PREFACE

This is the second edition of a book that first appeared in 1995. At that time, it was both a critical and commercial success, and it inspired similar efforts in many other cities. At last count, it had received four awards for reference excellence, had been through seven printings, and had sold more than 70,000 copies.

But that was before the Internet revolution and before third graders could Google anything or turn to Wikipedia for a reference on millions of topics. What, then, is the justification for hundreds of expensive pages of paper bound between two hard covers? Is this volume the literary equivalent of a livery stable in the 1920s?

The Encyclopedia of New York City may be an old model, but it is an enduring and necessary one. When Denis Diderot invented the genre of the encyclopedia in the middle of the eighteenth century, he offered what was then a novel and radical idea: bring all the knowledge of the world to anyone who wanted to discover it. Such easy access then was considered an affront to the establishment of the time, which tried to ban the book. Opposition crumpled in the face of support by progressive Enlightenment thinkers, who were delighted by the prospect of sharing knowledge. Diderot's genius also lay in his idea of assembling experts in different areas who would prepare authoritative entries that were both thorough and accessible to the reading public.

Like Diderot's project, *The Encyclopedia of New York City* provides the distilled knowledge of hundreds of experts and presents their entries in that same accessible way. In the twenty-first century, when books compete with electronic sources, there is still an important niche for reference materials such as this. Although third graders may know how to use an Internet browser, browsing a book is a very different experience. There is a joy in leafing through the pages to make unexpected discoveries about topics in which you did not think you had an interest. You look up Malcolm X, and your eyes fall also to the Malbone Street wreck, a train disaster in Brooklyn that claimed at least 93 lives in 1918. Or you look up tenements and also happen to read about the Tenderloin, a Manhattan neighborhood that once contained the city's greatest concentration of saloons, brothels, gambling parlors, and dance halls. On the Internet you cannot look up something that you do not know exists. Serendipitous discoveries are often the best kind. In New York City, there are mysteries on every block, and this encyclopedia is similar, with new mysteries on every page. Furthermore, this book has been created by experts who have spent decades specializing in specific areas, and the reader is able to identify these authors, whose entries cannot be changed by other people who may not have the same knowledge and expertise.

But why bother with a second edition? To put it simply, New York City is always evolving, and especially so in the past two decades. When the first edition was written, B. Altman was a department store, the World Trade Center dominated the city's skyline, J. P. Morgan and Chase Manhattan Bank were separate companies, crime was going up, and the worst day ever for the New York City Fire Department was 17 October 1966, when 12 firefighters were killed at 23rd Street and Broadway. We have eliminated several hundred entries and added almost a thousand new ones, from Kareem Abdul-Jabbar to the Ziegfield Follies. The new entries greatly expand the story of New York City: arson, bricks, the Central Park jogger, Compstat, Joe DiMaggio, E-ZPass, High Line, house numbering and street naming, Hudson Square, Archbishop Iakovos, Kleinfeld Bridal, Mickey Mantle, Evelyn Nesbit (the Girl in the Red Velvet Swing), public order, sidewalks, the Subway Hero (Wesley Autrey), and synagogues. We have also updated virtually every retained entry. In a city that has grown by a million people since 1990, the 450 neighborhoods have also grown and changed, with new ethnic groups continuing to make New York City the most diverse spot on the planet. And we have added hundreds of new illustrations, both historical and contemporary, to help bolster the reader's understanding of people and places. But even with all of the revisions, it remains impossible to capture all of New York City in one book, or to be flawless in every entry.

How does one take the measure of New York City? Even casual visitors can see and feel and sense that it is different from other places. Its buildings are bigger, its pace quicker, its streets noisier, and its sidewalks more crowded than those of other communities. It often overwhelms tourists from around the world, who are typically told that New York City is the least "American" of cities and that they must travel far from it if they are to understand and know the "real" United States.

In this case the stereotype is correct: New York City *is* different. For one thing, it is older than virtually every other American city. Boston, Philadelphia, Charleston, Savannah, Newport, and Williamsburg come to mind when one thinks of historic places, yet New York City is older than all of them. As for the settlements that were already established when Dutch traders first landed at the southern tip of Manhattan — St. Augustine, Jamestown, Fort St. George, Hampton, Plymouth, and Santa Fe — Jamestown, Plymouth, and Fort St. George disappeared, and the other three failed to prosper for the first three centuries of their existence.

New York City is also unusual because of its high population density. In 1900 the Lower East Side was the most densely inhabited place in the world. As late as 1960 Manhattan contained half of all the world's skyscrapers of 50 stories or higher. The city's midtown office district in 1960 had more office space per acre than any other central business district on earth; in fact, only lower Manhattan and the Chicago Loop were even half as dense. In recent years Hong Kong and Shanghai have matched New York City's skyscraper total; and Tokyo, Mexico City, and São Paulo have populations and densities that match or exceed those of New York City. Suburbanization has greatly reduced the worst overcrowding in the United States. But the city remains far more crowded than any other in the country, with twice the population density of Chicago and many times the density of Houston and Los Angeles.

New York City has long been unusual because of its sheer size. Even before 1775, when its population was never more than 25,000, it ranked with Boston, Philadelphia, Charleston, and Newport as one of the five leading cities in the colonies. It had surpassed Philadelphia by 1810 to become the largest city in the United States, and Mexico City by 1830 to become the largest in the western hemisphere. By 1900 it was the second-largest city in the world (after London) and by 1930 the largest. It remains the only U.S. municipality ever to exceed four million residents. And in 2010 each of its five boroughs is large enough to be an important city in its own right, with Queens having more inhabitants than Philadelphia or Phoenix, Brooklyn several times as many as Boston and San Francisco, the Bronx far more than Detroit, and Staten Island more than St. Louis.

Figures for the metropolitan area are even more impressive. When the Regional Plan Association in 1930 defined the metropolitan region as comprising the city and 31 adjacent counties in New York, New Jersey, and Connecticut, the region was already the first in the history of the world to exceed 10 million residents, and in 1970 it became the first to exceed 15 million. Although eventually surpassed by Tokyo and a few other places, the New York City metropolitan region still counted 22 million people in 2010, or as many as lived in all the cities of the earth combined in 1700.

Unlike other urban encyclopedias, which typically include suburbs in their coverage, this one is about the city of New York and its five constituent boroughs. No disrespect to the suburbs is intended, but to include all 1500 such places would have made the book so huge as to be unwieldy. However, New York City is inextricably linked to its suburbs, and the reader will note that we occasionally refer to *Greater New York* or to the *metropolitan region*. In such cases, the definition used is that of the 31-county area defined by the Regional Plan Association.

Capturing the essence of this vibrant and still-growing metropolis has not been easy. More than 10,000 books have been written about the city, with new ones appearing yearly. In the nineteenth century, guidebooks proliferated to service the booming tourist industry, and they provided a de facto history of the city. I. N. Phelps Stokes's six-volume *The Iconography of Manhattan Island, 1498–1909* remains unsurpassed. Edwin Burrows and Mike Wallace's *Gotham* is a beautifully written interpretive narrative of life up to 1898. Specialized studies address everything from prison ships to police to prostitution to public order. *The Encyclopedia of New York City* is the rare publication that addresses all aspects of life in the Big Apple (and this book explains where that term came from).

The format of this second edition is similar to that of the first. Its alphabetical entries range from prehistory to the present and cover all five boroughs, although most of the boroughs did not become part of New York City until 1898. Entries reference people, places, neighborhoods, ethnicities, events, generic and thematic topics, and time periods. This edition includes more than 5000 entries by more than 800 authors. The length of the entries ranges from 50 to nearly 7000 words, with most entries running about 200 to 800 words.

Like the first edition, this one adheres to principles of reference publishing, which is to provide basic information and a place to begin research, not to end it. As a synthetical work, it aims to gather existing information rather than present research on new material. Many entries have brief bibliographical citations to help the reader who is interested in more information. While the editor in chief has aimed to keep the entries as factual and impartial as possible, some interpretation has crept in, and this reflects the view of the individual author, not the editorial staff. The encyclopedia also has some useful cross-referencing. In addition to 750 illustrations, half of which are new, there are also more than 100 charts and tables, which show, for instance, which television shows were filmed and set in New York City, how many ticker-tape parades the city has organized, how tall the tallest buildings are, and a host of other fascinating aspects of the city. Certain entries have not been included for pragmatic reasons; city agencies, for instance, are covered in thematic entries, and advertising and law firms are shown in tables. Some of the entries are not only new, but they exist in no other encyclopedia: RAILROADS, SONGS, ARMORIES, TELEVISION SHOWS, PUBLIC EXECUTIONS, NEWSPAPERS, and SQUARES are examples of these.

New York City has never been a static entity, and neither is *The Encyclopedia of New York City*. An electronic edition of this print one is planned, with updates that will mirror the vibrancy of the city it reflects. And although every word in this book has been read by the editor in chief and many other editors, the encyclopedia no doubt includes errors. The editor accepts responsibility for them and asks that suggestions, criticisms, and comments be e-mailed to ktj1@columbia.edu.

These thousands of entries are meant not only to convey the history of this great metropolis, but also its spirit. A final word comes from E. B. White, connoisseur of New York City: "New York blends the gift of privacy with the excitement of participation; and better than most dense communities it succeeds in insulating the individual . . . against all enormous and violent and wonderful events that are taking place every minute."

ACKNOWLEDGMENTS

In 2001, even before the terrorist attacks on the World Trade Center transformed all of our lives, many friends and colleagues began urging me to put out a revised second edition of the encyclopedia. Even the idea of such an effort was daunting, but I and they knew that the community of people who care about the city and its history would assist and support me at every step. The first individual to offer material assistance was Dan Lufkin. Over lunch in Manhattan Valley, he reviewed my justification for such a volume and thought about my time and monetary estimates. Two weeks later he telephoned to say that the Peter Jay Sharp Foundation would become the major sponsor. Without Dan's enthusiasm and help, this project would not have moved forward. And he has remained committed to the encyclopedia in all the years since we began our work. Following Dan's lead, other funders soon joined him in support. Jack Rosenthal of the New York Times Company Foundation became a particularly engaged councilor. Kenneth Conboy, Joan K. Davidson, Tom Gochberg, and Sue Ann Weinberg offered both financial advice and personal friendship. Roger Hertog and Richard Gilder contributed even though their primary interests lay elsewhere. Special thanks go also to the Henry Luce Foundation for its generous matching program, and to the Warner Fund at the University Seminars at Columbia University.

Writing about New York City is often a labor of love. Fortunately, people who feel this way revised pieces they had written 20 years before, or better yet, submitted completely new pieces. John Tauranac, who drew a half dozen maps for the first edition, started all over again to update all of his original work. When I missed deadlines and when promised submissions never arrived, Jeffrey Kroessler, John Rousmaniere, and Barnett Shepherd generously gave their time to quickly plug the hole in the dike. Eric Goldstein of the Natural Resources Defense Council and Helene Amato of the Department of Environmental Protection ensured that our knowledge of New York City's remarkable water supply system was correct. Danniel Maio of Identity Maps quickly revised the complicated Manhattan street maps.

Librarians and archivists were essential at critical points. At the New-York Historical Society, Jean Ashton of the library made available work space; Marilyn Kushner, Sue Kriete, Miranda Schwartz, and Eleanor Gillers helped access a treasure trove of photographs. Thanks also go to Donna Jeffrey, Kieran Garvey, and Valerie Crane at the New-York Historical Society for their support. And Louise Mirrer, president of the New-York Historical Society, whose plate was always full with other concerns and responsibilities, was always willing to pause, consult, and encourage.

Ken Cobb, assistant commissioner of the New York City Department of Records and Information Services and former director of the Municipal Archives, offered his matchless knowledge and city records; he never hesitated to help answer the most difficult questions and supply photographs, too. Steve Saks and Tom Lisanti of the New York Public Library, and Susan Henshaw Jones and Robbi Siegel of the Museum of the City of New York made possible many of the hundreds of new illustrations.

Our digital files could not have made their way to the printed page without the guidance of Yale University Press. Joyce Ippolito, an extraordinary editor, spearheaded the effort to get this book out and oversaw every aspect of its editing and publication. She and her talented team of copy editors — Jessie Dolch, Robin DuBlanc, Karen Gangel, Laura Hensley, and Noreen O'Connor — demonstrated wisdom as they expeditiously went through masses of material. Susan Laity, production editor, gave valuable production advice, and Nancy Ovedovitz and Lindsey Voskowsky, designers, made the book as beautiful as it is. Thanks go to Maureen Noonan, production controller; Marcia Carlson, indexer, and her team, Suzanne Mackzum and Marian Rhys; and proofreaders Robin Charney, Jessie Hunnicutt, Jennie Kaufman, Noreen O'Connor, Millie Piekos, and Marnie Wiss. John Donatich, director of Yale University Press, was a source of support and encouragement, as was reference editor Vadim Staklo.

So many people spent so many hours with entries. Particular thanks go to David White and Holly Cronin for their hard work and boundless enthusiasm. Others who put special efforts into this project include Aleeza Lubin, Meghan

Lalonde, Kate Lauber, Cecilia Magnusson, Frank Nestor, Anne Epstein, and Meryl Cates. Alexander Heilner did a heroic job with his stunning new pictures and encouraged other talented photographers to contribute their work. Nancy Flood took over as managing editor at the start and spent countless hours organizing files, contacting authors, and providing a supportive environment for our many interns. Even as the first edition was pouring into bookstores, she was examining every page, warning me about textual biases and shortcomings, and suggesting new entries. Her love for New York City helped make this book come to fruition.

The last 18 months of a major reference effort are inevitably the most difficult. Fortunately, Professor Lisa Keller of Purchase College stepped into the breach and invested her enormous energy and talent into the project. As an author, she knew about prose style; as a New York historian, she knew about sources; and as a former journalist, she knew about deadlines. Each of these skills was critical as she edited entries, cajoled authors, pulled together hundreds of new illustrations, checked thousands of entries, and watched over production schedules. Her unbounded passion for New York City propelled her in the completion of this project.

Finally, Barbara Bruce Jackson supported my decision to contribute my time and our money to a project that in the end delivers neither academic glory nor financial reward. We made this choice because we left Memphis together 48 years ago and together found happiness in the place that we both continue to regard as the greatest city in the world.

KENNETH T. JACKSON

NOTES ON THE USE OF THE ENCYCLOPEDIA

COVERAGE

There is no more difficult and contentious issue facing the editors of a reference work than what to put in and what to leave out. In this encyclopedia the criteria vary according to whether the subject is a person, a neighborhood, an institution, an ethnic or religious group, or a broad, thematic topic, as well as varying from one historical period to another. Such criteria will ease the task of selection, but only to a degree. In the end subjectivity plays a part, as it must in any reference work other than a directory.

The people included in the encyclopedia are those whom the editors judged to have left a permanent mark on the city's history or culture. Most of them lived in the city for much of their lives; some are influential visitors (such as Lafayette, Lincoln, and Dickens) and one — the Duke of York, for whom the city is named — never set foot in the city. After the mid-twentieth century residence is a more elusive criterion. On the one hand there are figures who had important careers in New York City but lived outside it. On the other hand are prominent figures in the worlds of film, music, and sports with national and international careers, who may have had a residence in New York City, but also lived and worked in other places. Some people are mentioned only in tables and the index, as they are not significant enough to merit entries but are too important to be neglected altogether. Examples include most of the city's early mayors, who were appointed to what was a largely ceremonial office; in many cases little is known about them.

The more than 400 entries on neighborhoods include all those generally recognized as extant, as well as the best known of those that are defunct. In other categories — businesses, restaurants, magazines, radio stations — the choice of subjects is highly selective. National organizations and firms are generally included only if based in New York City. And to keep the encyclopedia to a manageable size, certain categories have been excluded entirely, notably line agencies of the municipal government and individual creative works such as novels and films.

In every entry the focus is on the connection of the subject to New York City, with careers outside the city compressed or omitted entirely. For example, the entry on Thomas Jefferson does not discuss his presidency or his writing of the Declaration of Independence: it deals solely with the six months that he spent in New York City in 1790.

USAGE

Given the great interest in New York City, this encyclopedia is written for both an American and international audience. Measurements are given in imperial and metric systems. Place names and institutional names are given in the form that prevailed at the time being discussed. This practice extends to spelling changes (Williamsburgh is used in references before 1855, Williamsburg thereafter), but not to changes in spacing or hyphenation (the Long Island Rail Road is referred to consistently as such, even though it was known as the Long Island Railroad until 1944). The city is referred to either as New York City or (in exceptional cases) as the City of New York. The form New York is used only in bibliographies, for the colony of New York, and in references to New York State where it is unmistakable that the state is being referred to (otherwise the form New York State is used).

The ampersand in corporate names is generally expanded, although it is used where necessary to avoid confusion (notably with the Ringling Brothers and Barnum & Bailey Circus) and in acronyms (such as AT&T). The en dash (–) is used rather than the hyphen (-) in institutional names like Helmsley–Spear, which are derived from two surnames rather than a single hyphenated surname. Transliteration follows the Pinyin system for Chinese and the YIVO system for Yiddish.

ALPHABETIZATION

The encyclopedia follows a letter-by-letter system, in which a heading of more than one word is treated as if it were spelled solid: spaces, hyphens, diacritical marks, and periods are disregarded, as are elements in brackets and parentheses. In accordance with established dialoguing practice, names beginning with "St." are alphabetized as if beginning with "Saint." Corporate and institutional names that begin with a person's forename (such as R. H. Macy and the Solomon R. Guggenheim Museum) are alphabetized under the first letter of the forename, not the surname. The reader who looks for such entries under their latter part (Macy and Guggenheim) will be referred to the appropriate place by a cross-reference.

HEADINGS

The heading of an entry about a person takes this form:

Washington, George (*b* Bridges Creek, near Fredericksburg, Va., 22 Feb 1732; *d* Mount Vernon, Va., 14 Dec 1799).

Parentheses are used to show parts of a name not ordinarily used by a person (or institution or other entitity). These parts are in boldface:

Ives, Charles (Edward)
Koch, Edward (Irving)
Catholic Medical Center (of Brooklyn and Queens)

Brackets are used for alternative names. These are in lightface:

Ellington, Duke [Edward Kennedy]
Clermont [North River Steamboat]

A person who has more than one name is entered under the best-known one, with alternative names given in brackets:

Twain, Mark [Clemens, Samuel (Langhorne)]

The formula "née" is used for maiden names:

Astor [née Schermerhorn]**, Caroline Webster**

Where there is more than one bracketed name these are separated by semicolons and the order is that of reverse chronology:

Malcolm X [Shabazz, el-Hajj Malik e-; Little, Malcolm]

Titles of nobility are given in lightface:

Bing, Sir **Rudolph**
Hyde, Edward, Viscount Cornbury
Moody [née Dunch]**, Deborah,** Lady Moody

For a firm or institution, the name appearing in the heading will be the current form if the entity is extant and based in New York City, and the best-known form if the entity is defunct or based elsewhere.

Where two or more entries have an identical heading they are distinguished by lowercase roman numerals:

West Brighton (i). Name by which West New Brighton is sometimes known.
West Brighton (ii). Neighborhood in southwestern Brooklyn.

When a person, place, institution, or other entity that is the subject of an entry is referred to in running text elsewhere, the form used is that of the boldface heading of the entry (including the lowercase roman numeral if there is one, unless the reference is unmistakable without it); anything in lightface, parentheses, or brackets is disregarded.

DATES

The dates appearing in the heading of an entry about a person provide the fullest information available on that person's birth and death. Question marks indicate uncertainty over that part of the date they are next to. If the specific date or part of it is unknown, circa or baptismal date is given, or just a year.

STRUCTURE OF ENTRIES

Each entry starts with a tagline—a short, verbless definition that describes the subject's principal activity or activities. Definitions of neighborhoods include the latest available population figures (if known) and approximate boundaries. In cases where such boundaries cannot be fixed with any certainty, the definition identifies the center of the neighborhood, the names of surrounding neighborhoods, or the location within the borough.

Most entries are ordered chronologically. The longest are divided into sections, each beginning with a subheading.

CROSS-REFERENCES

A cross-reference directs the reader to another entry or to another part of the same entry. If referring to another entry it is printed in small capitals. Cross-references are of three types:

1. The cross-reference from an acronym or alternative name to the main entry:

ACLU. See American Civil Liberties Union.
North River Steamboat. See Clermont.
Clemens, Samuel (Langhorne). See Twain, Mark.

2. The cross-reference from one entry to a second entry, used where the second entry contains a substantial amount of additional information about the subject of the first. It may appear in text, or at the end of the entry, after any bibliography and before the signature.

These measures contributed to widespread homelessness.
For further illustration see Riis, Jacob A.
See also Theater, §5.

3. The cross-reference from one part of an entry to another:

(see also §6, above).

Cross-references are used to direct the reader to substantive discussions, not passing mentions. Entries from thematic entries may cross-refer to other thematic entries, but not to entries on individual persons or institutions: thus the entry on science refers the reader to those on anthropology, biology, geology, physics, and psychology, but not to entries on individual scientists and scientific institutions.

BIBLIOGRAPHIES

The bibliographies are intended to provide suggestions for further research. They are selective and will not necessarily include all of the sources consulted by the authors or editors.

The first edition of a book is usually cited. For books with more than one edition the most recent is cited as well if it appeared at least ten years after the first edition (a subsequent edition that appeared sooner may be cited if it is bibliographically significant). Only one place of publication is given for each publisher. Places of publication and names of publishers for revisions and subsequent editions are given only if they differ from those of the first edition. The abbreviation "p(p)." is used only where necessary to avoid confusion. We have included Web sites that are not likely to change, usually for specific organizations rather than specific documents.

Articles in periodicals are cited thus:

Ellen G. Landau, "Lee Krasner's Early Career," *Arts Magazine* 56 (1981), no. 2, pp. 110–22; no. 3, pp. 80–89

Fascicle numbers (2 and 3 in the example above) are given only if each fascicle is separately paginated. If the periodical is through-paginated only the volume number is given.

Bibliographic items are ordered chronologically, earliest items first. Two or more items published in the same year are ordered alphabetically by authors' surnames.

CLOSING DATE

Information in the encyclopedia is believed to have been accurate as of 31 March 2010.

Abbott, Berenice (*b* Springfield, Ohio, 17 July 1898; *d* Monson, Maine, 10 Dec 1991). Photographer. She moved to Greenwich Village in 1918 to pursue journalism. During her first few years in the city she developed an interest in the arts, prompting her to move to Paris in 1921 to study sculpture and drawing. She fell into photography when Man Ray recruited her to work as his darkroom assistant, and she soon developed a talent and passion for the medium, becoming a well-known portraitist and photographing such luminary figures as James Joyce and Sylvia Beach. In Paris she met French photographer Eugène Atget, and when she returned to New York City in 1929, she brought the bulk of his images with her, publicizing his documentary work and arranging for the Museum of Modern Art to purchase the collection in 1968.

Fascinated by the contrasts between old buildings awaiting demolition and tall buildings under construction, Abbott—inspired by Lewis Mumford's writings on technological eras—embarked on an ambitious project to systematically chronicle the entire city. Initially, she worked on the project independently while supporting herself with commercial work and teaching at the New School for Social Research, where she established the photography program and continued to teach until 1958. In 1935 she moved into a Greenwich Village loft with the art critic Elizabeth McCausland, who was supportive of Abbott's documentary work and later wrote much of the text to accompany her New York photographs. That same year the Federal Arts Project took interest in Abbott's study of the city and gave her financial support to hire assistants and devote her time to completing the project. In 1939 the set of 305 photographs was given to the Museum of the City of New York, and the images became the subject of her book *Changing New York,* which is still considered the best record of the city made before World War II. Although most of her photographs were taken in Manhattan, all boroughs are represented in this collection of images that emphasize physical structure and capture the energy of New York City's rapid transformation during the interwar period.

A pioneer in the straight photography movement, which advocated the importance of unmanipulated images, Abbott published the acclaimed *Guide to Better Photography* in 1941. She also designed several photographic devices, including the telescopic lighting pole or "autopole," and held U.S. patents for four of her inventions. A number of her portraits of local artists, along with photographs of downtown streets and interiors, were collected in the book *Greenwich Village Today and Yesterday* (1948). Later projects included the documentation of scientific phenomena for high school textbooks and automobile culture in small-town America. Abbott moved to Maine in 1966. Many of her New York City photographs are archived at the New York Public Library, where a major retrospective of her work was exhibited in 1989.

Holly Cronin

Abbott, George (Francis) (*b* Forestville, N.Y., 25 June 1887; *d* Miami Beach, 31 Jan 1995). Director, producer, and playwright. He began his career as an actor in 1913–34 and later produced, directed, and wrote more than 75 plays and musicals, including *Twentieth Century* (1932), *Boy Meets Girl* (1935), *Where's Charley?* (1948), *The Pajama Game* (1954), and *A Funny Thing Happened on the Way to the Forum* (1962). With Richard Rodgers and Lorenz Hart he wrote the book for *On Your Toes* (1936), directed and wrote *The Boys from Syracuse* (1938), and produced and directed *Pal Joey* (1940). He also worked on the adaptation for the stage of Betty Smith's *A Tree Grows in Brooklyn* (1951), which he produced and directed, and was an author and the director of *Damn Yankees* (1955) and *Fiorello!* (1959). He worked on a revival of *Damn Yankees* in 1994.

George Abbott

Sara J. Steen

Abbott, Lyman (*b* Roxbury [now in Boston], 18 Dec 1835; *d* New York City, 22 Oct 1922). Minister. After a brief period in the Midwest he wrote for *Harper's Magazine* and moved to New York City, where he worked with Henry Ward Beecher on the publication *Christian Union* (later renamed *Outlook*). He became the editor in 1881, and the journal was soon known as the leading exponent of progressive Christian social thought, especially the Social Gospel. Abbott took part in Henry George's mayoral campaigns, was active in the Progressive Party, and wrote four books on Christianity and contemporary issues. In 1890 he succeeded Beecher as pastor of the Plymouth Congregational Church in Brooklyn Heights.

ABC. See American Broadcasting Company.

Abdul-Jabbar, Kareem [Alcindor, Lew] (*b* New York City, 16 Apr 1947). Basketball player. Born in Harlem, he led the elite Catholic high school Power Memorial to a 95–6 record during his four years on the basketball court, including a 71-game winning streak. He earned all-American honors three times and graduated as the leading scorer and rebounder in New York City high school basketball history. He later became one of the most successful college and professional basketball players of all time, winning three National Collegiate Athletic Association (NCAA) championships at the University of California, Los Angeles, and playing most of his professional career with the Los Angeles Lakers and Milwaukee Bucks. In 1971 he changed his name to reflect his Muslim faith, which he began practicing in college. He has made two brief returns to the New York City basketball scene since his retirement as a player: he applied for the position of head basketball coach at Columbia University in 2003 and was hired for a brief time as a scout by the New York Knicks in 2004. Abdul-Jabbar has also authored several books, including *On the Shoulders of Giants: My Journey through the Harlem Renaissance* (2007).

David White

Abel, Rudolf (Ivanovich) [Golfus, Emil R.; Fisher, William August] (*b* England, 11 July 1903; *d* Moscow, 15 Nov 1971). Cold war spy. A colonel in the Soviet security agency (KGB), he began his career in espionage in 1927. In 1948 he is said to have entered the

United States through Canada with a forged passport. He then lived in Brooklyn under the alias Emil R. Golfus and worked at an art and photographic studio at 252 Fulton Street. In 1957 fellow Soviet Reino Hayhanen defected, became a counter spy, and helped the Federal Bureau of Investigation (FBI) locate Abel, thereby dismantling a Soviet spy ring. After he was arrested on 21 July 1957, a search of his home revealed spy equipment. He was convicted by a federal district court in Brooklyn and sentenced to 30 years in prison. On 10 February 1962, he was exchanged for American U-2 pilot Francis Gary Powers.

Louise Bernikow, *Abel* (New York: Trident, 1970)

Martin Ebon, Stephanie Miller

Abercrombie and Fitch. Firm of retailers formed during the late nineteenth century as an outdoor-supply store by David T. Abercrombie, a railroad engineer and prospector. It opened on South Street in Manhattan, where one of the first customers was Ezra H. Fitch, a wealthy lawyer and sportsman who became Abercrombie's partner. In 1908 the store provided President Theodore Roosevelt with equipment for an African safari, including snake-proof sleeping bags. Abercrombie left in 1912, and in 1917 Fitch moved the store to Madison Avenue at 45th Street, where a fly-casting pond was installed on the roof and a shooting range in the basement (which closed after a friend of Ernest Hemingway injured his shoulder while firing an elephant gun). Well-known customers in the following years included Admiral Richard Byrd, Charles Lindbergh, and Amelia Earhart, as well as Presidents William Howard Taft and Warren G. Harding (who both bought golf clubs), Woodrow Wilson (riding equipment), Herbert Hoover (fishing tackle), and Dwight D. Eisenhower (boots for weekends at Camp David); King Hussein of Jordan outfitted his yacht there, and Katharine Hepburn occasionally rode a bicycle across the main floor. In 1977 the firm, which operated a chain of nine stores, declared bankruptcy. The name was bought in 1978 by Oshman's Sporting Goods, which opened its first Abercrombie and Fitch store in 1979 in California and another at South Street Seaport in 1984. Abercrombie and Fitch was sold to the Limited in 1988. In the early twenty-first century the company operated over 300 stores nationwide, selling clothing geared toward young adults.

Eric Wm. Allison

Abigail Adams Smith Museum. Former name of the Mount Vernon Hotel Museum and Garden.

Abingdon Square. Name given to the intersection of West 12th Street, Eighth Avenue, and Hudson Street in Manhattan, and by extension to the surrounding neighborhood.

Abingdon Square, 1904

Its eponym is Charlotte Warren, by marriage the countess of Abingdon; she was the daughter of Susannah de Lancey and the English privateer Admiral Peter Warren, whose estate of 300 acres (121 hectares) encompassed most of what is now the West Village. The neighborhood has a varied architecture that includes nineteenth-century row houses, apartment buildings, tenements, and commercial buildings, as well as factory buildings and warehouses at Westbeth and the Gansevoort Meat Market that have been converted into residences for artists and expensive condos. Its principal commercial thoroughfares are Hudson Street and Bleecker Street, which are lined with specialty shops and restaurants. A restoration in 2004 transformed the 0.22-acre (0.09-hectare) Abingdon Square Park from an asphalt triangle into a green park, emphasizing its historic character.

Joyce Mendelsohn

abolitionism. The course of abolitionism in New York City followed that within the state in general in many matters. Gouverneur Morris introduced a resolution to eliminate slavery in New York State at the state constitutional convention in 1777; a large majority of the delegates approved it. However, no further action was taken until 1785 when the state legislature debated several abolitionist measures. Among them was a plan introduced by Aaron Burr to free all slaves immediately, which won the support of Federalists (who sought to extend civil rights to blacks) but was soundly defeated; another plan calling for gradual emancipation, which a majority of the legislature supported, failed because it would also have extended suffrage to blacks. Federalists concentrated on ending the slave trade and in 1785 passed a bill banning the sale of slaves in New York State but allowing slaves to be brought into the state and remain there for no longer than nine months. During the same year such well-known figures as John Jay, Alexander Hamilton, Chancellor Livingston, Philip Schuyler, and Hector St. John de Crèvecoeur established the New York Manumission Society to encourage public support for abolition. The society mediated indentureship negotiations and provided legal assistance to African Americans who were denied their freedom; its efforts to ensure compliance with the law of 1785 were largely unsuccessful because slave owners often found loopholes that allowed sales of slaves out of state. The legislature in 1799 passed the Act for the Gradual Emancipation of Negroes and Other Slaves, which declared free the children of slaves born on or after 4 July, granted freedom to slaves born before that date at the age of 24 for women and 28 for men, and required the registration of children indentured to their masters until the age of manumission. To end abuses of the law the legislature in 1817 declared all slaves free as of 4 July 1827. In 1841 the state rescinded the provisions allowing nonresidents to hold slaves for as long as nine months.

Abolition did not end discrimination against blacks in New York, who were denied full rights of citizenship. The Democrats controlling the state constitutional convention of 1821 redefined the property requirement for voting along racial lines: blacks could vote only if they owned property worth at least $250, whereas the property qualification was eliminated for white male voters. Meanwhile, many free blacks joined the abolitionist movement, which was also taken up by the first black newspapers in New York City, *Freedom's Journal* (1827–29) and the *Rights of All* (1829). The city became an abolitionist center during the 1830s and in 1833 home to

the American Anti-Slavery Society, the first national organization of its kind. Some of its most influential members were leaders of the city's black community, including Samuel E. Cornish and Theodore S. Wright. Under the society's auspices Wright and Henry Highland Garnet made speaking tours of the northern and western states and with other black abolitionists from the city became leading spokesmen for the antislavery movement: they argued that blacks would not enjoy the full rights of citizenship until slavery was eradicated throughout the country. By demonstrating political acumen and oratorical skills, they also sought to destroy myths of inferiority that provided a basis for discriminatory legislation.

Interracial tensions mounted during the 1830s. Many white abolitionists advocated repatriating blacks to Africa, leading blacks to build a separate movement against racism while continuing to work with whites. Such prominent African Americans from Manhattan as Philip Bell Cornish and J. W. C. Pennington attended the first National Negro Convention in Philadelphia from 15 to 24 September 1830, the first of several such conventions held during the 1830s. At the New York State Negro Convention, held in New York City on 25 January 1831, a number of delegates denounced efforts by the New York Colonization Society to resettle blacks in Africa as a scheme to perpetuate slavery and proclaimed their dedication to abolition and the uplift of free blacks. Abolitionism failed to win much support among whites and even intensified antiblack sentiment among white workers who viewed blacks as competitors in the labor market. During a several-day rampage in 1834 known as the Journeymen's Riot, white day laborers disrupted a meeting of abolitionists at Chatham Street Chapel and attacked the homes of Lewis Tappan and scores of African Americans.

The *Colored American,* launched in 1837, provided coverage of the movement until ceasing publication in 1841. Black churches became the most important venues for abolitionism. Through astute biblical exegesis, hard-nosed political analysis, and fiery oratory, black clergymen inspired their congregations to embrace "moral suasion," a policy of eschewing political action and converting slaveholders to abolitionism through moral argument. In 1840 a number of blacks left the American Anti-Slavery Society after disagreeing with members who favored moral suasion and helped to form the American and Foreign Anti-Slavery Society. African Americans during the 1840s continued to hold state and local conventions where speakers protested racism, criticized business for maintaining ties to the southern economy, and encouraged blacks to vote for candidates of the Liberty and Free Soil parties, hoping that in return for the support of black voters the parties would oppose limitations on black suffrage in New York State. Such leaders as Garnet, who at a convention in Buffalo in 1843 urged slaves to fight for their freedom, adopted a more militant stance. The *Ram's Horn* (1847) also took up the abolitionist cause.

Protecting the freedom of African Americans also became an abolitionist cause in the city, where slave hunters sought to kidnap the many fugitive slaves who settled there. Concern mounted after the passing of the Fugitive Slave Act (1850), which outlawed efforts to help runaway slaves and required officials to cooperate in recapturing them. The case of James Hamlet, a resident of Williamsburgh captured by local authorities and transported to Baltimore, became a cause célèbre: the New York Vigilance Committee (1835), an organization dedicated to helping fugitives, raised $800 to buy his freedom, and on 5 October 1850 his return to the city was celebrated with a rally at City Hall Park.

Resentment against blacks reached a peak during the DRAFT RIOTS of July 1863 when a mob of Irish workers protested the federal draft act by attacking the local draft office and killing several state militiamen who had been called in. During the course of the day they destroyed the homes of blacks and the shops of whites who traded with them and dragged their occupants into the street. They set fire to the Colored Orphan Asylum on Fifth Avenue between 43rd and 44th streets, where they murdered an infant. New York State began accepting blacks for military service in 1864 to meet a quota imposed by the federal government. African Americans from the city were incorporated into the 20th Regiment by 5 May 1864 and the 31st Regiment by 27 March 1865 and accounted for 877 casualties by the end of the war.

Thelma Foote

Abraham and Straus. Firm of retailers, originated in 1865 in Brooklyn as a small dry-goods shop called Wechsler and Abraham by Abraham Abraham, who was 22 at the time, and Joseph Wechsler. When the Brooklyn Bridge was completed in 1883 Abraham and Wechsler foresaw that a new shopping district would emerge at its eastern terminus, and they moved the business to a five-story building at 422 Fulton Street (on the block bounded by Fulton, Hoyt, and Livingston streets and Gallatin Place) that by 1889 was the largest dry-goods store in New York State. In 1893 Abraham joined with Isidor and Nathan Straus to buy out Wechsler's share of the business and gave the store its current name; the new partnership dissolved in 1920. The store was incorporated, joined the American Merchandising Corporation, and in 1925 became publicly owned. It expanded outside of Brooklyn in 1934 when a store opened in Jamaica, and became a division of Federated Department Stores in 1949. With 15 stores, Abraham and Straus was the second-largest department store chain in the metropolitan area until 1995, when Federated dropped the name completely in favor of Macy's, which it had acquired in 1994.

Leon A. Harris, *Merchant Princes: An Intimate History of Jewish Families Who Built Great Department Stores* (New York: Harper and Row, 1979)

Laura Gwinn

Abrams, Charles (*b* Vilnius [now in Lithuania], 16 Feb 1902; *d* New York City, 22 Feb 1970). Lawyer, public official. Abrams left a highly successful law practice to participate in the drafting of the Municipal Housing Authorities Law of New York State in 1934 and became the first counsel of the New York City Housing Authority (NYCHA) (1934–37). His victory in *New York City Housing Authority v. Muller* (1936) established the authority's right to employ the power of eminent domain for slum clearance. As the chairman of the New York State Commission against Discrimination (1955–59) he challenged broad patterns of discrimination by launching wide-ranging investigations. He also taught at Columbia University, worked as a housing consultant, and traveled on behalf of the United Nations. His published writings include *Revolution in Land* (1939), *The Future of Housing* (1946), *Forbidden Neighbors* (1955), and *The City Is the Frontier* (1965).

Rosalie Genevro

Abrams v. United States. Pivotal case decided by the U.S. Supreme Court in 1919 (250 U.S. 616). It upheld the ruling of a lower court that had convicted five non-naturalized Russian citizens on Manhattan's Lower East Side of violating the Espionage Act. The defendants, some of who were self-described revolutionaries, anarchists, and socialists, had distributed pamphlets intended to foster solidarity between immigrant Russian workers and the freedom fighters in their homeland. The pamphlets criticized President Woodrow Wilson for American involvement against the Russian Revolution. Assistant Attorney General Robert Stewart argued the case for the government, while Harry Weinberger led the defense effort. Justice John Hessin Clarke wrote the Court's majority opinion, which argued that the pamphlets' appeal to workers threatened the government and American foreign policy. The ruling expressed prevalent fears of communism, anarchism, and revolution, as well as the government's intense efforts to contain political dissent. The creation of

the Committee for Public Information and the passage of the Espionage and Sedition Acts during World War I reflected efforts to quell opposition toward the government. Many newspapers ceased publication or avoided coverage of the war. Individual dissenters faced 20-year jail sentences and $10,000 fines. The Russian Revolution in 1917, a growing American socialist movement, and a wave of union strikes perpetuated fears after the war during the "first Red Scare." Only Justices Oliver Wendell Holmes and Louis Brandeis dissented from the majority opinion, claiming that the pamphlets posed no direct threat to the government and citing an infringement upon the Russians' First Amendment rights. The minority opinion conveyed concern over government suppression of free speech. The decision set the legal precedent for future rulings on government regulation of free speech and press, but also stirred a movement of First Amendment activists.

David White

Abyssinian Baptist Church, 2009

Abyssinian Baptist Church. One of the oldest, largest, and most influential Protestant congregations in the United States. It traces its origins to 1808, when a few free black parishioners left the First Baptist Church of New York City because they were unwilling to accept racially segregated seating in a house of worship. Together with a group of Ethiopian merchants, they established themselves in a building on Anthony Street (later Worth Street). After meeting in a series of buildings on Anthony, Thompson, and Spring streets, the congregation moved to Waverly Place and then to 40th Street. In 1908 Adam Clayton Powell, Sr., a young preacher from New Haven, Connecticut, became the pastor. Under his leadership the congregation in 1920 purchased lots on 138th Street between Lenox and Seventh avenues in Harlem. After a successful tithing campaign to which 2000 members responded, a cavernous Gothic and Tudor structure, replete with imported stained-glass windows and an Italian marble pulpit, was dedicated on 17 June 1923. In 1937, by which time the congregation had grown to 7000 members, Powell gave up the pastorate in favor of his only son, Adam Clayton Powell, Jr. An intrepid preacher and civil rights leader who also served 14 terms in the U.S. House of Representatives, the younger Powell made Abyssinian what he called the "church of the masses," combining the Christian message of justice and equality with the militant oratory of liberation. Powell's successors, Samuel DeWitt Proctor and Calvin O. Butts III, continued his tradition of political activism. In the early twenty-first century the church continued to serve thousands of communicants each week, many of them attracted by the superb choir and the 67-rank organ. The New York Philharmonic has performed at the church, as have such internationally acclaimed musicians as Leontyne Price and André Watts.

Kenneth T. Jackson

Abzug [née Savitzky], **Bella** (*b* Bronx, N.Y., 24 July 1924; *d* Manhattan, 31 March 1998). Politician. Born to Russian-Jewish immigrants who ran the Live and Let Live Meat Market on Ninth Avenue, Abzug gave her first speech at age 11 in a subway station. A graduate of Hunter College and Columbia Law School, Abzug represented accused communists and tried civil rights cases in New York and the South in the 1950s. In 1961 Abzug co-founded Women's Strike for Peace, a group that lobbied against the House Un-American Activities Committee and the Vietnam War and for a nuclear test ban. A self-proclaimed radical known for her trademark wide-brimmed hats, Abzug gained notoriety for brash rhetoric; Norman Mailer said her voice "could boil the fat off a taxicab driver's neck." In 1970 she won the congressional election in New York's nineteenth district (parts of lower Manhattan and the Upper West Side). In this campaign she actively campaigned to gay voters and ran on the slogan "This Woman's place is in the house—the House of Representatives." In Washington Abzug co-wrote the Freedom of Information Act; the "sunshine law," which provides guaranteed access to information held by the state; and the Right to Privacy Act. She favored cutting the Pentagon's budget to pay for national health care. Abzug was one of the first members of Congress to call for Richard Nixon's impeachment, and she responded to an invitation to the White House from him by writing on the acceptance line that her constituents demanded a withdrawal from Vietnam. The state legislature split the nineteenth district following Abzug's election; she was elected from the twentieth district (the Upper West Side and Riverdale) in 1972 and 1974. In 1974 Abzug and Ed Koch proposed the first-ever federal gay rights bill. Abzug gave up her congressional seat to run an unsuccessful campaign for Senate in 1976. After leaving Congress, Abzug briefly worked for Jimmy Carter, ran for Congress in 1978 and 1986, practiced law, and worked for women's groups.

Ben Silk

Academy of American Poets. Organization founded in 1934 that supports American poets and fosters the appreciation of contemporary poetry, located at 584 Broadway. It administers awards (including the Wallace Stevens Prize), sponsors readings, publishes a literary journal, and maintains a poetry Web site, an audio archive, and an array of online poetry resources for teachers. The organization also hosts workshops for New York City high school students. In April 1996 the academy inaugurated National Poetry Month. In 2008 the organization's 14 chancellors included such prominent poets as Sharon Olds and C. K. Williams. There have been more than 70 past chancellors, among them W. H. Auden, John Berryman, Robinson Jeffers, Robert Lowell, and Marianne Moore.

Academy of Mount St. Vincent. Original name of the College of Mount St. Vincent.

Academy of Music. Opera house opened in 1854 at the northeast corner of 14th Street and Irving Place. It was built at a time when the area near Union Square was an affluent neighborhood. The building was lavish and had a stage sufficiently large for grand opera, many private and stage boxes, and about 4000 seats upholstered in crimson velvet; the interior of the hall was painted white and gold and illuminated by thousands of gaslights. Irving Hall, an annex at Irving Place and 15th Street, was the home of the New York Philharmonic in 1861–63. In several seasons during 1856–86 the Philharmonic performed in the main theater, which for 30 years was the principal venue for foreign opera singers visiting the city. The building was destroyed by fire in 1866 but rebuilt by 1868; a more serious blow was the opening in 1883 of the Metropolitan Opera House, which drastically reduced its audience. The Academy of Music was unable to compete and closed in 1886; its manager, Colonel James Mapelson, lamented his inability to "fight Wall Street." The space continued to be used for several years for labor meetings, plays, vaudeville acts, and motion picture screenings; the site is now occupied by a building of Consolidated Edison.

accounting. Until the late nineteenth century most accounting in New York City was handled by clerks with only basic bookkeeping skills: the pace of business was slow and transactions uncomplicated. Certified financial statements were considered unnecessary because many businessmen based their dealings on informal assessments of character. A demand for new services arose during the 1880s with the development of large corporations. Investors required audits to verify financial statements by corporate managers, and the managers sought advice in developing and improving their accounting systems. The number of accountants in the city increased, and in 1882 the Institute of Bookkeepers and Accountants was formed; it later became the New York Institute of Accounts (NYIA). Among the directors of the organization was Charles Waldo Haskins, who operated one of the city's largest accounting firms, Haskins and Sells (later Deloitte Touche Tohmatsu). Training in accounting was offered through an apprenticeship system based on the British model and in proprietary bookkeeping academies such as that of Silas S. Packard in Manhattan, which was highly successful. Several accounting associations were soon formed in the city. One of the first was the American Association of Public Accountants (AAPA; from 1957 the American Institute of Certified Public Accountants [AICPA]), which began operations in 1887 after an English chartered accountant, Edwin Guthrie, traveled to the city seeking reputable American accountants to engage as correspondents. It attracted an elite membership based in the East that was often called on to devise new accounting methods for transactions of unprecedented complexity. Seeking recognition as specialists, the members promoted auditing as an element of corporate governance that had proved its effectiveness in investment banking; they also set standards for internal regulation based on those adopted by British chartered accountants earlier in the century.

Efforts to set standards for education and licensing were undertaken in the following years. In 1895 the AAPA opened the College of Accounts, which offered a one-year certification course consisting of a thousand hours of instruction; it closed soon after the New York State Board of Regents refused it the right to grant degrees. During the 1890s separate efforts to establish state licensing were pursued by accountants in the NYIA and by the AAPA. The accountants of the NYIA prevailed because they were concentrated in New York City and because they were led by Haskins, who through his connection by marriage to the Havemeyer family was able to win the support of Melvil Dewey, secretary of the Board of Regents (which controlled professional licensing). Haskins's colleagues in the NYIA formed the New York Society of Certified Public Accountants in 1897. Dissatisfied with existing training and apprenticeship programs, Haskins made plans for a university curriculum: he believed that the quantitative nature of accounting made it akin to the physical sciences and shared the hope of many Progressives that its precision might allow a high degree of control over the affairs of business and government. His enthusiasm and financial guarantees led to the formation of the College of Commerce, Accounts and Finance at New York University in 1899, of which he was the first dean. His ideas were reinforced by his close associate Charles Ezra Sprague, a faculty member whose book *The Philosophy of Accounts* (1908) and other writings were among the first to define a theory of accounting. The college became a model for institutions nationwide, and by 1927 its graduates accounted for 57 of the 179 college-educated members of the AAPA.

Accounting developed rapidly between 1900 and 1904, owing to a sudden increase in corporate mergers. The demand for audits rose sharply as bankers in the city floated securities in London, where statement certification was common practice. The importance of accounting became firmly established in 1901 when the House of Morgan engaged the firm of Price Waterhouse to certify statements of U.S. Steel, the country's first manufacturing corporation with more than $1 billion in assets. The AAPA set ethical standards prohibiting such practices as using knowledge of accounting contrary to the public interest; these standards proved durable as the profession developed in later years. After the federal income tax was introduced in 1913, accountants were increasingly engaged in preparing tax returns. A uniform certifying examination was introduced by the AAPA in 1917 and later adopted by all state licensing boards nationwide. By the 1920s most firms listed on the New York Stock Exchange presented annual certified statements; they were required to do

The Academy of Music, 14th Street and Irving Place, ca *1910*

so after the formation of the Securities and Exchange Commission, which considered such statements vital to restoring public confidence in the country's financial markets. From the 1930s the AAPA set standards for such practices as accounting and auditing, and later tax preparation, consulting, attestations, and reviews. Educational standards rose, largely because of Haskins's efforts, leading New York State in 1940 to require candidates for certification to have a baccalaureate degree, the first such mandate in the country. Doctoral programs were established by New York University (1944), Columbia University (1954), and Baruch College (1974). During the 1970s the AICPA assumed new responsibilities for review and oversight, through which it sought to protect the public; it also published books and periodicals to promote competence and achieve consensus about matters of practice. New York City remained a leading center for education in accounting in the early twenty-first century.

Paul J. Miranti, Jr.

Ackerman, Frederick L(ee) (*b* Edmeston, N.Y., 9 July 1878; *d* New York City, 17 March 1950). Architect and urban planner. He was the chief designer of low-rent housing and the town planner for the Fleet Corporation, an organization formed during World War I to provide emergency housing for shipyard workers. In collaboration with Clarence S. Stein and Henry Wright he developed Sunnyside Gardens in Queens (1924) and led the movement toward building housing units in clusters and constructing apartment buildings with common social space. As the director of the New York City Housing Authority from 1934 to 1938 he advocated low-rise, walk-up apartment buildings within the cost limits of public housing. Later he conducted site studies used by housing authorities during the late 1940s, and with Lafayette Goldstone he designed the Lillian Wald Houses (1949) on the Lower East Side. Ackerman wrote *The Housing Famine: How to End It* (1920).

Joel Schwartz

ACLU. See American Civil Liberties Union.

ACNielsen. Marketing firm. Established in 1923 by Arthur C. Nielson, Sr., the firm is headquartered in New York with offices in more than 100 countries worldwide. In the early twenty-first century, their headquarters were located at 700 Broadway. The firm is best known for its Nielsen ratings that measure radio, television, and newspaper audiences and the receptivity of programming. It also created Homescan, a program that measures grocery and retail purchases for a group of subjects to track purchasing patterns as related to household demographics.

Acosta Vice, Celia M. (*b* Guayanilla, Puerto Rico, 20 June 1919; *d* Puerto Rico, 30 Jan 1993). Civic leader. Acosta Vice arrived in New York City in 1926 and lived in Brooklyn until 1979. In the late 1930s, she opened a small business in Williamsburg that became a hub for information about jobs, housing, income taxes, and other concerns in the Spanish-speaking neighborhood. She worked with local Democratic clubs and helped found the Fernando Sierra Vardeci Independent Democratic Club in Brooklyn in 1954. She also organized the 50-member Council of Brooklyn Organizations. The first Puerto Rican woman real estate agent in New York City, in 1960 she was the first female grand marshal of the city's Puerto Rican Day Parade. Acosta Vice established the Puerto Rican Heritage Bookstore in the 1970s. This collection of artifacts and books is considered the foundation for El Museo del Barrio.

Virginia Sánchez Korrol

acquired immune deficiency syndrome. See AIDS.

Actors' Equity Association. Labor union of professional actors and stage managers working in the legitimate theater. It was formed in New York City in May 1913 by 112 actors committed to fighting the arbitrary work rules and low wages then prevalent in the American theater. In August 1919 it mounted a strike for recognition, which increased its membership to more than 8000 and led to a five-year contract between the union and the Producing Managers' Association. The union is affiliated with the AFL–CIO through its parent organization, the Associated Actors and Artistes of America, and has its headquarters in Manhattan. As of the early twenty-first century, Actors' Equity had more than 45,000 members nationwide.

Martha S. LoMonaco

Actors Studio. School opened in 1947 by Elia Kazan, Robert Lewis, and Cheryl Crawford of the Group Theatre to encourage actors to develop their craft without the demands of public performance. Its artistic director from 1951 was Lee Strasberg, who introduced the Method, a controversial psychological approach to acting that stressed the actor's life experiences and was greatly influenced by the work of Russian actor and director Konstantin Stanislavsky. Among the members of the studio was Marlon Brando, whose visceral acting style came to exemplify the Method. After Strasberg's death in 1982, joint leadership was assumed by Ellen Burstyn and Al Pacino, who continue to head the program today along with Harvey Keitel. In the fall of 1994, the Actors Studio Drama School (ASDS) began a Master of Fine Arts (MFA) program at the New School in New York City. In 2005 ASDS broke with the New School, and beginning in 2006 the studio offered a joint MFA program with Pace University. In 1994 the Actors Studio started broadcasting the Emmy-nominated television program *Inside the Actors Studio* on the Bravo television network; it features seminars with influential actors and directors discussing how they developed their talents and careers. The Actors Studio remains one of the most influential theater schools in the world, training such well-known actors, directors, and playwrights as Robert De Niro, Marilyn Monroe, Tennessee Williams, Paul Newman, Norman Mailer, Jane Fonda, Julia Roberts, and Dustin Hoffman.

ACT UP [AIDS Coalition to Unleash Power]. Organization formed in 1987 by activists in New York City to advocate stronger measures against acquired immune deficiency syndrome (AIDS) and to defend those suffering from it. Offering information on the medical and social consequences of AIDS, pharmaceuticals, and treatments, the group gave rise to dozens of similar groups throughout the United States and the world. ACT UP became especially known for its confrontational tactics toward government at all levels, the medical profession, and the pharmaceutical industry. In the early twenty-first century it held weekly meetings at 200 West 13th Street and maintained headquarters at 332 Bleecker Street.

Robert A. Padgug

Adams, Franklin P(ierce) (*b* Chicago, 15 Nov 1881; *d* New York City, 23 March 1960). Columnist. After working for the *Chicago Tribune* he moved to New York City in 1904 and in 1913 joined the *New York Tribune* to write a column called "The Conning Tower," which appeared in various newspapers in the city until 1941; he usually wrote under the pseudonym "F.P.A." He was also a regular guest on the radio quiz program *Information Please* (from 1938) and a member of the Algonquin Round Table. He lived at 124 West 13th Street (1925–28) and 26 West 10th Street (1929 to the mid-1930s). A humorist with a taste for the epigrammatic and the sardonic, Adams was among the most widely read journalists in New York City. His newspaper column was a forum for literary opinion, gossip, commentary, and light verse by him and others (including Ring Lardner, Sinclair Lewis, and Dorothy Parker); to be published in it was considered an honor.

Brenda Wineapple

Adams, Thomas (*b* Scotland, 10 Sept 1871; *d* England, 24 March 1940). Urban planner. He managed England's first "garden city," founded the British Town Planning Institute, and served as adviser to the Commission of Conservation of Canada, before being named director of the Regional Plan of New York in 1923. Sponsored by the Russell Sage Foundation, this grand scheme was a 40-year outline for the city's development into a vast supermetropolis of 20 million people. Adams served as the plan's director until 1929; his colleagues included Frederick Law Olmsted, Jr., and George B. Ford. In addition to supervising extensive survey and planning work, Adams oversaw publication of the plan in a book titled *The Building of the City.* Although generally applauded, the Regional Plan of New York was condemned by the critic Lewis Mumford as "nothing more than the orderly dilution of New York over a 50-mile circle."

Susan Kriete

Addams, Charles (Samuel) (*b* Westfield, N.J., 7 Jan 1912; *d* New York City, 29 Sept 1988). Cartoonist. He attended Colgate University, the University of Pennsylvania, and the Grand Central School of Art and first published cartoons in 1935 in the *New Yorker,* which carried his work for more than half a century. Known for their macabre humor, his cartoons were shown at the Metropolitan Museum of Art, the Museum of the City of New York, and Harvard University. They inspired the television series *The Addams Family* (1964–66), which was also made into several motion pictures (1991, 1993, 1998), cartoon series, video games, and a Broadway show (2010). Addams published a dozen books, including *Addams and Evil* (1947), *Monster Rally* (1950), and *Favorite Haunts* (1976).

James E. Mooney

Addisleigh Park. Housing development in central Queens, just north of the former site of a golf course in St. Albans later occupied by the Veterans Administration Extended Care Center. It was begun in 1927 when the Addisleigh Homes Company and the Rodman and English Building Company built several blocks of houses in the English style on large plots on 179th and 180th streets between Murdock Avenue (114th Street) and Linden Boulevard. The houses cost $12,000 to $30,000 at a time when prices in Queens typically ranged from $8000 to $12,000. Buyers were drawn by the proximity of the golf course and the train station at St. Albans. Among the residents were such prominent African Americans as Lena Horne, Count Basie, Percy Sutton, Ella Fitzgerald, and Jackie Robinson. The Depression and the building up of available land put an end to development in 1939. In 2010 the neighborhood was still predominately middle-class African Americans, with about 650 homes, and efforts were under way to have the neighborhood designated a historic district by the Landmarks Preservation Committee.

Vincent Seyfried

Adler, Felix (*b* Alzey, Germany, 13 Aug 1851; *d* New York City, 24 April 1933). Religious leader and educator. His family emigrated from Germany and settled in New York City in 1857, when his father was invited to assume the rabbinate of Temple Emanu-El. Educated at Columbia College (BA 1870) and in Semitic studies at the University of Heidelberg (PhD 1874), he was influenced by Kantian religious idealism, studied European approaches to the problems of labor and industrial society, and taught Hebrew and Oriental studies at Cornell University for two years. With the support of German businessmen and professionals who were adherents of Reform Judaism he formed the New York Society for Ethical Culture in 1876, which drew on traditional creeds, ritual, and prayer, and at the same time emphasized activism, secularism, and universalism. He also helped to train leaders for societies in St. Louis, Philadelphia, Chicago, and London and remained the leader of the society to the end of his life. Active in causes of civic and social improvement in the city between 1876 and 1925, he strongly supported industrial education, kindergartens, settlement houses, good-government clubs, tenement reform, child labor legislation, and the construction of small parks, public baths, and laundries. His interest in labor and his belief in providing young people with training in ethics led to the opening by the society of a kindergarten in 1878 (the first in the eastern United States) and a workingman's school in 1880, the first of several Ethical Culture schools in the city. In his writings and lectures Adler discoursed on the philosophical, ethical, and practical applications of Ethical Culture and his belief that religion should be based on intellectual truth, that the moral development of the individual and of society was paramount, and that morality need not rely on theology.

Guttchen, *Felix Adler* (New York: Twayne, 1974); Benny Kraut, *From Reform Judaism to Ethical Culture: The Religious Evolution of Felix Adler* (Cincinnati: Hebrew Union College Press, 1979); Horace Leland Friess, *Felix Adler and Ethical Culture: Memories and Studies* (New York: Columbia University Press, 1981)

Jane Allen

Adler, Jacob (*b* Odessa, Ukraine, 1855; *d* New York City, 1 April 1926). Actor, father of Stella Adler. In 1879 he made his debut in the Ukraine in the Yiddish theater, then a developing genre. After performing in eastern Europe he settled in 1882 in London, where he became well known for his performance in the title role of Karl Gutzkow's *Uriel Acosta.* By the time he moved to New York City in 1887, Adler enjoyed an international reputation. He was most popular in grand emotional roles and was associated with such literary repertory as Jacob Gordon's *Der yidishe kenig Lear.* A glamorous figure, Adler married several prominent actresses, including Sara Heine-Haimovitch and Dina Stettin Feinman. Stella Adler and several of his other children, including Celia Adler, Luther Adler, and Frances Adler, worked in the Yiddish and English-language theater.

Nahma Sandrow

Adler, Samuel (*b* Worms, Germany, 3 Dec 1809; *d* New York City, 9 June 1891). Rabbi. After earning a doctorate in Germany in 1836 he became a leader of the Reform movement in Judaism. In 1857 he moved to New York City to lead the congregation of Temple Emanu-El, where he continued his reform work and sought to raise the level of religious consciousness. His revised version of the Hebrew prayer book became widely used. Adler formed the Hebrew Orphan Asylum of New York, which stressed religious training for children, and worked toward equality for women in religious matters. His published writings include *Leitfaden für den israelitischen Religionsunterricht* (1864).

James E. Mooney

Adler, Stella (*b* New York City, 10 Feb 1901; *d* Los Angeles, 21 Dec 1992). Actress and acting teacher who pioneered the teaching of Method acting in American theater and founded one of the nation's most prominent acting schools. Born into a theatrical family, she was the daughter of Jacob and Sara Adler, both Russian immigrants and leaders of the Yiddish stage movement in New York; her five siblings were also actors. She first appeared on stage at the Grand Street Theater on the Lower East Side when she was four. After enrolling in the American Laboratory Theater School in 1925, she began studying the Method, the revolutionary technique created by Konstantin Stanislavsky. While Classical acting focused on the development of external skills, Method acting emphasized the development of an actor's internal sensory, psychological, and emotional abilities. During the Depression she joined the Group Theatre, an experimental union of writers, directors, and actors who promoted socially relevant theater

in the United States. With one of the company's founders, Lee Strasberg, she became a leading authority on the application of the Method, though she and Strasberg often differed on the role that imagination should play in the acting craft. While Strasberg encouraged students to utilize their own personal memories in order to convey emotion, Adler emphasized the development of imagination as the key component of the acting craft. Throughout her long career she appeared in nearly 200 stage productions and won high praise for both her acting and directing talents. She also appeared in three Hollywood films: *Love on Toast* (1938), *Shadow of a Thin Man* (1941), and *My Girl Tisa* (1948). In 1949 she founded the Stella Adler Conservatory of Acting in Manhattan on West 27th Street, which soon became one of the premier acting institutions in the United States. A demanding and impassioned teacher, she shaped the careers of hundreds of notable performers, including Marlon Brando, Warren Beatty, and Robert De Niro. In 2003 the Stella Adler Outreach Program was established by the school to offer free actor training, internships, and scholarships to disadvantaged inner-city children.

Robert Sanger Steel

Adler v. Board of Education of the City of New York. U.S. Supreme Court case (342 U.S. 485) of 1952 that challenged the constitutionality of New York's Feinberg Law, which prohibited anyone who belonged to a list of "subversive" organizations from teaching in the public schools. Passed in 1949, this law was a product of the government's far-reaching efforts to subvert communist activity in the United States by removing dissenters from positions of influence. It was directed at communist activity but seemingly threatened much broader applications. The New York Teachers' Union organized a small group to challenge the law's constitutionality before it could be implemented. The case bore the name of Irving Adler, a math teacher at the Textile High School in Manhattan who was listed first alphabetically of the appellants. The teachers won their case in the state supreme court, but the decision was overturned by the state appellate court and made its way to the U.S. Supreme Court, where the Feinberg Law was upheld by a 6–3 decision in March 1952. The court's ruling set an important precedent for the restriction of political dissent and the role of the government in the education system during the McCarthy era. A number of city teachers, including Adler, lost their jobs in the ensuing years when they refused to answer questions about their political beliefs. In 1967 the Supreme Court essentially reversed its *Adler* decision in *Keyishian v. Board of Regents* (385 U.S. 589). Many of the city's teachers who had been fired during the previous decade, including Adler, applied successfully for reinstatement.

David White

Adriance Farmhouse. Historic house in Queens. It was built in 1772 by Jacob Adriance and is now at 75–50 Little Neck Parkway in Floral Park; it is part of the Queens County Farm Museum. The first farm on the site, built in 1697, was one of many farms established by colonial settlers who were drawn to the region by the rich soil deposited by glaciers. The farmhouse that now stands in its place was built in the Dutch style with a steeply pitched roof and a shingled exterior; it was doubled in size in the 1830s. From 1890 to 1926 the property was a truck farm; it was acquired in 1927 by the Creedmoor State Hospital, and until the 1960s patients tilled the soil. Two years after the last members of the hospital staff left the premises, the house and farm were opened as a museum in 1975.

Jonathan Kuhn

adult education. During the colonial period adult education consisted of instruction in English and the Bible. In 1857 the philanthropist and inventor Peter Cooper opened the Union for the Advancement of Science in New York City to provide free evening technical training for people who worked during the day and to sponsor lectures and discussions through the Cooper Union Forum. In the early nineteenth century night schools offered classes in English and civics to immigrants. In 1919 James Robinson and Charles Beard opened the New School for Social Research at 66 West 12th Street as a center for adult education, with emphasis on the social sciences and psychology. Adult education was greatly increased by the passage of the Servicemen's Readjustment Act of 1944 (popularly known as the GI Bill) and the Universal Military Training and Services Act of 1951, which provided veterans with the opportunity to complete high school and college. In the 1970s and 1980s a large number of women entered adult education programs. In the twenty-first century the public school system in New York City provides a wide range of free courses for adults. Most colleges have special programs for older students: at the City University of New York people 65 years old may enroll in any course for a minimal charge. The New York City Adult Literacy Initiative prepares adult students for tests in English as a second language and high school equivalency tests; it offers classes free of charge at community organizations, public schools, branches of the City University of New York, and public libraries.

Rachel Shor

advertising. During the eighteenth century advertising in New York City appeared mainly in newspapers. Classified advertisements took up half or more of the printed page in the *New-York Gazette* (1725), the *New-York Weekly Journal* (1733), and the *New York Daily Advertiser.* By 1800 the city was beginning to surpass Philadelphia in its number of newspapers, and advertisements became more common and more vivid, often carrying display type and crude illustrations. By the first quarter of the nineteenth century, more than 500 magazines also provided important advertising space. The first advertising agent in the United States, Volney B. Palmer, opened an office in New York City a few years after he began operations in the early 1840s in Philadelphia: his commission of 25 percent was charged not to the merchants who placed advertisements, but to the newspapers that printed them. An early competitor of Palmer, S. M. Pettingill, in 1852 became the first agent to prepare advertisements himself, a practice that gave rise to the modern advertising agency.

After the Civil War advertising became more important. Magazines were more numerous, and George P. Rowell made several innovations in newspaper advertising: his practice of buying up advertising space in bulk from newspapers and then selling it to advertisers, which he developed in Boston, prompted him to move to New York City. There he issued *Rowell's American Newspaper Directory* (1869), which listed all the newspapers in the country and for the first time gave an accurate estimate of their circulations, a service of great value to advertisers. In 1888 he launched *Printer's Ink,* the first advertising trade magazine. In 1875 N. W. Ayer and Son introduced the "open contract," which made it clear that the agent represented the advertiser rather than the newspaper and which specified the amount to be spent on the advertising, as well as the commission to be paid by the advertiser to the agent (12 percent, later raised to 15 percent). In 1879 Ayer conducted the first marketing survey. J. Walter Thompson began his career in New York City in the 1860s by placing advertisements in magazines, and in 1880 Cyrus H. K. Curtis conceived magazines that were not primarily literary publications but rather vehicles for the growing advertising industry. P. T. Barnum is often regarded as a primary innovator in advertising, as he astutely promoted a woman who he alleged was the 161-year-old nurse of George Washington, the midget Charles Stratton (advertised as General Tom Thumb), the Swedish soprano Jenny Lind, and a circus advertised as the "Greatest Show on Earth."

The electrification of New York City led to the introduction in the 1890s of enormous illuminated advertising signs, and by 1893 Broadway was known as the "Great White Way." The city had 25 small advertising agencies by the turn of the twentieth century. Criticisms of advertising being fraudulent reached a peak, and in 1911 the vigilance committee of the Advertising Club of New York supported a "truth in advertising" bill in the state legislature. The bill was enacted and soon inspired similar measures in 36 other states. The image of advertising improved further as a result of World War I, during which representatives of advertising agencies aided the war effort through the Council of National Defense. From 1918 to 1929 advertising agencies in the city grew along with a rapidly industrializing economy that produced and marketed everything from cigarettes and toothpaste to piano lessons and soft drinks. Radio broadcasts began in 1920, and within two years more than two million sets were in use, providing agencies with another advertising medium. Radio advertisements were resisted at first but eventually became an important means of selling inexpensive and often-purchased items as well as durable goods such as refrigerators.

During the 1920s J. Walter Thompson emerged as the leading advertising agency in the United States, in part through its emphasis on market research, which it began in 1923 when it conducted a quantitative study of magazine circulation that proved widely influential. Another important agency, Young and Rubicam, began in 1923 in Philadelphia and moved to New York City in 1926. Raymond Rubicam was a brilliant copywriter who helped to focus greater attention on the creative side of the business. The agency also engaged George Gallup in 1932 to conduct research into copy testing and marketing. Advertising continued virtually unabated during World War II, when advertisements showing how a firm's products were helping to win the war were common. Advertisers also prepared to satisfy the pent-up demand for products that would be released when the war ended.

The late 1940s and 1950s, which saw an enormous expansion of the advertising business in New York City, included the advent of television. By 1952 there were 18 million television sets and 110 commercial transmitters in the United States, and by 1954 the Columbia Broadcasting System was the largest advertising medium in the world. Radio as an advertising medium was hit hard by the introduction of television and struggled for many years to recover. By 1957 television advertising accounted for $1.5 billion in spending by advertisers.

By the 1960s a new emphasis was placed on the creative side of the advertising business, in what came to be called the "creative revolution." William Bernbach, a native of Brooklyn, was influential in this change; his work sought drama in the natural, everyday language and expression of ordinary people, for example in his advertisements for Levy's Jewish Rye and his campaign for Volkswagen based on the slogan "Think small." Two other leading figures were Leo Burnett (who conceived the Marlboro man and the Jolly Green Giant) and David Ogilvy (who conceived the man in the Hathaway shirt and Commander Whitehead for Schweppes). During the 1960s many advertising agencies in the city were formed with creativity as their guiding principle. At the same time the advertising business was becoming ethnically more heterogeneous: the agency Doyle Dane Bernbach employed Jews, thus breaking with a long discriminatory practice of most agencies (with the notable exception of Grey Advertising). Gradually other ethnic exclusions were removed, and by the 1980s the advertising business in New York City was essentially open to whoever had sufficient talent to work in it.

The creative revolution faltered during the 1970s, and a renewed emphasis was given to the "hard sell," which stressed the product rather than the style of presentation. During the same period a number of the major advertising agencies in the city changed from partnerships to publicly owned corporations, including Doyle Dane Bernbach; Foote, Cone and Belding; Grey Advertising; Ogilvy and Mather; and J. Walter Thompson. Some agencies consolidated through merger and acquisition, including Ted Bates; Interpublic; Ogilvy and Mather; Wells, Rich, Greene; and Young and Rubicam. The trend toward consolidation continued into the 1980s: under the leadership of Martin Sorrell, the WPP Group acquired J. Walter Thompson and the Ogilvy Group, and the Omnicom Group was formed through the merger of BBDO International, Doyle Dane Bernbach, and Needham Harper Worldwide. The number of multinational advertising agencies decreased from 12 in 1978 to eight in 1988, and at the end of the 1980s only four of the 15 largest agencies in the country had the same ownership and structure as they had had at the beginning of the decade. With the recession of the late 1980s and early 1990s consolidations became less frequent and the advertising business entered a period of retrenchment. Nonetheless, New York City remained the advertising capital of the country, with half the people in the United States working in advertising being based in the city. With the rise of the Internet and e-mail into the twenty-first century, advertisers found new ways to revitalize marketing strategies as well as to work with older media such as cable television and film. New York City is home to the Association of National Advertisers (708 Third Avenue) and the American Association of Advertising Agencies (405 Lexington Avenue), both founded in 1917.

To the PUBLIC.

THE FLYING MACHINE, kept by John Mercereau, at the New-Blazing-Star-Ferry, near New-York, sets off from Powles-Hook every Monday, Wednesday, and Friday Mornings, for Philadelphia, and performs the Journey in a Day and a Half, for the Summer Season, till the 1st of November; from that Time to go twice a Week till the first of May, when they again perform it three Times a Week. When the Stages go only twice a Week, they set off Mondays and Thursdays. The Waggons in Philadelphia set out from the Sign of the George, in Second-street, the same Morning. The Passengers are desired to cross the Ferry the Evening before, as the Stages must set off early the next Morning. The Price for each Passenger is *Twenty Shillings*, Proc. and Goods as usual. Passengers going Part of the Way to pay in Proportion.

As the Proprietor has made such Improvements upon the Machines, one of which is in Imitation of a Coach, he hopes to merit the Favour of the Publick.

JOHN MERCEREAU.

Afghans. The extent of Afghan immigration to the United States was difficult to measure before 1953; only after passage of the 1952 McCarran–Walter Immigration and Nationality Act were members of the former Asiatic Barred Zone (non-Europeans and non-Africans) allowed to enter the country. The number of Afghan immigrants to New York City increased markedly after Marxists, with help from the army, seized control of the government in 1978 by assassinating the prime minister, Mohammad Daoud Kahn, who had overthrown King Zahir Shah in 1973. This later group represented all classes of Afghan society, though most of its better-educated members found themselves underemployed in their new home. According to immigration statistics, 1868 Afghans entered New York City between 1982 and 1987, a number that excludes those who entered the country illegally. After the Taliban took control of Afghanistan in 1996, many Afghans fled to New York, and following the attacks of 11 September 2001, the U. S. War on Terror drove even more inhabitants from Afghanistan. In response the United States initiated a special immigration program that opened up 500 special immigration visas annually for Afghans and Iraqis who had helped U.S. military forces. In 2008 there were just over 9000 Afghans living in New York City. A section of Flushing is sometimes referred to as Little Afghanistan; small Afghan communities have also taken root in several

Queens neighborhoods including Elmhurst, Jackson Heights, and Corona, and in Midwood, Brooklyn. The majority of Afghans in New York City are Muslims. The most visible Afghan organization in the country, the Afghan Community in America, based in Queens, has expended considerable effort to dislodge the Soviet Union from Afghanistan and influence American political leaders and public opinion.

African Americans. New York City has played a pivotal role in the history of African Americans. During the nineteenth century it was a center of abolitionism; the site of influential black churches, benevolent organizations, and schools; and a focus of sometimes violent conflict between blacks and European immigrants. After the turn of the twentieth century Harlem became internationally known as a center of black nationalism and other forms of political activism, and of the literary and artistic movement known as the Harlem Renaissance. In later years the city's black community increased its political power and eventually accounted for more than a quarter of the total population.

1. From the Colonial Period to 1900

The African presence in what is now New York City dates to the Dutch settlement of New Amsterdam in 1626 when the West India Company imported enslaved Africans to build public works and to labor in the prosperous fur trade. The Dutch recorded the names of nine of the first male slaves as Paulo Angola, Simon Congo, Big Manuel, Little Manuel, Manuel de Gerrit de Reus, Anthony Portuguis Garcia, Peter Santomee, Jan Francisco, and Little Anthony. The first female slaves arrived on the island in 1628. Those enslaved by the company were given the right to be baptized, to marry, and to own property and were allowed to work for themselves when their services were not required by the company or other slave owners. They could also obtain legal recourse and could testify against and sue whites. Because of these privileges slavery in New Netherland was less severe than in other colonies of the western hemisphere. On 25 February 1644 the 11 male slaves who had been the first to arrive in the colony and their wives were declared "half free" on petition; in exchange for this conditional freedom they were required to make an annual payment to the Dutch West India Company of 22.5 bushels (800 liters) of beans, corn, peas, or wheat and a fat hog valued at 30 guilders. They received deeds to land that some had farmed before their emancipation, near that deeded to Africans who had always been free, in the area between what are now Astor Place and Prince Street in Greenwich Village. The children (born and unborn) of the half-freed slaves remained the property of the company.

The English conquest of New Netherland in 1664 resulted in harsher and more restrictive bondage. Most free Africans were disfranchised, any public assembly of more than three Africans or Indians was deemed illegal, curfews were set for blacks and Indians, and free Africans were penalized for harboring fugitive slaves. In 1703 there were 630 blacks in what is now New York City. An uprising of slaves on 6 April 1712 culminated in the death of several whites, for which 19 African participants were executed, and led to the passage of a law that barred Africans from owning property. The enslaved population continued to rise: Africans accounted for about 20 percent of the city's 11,000 residents by 1741. In the same year Africans were accused of conspiring to burn down the colony, for which more than 30 people were executed and 71 deported.

Lured by the promise of freedom, enslaved Africans fought on both sides of the conflict in the American Revolution. In 1781 the state assembly passed a law freeing all Africans who had served in the state's military forces. But the political and civil rights of all black New Yorkers were severely limited: they could not vote or hold public office, interracial marriage was prohibited, and a statute passed in 1785 precluded them from testifying against whites in court. In the same year the New York Manumission Society was formed. Its members argued that slavery was incompatible with the democratic rhetoric that fueled the American Revolution. Abolitionists persuaded the state legislature in 1799 to enact the Act for the Gradual Emancipation of Negroes and Other Slaves, which stipulated that every male slave born after 4 July 1799 was to be freed at the age of 28 and every female at 24.

In 1796 a group of free Africans in New York City began to hold meetings that eventually led to the formation of the African Methodist Episcopal Zion Church, the first black congregation in the city (eventually known as "Mother Zion," it later occupied a church built at Church and Leonard streets in 1801). The first black Baptist church in the city, the Abyssinian Baptist Church, was formed in 1808 on Worth Street and directed by Thomas Paul. In the same year the African Association for Mutual Relief, the first insurance company that catered to blacks, was opened on Baxter Street by several black civic and political leaders. African American members of the White Sands Street Methodist Church in Brooklyn left in 1812 to form the High Street African Wesleyan Methodist Episcopal Church, and the first congregation of black Episcopalians, led by Peter Williams, Jr., built St. Philip's Protestant Episcopal Church on Centre Street in 1818. Out of the early African American churches grew literary and musical societies, church schools, and benevolent organizations such as the New York African Society for Mutual Relief (formed in 1808).

In 1821 the state legislature ruled that African Americans could vote only if they owned property worth at least $250, while at the same time it eliminated the property qualification for white male voters. Not surprisingly there were only 16 qualified African American voters in 1825 and 68 in 1835. Most employed African Americans in the nineteenth century were unskilled; men often were laborers and women domestic servants. In 1825 more than one-fifth of the African American residents of Manhattan lived in the sixth ward, which spread from Five Points north and west to the Hudson River.

A group of free blacks set up separate schools for black children, which were open only sporadically and were always underfinanced. The New York Manumission Society founded African Free Schools during the late eighteenth century. The nation's first black newspaper, *Freedom's Journal,* was launched in 1827 by the abolitionist minister Samuel Cornish and John Russwurm, one of the first blacks in the United States to receive a college degree. Its goal was to improve the political and economic standing of free blacks and agitate for the end of slavery. The newspaper later changed its name to *Rights for All* before ceasing publication in 1830. Other black newspapers in New York City in the nineteenth century were the *Colored American* (1837), the *Ram's Horn,* the *Anglo-African* (1859), and Frederick Douglass's *North Star* (1847). Williams helped to form the African Dorcas Society (1828), a women's sewing group that made clothing for young black students so that they could attend the African Free Schools. Many middle-class blacks opened restaurants, the most successful of which were Thomas Van Renesselaer's Eating House on Wall Street, Katy Ferguson's Pastry Shop on Thompson Street, Downing's Oyster House on Broad Street, and Cato's in lower Manhattan. The all-male African Clarkson Association, formed in 1829, was both a literary society and a benevolent organization. Its members paid monthly dues of 25 cents and could receive financial help when they or their families fell ill.

There were more than one dozen black literary and book-lending societies in Manhattan and Brooklyn by the mid-nineteenth century. The Philomethean Society (1830) owned more than 600 volumes by 1837, and the Phoenix Society (1833) sponsored lectures on history and science that regularly attracted more than 300 listeners; its members included Williams, Cornish, the abolitionist and book merchant David Ruggles, and the poet Charles B. Ray. Literary groups for women included the Female Literary Society (1834) and the Ladies Literary Society (1836). The Garrison Literary

Association (1834), a group for children and young adults, was open to any person of good moral character between the ages of four and 20 willing to pay annual dues of 12.5 cents. In 1845 a group of white abolitionists and politicians in New York City formed the African Education and Civilization Society (more commonly known as the African Civilization Society), which prepared black students to teach in Africa. The Society for Promoting Education among Colored Children was formed in 1847 by the poet and educator Charles Reasoner at 49 Frankfort Street.

In the 1840s many white European immigrants moved to New York City, leading to a great deterioration in the employment opportunities available to free blacks. Their political status remained weak as well: in 1846 a proposed amendment to the state constitution that would have granted blacks the same voting rights as whites was rejected by the local electorate. The fight for suffrage and against American colonization led to the formation of the Negro Convention movement in the 1830s. In 1834 a black minister delivering an abolitionist sermon to a predominantly black audience at the Chatham Street Chapel was assaulted, triggering five days of antiabolitionist agitation in which white mobs attacked blacks and abolitionist white churches as well as the Bowery Theatre. Two black churches were extensively damaged before the militia ended the violence on the night of 11 July by arresting about 150 ringleaders of the mob. By 1850 most of the city's blacks were living in or near Greenwich Village, and by 1860 others had settled on the West Side between 10th and 30th streets, the infamous Tenderloin. After accounting for 5 percent of the city's population in 1840, blacks in 1860 accounted for less than 2 percent.

A rash of antiblack incidents beset New York City during the Civil War. In the summer of 1862 a mob of Irishmen attempted to burn down a tobacco factory in Brooklyn where two dozen black women and children were working. The DRAFT RIOTS of 13–17 July 1863 began as a protest against a clause in the draft law exempting from service those who paid a $300 fee but soon assumed racial dimensions as an Irish mob assaulted blacks, hanging many and mutilating others, and destroyed black institutions and homes. This was the bloodiest riot in the history of the United States, and at least 105 people died. In 1869 a proposal to eliminate the property qualification for black voters was rejected by the electorate in New York State. Blacks in the city did not obtain the vote on an equal basis with whites until three-fourths of the states ratified the 15th Amendment to the U.S. Constitution in March 1870.

The Afro-American League (1889) and the Afro-American Council (1898), both formed by the militant black editor of the *New York Age,* T. Thomas Fortune, were short-lived. Black Democrats had no power in Tammany Hall, which tried to appease them in 1898 by creating an all-black group called the United Colored Democracy. Although there were 60,666 blacks in New York City by 1900, they still accounted for less than 2 percent of the total population, as immigrants from southern and eastern Europe flooded the city. Competition among blacks and immigrants for jobs and housing resulted in mutual distrust and hostility. A riot erupted in the Tenderloin on the night of 15 August 1900 after a white policeman was killed by a black man. Blacks were pulled from streetcars and beaten by the mob, and many fought back by hurling bricks and bottles. The police made little effort to intervene, and some joined the rioters in their racial attacks. In response to what they saw as a police cover-up of the incident, 3500 blacks met at Carnegie Hall on 12 September 1900 to form the Citizens' Protective League.

2. After 1900

In 1904–5 the real estate market in Harlem collapsed, leaving unfilled many new apartment houses along Seventh and Lenox avenues in the West 130s and 140s. To find tenants landlords reduced rents, allowing many blacks to move into the area. Several real estate firms purchased a number of these properties, among them the Afro-American Realty Company, formed in 1904 by Philip A. Payton, Jr. Blacks also established a community in San Juan Hill that stretched from 60th to 64th streets between 10th and 11th avenues; the area was the site of another race riot in 1905. By 1914 Harlem had 50,000 black residents, and several black churches moved there from midtown, including St. Philip's Episcopal Church (to 133rd Street) and the Abyssinian Baptist Church (to 138th Street), which had become the largest black church in the city. White residents and landlords opposed to the rapid increase in the area's black population were active in the Harlem Property Owners' Improvement Corporation from 1910 to 1915. The Gates Avenue Association protested the more modest influx of blacks into Brooklyn.

The expansion of the black community in New York City was fueled by migration from the South, a desire to escape southern racism and deprival of voting rights, and a search for economic opportunity and political freedom. The northward migration created the large black residential ghettos of northern cities and simultaneously a growing and eventually significant black electorate. Between 1910 and 1930 the white population of Manhattan decreased by 633,249 while its black population increased by 154,135. In 1917 Edward Johnson, a Republican from the 19th assembly district in Harlem, became the first black elected to the state legislature. Many blacks from the city fought in World War I: the all-black 369th Regiment (known as the Harlem Hellfighters) received the Croix de Guerre from the French government and returned to Manhattan for a triumphant victory parade on 17 February 1919. At the same time landlords were overcharging blacks in a racially restricted market, companies and unions were practicing blatant racial discrimination, and Harlem had the worst health record in the city. These racial inequities, coupled with antiblack race riots in 26 cities in the summer of 1919, converted many blacks to the nationalistic philosophy of the Universal Negro Improvement Association (UNIA), based in New York City and led by MARCUS GARVEY, who argued that blacks in the New World should be repatriated to Africa and that Africa should be liberated from European colonial rule. The core of Garvey's support was the large West Indian population of Harlem, but the group recruited members from all over the city through parades and conventions in Madison Square Garden. The UNIA disintegrated in the mid-1920s after Garvey was convicted of mail fraud, sentenced to federal prison, and later deported. Although other militant black organizations such as the Marxist nationalist African Blood Brotherhood had large followings, as did radicals like Cyril Briggs, Hubert Henry Harrison, and William Bridges, who were all active in New York City, they failed to capture the imagination of blacks in the city as Garvey had.

In the 1920s writers and artists traveled to Harlem from all over the United States to be part of the literary and artistic movement known as the Harlem Renaissance. Charles S. Johnson, editor of the magazine *Opportunity* (published by the National Urban League), held a meeting of leading black writers and white publishers at the Civic Club in March 1924 that helped to launch the careers of such talented black writers as Langston Hughes, Claude McKay, Zora Neale Hurston, Countee Cullen, Jean Toomer, and Rudolph Fisher. The painters Aaron Douglas, William H. Johnson, Palmer Hayden, and Malvin Gray Johnson and the sculptor Augusta Savage strove to invent a black American art by studying African art and emulating its styles and themes. Plays with black themes and actors enjoyed great success, notably *The Emperor Jones* (1920) and *All God's Chillun Got Wings* (1924) by Eugene O'Neill and *The Green Pastures* (1930) by Marc Connelly.

During the Depression 50 percent of blacks in New York City were unemployed, double the unemployment rate of whites. In 1929 the Republican Charles W. Fillmore was elected the city's first black district leader, but many blacks soon shifted their support from the Republicans to the Democrats, who for the first time received a majority of the black vote in elections for the presidency (1932), mayoralty (1933), and governorship (1934). By the mid-1930s the first effective black political organization in Brooklyn had developed

among the Democrats of Bedford–Stuyvesant. At the same time white merchants on 125th Street in Harlem refused to employ black sales clerks, and a boycott against them was organized in 1934 by Sufi Abdul Hamid. The Citizens League for Fair Play, a middle-class black organization led by John H. Johnson, became a powerful force in the boycott. The boycott ultimately failed when a court order prohibited the picketing of white merchants and the groups became riven by disagreements. A rumor that the police had killed an adolescent boy, Lino Rivera, for stealing a penknife sparked a riot in Harlem in 1935. In 1938 a second boycott of the white merchants on 125th Street, led by Adam Clayton Powell, Jr., and the Greater New York Coordinating Committee, was more successful in ending employment discrimination. Additional boycotts were launched against the bus and telephone companies, which also refused to employ blacks. The Communist Party received much publicity by protesting police brutality against blacks, racial bias in the city's public schools, and inadequate services and discrimination at Harlem Hospital.

Blacks as a Percentage of Total Population in Selected Counties of New York State, 1790–1890

	New York	Kings	Queens	Richmond	Westchester
1790	10.47	32.88	19.46	23.10	7.42
1800	10.53	31.55	17.52	16.61	6.35
1810	10.19	22.32	16.36	13.30	6.38
1820	8.80	15.74	14.90	9.94	5.65
1830	6.90	9.77	13.77	7.79	5.80
1840	5.23	5.98	11.57	4.40	4.73
1850	2.68	2.93	9.37	3.92	3.56
1860	1.55	1.79	5.90	2.59	2.28
1870	1.39	1.35	5.14	2.38	1.91
1880	1.63	1.53	4.20	2.39	2.37
1890	1.56	1.35	2.76	1.86	2.33

Note: During the period 1790–1890 New York, Kings, and Richmond counties are assumed to be substantially equivalent to the present Manhattan, Brooklyn, and Staten Island. Queens included what is now Nassau County, and Westchester included what is now the Bronx.

Sources: U.S. Bureau of the Census, Reports for 1790, 1800, 1810, 1820, 1830, 1840, 1850, 1860, 1870, 1880, 1890; Ira Rosenwaike, *Population History of New York City* (Syracuse: Syracuse University Press, 1972)

The outbreak of World War II and the U.S. military buildup did not benefit blacks in the city to the same extent that it did whites: 40 percent of the city's black population in 1940 remained on relief or dependent on federal funds for temporary work relief. A survey of 72 defense plants in Brooklyn taken by the Urban League in 1941 revealed that they employed only 234 blacks in a total workforce of 13,840, and almost half the plants excluded blacks entirely. In the same year A. Philip Randolph formed the March on Washington Committee in New York City to prevail on the federal government to end the political disfranchisement of blacks in the South, desegregate the army, and prohibit discriminatory employment practices by defense contractors. Fearful of a potential threat to national unity, President Franklin D. Roosevelt asked Eleanor Roosevelt and Mayor Fiorello H. La Guardia to persuade Randolph to call off the protest march. Randolph agreed, provided that the government ban discrimination in companies with defense contracts; in response, Roosevelt on 25 June 1941 issued an executive order banning discrimination in defense industries. Even then blacks were relegated to less lucrative forms of work: they tended not to work in defense industries but rather to take the place of whites who did, as well as whites who had gone to war.

World War II saw the emergence of Powell as an important political figure. After serving as the pastor of Abyssinian Baptist Church he won a seat on the City Council in 1941. Although La Guardia had supported his candidacy, the two men were soon at odds over Powell's charges of racial discrimination and police brutality in New York City. In 1942 Powell protested the refusal of City College to reappoint a black leftist professor, Max Yergan, at a time when the school did not have any full-time tenured black professors. He also criticized La Guardia for allowing the U.S. Navy to use Hunter College and Walton High School as training facilities for the Women's Reserve, which practiced racial segregation, and for contracting with the Metropolitan Life Insurance Company to build Stuyvesant Town, a tax-exempt, quasi-public housing project on the Lower East Side that excluded blacks from its properties. The city eventually agreed to prohibit the discriminatory selection of tenants in all its future projects.

The shooting of a black military policeman by a white policeman in mysterious circumstances at a hotel in Harlem on 1 August 1943 led to a riot in which five people were killed and 307 were injured. Plate-glass windows of stores along 125th Street were smashed, and the total damage exceeded $5 million. The anger of the community was evident that autumn when the communist Benjamin Davis was elected to the City Council because of his strong sponsorship of civil rights. Davis replaced Powell, who had resigned from the council and won a seat in Congress as a Democrat in 1944. In 1953 Assemblyman Walter Gladwin became the first black elected official in the Bronx, and Hulan E. Jack, a seasoned Democratic politician, became the first black borough president of Manhattan. Brooklyn elected its first black city councilman, J. Daniel Diggs, in 1957.

The unemployment rate of blacks in New York City during the 1950s remained double that of whites. Of the students who entered academic high schools in Harlem in 1959, about 53 percent failed to graduate, as did 61 percent of those entering vocational schools. By the mid-1960s only about half the children in Harlem lived with their parents, compared with 83 percent in New York City as a whole. As the population of Harlem declined and the black population of the other boroughs increased, poverty and unemployment remained. In 1961 the Congress of Racial Equality (CORE) demanded that a milk plant operated by Sealtest–Sheffield Farms in Bedford–Stuyvesant increase its black labor force, which then consisted of seven out of 367 employees, and in 1963 it demanded that more blacks work on the construction of the Downstate Medical Center. Constance Baker Motley served as the borough president of Manhattan (1965–66), as did Percy Sutton. In 1964 J. Raymond Jones, known as the "Harlem Fox," became the first black leader of Tammany Hall, and Kenneth Brown became the first black elected to the state assembly from Queens. In the same year Milton Galamison and the City-Wide Committee for Integrated Schools led two student boycotts of classes to demand the removal of the president of the Board of Education, and Jesse Gray organized rent strikes in Harlem by black tenants to obtain affordable housing. The killing of a black youth by a white police lieutenant in the summer of 1964 led to a riot in Harlem that lasted three nights; one person was killed, 141 were seriously injured (including 48 police officers), and 519 were arrested. Amid this unrest militant black leaders like Malcolm X and organizations like the Nation of Islam gained increasing popularity. After the riot Mayor Robert F. Wagner invited

Martin Luther King, Jr., to New York City to obtain his advice on racial matters, and charges of police brutality led to the formation of a civilian police review board. Mayor John V. Lindsay's efforts to promote better race relations in the city contributed to its escape from the massive rioting that besieged other U.S. cities during the 1960s.

In 1968 Shirley Chisholm of Brooklyn became the first black woman to be elected to the U.S. Congress by defeating James Farmer, a nationally known civil rights leader and former head of CORE. Despite his troubles with CORE stemming from charges of conflict of interest, Powell was repeatedly reelected until he lost his seat to Charles B. Rangel in 1970. During the administration of President Lyndon B. Johnson the Bedford Stuyvesant Restoration Corporation, an antipoverty agency in Brooklyn, obtained about $50 million from government and foundation sources, an impressive sum that nevertheless amounted to only $125 for each resident of the area over a seven-year period. With the de-escalation of the war on poverty and the shift from manufacturing to a service economy that relied on a more highly educated and technically skilled labor force, employment prospects for many lower-income blacks diminished: in New York City between 1970 and 1984 industrial employment requiring only a minimum of education fell from 492,000 to 239,000. The city's black population increased from 458,000 in 1940 to 1,668,000 in 1970, while suburbanization reduced the white population from 6,977,000 to 6,048,000. Many blacks left Manhattan to live in less crowded areas, and consequently the number of blacks living in the outer boroughs increased sharply.

In November 1989 David N. Dinkins was elected the first black mayor of New York City after asking residents to vote their hopes, not their fears. He made strenuous efforts to manage the city, which he frequently referred to as a "gorgeous mosaic" of racial, ethnic, and religious groups, but he was unable to stem the tide of economic decay and ethnic factionalism abetted by years of official neglect. This lack of success led to his narrow defeat in 1993 by Rudolph W. Giuliani, although his record was consistent with that of other mayors of large American cities in the early 1990s.

According to the federal census the non-Hispanic black population of New York City in 1990 stood at 1,847,049 (including 417,506 foreign-born), accounting for 25.2 percent of the total population and representing an increase of 9 percent over the preceding decade.

3. Post-1990 Gentrification

The economic boom of the 1980s barely reached Harlem. By 1990 high unemployment rates, high crime rates, poor schools, and deteriorating social services contributed to the continuing suburbanization of the black middle class. Between 1960 and 1990 Harlem lost approximately one-third of its population and half of its housing stock, but because of its illustrious history as the epicenter of the African American renaissance of the 1920s, the neighborhood continued to hold the attention of urban planners and community activists.

At the turn of the twenty-first century, Harlem had a dearth of bank branches, grocery stores, chain stores, and upscale coffee shops, but that changed during the following years with the establishment of major department store outlets, movie complexes, and "higher end" stores. Questions of housing affordability became important in the community. In May 2008 the City Council approved the rezoning of 125th Street to pave the way for high-rise office towers and some 2100 new market-rate condominiums. Such changes could cause the loss of small businesses and the displacement of some long-term residents. With renovated brownstones in Harlem selling for $1 million and new condominium apartments selling for almost that much, working-class Harlem residents cannot afford the newer upscale housing.

The arrival of the black and white "gentrifiers" is changing the class and racial composition of Harlem. Black urban professionals profess a desire to redeem Harlem and other historic black communities from decay and despair. White urban professionals seeking quality housing at affordable prices claim a color blindness and a willingness to live in an integrated neighborhood. Nevertheless, both black and white gentrifiers have similar effects upon the working class. Lawsuits, calls for economic boycotts, community-wide meetings, and denunciations to block gentrification have become commonplace. The return of middle-class people to Harlem may improve city services, but integrating lower income urban residents into the economic mainstream transcends gentrification.

African Burial Ground. Seven-acre (2.83-hectare) burying place for enslaved and free Africans from the late 1600s to 1794. The Negroes Burial Ground, situated north of present-day Wall Street, may be related to Trinity Church, at Broadway and Wall Street, which received its charter and land title in 1697. That same year the church declared that Africans who were not members of the church would no longer be buried in the churchyard. Prior to the establishment of Trinity Church as the Church of England in New York, the land had been designated as the city's burial ground for paupers, who were interred there without regard to race. The establishment of the African Burial Ground created a segregated location for the burial of Africans and people of African descent outside the official city limits.

The northern portion of the cemetery at Duane and Elk streets was excavated in 1991–92, when the federal government began the construction of an office building at Broadway and Duane Street. The remains of 419

men, women, and children were unearthed and analyzed at Howard University, in Washington, D.C. The number of human remains buried in the cemetery is estimated at more than 15,000, nearly 50 percent of which are children under the age of 12. The skeletal remains of these children indicate malnutrition and early disease; those of adult men and women show evidence of hard labor. Artifacts associated with the burials included African trade beads, shroud pins, fragments of shroud cloth, coins, buttons, bits of smoking pipes, coffin hardware, and a few items of silver and copper jewelry. Approximately 200 to 300 human remains are estimated to lie below the excavated portion of the site; these were not unearthed owing to community and public protest over the defilement of a previously unknown sacred site.

The Negroes Burial Ground became the African Burial Ground in 1993 because use of the term *Negro* was considered derogatory. The word *African* was used throughout the late eighteenth and early nineteenth centuries in the names of organizations created for and by people of African descent and was thereby viewed as historically in keeping with what Africans called themselves during the time the cemetery was in use. The African Burial Ground is a National Historic Landmark, and New York City designated the surrounding area the African Burial Ground and Commons Historic District in 1993. In 2003 the excavated ancestral remains and artifacts were reinterred on a portion of the historic site. More than 8000 "ancestor cards," which contemporary people had used to express love, honor, and gratitude for their African ancestors, were also buried at the site. In 2004 Elk Street, which borders the reburial site to the east, was renamed the African Burial Ground Way.

The African Burial Ground National Monument was established by proclamation of President George W. Bush on 26 February 2006 and is now administered and managed by the National Park Service. In fall 2007 a 25-foot (7.62-meter) granite memorial by the architect Rodney Leon, entitled *Door of No Return,* was dedicated at the site.

Sherrill D. Wilson

African Dorcas Society. New York City's earliest African American women's association. Founded by members of St. Philip's Church in 1827 at the urging of church leaders, the society was created the same year that African slavery ended in New York. Its primary purposes were to collect monies and to gather and sew clothing for impoverished African American children to enable them to attend classes at the African Free Schools.

Sherrill D. Wilson

African Free Schools. Schools opened by the New York Manumission Society during the late eighteenth century to provide children of African ancestry with moral and practical instruction. The first African Free School, under the instruction of Cornelius Davis, admitted both boys and girls and offered training in reading, penmanship, arithmetic, grammar, geography, and (after 1791) needlework. In 1797 trustees added an evening school for adults taught by William Pirsson and his assistant John Teasman, one of the few early teachers who were black. On Pirsson's retirement Teasman took charge and in 1809 introduced a highly efficient monitorial method of teaching developed in London by Joseph Lancaster. By training a group of student monitors who eventually became teachers themselves, Teasman increased the average attendance at the free school from 60 to more than 350. The first schoolhouse was destroyed by fire in 1814, and the society soon built another one at 245 William Street. A second school was established closer to the city's black population at 135 Mulberry Street in 1820; between 1827 and 1829 the society employed the editor and minister Samuel Cornish to increase enrollment. Five schools opened in 1831–33 under Benjamin H. Hughes, and the curriculum of the schools expanded as Charles C. Andrews, the principal instructor, added classes in navigation, business, and skilled trades.

In the early 1830s William Hamilton, Henry Sipkins, and Thomas Downing mounted a successful campaign to remove Andrews because of his support for the African colonization movement. Under increasing local demands for more black teachers the schools appointed John Peterson, Sarah M. Douglass, Ransom F. Wake, and Charles Reason; by 1834 blacks taught in five of the seven schools and held all but one of the assistants' positions. In the same year the Manumission Society transferred control of all seven of its schools to the New York Public School Society, a charity group not belonging to the abolitionist movement. Two of the schools were designated as public schools and the rest at a lower level as public primaries; all became part of the public school system in 1847. During their 60-year history the African Free Schools prepared many of their students for more advanced education and trained future leaders like the physician James McCune Smith, the abolitionist ministers Samuel Ringgold Ward and Henry Highland Garnet, the Episcopal clergyman and scholar Alexander Crummell, the antislavery leader and Liberian government official John B. Russwurm, the businessman Peter Williams, the abolitionist Theodore S. Wright, the engraver Patrick Reason, and the Shakespearean actor Ira Aldridge. Largely denied entry into the skilled trades, other products of the practical curriculum had to settle for work as waiters, coachmen, barbers, servants, shipwrights, and seamen.

Robert C. Morris

African Methodist Episcopal Church. A denomination formed by black members of the St. George Methodist Episcopal Church in Philadelphia, who withdrew in 1787 because of racial discrimination. Most who withdrew became Episcopalians, but a small group led by Richard Allen formed a congregation named Bethel African Methodist Episcopal Church. Repeated efforts by white Methodists to assert control led Allen to gain autonomy for the congregation in 1807 and to form an independent denomination in 1816, the African Methodist Episcopal Church, of which he became the first bishop. In 1819 Allen sent William Lambert to New York City to hold the first New York Annual Conference; independent congregations in Brooklyn (1766) and Flushing (1810) were among the first to join the church. During the years before the Civil War the church grew rapidly. In 1918 Reverdy C. Ransom, the pastor of Bethel Church in Manhattan and later a bishop, became the first black to seek election to the U.S. House of Representatives, from the 21st congressional district. Floyd H. Flake, the pastor of Allen Church in Jamaica, was elected to the U.S. House of Representatives in 1986 (from the sixth district, in Queens). In the beginning of the twenty-first century, the church had 2.5 million members in the United States, 20 bishops, and 19 episcopal districts in North America, South America, the Caribbean, Africa, and Europe. It operates missions and financial agencies, issues publications, and sponsors housing, institutions of higher education, and social service centers.

African Methodist Episcopal Zion Church. Church formed by black members of the John Street Church in New York City. Increasing tension with white members led some black members of the John Street Church to ask Bishop Francis Asbury for permission to conduct separate services in 1796. Although officially autonomous, the African Chapel remained within the jurisdic-

tion of the Methodist Episcopal Church until 1820, when a group led by William Stillwell, a supporter of the independent black church movement, broke away. After failing to win independence within the white church, blacks formed the African Methodist Episcopal Zion Church in 1821; congregations were organized in Manhattan, Philadelphia, and New Haven, Connecticut, and on Long Island. James Varick was elected the first superintendent in 1822 and reelected in 1826; Christopher Rush succeeded him in 1828. At the urging of the African Methodist Episcopal Church during preparations for a merger in 1864, the church replaced its superintendency with a lifetime episcopacy. Although the merger failed, the superintendents of the church became bishops in 1868. From 1880 they served without term restrictions. Congregations formed in New England and the Middle Atlantic states, and the church became associated with abolition through the work of such noted members as Sojourner Truth, Harriet Tubman, Jermain Loguen, and Frederick Douglass. After Emancipation missionaries opened churches in the South. Expansion was most rapid in North Carolina and Alabama; many congregations were also formed in other parts of the South, the Midwest, and the West. Membership increased from 13,702 in 1864 to 349,788 in 1890. Well-known members of the church in New York City during these years included T. Thomas Fortune, who between 1881 and 1907 launched the newspapers the *Freeman*, the *Globe*, and the *Age*, and Bishop Alexander Walters, an important black spokesman in the Democratic Party, especially during the presidential election of 1912. At the beginning of the twenty-first century the church had more than 1.2 million members in 13 episcopal districts in the United States, South America, the Caribbean, West Africa, and England and 13 bishops, who oversaw missions, publications, pension funds, and evangelical efforts. Its principal educational institutions were Livingstone College and Hood Theological Seminary in Salisbury, North Carolina.

Agee, James (Rufus) (*b* Knoxville, Tenn., 27 Nov 1909; *d* New York City, 16 May 1955). Essayist, poet, and novelist. After graduating from Harvard University in 1932 he moved to New York City to work as a reporter for *Fortune.* He took a basement apartment at 38 Perry Street in Greenwich Village and had an office on the 52nd floor of the Chrysler Building, where he became known for working all night while smoking cigarettes, drinking whiskey, and listening to classical music. He published a volume of poetry, *Permit Me Voyage,* in 1934. In 1936 he received a commission from the magazine to write a series of articles about tenant farming in the South; the result was an impressionistic mixture of prose and poetry that was 10 times longer than required. After the magazine relinquished the rights to the story, Agee worked alone to complete it, living at times in Brooklyn, as well as in Frenchtown and Stockton, New Jersey; Harper and Brothers provided a small advance but dropped the project after receiving the revised manuscript. Financially ruined and drinking heavily, Agee lived at 322 West 15th Street from 1939 until 1941 when he began working for *Time.* His book was published by Houghton Mifflin as *Let Us Now Praise Famous Men.* He lived at 172 Bleecker Street from the autumn of 1941 until 1951, and in the mid-1940s he worked in a studio at 33 Cornelia Street. His film reviews for *Time* and the *Nation* were among the most influential in the country; he also wrote scripts for three films, including *The African Queen* (1951) and *The Night of the Hunter* (1955), and the novel *The Morning Watch* (1950). He spent the end of his life at 17 King Street in a house built by Aaron Burr. Agee's novel *A Death in the Family* was published in 1957 and won a Pulitzer Prize in 1960; a collection of his essays, *Agee on Film,* was published in 1958–60. He died of a heart attack at age 45 and was buried on his family farm in Hillsdale, New York.

agriculture. The first farmers on Manhattan Island were Lenape women, who adopted agriculture sometime after the year 1300. Like other Indians in eastern North America, the Lenape grew Northern Flint corn, with its small 3- to 4-inch ears and multicolored kernels; pole and runner beans; and summer and winter squash, including pumpkins. These new crops supplemented the wild plants, nuts, fish, and game that made up the Late Woodland diet of the American Indian. Perhaps as early as the late sixteenth century, and certainly by the early 1600s, the Lenape dehydrated and stored vegetables in granaries and pits, which were drawn upon as exchange for trade goods from European fishermen. Although Manhattan's first permanent European settlers sowed wheat, oats, and rye in the spring of 1626, over the next two decades they intermittently relied on Indian stores for a portion of their subsistence.

In 1630 the Dutch West India Company encouraged agriculture by providing settlers with shelter, livestock, seed, and tools. The company also recognized slavery, which was to remain legal for the next two centuries. As elsewhere along the eastern coast of North America, seventeenth-century agriculture in New Amsterdam borrowed from the crops and methods of both the New and Old Worlds. The Europeans adopted the practice of burning brush and planting in hills, while the Indians diversified their diets with the addition of cherries and peaches and adopted the use of iron hand tools. This transformation was not without friction, however. With so much open land, the Europeans allowed their cattle and swine to graze freely, a practice that led, inevitably, to incursions onto Indian fields. Gardens and cultivated fields also served as targets of vengeful armies on both the Dutch and Lenape sides during the periodic violence that plagued the colony between 1637 and 1674.

As the Lenape retreated west under pressure of Europe's advance, the new settlers cleared land for grain, corn, and garden crops. Owing to the small size of their farms and their limited labor resources, most families functioned as semisubsistence producers. They raised livestock and foodstuffs sufficient for home use, in addition to producing small surpluses of wheat, butter, and pork. In the pre-Revolutionary era, western Long Island, the Hudson Valley, and southeastern Pennsylvania became well known for exporting wheat. Farm tenancy was common throughout the seventeenth and eighteenth centuries, and a somewhat limited use of slave labor on farms continued through the period into the nineteenth century.

The rise of New York as a port city after 1815 came at a time when farmers in the Northeast sought to replace wheat as a cash crop. Declining soil fertility, endemic losses to disease and insects, and higher operating costs forced New York's farmers to yield to western competitors. Despite such problems, the huge local market, the abundance of experienced labor, and the unlimited availability of fertilizer influenced the choices made by those living within a day's travel of the city. These conditions invited agricultural specialization, and from the 1820s through the 1870s agriculturalists switched from mixed farming to milk and vegetable production. As the growing city's demand for fresh milk outstripped local supplies, entrepreneurs in the 1840s established confinement dairies. Built in conjunction with whiskey distilleries in industrial sections of Manhattan and Brooklyn, these low stables housed thousands of cattle that consumed a diet consisting almost entirely of distillery mash; detractors labeled the resulting product swill milk. The unsanitary conditions of these businesses drew the attention of the reform press and, eventually, of legislators, who outlawed this means of milk production—though it held on past 1900 regardless. However, in the twentieth century, and due to the unhealthy production of milk, the Department of Health closely regulated dairies in New York City (this is when pasteurization began). In 1916 the nearly 100 dairies housed a total of 10,000 to 15,000 cows. The last dairy in Manhattan closed in

the late 1920s, and by 1960 only five dairies remained citywide. These included Oscar Prasse's certified goat dairy in Staten Island and Balsam Farms, a 200-head dairy established in 1900 by Isaac Balsam. Located at 88-25 Pitkin Avenue in Ozone Park, Balsam Farms was the last dairy in the city when it closed in the mid-1960s. The site became the Balsam Village housing development.

In the mid-1800s New York's farmers faced constant pressure from developers to sell their land. Even though the process of converting farmland to housing led to the ultimate destruction of agriculture within the city, it initially encouraged vegetable farming. As property changed hands over generations, heirs who might once have viewed land in terms of its agricultural potential began to consider its value as real estate. In this way land slowly trickled away from farm families into the hands of speculators and developers. In other instances retired farmers oversaw the development of their properties. Both processes resulted in the creation of numerous small, unconnected plots of vacant land that were often held off the real estate market for one or more seasons. The new landowners generated income by leasing these plots to recently arrived immigrants from Germany and the United Kingdom, many of whom had prior experience as market gardeners.

Between 1850 and 1880, owing to the availability of horse manure from Manhattan and Brooklyn and the adoption of intensive production methods, New York, Queens, and Kings counties consistently ranked among the top vegetable producers in the United States. In the latter year, Kings and Queens counties ranked first and second nationally, and Queens County continued as a top vegetable producer into the twentieth century.

At the turn of the twentieth century there were more than 2000 farms in New York City, averaging 25 acres (10.12 hectares) each. Thirty years later, nearly 90 percent had disappeared. In 1937 Vincenzo and Mary Bendetto, who worked as vegetable growers in Manhattan, converted their square-block lot of leased land at 10th Avenue and 214th Street to an automobile parking lot; in this manner the last commercial farm in Manhattan quietly passed from existence. Commercial agriculture continued elsewhere in the city, however, particularly in Queens and Staten Island, although only a handful of tiny, isolated farms were left by 1960. Commercial farming persisted in New York City until 2003, when the family of John Klein, Jr., sold the remaining 2 acres (0.81 hectares) of the family farm, located at 194-15 73rd Avenue in Fresh Meadows.

Although commercial farming disappeared from New York City, three agricultural museums keep farming traditions alive: the Queens County Farm Museum, Wyckoff House, and the Sylvanus Decker Farm. The agriculture program at John Bowne High School continues to prepare students for agriculture-related employment, as it has since 1917. In the first decade of the twenty-first century more than 1300 community gardens stretched across the city, a handful of publicly funded "farmer" training programs were in place, and backyard poultry hobbyists, beekeepers, and hydroponics enthusiasts continued to be in evidence. Hydroponic farming has a long history in New York, dating back at least to the 1930s, yet it remains current; in 2007 a hydroponic demonstration garden floated on a barge in the Hudson River as a means to promote urban agriculture.

AIDS [acquired immune deficiency syndrome]. During the decade following the identification of AIDS by public health officials in the early 1980s, New York City was more severely affected by the disease than any other American city. In 1986 epidemiologists estimated that more than half the homosexual men in the city and three-fifths of intravenous drug users were infected with the human immunodeficiency virus (HIV), the precursor of AIDS. By the end of 1987 one in 61 women giving birth in the city was infected. Toward the end of the 1980s AIDS became the leading cause of death in the city among men 25 to 44 years of age and black women 15 to 44 years of age. By 1988 the city's health care and social welfare systems were becoming increasingly overwhelmed: 13 percent of the inpatient beds in facilities maintained by the Health and Hospitals Corporation were occupied by AIDS patients that year. In response the city and private organizations worked to increase inpatient and outpatient services as well as home health care.

AIDS raised a number of controversial issues of public policy. A debate over mandatory testing for HIV and whether the names of those who tested positive should be kept confidential was settled when the state legislature passed the Testing Confidentiality Act of 1988, which required informed consent before testing and assured those tested of confidentiality. In addition, health care workers were empowered to help individuals who tested positive in disclosing their status to intimate partners. In the twenty-first century city officials continued their policy against mandatory testing and treatment while stressing the importance of both. While patient confidentiality remained crucial, a 1998 law, which became effective in 2000, reaffirmed mandatory reporting procedures for both health care providers and laboratories. In 2004 New York City correctional facilities expanded the availability of voluntary rapid testing, a move that resulted in a fourfold increase in testing among the incarcerated population of New York City.

In the twenty-first century the development of more effective pharmaceutical therapies and the increased spread of information about HIV and AIDS prevention led to a dramatic drop in the number of both AIDS-related deaths and new infections. In 2008, 3305 new AIDS cases were reported in New York City; this was 2020 fewer than in 2004. The number of AIDS-related deaths that same year was 1108, an 8 percent drop from 2007. While the overall number of diagnoses began to decline in 2001, diagnoses in young women and men between the ages of 13 and 29 increased. As of 2007 infection rates in New York City were three times the national average, and AIDS was the third leading cause of death among individuals younger than 65. The disease disproportionally affects minority communities; in the early part of the twenty-first century 80 percent of new AIDS diagnoses occurred in African American and Hispanic individuals. According to 2008 data from the New York Department of Health and Mental Hygiene, one in 70 New Yorkers is infected with HIV, and one in 40 African Americans. New York City remained the epicenter of the pandemic in the United States in 2008, with more AIDS cases than Los Angeles, San Francisco, Miami, and Washington, D.C., combined, with more than 100,000 people in the city living with HIV/AIDS.

The pandemic inspired early activism by such groups as the Gay Men's Health Crisis and the more militant organization AIDS Coalition to Unleash Power (ACT UP). Between 1986 and 2006 the New York City AIDS Walk raised more than $100 million, with more than 40,000 walkers annually. In 1991 Thomas Duane became the first openly gay and openly HIV-positive member of the New York City Council. He was elected to the New York State Senate in 1998 and continued to speak out against discrimination and the stigma associated with the disease. The Broadway community, always deeply affected by the disease, formed the largest industry-based HIV/AIDS fund-raising and grant-making organization, Broadway Cares/Equity Fights AIDS. Artists in New York City take part in fund-raising and educational efforts, including an annual event known as the Day with(out) Art sponsored by the city-based nonprofit organization Visual AIDS. Begun in 1989 as the Day without Art, the event

initially shut down museums and other art organizations so staff could volunteer their time to AIDS charities. In 1997, however, the national day of remembrance was reframed to emphasize works of art focusing on the disease or created by artists with HIV/AIDS. Many artists, choreographers, and writers have produced art related to the AIDS pandemic, including paintings by Keith Haring, Larry Kramer's play *The Normal Heart,* and the Pulitzer Prize–winning play *Angels in America* by Tony Kushner. Several municipal landmarks are dedicated to acknowledging the effect of AIDS on New York City. Park Row between Beekman and Spruce Streets was renamed People with AIDS Plaza. On 30 November 2008, the day before the annual World AIDS Day, the AIDS Memorial was dedicated in Hudson River Park.

air rights. Zoning regulation. *Air rights* refers to the difference between the actual floor area of an entire building and the maximum amount of floor area allowed on a lot. Developers commonly use air rights to build taller skyscrapers than city zoning regulations allow. These rights can be bought and sold in order to raise revenue or create larger buildings. This transfer can be done in two ways. The first is to combine two adjacent lots into one, which is called a zoning lot merger. Once this has been done, any unused air rights of one lot may be transferred to the other. The other method of obtaining air rights is a transfer of development rights to shift the air rights from one building to another within the vicinity. This is only applicable in special circumstances, usually protecting a historic building, an open space, or cultural resources. This method is only used when a zoning lot merger is impossible, such as when a street separates a historic building from another lot. In 2005 Christ Church at Park Avenue and 60th Street set the record for air-right sales, selling for $430 per square foot, which totaled over $30 million.

Nathan Morgante

AirTrain (JFK). An 8.1-mile (13-kilometer) light rail mass transit service. Opened in 2003 by the Port Authority of New York and New Jersey, the AirTrain provides passenger service within John F. Kennedy International Airport (JFK); connecting service between JFK and the New York City subway system's A-train at Howard Beach Station, in Queens; and connecting service between JFK and the E, J, and Z trains as well as the Long Island Railroad at Jamaica Station, also in Queens. Replacing shuttle buses, the AirTrain decreases local road traffic and shortens commute times. The trip takes between 8 and 16 minutes to get from the airport to Howard Beach and Jamaica; trains run around the clock, leaving every 2 to 8 minutes during peak hours and every 6 to 12 minutes late at night.

AirTrain, 2009

Ben Silk

Alan Guttmacher Institute. Nonprofit organization in New York City and Washington, D.C., formed in 1968 as the Center for Family Planning Program Development, a division of the Planned Parenthood Federation of America. Its founders, Frederick S. Jaffe and the obstetrician and gynecologist Alan F. Guttmacher, then president of the federation, intended that the new organization should protect reproductive rights throughout the world (especially among the young and the poor) and communicate to policy makers and the public the findings of research in the fields of reproductive rights, reproductive health, and population. The institute became independent and separately incorporated in 1977. As of 2010 its New York City office was located at 125 Maiden Lane.

Albanians. Albanian peasants and unskilled workers settled in New York City early in the twentieth century; most found work in shoe, glass, and textile factories. They formed neighborhoods according to religious affiliations: Catholics on South Fordham Road opened the Albanian Catholic Center, Muslims in central Brooklyn created the Albanian American Islamic Center, and Eastern Orthodox in Jamaica founded the St. Nicholas Albanian Church. Another influx of immigrants began after World War I and again after World War II when refugees, political exiles, and professionals settled in the city and launched a number of periodicals and organizations. The Free Albania Committee, an alliance of various political groups, promoted freedom and democracy in Albania and in 1957 began publishing *Shqiptari i Lire* (The Free Albanian). The farmers' organization the Agrarian Democratic Party (also known as Balli Kombetar) issued the publication *Shgrbistari* (The Serviceman, 1950–61) for its youth branch and also introduced the newspaper *Zeri i Ballit* (The Voice, 1950–). *Jeta Katholike Shkiptare* (Catholic Albanian Life, 1966–) and the Muslim publication *Perpejka e Jone* (Our Effort, 1974–) were intended to provide religious, social, and political news. The Albanian Kosovar Youth reported on violations of the political rights of Albanians living in Yugoslavia. Small business owners belonged to the Albanian Owners Association.

In the mid-1990s between 20,000 and 25,000 Albanians lived in New York City. Many were professionals, office workers, small business owners, and food-service and maintenance workers; they promoted education and also sought to preserve their customs and ethnic heritage. Well-known Albanians in the city have included the writer and social activist Nemnie Zaimi and the writer and literary scholar Arshi Pipa. In 2007 more than 31,000 people in the city were reported to be of Albanian ancestry.

Vladimir Wertsman

Albee, Edward (Franklin) (*b* Washington, D.C., 12 March 1928). Playwright. He achieved some notoriety with his early works *The Zoo Story* (1959), which is set in Central

Park, and *The American Dream* (1961), and won a Tony Award and a New York Drama Critics Circle award for *Who's Afraid of Virginia Woolf?* in 1962. During his early career he lived in a duplex in Greenwich Village; in 1978 he began dividing his time between a loft in Tribeca and homes in Long Island and Florida. He later wrote three Pulitzer Prize–winning plays, *A Delicate Balance* (1966), *Seascape* (1975), and *Three Tall Women* (1994). A number of his plays were performed Off-Broadway in honor of his 80th birthday in 2008, including two of which he directed himself at the Cherry Lane Theater.

Kenneth T. Jackson

Aldridge, Ira Frederick (*b* New York City, 1807; *d* Łódź, Poland, 1867). Internationally acclaimed African American actor. He attended the African Free School in New York City and received awards for his oratory skills. His fondness for theater developed while living in the city. He worked with the African Company, also known as the African Grove Theatre, formed in 1821, where he performed his first role as Rolla from *Pizarro*. Feeling stifled by his race in the United States, Aldridge left the country in 1825 for England in hopes of receiving better roles. Abroad he achieved recognition and praise from audiences; he is regarded as the first black American to become established as an actor in another country, performing Shakespeare and debuting at London's Covent Garden in 1833. He lived and toured in Europe for the remainder of his life. The Ira Aldridge Memorial Chair at the Shakespeare Memorial Theatre in Stratford-upon-Avon, England, and a theater at Howard University in Washington, D.C., were named in his honor.

Meryl Cates

Alexander, William, Lord Stirling (*b* New York City, 1726; *d* Albany, N.Y., 15 Jan 1783). General. After receiving his education in New York City he went to England to claim his title, which was refused by the House of Lords; he then returned to the city, where he became a governor of King's College and held several offices after his marriage to Governor William Livingston's sister. He opposed the Stamp Act, and as a colonel during the American Revolution in January 1776 he captured the *Blue Mountain Valley,* a British transport ship. He was then promoted to brigadier general of the Continental Army and oversaw the construction of fortifications including Forts Lee and Washington. Captured during the Battle of Long Island, he was freed during an exchange of prisoners and fought in the battles of Westchester, Trenton, Brandywine, and Germantown; his attack on British forces on Staten Island was repulsed. By the end of the war Alexander was promoted to the rank of major-general.

Paul David Nelson, *William Alexander, Lord Stirling* (Tuscaloosa: University of Alabama Press, 1987)

James E. Mooney

Alexander Hamilton. Side-wheel steamboat designed by J. W. Millard and built by the Bethlehem Shipbuilding Corporation of Maryland in 1924. It measured 349 feet (106 meters) by 77 feet (23 meters). From 1924 until 6 September 1971 the ship was operated by the Hudson River Day Line between New York City and other points along the Hudson. Its retirement marked the end of the scheduled steam service along the Hudson that had begun in 1807. Efforts to preserve the vessel failed: the hulk lies in Sandy Hook Bay, New Jersey.

Arthur G. Adams

Alexander Hamilton U.S. Custom House. See U.S. Custom House.

Alexander Robertson School. Private elementary school, opened in 1789 in Manhattan by the Second Presbyterian Church and originally situated at Broadway and King's Street (now Pine Street). It is the oldest fully coeducational institution in New York City. The school is named for the principal benefactor of the church, a Scotsman who lived in New York City and raised money to repair the church after Hessian mercenaries used it as a barracks during the American Revolution. The school moved in 1813 to West 14th Street and in 1900 to 95th Street and Central Park West. A Scottish flavor persists despite the diverse populations of both school and church: the emblem of the school is a thistle, bagpipes are played at special events, and each graduation ceremony ends with the singing of "Auld Lang Syne."

Richard Schwartz

Alexander's. Firm of retailers. Its first department store was opened in 1928 at Third Avenue and 152nd Street in the Bronx by George Farkas (1902–80) and named after his father. The firm built its reputation by selling fashionable clothes at discount prices and concentrating on lower- to middle-income customers. In 1963 Farkas moved the main store to 59th Street and Lexington Avenue, just across from Bloomingdale's. Alexander's filed for bankruptcy in May 1992 and closed its eleven retail outlets in the city. The building at 59th Street remained unoccupied until it was torn down in 1999. The Bloomberg Tower opened on the 59th Street site in 2004.

Leslie Gourse, Kenneth T. Jackson

Alger, Horatio(, Jr.) (*b* Chelsea, Mass., 13 Jan 1832; *d* Natick, Mass., 18 July 1899). Writer. In 1866 he was asked to leave the Unitarian ministry and moved to New York City, where he worked for the benefit of the Newsboys Lodging House. Before long he was writing dime novels for the juvenile market about street boys who go from rags to riches by virtue of hard work and good luck. From 1872 to 1876 he lived at 26 West 34th Street. Alger wrote 103 juvenile novels, among them the best seller *Ragged Dick* (1868); though modestly received during his lifetime these works were popularized after World War I, when they were marketed to adolescents as models for achieving success.

Michael Joseph

Algerians. The first Algerians to settle in New York City were 200 college students who arrived in the early 1970s on government scholarships to attend New York University, Columbia University, Brooklyn's Polytechnic University, and Stevens Institute of Technology (in New Jersey). This group stayed on in the country as professionals in scientific and technical fields. In the 1980s a second wave of mostly middle-class families came seeking relief from economic hardship. In the 1990s young, single Algerians from France began immigrating to escape French racism toward North Africans. Even so, the population remained small: in the early 1990s Algerian New Yorkers probably did not exceed 600. Owing mainly to the diversity lottery, which creates visas for countries with low rates of immigration, however, there has been a steady influx of Algerians since then; by the early twenty-first century between 10,000 and 12,000 Algerians were residing in New York City. Algerians maintain cultural solidarity through the Algerian American National Association (AANA, established 1987). AANA helps Algerians achieve American citizenship and sponsors educational and cultural programs that promote good relations between Algeria and the United States. Algerian *rai*, a mix of Arab, African, and rock music with themes of social commentary and protest, has become popular in the city through the performances of such musicians as Cheb Khaled.

Paula Hajar

Algonquin Hotel. Hotel opened in 1902 on West 44th Street between Fifth and Sixth avenues. Frank Case operated the hotel from 1907 until his death in 1946. The building, designed by Goldwyn Starrett, has a facade of red brick and limestone and is decorated with eighteenth-century English and American furnishings. In the 1920s and 1930s the hotel was a center of literary and theatrical life: it was closely associated with the *New Yorker* and hosted the Algonquin Round Table, a meeting of famous writers and literary personalities. Alan Jay Lerner wrote the musical *My Fair Lady* in room 908. Control of the hotel passed to Ben Bodne in 1946; upon his retirement in 1987 Caesar Park Hotels acquired the Algonquin.

Algonquin Hotel, ca *1910*

Frank Case, *Tales of a Wayward Inn* (New York: Frederick A. Stokes, 1938)

B. Kimberly Taylor

Algonquin Round Table. Name given to a group of lively theatrical and literary figures who met daily for lunch at the Algonquin Hotel on West 44th Street for about a decade beginning in 1919. The group met first in the Pergola Room (now the Oak Room), until Frank Case, manager of the Algonquin, moved it in 1920 to the round table in the larger Rose Room so that the members would be more visible to the public. The central figure in the group was Alexander Woollcott, drama critic of the *New York Times.* Its other members included the writer Franklin P. Adams, author of the highly popular newspaper column "The Conning Tower" and generally considered the dean of the table; the press agents Murdock Pemberton and John Peter Toohey; the writers Heywood Broun and his wife, Ruth Hale; Jane Grant of the *New York Times* and her husband, Harold Ross, who founded the *New Yorker;* Dorothy Parker, Robert E. Sherwood, and the humorist Robert Benchley, all writers for *Vanity Fair;* Art Samuels of *Harper's Bazaar;* the writers Marc Connelly, George S. Kaufman, and Donald Ogden Stewart; and the illustrator Neysa McMein. From time to time others were invited to the table, including the actors Douglas Fairbanks, Harpo Marx, Alfred Lunt and Lynn Fontanne, Tallulah Bankhead, Ina Claire, and Margalo Gilmore; the novelists Edna Ferber, Margaret Leech, and Alice Duer Miller; the playwrights Noël Coward and Charles MacArthur; the screenwriter Herman Mankiewicz; and the young violinist Jascha Heifetz. The group was celebrated for being at once glamorous, irreverent, acerbic, worldly, and clannish. Its influence stemmed largely from the power that newspaper columnists wielded during the prosperous 1920s. By the end of the 1920s the Algonquin Round Table had virtually ceased to exist. They remain the symbols of a literate humor that is inextricably associated with New York City and reminders of a time when urban living and urbanity were often combined.

Brenda Wineapple

Alice Austen House. Historic structure in Staten Island. The first house on the site was built by the Dutch in the 1690s as part of a farm near the Narrows. The property was acquired in 1844 by the grandfather of the photographer Alice Austen, who expanded the house and added peaked windows and a gingerbread trim, giving it the appearance of a Victorian cottage. The family moved into the house shortly after Austen was born in 1866, and she remained there until 1945; the more than 7000 photographs that she took while living at the house are now at the Staten Island Historical Society. The house and grounds were restored in the 1980s and reopened as a museum, with temporary exhibitions.

Jonathan Kuhn

All Angels' Church. Founded in the 1830s by St. Michael's Church (99th Street and Amsterdam Avenue) as the "colored Sunday School" for residents of Seneca Village, a racially mixed community in what is now Central Park. All Angels' relocated from park ground and incorporated in 1859. It then purchased the old building and moved it to donated land at West End Avenue and 81st Street. A stone church designed by Samuel B. Snook replaced it by 1890 but was razed in 1979. In the early twenty-first century the congregation continued to meet in the old parish house on 80th Street, maintaining traditional and innovative worship and a vigorous social program.

John B. Snook

Allen [Israel]**, Mel(vin)** (*b* Birmingham, Ala., 14 Feb 1913; *d* Stamford, Conn., 16 June 1996). Sports broadcaster. Raised in Alabama, he came to New York City in 1937 to work in radio; he broadcast New York Yankees and Giants home baseball games from 1939 until 1943. After military service he returned to New York City in 1946, broadcasting Yankee games through 1964 on radio and television, after which time the Yankees did not renew his contract. Allen broadcast baseball in Milwaukee (1965) and Cleveland (1968), then returned to New York City in 1978 to call Yankee games on cable television through 1985. He also served as host of the long-running

Alice Austen House, 2009

weekly syndicated television series *This Week in Baseball,* nearly until his death.

Andrew Sparberg

Allen, Stephen (*b* New York City, 2 July 1767; *d* Hudson River at Riverdale, 28 July 1852). Mayor. Apprenticed to a sail maker during the American Revolution, he later formed a partnership with his former employer. Soon after starting his own business he amassed a fortune by bypassing ship chandlers to deal directly with wholesalers. A staunch Jeffersonian, he became president of the Mechanics City, a director of the Mechanics Bank, and a city alderman. Allen was appointed mayor and served for three terms (1821–24) and in his later years became a Jacksonian Democrat. He died aboard the steamboat *Henry Clay* when it caught fire on the Hudson River in 1852.

Howard Rock

Allen, Woody [Konigsberg, Allan (Stewart)] (*b* Brooklyn, 1 Dec 1935). Musician and award-winning film director, writer, and actor. He grew up in Flatbush and during his first year at Midwood High School wrote material for the columnist Earl Wilson; in 1952 he took his current name partially based on his musical idol, clarinetist Woody Herman. After briefly attending New York University and City College of New York, he was hired as part of NBC's internship program for writers and contributed material to major programs during television's "Golden Age." During the 1960s Allen appeared as a stand-up comedian at venues such as the Bitter End and the Blue Angel, on the *Ed Sullivan Show,* and on the *Tonight Show,* of which he was also a guest host. His play *Don't Drink the Water* (1966) ran for 18 months on Broadway. In 1965 he wrote and acted in *What's New, Pussycat?,* and in 1969 he directed his first complete feature film, *Take the Money and Run.* Many of the films he directed, which numbered 45 by 2009, were set in New York City and largely autobiographical. Notable examples include *Manhattan* (1979), *Radio Days* (1987), and *Manhattan Murder Mystery* (1993). *Hannah and Her Sisters* (1986), much of which was filmed at the Langham, an apartment building at 135 Central Park West, includes an architectural tour of Manhattan; other films were made at locations ranging from Sutton Place to Coney Island. In the early twenty-first century, Allen's filming location preferences tended toward Europe, primarily London, where his creative freedom was challenged less by financiers and audiences were more receptive. Allen has played traditional jazz clarinet since the age of 15 and performs with his band on a regular basis in New York City.

Val Ginter

Alley Pond. Name formerly applied to a neighborhood in northwestern Queens, at the head of Little Neck Bay along a valley 125 feet (38 meters) deep made by Alley Pond. A royal grant for the land was given in 1673 to Thomas and Christopher Foster, who soon built the first house. By 1691 a grist mill was operated by John and Stephen Hicks just south of what is now Northern Boulevard; Alley Pond was dammed just upstream to provide power for a second mill (1752), to the east of which Thomas Foster built a house in 1758 that survived until the 1930s. In the 1820s a wool mill operated at or alongside the site of this second mill, and from 1821 to 1826 the hamlet of Alley Pond provided a post office for Flushing (the second in Queens County). The mill was bought in 1828 by Benjamin Lowerre of Flushing, who operated it and a country store until 1859. His son-in-law William C. Buhrmann took over the business and repaired and improved the mill machinery as late as 1878; Buhrmann's sons continued to operate the store from his death in 1898 until 1920. The film *Zaza* was made in the neighborhood in 1908. By 1926, when the mill was destroyed by fire, the hamlet of Alley Pond had grown to include about a dozen houses. The store was demolished to make way for the Cross Island Parkway in October 1939; Alley Pond was filled in and the mill was demolished in 1955 during the construction of an embankment for the Long Island Expressway. In the 1970s row houses were built on new streets to the south, and a shopping mall opened on the east side of the valley.

Vincent Seyfried

Alley Pond Park. Second-largest public park in Queens, measuring 624.78 acres (253 hectares) and bordered to the north by Little Neck Bay, to the east by Douglaston, to the south by the Union Turnpike, and to the west by Bayside. The park is transected by the Belt Parkway from north to south, by the Long Island Expressway south of Oakland Lake, and by the Grand Central Parkway at its southernmost corner. Most of the park was acquired and cleared by the city in 1927, but the area was moderately augmented in 1936 by small sections south of Grand Central Parkway (on either side of the old Motor Parkway) and around Oakland Lake; meadowlands north of Northern Boulevard were added in 1961–62. In the northern end of the park Lake Oakland flows into Alley Creek and on to Little Neck Bay. North of the Long Island Expressway there are meadowlands and to the south woodlands. The Alley Pond Environmental Center has a library, museum, animal exhibits, guided nature walks, and trails for horseback riding.

Vincent Seyfried

Allied Chemical. Firm of chemical manufacturers, formed on 17 December 1920 as the Allied Chemical and Dye Corporation, one of two major American holding companies that sought to counter German control of the chemical industry during World War I. On its formation the firm commanded assets of $282.7 million from five large makers of related products: the Solvay Process Company, maker of alkalis and nitrogen products; the Semet–Solvay Corporation, a pioneer in the production of soda ash, caustic soda, and coke by-products; the Barrett Company, a maker of coal tar products; the General Chemical Company, the first maker of synthetic ammonia and contact acid in the United States; and the National Aniline and Chemical Company, which erected the first integrated dyestuffs plant in the United States. In 1922 Allied Chemical and Dye acquired Heyl Laboratories and began to produce medical products; during the 1940s the original five corporations were liquidated and a large research laboratory was constructed. The firm took the name Allied Chemical Corporation in 1958. In 1971 it moved its corporate headquarters from New York City to a large complex at Morris Township, New Jersey. Later it was renamed the Allied Corporation before merging with the Signal Companies in 1985 to become Allied–Signal, which merged with and took on the name of Honeywell in 1999.

Williams Hayes, ed., *American Chemical Industry,* vol. 6, *The Chemical Companies* (New York: D. Van Nostrand, 1949)

David B. Sicilia

almshouses. The first almshouse in what is now New York City was built in 1653 on Beaver Street in New Amsterdam; it was replaced under Dutch and English rule by structures on Broad and Wall streets called deacons' houses, which were privately supported by charitable contributions to churches. A publicly financed almshouse opened in 1736 on the site of the present City Hall and included a range of facilities for the poor: a workhouse for those fit to work, a poorhouse for the unfit, and a house of correction for "unworthy" paupers who were considered criminals. In 1784 the city appointed commissioners of the Alms-House and Bridewell (the prison), and in 1832 it formed the Alms House Department. The commissioners shared the prevailing attitude of the day that the problems of health, housing, and unemployment resulted from moral deficiencies and could be solved by hard work, thrift, and temperance. In the almshouse

The Female Almshouse on Blackwell's Island, ca *1885–90*

Protestant clergymen preached to predominantly Irish Catholic inmates. Strict rules were prescribed and harsh measures imposed to enforce proper behavior, including physical punishment, solitary confinement on bread and water, and leg irons. Overcrowding was acute, particularly during the years of cholera and yellow fever; as a result larger almshouses were built, such as the one opened in April 1816 at 26th Street near the East River in Bellevue. Over the years separate facilities opened for paupers with contagious diseases, for prostitutes, for criminals, and for mental patients. Children living at the almshouse were moved in 1832 to the Long Island Farms in Queens County and then in 1848 to "nurseries" on Randalls Island. A workhouse was set up on Blackwell's (now Roosevelt) Island in the following year. During the same period almshouses also opened in Brooklyn, Queens, and Staten Island. The commissioners of the almshouses complained that immigrants overburdened their facilities; by 1854–60 the almshouse population was on average 86 percent foreign born. Reports of the period abound with descriptions of destitution, disease, and death. In the 1870s and 1880s, New York State passed laws requiring that children over two years of age be removed from almshouses and placed with families or in hospitals, orphan asylums, or other institutions.

The agency charged with overseeing the almshouses was restructured and renamed several times. After consolidation (1898) the city began to subsidize the care of poor children in private institutions, and in 1902 the board of trustees of the Bellevue and Allied hospitals assumed responsibility for the public charity hospitals. In 1936 the last of the almshouse facilities was abolished when the penitentiary at Blackwell's Island was moved to Rikers Island. The Almshouse Department became the Department of Welfare in 1936, which in turn became the Department of Social Services in 1967.

David M. Schneider, *The History of Public Welfare in New York State,* vol. 1, *1609–1866* (Chicago: University of Chicago Press, 1938); Raymond A. Mohl, *Poverty in New York, 1783–1825* (New York: Oxford University Press, 1971)

Juliana F. Gilheany

Alphabet City. Neighborhood in Manhattan in the East Village, bounded to the north by 23rd Street and Avenue C, the west by FDR Drive, the south by Houston Street, and the east by Avenue A. Its name derived from avenues A, B, C, and D, which run only in this part of Manhattan. In the 1840s and 1850s, the area had a large German population and was referred to as Little Germany, or Kleindeutschland. In the mid-nineteenth century, the population shifted to eastern European immigrants, mostly Irish, Italian, and Jewish. The area underwent another major population change in the twentieth century, with a large influx of Puerto Ricans. It has long been known as a low-rent neighborhood for immigrants. Since about 1980, however, higher rents have brought increased commercial activity with the opening of new restaurants, bars, and shops, as well as a more affluent population. Notable places include Tompkins Square Park, Stuyvesant Town, and the Christodora House. The area also contains several community gardens.

Jessica Montesano

alternate-side-of-the-street parking. System of regulations imposed in 1950 that limits curbside parking to one side of the street on certain days of the week. The regulations began as an experiment on the Lower East Side to facilitate street cleaning, which had recently become mechanized, and were soon extended to all of Manhattan, the Bronx, Brooklyn, and Queens. In many areas parking was allowed only on the south side of the street during three-hour periods on Mondays, Wednesdays, and Fridays, and only on the north side during three-hour periods on Tuesdays, Thursdays, and Saturdays. Fines levied against violators were at first nominal but increased as the city began to rely more heavily on parking tickets as a source of revenue: by 2008 the fine for alternate-side-of-the-street violations reached $65 and receipts from parking citations of all kinds exceeded $550 million. More than 10,000 miles (16,000 kilometers) of street fell under alternate-side-of-the-street rules. Motorists, in what some sarcastically refer to as the "New York Grand Prix," ritualistically moved their vehicles each morning from one side of the street to the other, often just ahead of the street cleaners. In 2001 Calvin Trillin published *Tepper Isn't Going Out,* a humorous novel about a man who found the perfect parking spot and decided to stay in his car forever. Initially the regulations were suspended only on Sundays and civic holidays such as Veterans Day, but in 1952 the City Council added the Jewish high holy days, with Catholic holy days following soon after. Greek Orthodox holy days were added in 1990. In more recent years the number of suspended days has grown to 34 with the addition of Muslim (Idul-Fitr and Eid al-Adha) and Hindu (Divali) holy days and the Asian Lunar New Year. The regulations are also routinely suspended after heavy

snowfalls. The high fines and seemingly greater competition for a fixed number of parking spaces have given rise to several thriving businesses that offer car-moving and ticket-fixing services.

Edward T. O'Donnell

alternative press. Term used for periodicals with a nontraditional content and readership, often combining characteristics of newspapers and magazines and sometimes published irregularly. *Freedom's Journal,* launched in 1827 by and for blacks, was the first newspaper of its kind in the country and remained in operation until 1829. The *Free Enquirer,* published from 1829 to 1830 by the communitarian theorist Robert Dale Owen and the feminist Fanny Wright, supported women's rights and birth control and encouraged frank debates about religion. It influenced George Henry Evans, who published the *Working Man's Advocate* (weekly, 1829–45), the most widely read labor newspaper during the 1830s and 1840s, as well as the *Man* (1834–35), the *Radical* (1841–42), and *Young America* (1844–49); he eventually aligned himself with advocates of land reform who adopted the slogan "vote yourself a farm." During the labor movement of the 1830s advocates of prison reform, broad-based education, and democratic changes in suffrage presented their ideas in alternative publications. Craft unions in the city formed the General Trades Union during the mid-1830s and published the *Union* (1834–36) under the editorship of the labor leader John Commerford. Although efforts to organize workers diminished during a severe depression in 1837, capitalist speculators and their sympathizers in Tammany Hall remained the target of several newspapers, among them the *Subterranean,* published by the politician Mike Walsh from 1845 to 1847. The newspaper *Sybyl* promoted women's rights in the 1840s, and Victoria Woodhull and her sister Tennessee Claflin published *Woodhull and Claflin's Weekly* from 1870 to 1876, which advocated women's rights and also included articles on marriage (attacked as a form of slavery), extramarital sex, prostitution, abortion, and venereal disease.

After organizing the Socialist Labor Party in 1877 a number of German intellectuals published the first English-language socialist newspaper that became widely read, as well as the *People* (1891–99) and the *Daily People* (1900–14), the most important publications of the party. Such alternative newspapers were crucial to politics in the city; almost every socialist, radical, and anarchist group produced a newspaper to recruit and educate members. New York City became the national center of the alternative press. In 1883 John Swinton, a former managing editor of the *Sun,* launched a newspaper to encourage workers to engage in politics. Known as *John Swinton's Paper,* it was read by trade unionists throughout the country but ceased operations in 1887 after consuming $40,000 of Swinton's savings. When the Socialist Party was at its peak, *The Masses* (1911–17), a literary and political journal based in Greenwich Village, challenged the cultural status quo. Edited by Max Eastman, it attracted such writers as John Reed and Walter Lippmann but was eventually undermined by tension among radical intellectuals, artists, and labor leaders whom it sought to bring together. The Bolshevik Revolution divided the socialist movement: the communist ideology of the Soviet Union was embraced by *Class Struggle* (1917–19), *Revolutionary Age* (1918–19), and *Worker's Council* (1921) and rejected by the *Socialist Review* (1919–21), *Labor Age* (1921–33), and the *American Socialist Monthly* (1935–37).

The relationship of the American left and the Soviet Union remained the most divisive issue in the alternative press during the following decades and led to the formation of several new publications. The editors of the *New Masses* (monthly, 1926–33), Mike Gold and Joseph Freeman, supported strict revolutionary communism, argued for a "proletarian literature," and excluded writers such as Ernest Hemingway, Theodore Dreiser, Langston Hughes, and Richard Wright; strident factionalism gradually abated as the left coalesced in support of the Popular Front in the mid-1930s. At the same time the *Daily Worker* (1924–58), sponsored by the Communist Party, sought a wider audience by adding a sports page and book and film reviews; it was one of the first newspapers in the country to

The Revolution.

PRINCIPLE, NOT POLICY: JUSTICE, NOT FAVORS.

VOL. I.—NO. 1. NEW YORK, WEDNESDAY, JANUARY 8, 1868. $2.00 A YEAR.

The Revolution;

THE ORGAN OF THE

NATIONAL PARTY OF NEW AMERICA.

PRINCIPLE, NOT POLICY—INDIVIDUAL RIGHTS AND RESPONSIBILITIES.

THE REVOLUTION WILL ADVOCATE:

1. In Politics—Educated Suffrage, Irrespective of Sex or Color; Equal Pay to Women for Equal Work; Eight Hours Labor; Abolition of Standing Armies and Part; Despotisms. Down with Politicians—Up with the People!

2. In Religion—Deeper Thought; Broader Idea; Science not Superstition; Personal Purity; Love to Man as well as God.

3. In Social Life.—Morality and Reform; Practical Education, not Theoretical; Facts not Fiction; Virtue not Vice; Cold Water not Alcoholic Drinks or Medicines. It will indulge in no Gross Personalities and insert no Quack or Immoral Advertisements, so common even in Religious Newspapers.

4. The Revolution proposes a new Commercial and Financial Policy. America no longer led by Europe. Gold like our Cotton and Corn for sale. Greenbacks for money. An American System of Finance. American Products and Labor Free. Foreign Manufactures Prohibited. Open doors to Artisans and Immigrants. Atlantic and Pacific Oceans for American Steamships and Shipping; or American goods in American bottoms. New York the Financial Centre of the World. Wall Street emancipated from Bank of England, or American Cash for American Bills. The Credit Foncier and Credit Mobilier System, or Capital Mobilized to Resuscitate the South and our Mining Interests, and to People the Country from Ocean to Ocean, from Omaha to San Francisco. More organized Labor, more Cotton, more Gold and Silver Bullion to sell foreigners at the highest prices. Ten millions of Naturalized Citizens Demand a Penny Ocean Postage, to Strengthen the Brotherhood of Labor; and if Congress Vote One Hundred and Twenty-five Millions for a Standing Army and Freedmen's Bureau, cannot they spare One Million to Educate Europe and to keep bright the chain of acquaintance and friendship between those millions and their fatherland?

KANSAS.

The question of the enfranchisement of woman has already passed the court of moral discussion, and is now fairly ushered into the arena of politics, where it must remain a fixed element of debate, until party necessity shall compel its success.

With 9,000 votes in Kansas, one-third the entire vote, every politician must see that the friends of "woman's suffrage" hold the balance of power in that State to-day. And those 9,000 votes represent a principle deep in the hearts of the people, for this triumph was secured without money, without a press, without a party. With these instrumentalities now fast coming to us on all sides, the victory in Kansas is but the herald of greater victories in every State of the Union. Kansas already leads the world in her legislation for woman on questions of property, education, wages, marriage and divorce. Her best universities are open alike to boys and girls. In fact woman has a voice in the legislation of that State. She votes on all school questions and is eligible to the office of trustee. She has a voice in temperance too; no license is granted without the consent of a majority of the adult citizens, male and female, black and white. The consequence is, stone school houses are voted up in every part of the State, and rum voted down. Many of the ablest men in that State are champions of woman's cause. Governors, judges, lawyers and clergymen. Two-thirds of the press and pulpits advocate the idea, in spite of the opposition of politicians. The first Governor of Kansas, twice chosen to that office, Charles Robinson, went all through the State, speaking every day for two months in favor of woman's suffrage. In the organization of the State government, he proposed that the words "white female" should not be inserted in the Kansas constitution. All this shows that giving political rights to women is no new idea in that State. Who that has listened with tearful eyes to the deep experiences of those Kansas women, through the darkest hours of their history, does not feel that such bravery and self denial as they have shown alike in war and peace, have richly earned for them the crown of citizenship.

Opposed to this moral sentiment of the liberal minds of the State, many adverse influences were brought to bear through the entire campaign.

The action of the New York Constitutional Convention; the silence of eastern journals on the question; the opposition of abolitionists lest a demand for woman's suffrage should defeat negro suffrage; the hostility everywhere of black men themselves; some even stumping the State against woman's suffrage; the official action of both the leading parties in their conventions in Leavenworth against the proposition, with every organized Republican influence outside as well as inside the State, all combined might have made our vote comparatively a small one, had not George Francis Train gone into the State two weeks before the election and galvanized the Democrats into their duty, thus securing 9,000 votes for woman's suffrage. Some claim that we are indebted to the Republicans for this vote; but the fact that the most radical republican district, Douglass County, gave the largest vote against woman's suffrage, while Leavenworth, the Democratic district, gave the largest vote for it, fully settles that question.

In saying that Mr. Train helped to swell our vote takes nothing from the credit due all those who labored faithfully for months in that State. All praise to Olympia Brown, Lucy Stone, Susan B. Anthony, Henry B. Blackwell, and Judge Wood, who welcomed, for an idea, the hardships of travelling in a new State, fording streams, scaling rocky brinks, sleeping on the ground and eating hard tack, with the fatigue of constant speaking, in school-houses, barns, mills, depots and the open air; and especially, all praise to the glorious Hutchinson family—John, his son Henry and daughter, Viola—who, with their own horses and carriage, made the entire circuit of the state, singing Woman's Suffrage into souls that logic could never penetrate. Having shared with them the hardships, with them I rejoice in our success.

E. C. S.

THE BALLOT—BREAD, VIRTUE, POWER.

The Revolution will contain a series of articles, beginning next week, to prove the power of the ballot in elevating the character and condition of woman. We shall show that the ballot will secure for woman equal place and equal wages in the world of work; that it will open to her the schools, colleges, professions and all the opportunities and advantages of life; that in her hand it will be a moral power to stay the tide of vice and crime and misery on every side. In the words of Bishop Simpson—

"We believe that the great vices in our large cities will never be conquered until the ballot is put in the hands of women. If the question of the danger of their sons being drawn away into drinking saloons was brought up, if the mothers had the power, they would close them; if the sisters had the power, and they saw their brothers going away to haunts of infamy, they would close those places. You may get men to tride with purity, with virtue, with righteousness; but, thank God, the hearts of the women of our land—the mothers, wives and daughters—are too pure to make a compromise either with intemperance or licentiousness."

Thus, too, shall we purge our constitutions and statute laws from all invidious distinctions among the citizens of the States, and secure the same civil and moral code for man and woman. We will show the hundred thousand female teachers, and the millions of laboring women, that their complaints, petitions, strikes and protective unions are of no avail until they hold the ballot in their own hands; for it is the first step toward social, religious and political equality.

First issue of the Revolution, *8 January 1868, launched by Susan B. Anthony*

report on racial conflict and also published articles by Wright on politics and culture in Harlem. As a newspaper of the Communist Party it remained closely tied to the interests of the Soviet Union: it did not protest the internment of Japanese Americans and condemned wartime strikes. Always in debt, it never had more than 38,000 subscriptions and ceased operations after its circulation fell below 10,000 during the 1950s.

A number of young writers who became activists in the 1960s worked in the 1930s and 1940s for newspapers that were not aligned with the Communist Party. The *Catholic Worker,* formed in 1933 by Dorothy Day and the French philosopher Peter Maurin, stressed the virtues of voluntary poverty and nonviolent action and urged readers to take responsibility for achieving social justice. Former Trotskyists including Irving Howe, C. L. R. James, Dwight Macdonald, and James Burnham wrote for the *Militant* (weekly, 1928–) and the *New International* (1934–58); among the political and cultural journals published in the city by former Trotskyists were *Dissent* (1954–) and *Politics* (1944–49). The independent newspaper the *National Guardian,* which began publication in 1948 and was renamed the *Guardian* in 1967, covered national liberation movements in Africa and Southeast Asia long before there was widespread interest in them. The *Daily Worker* resumed publication as the *Daily World* in 1968 and was successively renamed the *People's Daily World* in 1986 and the *People's Weekly World* in 1990.

During the 1960s and early 1970s an "underground" press developed in the city. Several newspapers sought to introduce the politics of the New Left to the counterculture, including the *Village Voice* (1955– , edited by Ed Fancher and Daniel Wolf), the *Realist* (1958–74, Paul Krassner), the *East Village Other* (1965–72, Walter Bowart), and the *New York Rat* (1968–70, Jeff Shero). Oriented toward youth and irreverent toward both right and left, these newspapers were known for their psychedelic graphics and sexual frankness. The *East Village Other* called for rent control, safer streets, and investigations of unscrupulous landlords; the *New York Rat* had close links to the antiwar movement. As new, more radical groups were formed, the alternative press became increasingly angry and militant: stories appeared under such headlines as "The Year of the Heroic Guerilla," and radical feminists took over the *Rat,* which they renamed *Women's Liberation.* After homosexual patrons of the Stonewall Inn resisted a police raid in June 1969, the periodical *Come Out!* was launched by the Gay Liberation Front. Most publications introduced during these years soon ran out of funds or were abandoned. A few, such as the *Village Voice,* survived by revamping themselves to reach a wider readership and attract more advertisers. In the twenty-first century many alternative newspapers are published online where they can be updated quickly and regularly. They also feature columnists and bloggers to present varying viewpoints and encourage discussion between writer and readers.

Alvin Ailey American Dance Theater. Dance company. Alvin Ailey (*b* Rogers, Tex., 5 Jan 1931; *d* New York City, 1 Dec 1989) studied dance with Lester Horton and Martha Graham before moving to New York City in 1954 after an invitation to perform in Truman Capote's Broadway show *House of Flowers.* In 1958 he formed the Alvin Ailey American Dance Theater with the aim of bringing black dancers into the mainstream of dance. The company's first performance took place at the 92nd Street Y, and in 1960 the Alvin Ailey American Dance Theater became the resident company of the Clark Center for the Performing Arts at the 51st Street Young Women's Christian Association. From the early days of the company, Ailey and his dancers were tapped to be international ambassadors of dance performing tours in Africa, Europe, Asia, and Australia as part of President John F. Kennedy's President's International Program for Cultural Presentations. In 1969 the company temporarily moved to the Brooklyn Academy of Music, where Ailey established the Ailey School. For the most part, the Ailey organization has tended to make the West Side of Manhattan its home, with studios in such varied locations as a renovated church at 229 East 59th Street, 1515 Broadway, 211 West 61st Street, and City Center at 151 West 55th Street. Ailey dancers were repeatedly invited to perform for White House functions. In 1976 the company performed at the opening night at Studio 54. After Ailey's death in 1989, dancer and choreographer Judith Jamison was named artistic director. In 2008 the entire Ailey organization, including the Alvin Ailey American Dance Theater, the Ailey School, Ailey II, and the Alvin Ailey Foundation, was located in the Joan Weill Center for Dance at 405 West 55th Street in Manhattan. In 2008 the block between Ninth and 10th avenues was officially renamed Alvin Ailey Place as part of a 50th anniversary celebration of the company.

The troupe performs Ailey's dances as well as the work of such established choreographers as Horton, Katherine Dunham, Pearl Primus, Ted Shawn, Talley Beatty, John Butler, and Donald McKayle and such younger ones as Ulysses Dove, Elisa Monte, and Bill T. Jones. A versatile choreographer himself, Ailey skillfully blended ballet, modern dance, and jazz dance in works set to music by diverse composers such as Ralph Vaughan Williams, John Coltrane, and Duke Ellington, who in 1970 composed *Les trois rois noirs* and *The River* for the company. Some of Ailey's dances are thematic, often drawing on black culture (including his best-known work, *Revelations,* and *Blues Suite*); others focus on abstract movement and have often been performed by ballet companies (*Streams, The River,* and *The Lark Ascending*).

Brenda Dixon Gottschild, Anne Epstein

Alwyn Court. Elegant apartment building in Manhattan, erected in 1909 at 180 West 58th Street by the architectural firm of Harde and Short. The building is notable for its exuberantly decorated French Renaissance facade of terra-cotta, depicting salamanders (symbol of François I of France), flowers, leaves, dragons, and crowns. It has a central courtyard containing an architectural mural by Richard Haas. Designed at the time that large apartment buildings were just beginning to win acceptance as upper-class residences, Alwyn Court originally contained only 22 apartments, ranging in size from 14 rooms to 34. The Depression forced a change, and in 1938 the building was modified to contain 75 apartments, each with three to five rooms.

Sandra Opdycke

Amalgamated Bank of New York. Commercial bank opened in 1923 in Union Square by the Amalgamated Clothing Workers of America. It became instrumental in supporting unions by providing low-interest loans and a loan support program for strikers, and was the first bank in New York City to offer unsecured personal loans and free checking with no minimum balance. In the early twenty-first century, Amalgamated was the only bank in the United States owned entirely by a union. It had assets of more than $4 billion and nine New York branches, which provided pension trust and custodial services, consumer and commercial loans, mortgages, and health care financial services.

The Evolution of Banking: A Story of the Transition from the Medieval Moneylender to the Labor Bank (New York: Amalgamated Bank of New York, 1926)

Laura Gwinn

Amalgamated Clothing Workers of America. Labor union formed in 1914 by men's clothing workers, most of them Jewish and Italian immigrants. It had its roots in a bitter strike at the end of 1912 by employees seeking higher wages and relief from conditions in disease-ridden tenements and dark, poorly ventilated sweatshops. The first enduring institution to defend against abuses in the garment trade, it took an approach that

became known as the "new unionism": unlike its affiliate in the American Federation of Labor, the United Garment Workers, which promoted nativism and craft elitism, it sought the membership of immigrants and introduced a method of collective bargaining, sometimes called "industrial democracy," that encouraged workers to help resolve grievances on the shop floor. In the 1930s and 1940s these innovations became the model for labor relations throughout much of American industry. In 1936 the union was one of the founding members of the Congress of Industrial Organizations (CIO). The union also achieved success in a number of social innovations, including unemployment insurance, group health care, affordable credit (through the Amalgamated Bank), and cheap cooperative housing (in Manhattan and the Bronx); these measures prefigured the core reforms of the New Deal and represented a remarkable degree of social conscience at a time when such concepts were uncommon.

These gains were threatened by the Depression, and the union survived partly because it organized aggressively and in 1932 rid itself of members with ties to organized crime, an effort carried out with the reluctant help of Mayor James J. Walker. Unable to escape calamity on its own, it strengthened its relations with government and shifted its support from socialism to the Democratic Party and the welfare state. In the city it helped to form the American Labor Party, which delivered the votes of former radicals to Franklin D. Roosevelt, Herbert H. Lehman, and Mayor Fiorello H. La Guardia. After World War II the union changed as blacks, Asians, Latin Americans, and Puerto Ricans became the majority. Membership reached 96,000 in 1952 but declined to 57,000 by 1970, reflecting the decline of garment manufacturing in the city. In 1976, as imports flooded the American market, the union merged with the Textile Workers Union of America, a measure first considered during the early 1920s. In 1995, the Amalgamated Clothing and Textile Workers Union merged with the International Ladies' Garment Workers' Union to form UNITE, which merged again in 2004 with the Hotel and Restaurant Employees Union and formed UNITE HERE. In 2009 the combined organization had more than 265,000 members, who worked primarily in the hotel, food service, casino gaming, laundry, and warehousing industries.

Steve Fraser

Amalgamated Housing Corporation. Organization formed in 1926 by the Amalgamated Clothing Workers of America (ACW). Its incorporation followed an attempt in the preceding year by Abraham Kazan, manager of the credit union of the ACW, to build reasonably priced cooperative housing for the union's workers by forming the ACW Corporation. With his colleagues he chose a site in the Bronx accessible to the subway, near Van Cortlandt Park and the Jerome Park Reservoir, but was unable to raise sufficient funds to begin construction. The Amalgamated Housing Corporation was formed by the union as a means of furthering Kazan's project after the state legislature in 1926 passed the Limited Dividend Housing Companies Law to encourage low-cost housing through tax incentives. Kazan was named president of the new corporation by Sidney Hillman, president of the ACW, and he also remained as president of the ACW Corporation, which became the construction company for the project. In addition to capital raised from cooperative members, the Metropolitan Life Insurance Company and the publishers of the *Jewish Daily Forward* provided a credit fund and a mortgage, enabling groundbreaking to take place in November 1926. The following year the Amalgamated Cooperative Apartments, designed by the architects George W. Springsteen and Albert Goldhammer, were built north of Sedgwick Street between Saxon and Dickinson avenues in the Bronx. The apartments accommodated 303 families who paid $11 a room a month and $500 a month to buy into the cooperative: because of Kazan's insistence on open membership not all the families were associated with the ACW. Among the first tenants was the family of David Dubinsky, president of the International Ladies' Garment Workers' Union. The building was luxurious by the standards of the time, with large rooms and interior garden courtyards. Ice, dental, medical, and children's services were provided cooperatively, along with a newspaper (*Community News*) and various cultural activities; house committees oversaw day-to-day functions. In January 1929 construction of an additional 192 apartments began on land adjacent to the original building. That same year Kazan and the Amalgamated Housing Corporation purchased a block of land on Grand Street, in the Lower East Side, and built the Amalgamated Dwellings (six stories, 236 apartments), also designed by Springsteen and Goldhammer. The complex won an award in 1931 from the American Institute of Architects, and a local street was renamed Kazan Street. Another 115 units were added to the original housing in the Bronx in 1931, and a large complex of five- and six-story buildings in a Gothic style was built in 1937. Norman Avenue, which adjoins these extensions, was renamed Hillman Avenue after the union's president.

Tenants in the early decades of the Amalgamated projects were primarily Jewish and Italian. In 1950 the three Amalgamated groups, along with several cooperatives in the city, labor unions, and neighborhood and fraternal organizations, formed the United Housing Foundation to promote cooperative housing, with Kazan as president. The following year the Hillman Housing Project, comprising three 12-story buildings, their gardens, and their playgrounds, was constructed at Grand Street between Abraham Kazan Place and Lewis Street, requiring clearance of 65 slum tenements in a four-block area; by 1990 the complex contained more than 4000 units. Like the rest of the city the Amalgamated projects became more ethnically diverse in the 1970s and housed an increasing number of black, Latin American, Korean, and other Asian residents. In 2008 the Amalgamated Housing Corporation maintained housing for more than 1500 families. Both the Amalgamated Houses and the Amalgamated Dwellings were managed by independent cooperative boards composed of local residents, and state law required that residency be open only to those of middle or limited income.

Asher Aschinstein, *Report of the State Board of Housing on the Standard of Living of 400 Families in a Model Housing Project, the Amalgamated Housing Corporation* (Albany, N.Y.: Burland, 1931); *Thirty Years of Amalgamated Cooperative Housing, 1927–1957* (New York: Warbasse Memorial Library, 1958)

Marjorie Harrison

Amato Opera Theater. Opera company formed in 1947 by Anthony Amato and Sally Bellantoni Amato. It initially sponsored performances at unused auditoriums around the city before moving to a site on Bleecker Street now occupied by the Circle in the Square Theatre, and then to a white brick building in the East Village at 319 Bowery at Second Street. Although the theater seats only 107 persons and the stage is only 20 feet (6 meters) wide, the productions were ambitious, and as many as 70 performers have been onstage at one time. Aspiring singers who had hoped to be discovered by major companies performed for no pay. In May 2009 the Amato ceased operations, and Anthony Amato sold the theater building. Their last performance was of Mozart's *Marriage of Figaro* on 31 May 2009.

Kenneth T. Jackson

AMAX. Firm of ferrous-metal miners. It was formed in 1887 at 80 Wall Street by a prominent German family as the American Metal Company (Amco), a trader of metals, and moved to 61 Broadway in 1913. Its financial interest in the discovery of molybdenum ore in the Rocky Mountains in 1916 made it internationally known, and it soon developed molybdenum for commercial use and focused increasingly on mining rather than trading. The Climax Molybdenum Company was formed in 1934 with headquarters at 500 Fifth Avenue and worked closely with Amco until the two companies merged in 1957 to form American Metal Climax, with offices in Rockefeller Center. Renamed AMAX in 1974, it became one of the most successful firms in

the city. In 1993 AMAX merged with the Cyprus Minerals Company to form Cyprus Amax Minerals Company.

James Bradley

Ambassador Hotel. Hotel at 51st Street and Park Avenue, designed by the firm of Warren and Wetmore and erected in 1921. An aristocratic structure, it differed from some of its contemporaries in having individually designed rooms and suites. The furnishings and interior ornamentation, loosely inspired by eighteenth- and nineteenth-century English and French styles, were supplied by John Wanamaker.

Shan Jayakumar

Ambrose, John W(olfe) (*b* Newcastle West, Ireland, 10 Jan 1838; *d* New York City, 15 May 1899). Engineer who developed docks and channels in New York Harbor and constructed elevated railroads. In the 1880s Ambrose founded the 39th Street South Brooklyn Ferry and became president of the Brooklyn Wharf and Dry Dock Company. He devoted his last years to seeking funds for enlarging New York Harbor from Congress, which shortly before his death voted an appropriation for a channel 45 feet (13.7 meters) deep, 2000 feet (610 meters) wide, and 10 miles (16 kilometers) long. The Ambrose Channel and Light are named for him.

Elliott B. Nixon

A.M.E. Church. See African Methodist Episcopal Church.

Amerada Hess Corporation. Firm of petroleum distillers formed as the Amerada Corporation in 1920 by Everett de Golyer (1885–1954), with headquarters at 65 Broadway. Initially a small firm that sought new methods for finding petroleum, it became one of the largest independent oil companies in the country after discovering an important oil field in North Dakota in 1952. Through the efforts of Leon Hess (1914–1999) it merged with the Hess Oil and Chemical Corporation and became the Amerada Hess Corporation; the offices were moved in 1973 to Rockefeller Center. In 2006 the company changed its name to the Hess Corporation.

James Bradley

American Academy of Arts and Letters. Society of composers, artists, architects, and writers founded in 1904 by elite members of the National Institute of Arts and Letters, who took the Académie Française as their model. The initial seven members were William Dean Howells, Augustus Saint-Gaudens, Edmund Clarence Stedman, John La Farge, Mark Twain, John Hay, and Edward MacDowell. Now numbering 250, the academy's members are elected for life. Since 1923 the academy has been housed in the Audubon Terrace complex in upper Manhattan on Broadway between 155th and 156th Streets. In 1976 the academy and its parent organization voted to merge into one institution with a two-tiered membership structure, called the American Academy and Institute of Arts and Letters. In 1993 all members were enrolled in a single organization, again known as the American Academy of Arts and Letters. The organization exhibits art and manuscripts, funds readings and performances of new works, purchases works of art to be donated to museums, and administers awards. Each year more than 50 individuals are recognized with awards and honors ranging from $5000 to $75,000.

Helen Graves

American Academy of Dramatic Arts. A school for film, television, and stage acting. Founded in 1884, the academy celebrated its 125th anniversary in 2009. It offers classes in acting, voice and speech, theater history, and makeup. The academy also provides an education in the business aspect of an acting career. The school is designed around a two-year program with conservatory classes and programs, including performances. Academy alumni, many of whom have won Emmy, Tony, and academy awards, include Grace Kelly, Adrien Brody, Kim Cattrall, and Danny DeVito.

Meryl Cates

American Academy of the Fine Arts. Formed in 1802 as the New York Academy of Arts, the first art school and museum in the city. Its founders were Edward Livingston, then the mayor of New York City, and his brother Robert R. Livingston, the American minister to France. The Livingstons attracted nearly 80 merchants, physicians, lawyers, and other prominent citizens to a subscription for the purchase of casts after antique sculptures in the Louvre. Later the academy was led by De Witt Clinton (1813–16), who deployed it for political purposes, and by John Trumbull (1817–35), who sought to professionalize the arts. The name was changed to the American Academy of the Fine Arts in 1817, and annual exhibitions were held at the New York Institution for the Arts in City Hall Park (1816–30) and at 81/2 Barclay Street (1831–42). In 1826 members of the academy reacted to the contemporary American art exhibits of the newly formed National Academy of Design by increasing their display of paintings by old masters, a gambit that eventually failed but nonetheless jump-started the market for European painting in the city. In 1842 the remaining officers disbanded the academy and sold its sculpture to the National Academy and paintings to Daniel Wadsworth.

reformers in New York City led by Lewis Tappan and a group from Boston favoring immediate abolition led by William Lloyd Garrison. The society was based in New York City and was dominated by New Yorkers until 1840. Tappan served on the executive committee with such prominent merchants and reformers as John Rankin and William Green; his brother Arthur Tappan was president of the society. In the 1830s the society flooded the mails with abolitionist literature and organized a massive petition campaign. It was crippled in 1840 when the faction from New York City led by the Tappans withdrew and formed the American and Foreign Anti-Slavery Society. Control of the American Anti-Slavery Society was assumed by Garrison, who advocated moral suasion, northern secession, and black civil rights. The society disbanded in 1870 after Congress ratified the 15th Amendment.

Peter J. Wosh

American Art-Union. Nonprofit organization formed in 1839 by a group of merchants, bankers, lawyers, and railroad directors in New York City as the Apollo Association for the Promotion of the Fine Arts in the United States; it changed its name in 1844. The stated goals were "cultivating the talent of artists" and "promoting the popular taste." The group bought paintings from American artists such as William Sidney Mount and Thomas Cole and distributed them by lottery to subscribers, who paid an annual membership fee of $5. At the height of its influence in 1849 it distributed 1010 works of art among 18,960 subscribers across the nation. It also published an illustrated periodical (April 1848 to December 1851) and issued one or more engravings to members each year. At a time of growing sectional strife between North and South, the American Art-Union promoted themes of patriotic cohesion. It ceased operations in 1853 as the result of legal actions brought against it because of its lotteries.

Mary Bartlett Cowdrey, *The American Academy of Fine Arts and American Art-Union, 1816–1852* (New York: New-York Historical Society, 1953)

Patricia Hills

American Ballet Theatre [ABT]. Dance company. Formed in 1939 under the name Ballet Theatre, it gave its first performance in January 1940. The founders, Richard Pleasant and Lucia Chase, previously gave financial support to ABT's forerunner, Mordkin Ballet, led by the Russian dance teacher Mikhail Mordkin. Pleasant encouraged Chase to build a larger company on the European model, and the two recruited many performers, including Europeans fleeing the hostilities of World War II, and signed on Antony Tudor as their resident choreographer. Since its founding, ABT emphasized classical technique, such as the Vaganova method, and adaptability in its dancers. Its repertoire consisted of classical full-length ballets from the nineteenth and early twentieth centuries and contemporary works, including *Giselle, Apollo,* and *Duets.* ABT also encouraged the development of new works and has performed pieces by twentieth-century choreographers such as Agnes de Mille and Twyla Tharpe.

The impresario Sol Hurok expanded the audience for the company by booking performances at the Metropolitan Opera House but damaged its reputation by disregarding Tudor's seriousness of purpose and seeking to impose his view that ballet should be frothy, high-spirited entertainment. The company nevertheless gave successful performances of *Fancy Free* (1944) by Jerome Robbins, ABT's first collaboration with scenic designer Oliver Smith, and *Theme and Variations* (1947) by George Balanchine. Oliver Smith, who emphasized the interaction between moving scenery and the human form, later became codirector of ABT in 1945 and held the position until 1980.

From the late 1940s to the early 1960s the company suffered from its lack of a permanent performance venue in New York City. After breaking with Hurok, it was unable to depend on the Metropolitan Opera House, and when Balanchine's company, the New York City Ballet, became an affiliate of the City Center of Music and Drama in 1950, this venue became unavailable as well. The company was reduced to performing in various theaters on Broadway, an arrangement that proved unsatisfactory. Tours took on an increasingly important role: the company visited small U.S. cities throughout the 1950s and 1960s, Europe in 1956–57 (at which time the company took its current name), and the Soviet Union with the sponsorship of the U.S. Department of State in 1960. These years were marked by such a lack of artistic focus that the tour of the Soviet Union took place only after one early supporter, John Martin of the *New York Times,* failed to dissuade the government from funding it.

The fortunes of the company revived in 1964 when the New York State Theater opened as part of the Lincoln Center for the Performing Arts. By providing a home for the New York City Ballet, the theater again freed up the City Center for ABT; the New York State Theater was itself available when the New York City Ballet and the City Opera were not in residence there. In 1967 the company gave a well-received performance of the complete *Swan Lake,* staged by David Blair of the Royal Ballet. In the same year Cynthia Gregory emerged as a promising dancer and Eliot Feld made his debut as a choreographer. The company continued to emphasize international talent: among those who performed with the company after taking up residence in the United States were the prominent Russian dancers Natalia Makarova (1970) and Mikhail Baryshnikov (1974) and Balanchine's leading ballerina, Gelsey Kirkland. In 1977 public television showed ABT's production of *The Nutcracker* featuring Baryshnikov and Kirkland, regarded by many as a classic. The late 1970s were the company's most successful years since its first few seasons.

In 1980 the board of directors, in a controversial move, forced the retirement of Chase and placed Baryshnikov as the new artistic director. He received continual popular and internal criticism during this time. With Baryshnikov as the head, the company refined its classical tradition and staged and restaged many classical ballets. Baryshnikov resigned from the directorship in 1989 and a year later was replaced by Oliver Smith and Jane Hermann, a former director in the presentations department in the Metropolitan Opera Association. This change was characterized by bitterness, threats of strikes and financial collapse, and fears for the company's financial and artistic survival.

In 1992 Kevin McKenzie, a former ABT principal dancer, became the artistic director. He wished to maintain the company's traditional repertoire and recognized the importance of touring as a source of revenue, publicity, and spreading dance to people all over the world. In the fall of 2000 ABT visited

Members of the American Ballet Theatre in Fancy Free *(1940; Jerome Robbins, third from left)*

China, Singapore, and Taiwan, the latter two for the first time. The company supports the development of dance and choreography by holding various programs, such as ABT II, and summer intensive sessions for young artists from across the United States. In 2004 ABT opened the Jacqueline Onassis School, a facility that teaches dancers from 12 to 18 years old. Its curriculum uses principles from the classic French, Italian, and Russian schools of training in order to provide its students with classical technique and the ability to adapt to all styles of dance; thus they are instructed in the ideals of the company that they may later join. ABT annually tours the United States, reaching more than 600,000 people. Its repertoire continues to consist of classical ballets and contemporary works, many with American themes. While ABT remains at City Center in the fall, during its main season the company performs at the Metropolitan Opera House for eight weeks in the spring.

Anita Finkel, Frank Nestor

American Bank Note Company. Firm of engravers formed in 1858 by the merger of seven banknote engraving firms. It was originally housed in the Merchants' Exchange Building on Wall Street and soon after its formation became the most renowned financial engraver in the country. In addition to paper money the firm printed stamps and stock certificates. It built headquarters on Broad Street in 1908. The firm was acquired by the United States Bank Note Corporation in 1990 and left New York for suburban Pennsylvania.

James Bradley

American Bible Society. Interdenominational religious society formed in New York City in 1816 by delegates representing local Bible societies from across the country and having as its aim the circulation of the Bible without doctrinal note or commentary. Despite some early contact with Roman Catholics it remained essentially Protestant until the 1960s. The society first occupied quarters on Nassau Street. During its early years it used new forms of printing technology to produce unprecedented quantities of inexpensive Bibles and testaments, and subsidized missionary translators overseas. From 1836 it set up agencies overseas to coordinate the translation, production, and distribution of Bibles; this trend increased dramatically after the Civil War. The society directed special efforts at urban youths, immigrants, mariners, and American Indians. In 1853 it moved to Bible House on Astor Place, a six-story building that housed its extensive pressroom, bindery, and sales operations while also providing a headquarters for a wide range of Protestant benevolent organizations. Later the offices moved successively to Park Avenue at 57th Street (1936) and Broadway at 61st Street (1966). The society maintained a visible presence in the Near East, the Far East, and Latin America well into the twentieth century. By the middle of the century it began to focus its efforts on distributing not only the Bible in its entirety but also biblical excerpts. At the same time the work of the society was marked by a growing cooperation with Roman Catholics after the Second Vatican Council and by support for the world Bible fellowship known as the United Bible Societies, a consortium of national organizations that the society had helped to form in 1946. In the early twenty-first century the society's headquarters were at 1865 Broadway.

American Booksellers Association. Trade association for American retail bookstores. Formed in 1900 in New York City, it was originally intended to stabilize book prices and eliminate price cutting. The association offers programs to facilitate book distribution, issues manuals and handbooks, and is a sponsor of the National Book Awards. In 1992 the association moved from New York City to suburban Tarrytown in Westchester County, New York.

Eileen K. Cheng

American Brands. Firm of consumer-product manufacturers, formed as the American Tobacco Company in 1890 by James B. Duke with headquarters at West 22nd Street, off the Hudson River. In 1904 Duke formed the American Tobacco trust by consolidating most of the nation's major tobacco companies, and he moved the headquarters to the Constable Building (Fifth Avenue and 18th Street). The trust was broken up after the U.S. Supreme Court ruled in 1911 that it violated antitrust laws, but the firm nonetheless remained tremendously successful. At Duke's death it was taken over by George Washington Hill and soon became the leading tobacco company in the United States. The firm moved its offices in 1955 to Lexington Avenue and 42nd Street; it was renamed American Brands in 1968. American Brands expanded during the 1980s, when it bought life insurers and manufacturers of office products, hardware, rubber products, and optical goods. The firm moved its headquarters from New York City in 1986.

James Bradley

American Broadcasting Company [ABC]. Television and radio network based in New York City. It began as the second radio network of the National Broadcasting

Company (NBC), called the Blue Network; put up for sale by a ruling of the Federal Communications Commission in 1943, it was acquired by Edward J. Noble for $8 million and given its current name. Although Noble bought five television stations in major markets in 1946, NBC and the Columbia Broadcasting System (CBS) still had more affiliates and more talent. At first ABC specialized in animated cartoons from Hollywood and in action and Western series such as *Cheyenne* and *Maverick*. The news division was run by John (Charles) Daly, also the host of the quiz program *What's My Line?* on CBS. Financial difficulties in 1953 forced a merger with United Paramount Theatres, the president of which, Leonard Goldenson, ran the new company for the next 32 years. ABC was the only network to broadcast the Army–McCarthy hearings live in 1954, but the network was known for the low quality of its news programs, which relied on films supplied by newsreel companies until 1963. During the 1960s it broadcast such popular programs as *77 Sunset Strip* and *Hawaiian Eye,* but it did not pose a threat to CBS and NBC until 1975–76, when Elton T. Rule became president and the network overtook both its competitors in the ratings (a position it held for three consecutive years). In 1976 it offered Barbara Walters the unprecedented salary of $1 million a year to become the first female anchor of a network news program, and it broadcast the series *Roots* (based on the book by Alex Haley), which attracted more viewers than any television program had done before. The network also became known for the sports programs *Wide World of Sports* and *Monday Night Football* and for its coverage of the Olympics; its sports producer Roone Arledge introduced such techniques as slow motion and instant replay. Arledge became president of the news division in 1977. He made an aggressive attempt to improve it by persuading journalists from CBS to join ABC-TV and by developing such highly regarded programs as *Nightline* (with Ted Koppel) and *Sunday Morning with David Brinkley.* In the 1980s the evening news program (with Peter Jennings) surpassed those of the other networks in the ratings. Emboldened by its success, the company expanded its facilities on West 66th Street and built more studios in the West 60s. In 1986 ABC was acquired for $3.5 billion in a friendly takeover by Capital Cities Communications. The joint company was acquired by the Walt Disney Company in 1996. After several years of lackluster ratings ABC experienced an increase in viewership in 1999 with its popular game show *Who Wants to Be a Millionaire?* hosted by Regis Philbin and aired from the company's New York City studios. In the early twenty-first century ABC continued to broadcast many programs nationally from studios in New York City.

Judith Adler Hennessee

American Chicle Company. Firm of chewing gum manufacturers, formed as Adams Sons and Company in 1876 by the glass merchant Thomas Adams (1818–1905) and his two sons. As a result of experiments in a warehouse on Front Street, Adams made chewing gum that had chicle as an ingredient, large quantities of which had been made available to him by General Antonio de Santa Anna of Mexico, who was in exile in Staten Island and at whose instigation Adams had tried to use the chicle to make rubber. Adams sold the gum with the slogan "Adams' New York Gum No. 1—Snapping and Stretching." The offices and factory were on Vesey Street and were later moved to Murray Street. The firm was the nation's most prosperous chewing gum company by the end of the century: it built a monopoly in 1899 by merging with the six largest and best-known chewing gum manufacturers in the United States and Canada, and achieved great success as the maker of Chiclets. It was renamed the American Chicle Company, with headquarters on 44th Street in Manhattan, but it moved in 1923 to Thomson Avenue in Long Island City, where the firm had two factories. During World War II many of the facilities were used for packing and shipping war rations. The firm merged with the Warner–Lambert Pharmaceutical Company in 1962 and soon left the city; its factories in Long Island City closed in 1981.

James Bradley

American Civil Liberties Union [ACLU]. Organization devoted to the defense of individual liberties guaranteed by the Bill of Rights of the Constitution of the United States. Its national office is in New York City, as is the office of its affiliate, the New York Civil Liberties Union (NYCLU). On its formation in 1920 the ACLU was seen as the successor to the Civil Liberties Bureau (CLB), which had been formed in 1917 to protect freedom of speech, freedom of the press, and the rights of conscientious objectors during World War I. The leaders of the CLB and of its parent organization, the American Union against Militarism (AUAM), included many social workers and reformers associated with the Henry Street Settlement.

The ACLU is active in the areas of First Amendment rights (freedom of speech, of the press, and of assembly), due process (search and seizure, the right to counsel), equal protection (civil rights for racial minorities and women), and privacy (abortion rights). It is perhaps best known for defending adherents of controversial groups, including communists, American Nazis, and members of the Ku Klux Klan. It has also aroused controversy by advocating a strict separation of church and state that precludes prayer in public schools and religious displays on government property.

During its first decades the national office of the ACLU in New York City handled virtually all the work of the organization, and members of the board of directors and staff lived in the city. Roger Baldwin, the director from 1920 to 1950, was active in many other political and social causes, including pacifism, the labor movement, and civil rights. In the 1950s the ACLU began to develop a network of state affiliates, which took on most of the local and regional work of the organization. The national office coordinates the affiliates, works on special projects in such areas as reproductive freedom, women's rights, and children's rights, and maintains a legislative office in Washington. The NYCLU grew out of the New York Civil Liberties Committee (NCLC) and became a semiautonomous affiliate with its own professional staff in 1951.

The activities of the ACLU include litigation, lobbying, and public education. At any one time the organization works on about 1000 cases, most of which are handled by volunteer lawyers. Its most notable successes have come about in Supreme Court litigation: by one estimate the organization played a part in four-fifths of the important civil liberties and civil rights cases decided by the Supreme Court between the mid-1920s and the mid-1990s. As of 2008 the ACLU had about 500,000 members.

Samuel Walker

American Council of Learned Societies. Organization of scholarly societies formed in 1919 for the study of the humanities. The council promotes research, offers fellowships, and sponsors the International Research and Exchanges Board, the Council for International Exchange of Scholars, a program to encourage American studies in Europe and Asia, committees on Chinese civilization, and exchanges with scholars from Russia and eastern Europe. Books published under its auspices include grammars of Azerbaijani, Armenian, Finnish, Mongol, and Bashkir, the papers of Charles Darwin, the census of medieval manuscripts, and such reference works as the *Dictionary of Scientific Biography* (1970–80), the *Dictionary of the*

Middle Ages (1982–89), and the *Dictionary of American Biography* (1928–). The council also produces an annual report, a quarterly newsletter, and an occasional papers series. The offices are at 633 Third Avenue in Manhattan. In the early twenty-first century it had 69 organizations as members, among them the American Philosophical Society (formed in 1743 by Benjamin Franklin), the American Dialect Society, the History of Science Society, and the Metaphysical Society of America.

James E. Mooney

American Craft Museum. See Museum of Arts and Design.

American Cyanamid. Firm of chemical and pharmaceutical manufacturers. It had headquarters in New York City at Rockefeller Center from 1928 to 1962 and a plant on Willoughby Street in Brooklyn where surgical sutures and ligatures were manufactured from 1945 to 1952. It left the city for suburban Connecticut in 1963.

James Bradley

American Ethnological Society. Oldest professional anthropological organization in the United States. It was formed in New York City in 1842 by a group including Albert Gallatin, who was also its first president. Weakened by factionalism and financial difficulties during the 1850s and 1860s, it nevertheless continued to meet sporadically through the end of the nineteenth century. After 1900 the society was revitalized under the direction of Franz Boas, who drew on the anthropological resources of Columbia University and the American Museum of Natural History. It published an important monograph series beginning in 1940. In the mid-1950s the American Ethnological Society moved beyond its focus primarily on New York City to became a national organization, with publications issued from the University of Washington in Seattle. In the early 1980s it became a subsection of the American Anthropological Association.

Ira Jacknis

American Express. Firm that began in 1850 as a joint stock corporation formed by the merger of three former rivals: Wells and Company; Butterfield, Wasson and Company; and Livingston, Fargo and Company. The new firm constructed a building on Jay and Hudson streets in Manhattan and enjoyed a virtual monopoly on the transport of goods, currency, and securities throughout New York State. In 1874 it moved to 65 Broadway. Soon the firm offered services nationwide by reaching agreements with other express companies (including Wells Fargo), railroads, and steamship companies. It expanded to include financial services by offering money orders from 1882 and introducing the world's first traveler's check in 1891. By the early twentieth century the express companies came under scrutiny from the Interstate Commerce Commission. The firm discontinued its express business altogether when the government took over the railroads during World War I. It opened a travel division in 1915, constructed a new building at 65 Broadway (1917), opened branches in several countries, and set up a banking subsidiary with offices throughout the world. During the 1920s the firm offered around-the-world cruises and one of the first air travel arrangements, from London to Zurich. In 1929 Chase Securities Corporation, an affiliate of the Chase National Bank, purchased 97 percent of the firm in an attempt to gain access to its extensive international network, but the Depression prevented Chase from acquiring full ownership, and when the government ruled in 1933 that banks could not conduct nonbanking operations, Chase divested itself of American Express entirely. After World War II the firm increased the number of its foreign offices from 50 to 139 in response to a markedly increased demand for tours and excursions, and in 1958 it introduced its charge card. An attempt by a fraudulent subcontractor to sell large quantities of water as soybean oil in November 1963 left the firm with enormous liabilities (the incident became known as the salad-oil scandal), but creditors' claims were quickly settled. The charge card operation was at first unprofitable, but by 1967 cardholders numbered more than two million, and the volume of charges reached $1.1 billion.

In 1968 American Express acquired the Fireman's Fund Insurance Company, which became one of its largest subsidiaries, and in 1971 it launched the magazine *Travel and Leisure.* It acquired the data processing firm First Data Resources as well as the brokerage house Shearson, Loeb, Rhoades in 1981 and Investors Diversified Services in 1984; in the following year it began selling off the Fireman's Fund Insurance Company, which had proved to be a financial drain because of cyclical losses. It moved its headquarters to the World Financial Center at Battery Park City in 1986, constructing the 51-story American Express Tower. On 11 September 2001, when two hijacked airliners crashed into the twin towers of the World Trade Center, the American Express headquarters across the street were heavily damaged and 11 American Express employees were killed. It took more than half a year for the company to move back into its former location.

Mary Hedge

American Federation of Labor [AFL]. Trade union organization formed in 1886. Among its forerunners was the Cigar Makers International Union (CMIU), based in New York City, which was organized along craft lines and offered generous benefits to members in exchange for high dues. Under Adolph Strasser, the international president, and Samuel Gompers, the president of Local 144, the organization responded to a recent depression and the political activism of socialists, greenbackers, and others by joining with Peter McGuire, who had organized carpenters in St. Louis, to form the Federation of Organized Trades and Labor Unions in 1881; this remained smaller than its rival, the Knights of Labor, but played an important role in agitating for the eight-hour day. After a bitter dispute in the city between the CMIU and District 49 of the Knights, labor leaders including Strasser and Gompers called for the formation of a stronger federation, and in December 1886 the American Federation of Labor held its first convention in Columbus, Ohio, electing Gompers its president. The most influential trade unionist in New York City, he held the position until his death in 1924 (except for a year in 1894), his tenure marked by the growth of skilled craft unionism in many industries, including the building trades. Under his direction the federation became the most powerful organization of its kind in the United States; during a time when it had little money he made his apartment its headquarters.

Gompers came to believe that political activities and trade unionism should remain separate, and in 1889 he came into bitter conflict with Daniel DeLeon, the socialist leader of the Central Labor Federation (CLF), an organization chartered in the AFL. DeLeon refused to dissociate his Socialist Labor Party from the federation, which from 1894 responded by discouraging the participation of socialists and opposing socialist alternatives to capitalism. The national organization made no effort to organize unskilled workers and became increasingly conservative: Gompers eventually joined the National Civic Association, which was dominated by business and dedicated to rationalizing relations between labor and management. In 1922 Rose Schneiderman of the Women's Trade Union League resigned from the New York City Central Trades and Labor Council, the governing body of the federation in the city, because she was convinced that it would never seriously support women's labor issues.

During the 1920s and early 1930s the AFL suffered nationwide from a fierce campaign against unions waged by corporations, and at the onset of the Depression membership declined from about five million to about three million. During 1933 and 1934 New York City experienced a resurgence of organizing in the garment trade. Both Sidney Hillman's

Amalgamated Clothing Workers of America (ACWA) and David Dubinsky's International Ladies' Garment Workers' Union (ILGWU) won strikes in the city. Eventually Hillman took the ACWA into the newly formed Committee of Industrial Organizations (CIO; later renamed the Congress of Industrial Organizations), formed by Hillman and John L. Lewis to organize workers in mass-production industries who had been ignored by the AFL. The ILGWU at first also joined the CIO, but it returned to the AFL in 1940. The AFL denounced the CIO for its links to communism even as some of its affiliates, including the teamsters, adopted the organizing methods of the CIO. One of the most important trade unionists at the time was George Meany, president of the AFL in New York State, who built alliances with city and state political leaders that ensured the passage of laws requiring unemployment insurance and workers' compensation.

The AFL gained strength by adapting to the anticommunist movement after World War II: its unions readily accepted the anticommunist provisions of the Taft–Hartley Act (1947), while the CIO suffered from internal struggles that led to the expulsion of unions with links to communists. A merger of the two organizations took place in 1955 to form the AFL–CIO but was not completed in New York City until 1959, when the Greater New York Central Trades and Labor Council of the CIO was replaced by the New York City Central Labor Council (CLC) as the central body of the AFL–CIO in the city. The first president of the CLC was Harry Van Arsdale of the International Brotherhood of Electrical Workers (IBEW); he was largely responsible for persuading Mayor Robert F. Wagner to recognize the right of public workers to organize and for winning strong encouragement from the CLC for the organizers of Local 1199 of the Hospital Workers' Union, most of whom were black women.

The CLC was politically involved in elections, such as the election of Mario M. Cuomo as governor of New York in 1982. After Harry Van Arsdale's death in 1986, a rift developed between building-trade unions and municipal unions during the disputed election of Van Arsdale's son, Thomas Van Arsdale, as the council's president. The younger Van Arsdale charged Victor Gotbaum, his rival, with supporting communist governments abroad. Van Arsdale won the election after a ruling by Lane Kirkland, then president of the AFL–CIO. In 1995, Kirkland resigned; Thomas Donahue took his place as acting president until John Sweeney was elected president of the AFL–CIO. In the beginning of the twenty-first century, the AFL–CIO suffered from severe cutbacks in industrial employment and the withdrawal of three large unions from the federation in 2005.

Richard Yeselson

American Federation of State, County and Municipal Employees [AFSCME]. Labor union formed in Wisconsin in 1932. Its first local in New York City dates to 1937. In 1944 District Council 37 was chartered to coordinate its locals in the city. Several thousand municipal employees joined AFSCME by 1949, but in 1952 its two largest units defected to the International Brotherhood of Teamsters: one became the Uniformed Sanitationmen's Association, the other Local 237. Under the leadership of Jerry Wurf, the union slowly recovered, capitalizing on Mayor Robert F. Wagner's commitment to collective bargaining. By 1961 District Council 37 had 20,000 members. When Wurf was elected international president of AFSCME in 1964, he was succeeded as executive director of District Council 37 by Victor Gotbaum. In 1965 District Council 37 won a recognition election involving 20,000 hospital workers and became the largest municipal union; its certification as the representative of most employees of mayoral agencies gave it the right to bargain for pensions and benefits for most city workers, including those represented in wage negotiations by other unions. Its strength, organizing campaigns, favorable contracts, and occasional job actions helped increase its membership to nearly 100,000 by the early 1970s. The union offered its members, many of whom held low-paying jobs, a wide range of benefits, including legal, medical, and social services, educational programs, and cultural activities. In 1974 AFSCME set up District Council 1707 to represent its growing membership among employees of nonprofit social service agencies.

AFSCME's financial contributions, telephone banks, and volunteers made it a powerful force in local and state politics, usually providing support for liberal Democrats. During the fiscal crisis of the mid-1970s Gotbaum helped negotiate agreements among leaders in government, business, and labor that saved the city from bankruptcy. With other unions District Council 37 agreed to wage deferrals, reductions in benefits, and a massive purchase of municipal bonds with pension funds, even as thousands of its members were put out of work. Gotbaum emerged from the crisis as the city's most prominent labor leader, known for his blustering style and close ties to business leaders. He retired in 1987; his successor was Stanley Hill, who started working for the city as a caseworker in 1959. The leading African American unionist in the city, Hill played important roles in the presidential campaign of Jesse Jackson in 1988 and the election of Mayor David N. Dinkins in 1989.

During the 1980s and 1990s the leaders of individual District Council 37 locals became increasingly powerful and in some cases corrupt. A series of investigations that began in 1997 ultimately led to the conviction of 32 AFSCME officials on charges of embezzlement and rigging a membership vote to ratify a controversial 1996 contract with the city. National AFSCME forced Hill to retire and placed District Council 37 under their supervision and administration. It regained its autonomy in 2002 with the election of Lillian Roberts as its executive director (she had served as a top AFSCME leader under Gotbaum). AFSCME remained the city's largest union of public employees but without the widespread influence it once had.

Jewel Bellush and Bernard Bellush, *Union Power and New York: Victor Gotbaum and District Council 37* (New York: Praeger, 1984)

Joshua B. Freeman

American Federation of Television and Radio Artists [AFTRA]. Labor union formed as the American Federation of Radio Artists (AFRA) in New York City in 1937; its first president was the entertainer Eddie Cantor. In 1952 the union broadened its scope to include television performers and took its current name. During the 1950s the union fined, censured, and expelled members who failed to cooperate with the House Committee on Un-American Activities. The local union in New York City had about 25,000 members in the early twenty-first century, roughly one-third of the national membership. The union's national headquarters moved to Los Angeles in 2006. AFTRA represents actors, broadcasters, musicians, dancers, disc jockeys, puppeteers, and other performers who work in radio, television, Internet and digital programming, and a few other areas unrelated to broadcasting. It has successfully organized performers in public broadcasting, but met with some challenges in cable television, video recording, and digital media. The union establishes minimum salaries and fees through collective bargaining with networks, local stations, advertisers, and other producers. Initiation fees and dues are used primarily to support contract negotiations and enforcement. The union is affiliated with the American Federation of Labor–Congress of Industrial Organizations (AFL–CIO).

Gerard Koeppel

American Folk Art Museum. Museum originally chartered as the Museum of Early American Folk Arts in 1961. Its founders believed that folk art should be studied not only as historical and ethnographical artifacts, but

as serious art. It first showed works to the public in a gallery located on the parlor floor of a townhouse at 49 West 53rd Street. Robert Bishop was appointed director of the museum in 1977. During his tenure he greatly expanded its collection and promoted it to a wide audience. The museum partnered with New York University in 1981 to create the first graduate program in folk art studies in the nation. In 1989 it opened a branch location in Columbus Circle, opposite Lincoln Center. Over the following years the museum increasingly focused on contemporary folk artists and gained recognition for its acquisition of the archives of and 24 paintings by Henry Darger. In 2001 the museum changed its name to the American Folk Art Museum and opened its new building at 47 West 53rd Street, which was critically and publicly acclaimed for its innovative architectural design.

Breanne Scanlon

American Geographical Society. Organization formed at 179 Broadway in Manhattan on 9 October 1851 as the American Geographical and Statistical Society. The original membership numbered about 100 and included some of the most prominent figures in New York City, among them Alexander Isaac Cotheal, Henry Evelyn Pierrepont, Charles A. Dana, Henry J. Raymond, Freeman Hunt, and Judge Alexander Warfield Bradford. Early activities of the society included publication of its *Bulletin* (from 1852) and the reading of papers on such topics as the exploration of South America and the polar regions, construction of a railroad to the Pacific, and the extension of the telegraph. Despite concerns about insufficient funds and membership, the society was granted a charter by the state legislature in 1854. It moved its headquarters to Cooper Union in 1866 and took its current name in 1871; it later moved successively to 11 West 29th Street (1876), West 81st Street, 3755 Broadway, at Audubon Terrace (1911), and 156 Fifth Avenue. In the 1880s the society focused on such concerns as development of the Congo basin and the siting of a ship canal between the Atlantic and the Pacific oceans. Its president between 1903 and 1906 was Commander Robert E. Peary, explorer of the North Pole. In 1912 the society gained international recognition when it sponsored the Transcontinental Excursion, which introduced distinguished European geographers to the American landscape. The *Bulletin* became the *Geographical Review* in 1916.

The society was an important source of strategic information to the American military during both world wars. In 1950 it launched a quarterly magazine for the general reader called *Focus* and the following year published the *Millionth Map of Latin America.* It played an important role in preparing the *Columbia Lippincott Gazetteer of the World* (1952) and assembled an important map collection (now at the University of Wisconsin at Milwaukee). In later years the society reaffirmed its commitment to strengthening geographical education in American schools. A travel program was begun in 1985 to sponsor educational voyages throughout the world. At the turn of the twenty-first century the American Geographical Society was located at 120 Wall Street.

Elizabeth J. Kramer

American Heart Association. Organization for the prevention and cure of heart disease. Among its forerunners was the Society for the Prevention and Relief of Heart Disease, formed by physicians in New York City concerned with the management of heart disease. Organizational meetings were held at the New York Academy of Medicine in 1915, the first annual meeting on 26 January 1916. During the next eight years the society provided information and assistance to physicians in other cities who were organizing similar groups. At the initiative of the society the American Heart Association was formed in 1924 and held its first meeting in February 1925. The national headquarters moved to Dallas, Texas, in 1975. In the early twenty-first century the American Heart Association Heritage Affiliate was located at 122 East 42nd Street.

William Lee Frost

American Indians. Indian people have been living in and around what is now New York City for at least 11,500 years.

1. Early Hunters and Gatherers

Remains associated with early Paleo-Indians represent the oldest known verifiable physical record of human occupation in the area. The most direct evidence comes from Clovis points, which are lance-shaped chipped-stone projectile points with a long, narrow channel flake removed from the center; they have been found at North American sites occupied between 11,500 and 10,000 B.P. and have been recovered on Staten Island, notably at Port Mobil. Paleo-Indians and people who lived during the Archaic period (circa 10,000 to 3000 B.P) and the Early and Middle phases of the Woodland period (circa 3000 to 1000 B.P) were hunters and gatherers.

Artifacts made and used by these hunting and gathering people have been found at sites throughout the metropolitan area and were crafted almost entirely between 3300 and 3000 B.P from the Late Archaic period to the Early Woodland period. Thousands of stylistically distinct objects have also been found in the city, including pottery, which was first introduced into the Northeast during Early Woodland times. Most of these objects have been found in large sites repeatedly reoccupied by different peoples at different times, among them the Ryder's Pond site near Sheepshead Bay in Canarsie, the Bay Terrace site on Little Neck Bay in Queens, and the Ward's Point National Historic Landmark on Staten Island. Others have been discovered in small sites briefly occupied and used for special purposes, such as the rock shelters in Inwood Park at the northern tip of Manhattan Island and the many garbage heaps of shells, called shell middens, that formerly lined the local waterways.

Studies suggest that Paleo-Indians and succeeding hunting and gathering peoples in the metropolitan area belonged to small, mobile bands that divided into flexibly organized groups consisting of family and friends; these

Jacob A. Riis, Mountain Eagle and His Family of Iroquois Indians *(1895)*

groups traveled on foot or in watercraft and used tools, weapons, and ornaments crafted from stone, bone, shell, horn, and wood. Hunters and warriors used spears and darts tipped with antler projectile points or chipped stone that often came from local cobbles and rock outcrops; discoveries of projectile points made from cherts, flints, and other stones quarried in Pennsylvania, New Jersey, Connecticut, and upstate New York suggest contact with people from those areas. At specific times of the year members of these groups traveled to particular places to quarry stones; gather wild plants, shellfish, and eggs; and catch fish using spears, nets, or weirs. Gathering together in villages or camping separately, they lived in dome-shaped, sapling-framed houses covered with bark or grass mats and stored their goods in bark or skin containers, in pits, in wooden-splint or woven-grass baskets, and (during Woodland times) in fired clay pots and jars.

Living in Ice Age times, Paleo-Indians hunted such animals as caribou and elk roaming dense spruce and pine forests similar to those now found in northern Canada and Siberia. Remains of plants and animals adapted to more temperate environments have been found in deposits postdating Paleo-Indian times. The presence of deer bones, oyster and clam shells, and pollen from deciduous trees indicates that present-day climatic conditions arose in the region about 8000 B.P. and continued to change over the following years, with changes in air temperature and humidity as well as water temperature, salinity, and sea level.

Variations in the types and styles of artifacts and the frequency with which they are found may reflect social responses to environmental changes. Archaeological evidence indicates that direct and indirect contact with people from more interior portions of the continent influenced the life of Indians in the metropolitan area during Woodland times. Sites have yielded Meadowood and Adena projectile points from the Early Woodland period of a kind most commonly found farther north and west and dated to between 3000 and 2000 B.P. Several of these sites contain the oldest pottery yet found in the Northeast. Middle Woodland sites dating from 2000 to 1000 B.P. have provided evidence of increasing contact with groups in other regions. One group was people from upstate New York of the Kipps Island phase, whose presence within the present city limits became traceable through discoveries at Ward's Point of tools made from jasper stones quarried in Pennsylvania, olivella shells from the southern Atlantic coast, mica from the Carolina highlands, copper from the Great Lakes, and a platform pipe similar to others usually found in the Ohio Valley. Many archaeologists believe that the arrival of Indians later known as Delawares is confirmed by discoveries at several sites (including Ward's Point) of pottery belonging to the Abbott Farm series, as well as stone projectile points in the Fox Creek style made of argillite quarried from the Delaware Valley.

2. Late Woodland Period

Evidence of sweeping changes in social organization has been found in deposits dating to the earliest phases of the Late Woodland period, between 1200 and 800 B.P., at Ward's Point and Bowman's Brook on Staten Island, Ryder's Pond in Brooklyn, and Clason's Point in the Bronx. Thick midden layers of occupational debris and dense clusters of hearths and storage or refuse pits at these sites indicate that Late Woodland people spent much of their time in towns of unprecedented size and density. New styles of pottery and small, triangular, chipped-stone projectile points used with newly introduced bows and arrows have been found in these towns and smaller campsites like those discovered at the Cold Spring Harbor site in northern Manhattan, the Van Cortlandt site in the Bronx, and the Aqueduct site in Queens.

Other evidence suggests that during these times Indians in the area also began to live in bark- or grass-covered longhouses and to grow or consume cultivated plants, including corn, beans, squash, and tobacco. This was the culture encountered by the Florentine navigator Giovanni da Verrazano when he made the first recorded landfall by a European in New York Harbor in 1524. Neither he nor Henry Hudson, who conducted the next documented voyage to the area in 1609, noted the names or identities of the people they met. They were eventually called Delawares, a name given to all linguistically and culturally related Indians living along the Atlantic seaboard between the Delaware and Hudson valleys at the time of initial contact with Europeans; the name was originally applied to those living along the Delaware River.

3. Munsees

According to Delaware traditionalists currently living in such places as Oklahoma, Wisconsin, and Ontario, the Indians of the metropolitan area called themselves *Lenape* (people) and their homeland *Lenapehoking* (land of the people). It is widely believed that those living in the northernmost reaches of Lenapehoking spoke variants of a Delaware dialect known as Munsee (stony country). Colonial records documenting relations with Indians indicate that kinship, political ties, and economic ties linked Munsee speakers into a widespread social network that extended across the lower Hudson and upper Delaware valleys from southeastern New York to northeastern Pennsylvania.

Early European records are unclear about the structure of Munsee society; ethnographic evidence provided later by Delawares indicates that all Munsees belonged to one of several maternally linked clans consisting of related women, their children, and husbands from other families living together in sapling-framed longhouses. They lived near reliable sources of water, well-drained soils, and places favorable for hunting, fishing, and foraging. In the spring they felled trees, burned undergrowth, and planted crops between tree stumps. They also fished for shad, eel, and herring; gathered greens, nuts, roots, and berries; and collected bird eggs. During communal hunts they burned sections of forest to drive game off cliffs or into pens or rivers. In the summer they dispersed to small camps, traded, traveled, made war, undertook vision quests, and held thanksgiving celebrations. They gathered together again during the fall to harvest crops, gather nuts, catch fish, collect shellfish, and hunt deer and migrating waterfowl. During the winter they made and repaired tools and weapons, told stories, and held religious festivals.

Munsee society lacked institutionalized inequalities. The people followed both men and women of proven ability who governed by the power of persuasion. Unfettered by coercive governments or authoritarian leaders, Munsees could move to any community willing to accept them. Women usually owned their homes and fields and moved infrequently; men moved more often because of customs that required a husband to move into his wife's household. Men retained membership in their original clans throughout their lives, but many shifted their political loyalties when they moved. Such shifts were essential for those who took on leadership responsibilities in new communities. One figure who did was Waumetompack, known in the 1650s as a Rockaway chief in Queens County but later prominent among Matinecocks living farther east along the northern shore of Long Island.

4. Colonial Times

There were a number of Munsee communities in the area during the seventeenth century. In addition to Rockaway (sandy place) and Matinecock (at the lookout point), there was Maspeth (bad water place) and Jamaica (beaver place) in Queens, as well as five communities in Brooklyn: Marechkawick (sandy place) near Borough Hall, Nayack (point of land), Wichquawanck (sandy bank) at Fort Hamilton, Techkonis (translation unknown) in Gravesend, and Canarsie (grassy place), a village in the marshy Flatlands. Settlers often referred to Indians from what are now the Bronx and Westchester County as Wiechquaesgecks (birch bark or swampy country), the Indian name for what became Dobbs Ferry, New York. Indian communities formed in the Bronx along Long Island Sound at Hunt's Point, Soundview, Throgs Neck, and Pelham Bay; along the Harlem River in Hell Gate,

Mosholu, and Marble Hill; and at various places in Manhattan, including Cold Spring Harbor. According to two accounts from the early seventeenth century, there was a group in the eastern Bronx called Siwanoys (southerners). Other documents indicate that the Rechgawawancks (sandy hillside), who were believed to have lived in the western Bronx, were more probably the Haverstraws, another Munsee group on the western bank of the Hudson River living in a town bearing their name in Rockland County. Another Munsee village, Aquehonga (sandy hillside), sat on bluffs overlooking Raritan Bay near what is now the Ward's Point National Historic Landmark. Colonists on Staten Island noted other Munsee communities on the banks of the Great Kills, the Narrows, the Kill van Kull, and the Arthur Kill.

Manhattan (possibly derived from the Munsee word *menatay,* or island) stood at the center of this world. In 1626 the island was reportedly sold by Indians for 60 guilders' worth of goods to Peter Minuit, the first governor of New Netherland, who established the capital of New Amsterdam at its southern tip. Munsees sold Staten Island to the Dutch in 1630. Both islands soon became important trading centers where visiting Munsees exchanged pelts, food, and cylindrical blue and white shell beads known as wampum for European textiles, glass beads, and implements made of iron, brass, and copper. Many also managed to obtain guns, ammunition, and liquor from colonists who ignored laws prohibiting the sale of such items to Indians. Firearms allowed game to be killed with unprecedented ease and efficiency and also made raids and warfare more dangerous.

5. Conflict with Europeans and Other Indians

Alcohol presented a serious threat to Munsee communities, which were disrupted and demoralized by the violence of drunkards. But the threats posed by guns and alcohol paled in comparison to the devastation caused by deadly epidemics of smallpox, measles, and malaria, which struck Indian communities every five to 10 years throughout the colonial era and may have killed nine out of every 10 Munsees. Weakened by losses from disease, alcohol abuse, and warfare, Munsees found themselves caught between powerful rivals desiring control over their lands. Armed with Dutch guns, such powerful interior nations as the Mohawks and Mahicans denied Munsee hunters access to trapping grounds; they also extorted wampum and other commodities. Desiring their land, Dutch settlers quickly came to regard the impoverished Munsees as unwanted neighbors, and an increasingly violent struggle ensued in which insults, thefts, and assaults gave way to a series of unpunished murders.

War finally broke out in 1640 when Governor Willem Kieft sent a military detachment to Staten Island to investigate the theft of a pig. Instead, the soldiers attacked a Raritan Indian community. This set off what became known among Europeans as Governor Kieft's War, part of a wider struggle sparked by the European invasion of the Northeast and often pitting Indians against each other during the seventeenth century. The first phase of the war ended when Munsee warriors from Long Island and the lower Hudson Valley attacked and defeated the Raritans. A Mahican attack on Wiechquaesgecks and Hackensacks during the winter of 1643–44 set the stage for the war's second and more violent phase. Seizing the opportunity to avenge several settlers' murders, Kieft ordered an attack on the more than 120 Wiechquaesgeck and Hackensack refugees sheltering among the Dutch in camps at Pavonia (in what is now Jersey City) and Corlear's Hook (in lower Manhattan); most of the refugees were killed during a surprise attack on the night of 23 February 1643. Munsee warriors united by hatred of the Dutch soon attacked outlying settlements throughout New Netherland, where they killed or captured scores of colonists, among them the well-known Puritan dissenter Anne Hutchinson and most of her family; they also drove colonists from Staten Island and much of the adjacent mainland. The Dutch retaliated quickly, killing hundreds of Munsees in Westchester County and Long Island in 1644. Despite devastation on both sides, the struggle remained indecisive, and a peace treaty was signed on 30 August 1645.

But the peace proved uneasy, and Munsees resentful of Dutch encroachments on their lands attacked settlements in and around Manhattan in 1655. The renewed hostilities became known as the Peach War, after a Dutch settler who was alleged to have murdered an Indian woman for picking peaches in his orchard, and dragged on for several years. The outbreak of war with Esopus Indians living farther upriver in 1658 further weakened the Dutch colony, which was denied adequate support by the Netherlands and fell easily to an English squadron in 1664 after years of almost continual Indian warfare. Eager to avoid these mistakes, the English quickly signed treaties of friendship with Indian leaders.

6. Dissolution of the Munsees

Although rumors of Indian conspiracies circulated throughout the region for the next 100 years, Munsees never again took up arms against settlers in the metropolitan area. English leaders compelled the Munsees to sell all their remaining lands within what are now the city limits; by 1701 they had put their marks to 39 deeds to lands there. Staten Island was resold in 1657 by Indians who had driven settlers away during Governor Kieft's War and again in 1670 by English colonists eager to secure clear and uncontested title to the land. All lands in Brooklyn were alienated from Indians through 22 deeds signed between 1636 and 1684; among the last areas of the county to be handed over was Canarsie.

Indians unwilling to leave their lands then lived as tenants on colonial farmsteads or moved to remote or unwanted swamplands. The Munsees grew poorer and subsisted as best they could. Most dressed in English clothes and spoke a trade jargon of mixed English, Dutch, and Delaware words when speaking to colonists; many also sought to master English. Men found work as laborers, farmhands, and sailors; women worked as servants and sold homemade straw brooms, splint baskets, and grass mats. Elderly Munsee herbalists and healers found many patients among both Indians and Europeans.

Most Munsees gradually moved away, often settling in mountainous enclaves in the Hudson Highlands of northern New Jersey and southern New York State. Others moved to small tracts of land set aside as reservations in Nassau County at Cow Neck, Matinecock Neck, and Fort Neck. Many of these people ultimately joined other Munsees at the large Minisink towns along the upper Delaware Valley; all were finally forced westward into exile at the end of the Seven Years' War in 1762. Some Munsees refused to abandon their old homes, among them a number of Matinecock families who continued to live in small communities scattered along the northern shore of Queens and Nassau counties. Other Indians lived quietly in unwanted backlots in Washington Heights and Canarsie and on Staten Island. Increasingly unable to find spouses among the few remaining Indians in the region, most married non-Indians. Children born into these households rarely learned Indian language or customs. The Munsee language finally died out in the city as the last elders fluent in it died during the early nineteenth century.

7. Nineteenth to Twenty-first Centuries

Indians from elsewhere began moving to New York City in search of work during the nineteenth century. Men found work as longshoremen, factory workers, and laborers; women as artisans, seamstresses, washerwomen, and servants. A number took an active interest in their Indian heritage. A Chibcha artist from Colombia named Emilio Cabral Diaz worked with such local non-Indian historic preservationists as Reginald Pelham Bolton and William L. Calver to establish an "Indian life reservation" in Inwood Park during the 1920s; it was the site of powwows and encampments until the 1950s. Many of those in attendance were Mohawks from reservations in upstate New York and Canada uniquely skilled in high steel work

and readily able to find work in bridge and skyscraper construction. They formed a small community at Gowanus in Brooklyn during the 1920s; most left by the 1960s.

The federal census of 2000 counted 41,289 Indian people in New York City (about 0.3 percent of the total population). Most Indians descended from communities in the metropolitan area call themselves Delawares or Lenapes, and those from Queens are usually known as Matinecocks. An important center of Indian life is the American Indian Community House, founded in 1969, at 11 Broadway, which administers cultural programs and service projects.

American Institute of Architects [AIA]. Organization formed on 23 February 1857 in New York City by 13 architects, including Richard Upjohn, Richard M. Upjohn, Jacob Wrey Mould, Richard M. Hunt, and Leopold Eidlitz. These founders invited 12 other architects to become members, of whom at least two, Thomas U. Walter and Alexander Jackson Davis, had belonged to a similar organization in 1836 that quickly disbanded because its membership was small and widely dispersed. The institute stated in its constitution (signed 18 May 1857) that its purpose was "to promote the scientific and practical perfection of its members and to elevate the standing of the profession." It soon focused its attention on the concerns of an emerging profession, including fee schedules, training for students and young practitioners, professional ethics, and fair standards for architecture competitions. The institute inaugurated a system of local chapters when it formed one in New York City in 1867. It admitted its first female member, Louise Bethune, in 1888, merged with the Western Association of Architects in 1889, and in 1898 moved its headquarters from New York City to the historic Octagon House in Washington. In the early twenty-first century the local chapter in the city worked through an extensive structure of volunteer committees; it offered continuing education and formulated positions on public building and planning issues. The *AIA Guide to New York City* (1967; 4th edn 2000) by Eliot Willensky and Norval White is the standard architectural guide to the city.

Rosalie Genevro

American Institute of Physics [AIP]. Organization formed with a grant from the Chemical Foundation in 1931 to foster communication among physicists dispersed through different fields and facing rising costs of publication. It was proposed at a joint committee of physicists at Columbia University and set up quarters in offices owned by the Chemical Foundation; it soon moved into its own office on East 57th Street and then to larger quarters at 335 East 45th Street after World War II. In the following years the institute became one of the largest and most important physical science organizations in the country, gaining tens of thousands of members in dozens of chapters nationwide. It opened a publishing facility in suburban Woodbury, Long Island, and in the early twenty-first century produced the publications of more than 25 physics and engineering societies. Its office in Manhattan houses the Niels Bohr Library.

Chad Ludington

American International Group [AIG]. Firm of insurers. It was founded in 1919 by Cornelius Vander Starr as C. V. Starr and Company of Shanghai, which arranged insurance for the China trade of American businesses and was the first American company to sell insurance products to Chinese buyers in Shanghai. Following World War II the company greatly expanded its operations, growing its business in Asia and branching out into the Caribbean, the Middle East, and Africa. In 1962, Starr turned over the company's American operations to Maurice R. "Hank" Greenberg, who built up the company's highly profitable corporate insurance coverage. Throughout the 1960s the firm acquired numerous insurance companies in the United States, including National Union Fire (1968), New Hampshire Insurance Company (1969), and American Home (1969), and established its headquarters on Pine Street in Manhattan. In 1968 Greenberg succeeded Starr as chief executive, and the company quickly became the largest underwriter of commercial and industrial insurance in the United States. The company went public in 1969 and continued to expand both its domestic and overseas operations under Greenberg, eventually becoming the 18th largest company in the world with revenues in excess of $100 billion. In 2008, due to AIG's large exposure to rapidly deteriorating mortgage-backed securities on which it had sold insurance protection, Standard & Poor's downgraded the company's credit rating to below AA levels, which restricted AIG's access to the credit it required to do business. The company was saved from bankruptcy on 17 September 2008, by the provision of $85 billion (later expanded to nearly $183 billion) in emergency credit from the Federal Reserve Bank of New York, as well as the Federal Reserve's assumption of a 79.9 percent equity stake in the company. On 22 September, AIG's stock was removed from the Dow Jones Industrial Average. As of 2010, the company's headquarters remained at 70 Pine Street in Manhattan.

Andrew A. Kryzak, Robert J. Gibbons

American Irish Historical Society. Organization formed in Boston in 1897 and later based in New York City. In 1940 it moved its offices to 991 Fifth Avenue. The society focuses on Irish contributions to the history of the United States, and it holds lectures, concerts, and art exhibits. It also has a literary journal and public library.

The American Irish Historical Society, 1897–1972: Seventy-fifth Anniversary (New York: American Irish Historical Society, 1972)

William D. Griffin

American Jewish Committee. Jewish defense agency formed in New York City in 1906 in response to pogroms in Russia. It initially drew much of its membership from among wealthy Jews of German descent and had an executive committee of 15. Because the organization remained exclusive it was threatened with marginalization as Jews from eastern Europe moved to the city in large numbers. It responded by forming the New York Kehillah in 1908, which became its local chapter. Under its second president, Louis Marshall, the committee fought the Ku Klux Klan and the restrictive Immigration Act of 1924. Its journal, *Commentary,* began as a publication of a group of Jewish thinkers and writers on political and cultural subjects. Not originally a Zionist organization, the committee became a strong defender of Israel after 1948. It has headquarters in New York City.

Henry Feingold

American Jewish Congress. Organization inspired by the Congress movement in New York City and Philadelphia, which sought to make Jewish organizations democratic, and formed to give American Jews a voice at the peace conference in Versailles. It was formally established as a national organization after communal elections were held in June 1917.

After the peace conference it made its headquarters in New York City until 1922, when it adjourned. In the following years the Congress was reorganized to become the most politically activist Jewish secular organization in the United States. Under Stephen S. Wise it enjoyed success through its Commission on Law and Social Action and offered staunch support to the Zionist movement. Unlike other Jewish defense agencies it took part directly in local and national politics, relying on coalitions with other organizations representing minority groups to accomplish its goals. It focused its efforts on political reform and often used the courts to implement its program of social justice, which pursued improvements in public housing, education, and civil rights. With the advent of Nazism it sought to focus public attention on the issue of rescue by sponsoring protest rallies and boycotts; a rally at Madison Square Garden inspired dozens of others in cities nationwide. After 1945 the American Jewish Congress shifted its efforts to civil rights, public housing, women's rights, and the Labour Party in Israel. During the 1960s, many of the organization's civil rights efforts paralleled the American civil rights movement while membership during the 1980s and 1990s slowly declined. The establishment of the Commission of Women's Equality in 1984 was heavily influenced by the Congress's practice as one of the first Jewish organizations to devote considerable time and resources specifically to women's issues by both male and female members of the organization. Resurgence during the late 1990s and early 2000s was largely due to growing support for Israel and the challenging of contemporary anti-Semitism abroad.

Henry Feingold

American Jewish Joint Distribution Committee. Organization formed as the Joint Distribution Committee on 27 November 1914 in New York City to help displaced eastern European Jews. It soon merged with the American Jewish Relief Committee, an organization of German Jews, and the Central Relief Committee, an organization of Orthodox Jews. It took its current name in 1915 after merging with the People's Relief Committee, which represented workers. After the war the committee took part in reconstruction and formed loan cooperatives. During the 1930s it aided European Jews; its office in Paris offered vocational training and provided relief for Jews fleeing the Nazis, and the organization played a vital role in rescuing 80,000 Jews from occupied Europe, guiding them mainly through Spain and Vichy France. Between 1945 and 1952 the committee spent more than $350 million to assist 250,000 displaced persons, and from 1949 it cooperated with the Israeli government to form Malben, an organization that helps ill, handicapped, and elderly immigrants. It also maintained medical, educational, and vocational programs in North Africa, Iran, France, eastern Europe, and the former Soviet Union. One of the most effective organizations of its kind, the American Jewish Joint Distribution Committee had helped millions of Jews worldwide by the early twenty-first century. In 2004 the committee spent nearly $200 million on its services.

Michael N. Dobkowski

American Labor Party. Political party formed in New York City in 1936 by leaders of various garment trade unions. It endorsed Democratic and Republican candidates in local, state, and national elections and occasionally sponsored independent candidates; many of its votes came from adherents of the Socialist Party who wished to support Franklin D. Roosevelt and other candidates committed to the New Deal but were reluctant to vote for a "bourgeois" party like the Democrats. Despite the anticommunist leanings of its founders, David Dubinsky and Alex Rose, the American Labor Party quickly came under the influence of communists; its most prominent spokesman was the congressman from East Harlem, Vito Marcantonio, a sympathizer with the communists on many issues. In the late 1930s the Labor Party played an important role in the politics of New York City by helping to provide more than one-fifth of the votes for the reelection of Mayor Fiorello H. La Guardia in 1937; it also supported Mike Quill, president of the Transport Workers Union, who maintained close ties to the Communist Party and was elected to the City Council as a candidate of the American Labor Party in 1937, 1943, and 1945. When communists gained control of the party early in World War II, Rose and others left it to form the Liberal Party. The Labor Party received an average of 13 percent of the vote in elections in the city between 1938 and 1949 and was strongest in Jewish, black, and Puerto Rican neighborhoods. As the surrogate in New York State for the Progressive Party in 1948 it helped Leo Isacson to win a special election for a seat in Congress as a representative from the southern Bronx, and in November it gave the presidential candidate Henry Wallace more than half the votes that he received nationwide (Isacson failed to win reelection to a regular term in the same election). Marcantonio lost his seat in 1950. Attacked as a communist front, the American Labor Party lost support during the cold war and was dissolved in 1956.

Maurice Isserman

American Lung Association. Organization formed in New York City in 1907 as the National Tuberculosis Association to coordinate the activities of various state affiliates, including the New York Lung Association.

American Museum of Natural History. One of the largest and most important museums in the world, conceived by the scientist Albert Bickmore in the early 1860s and established in 1868. It opened in 1869 at the New York Arsenal, where several specimen collections were put on display the following year. The many business leaders and politicians on the museum's board of trustees helped secure funds from the city and private donations. In 1874 President Ulysses S. Grant took part in the groundbreaking for a new building on Central Park West between 77th and 81st streets. The trustees soon purchased many collections, but the museum lacked a systematic process for acquiring specimens and adequate means for displaying them. Situated well north of the center of the city and closed on Sundays during the 1870s, the museum attracted few visitors and eventually fell into debt.

Important changes were made by Morris K. Jesup, a wealthy railroad securities broker who became the third president of the museum in 1881. He employed a taxidermist to create displays that were attractive and comprehensible and supported Bickmore's plan to inaugurate lectures on nature for schoolteachers. This program and a new policy that kept the museum open on Sundays increased the popularity and visibility of the museum. Jesup had a strong interest in evolution and scientific research. He appointed the zoologist Joel A. Allen as the curator of mammalogy and ornithology, asked Henry Fairfield Osborn to develop a new program in vertebrate paleontology (1891), and invited Franz Boas to join the department of anthropology (1896). The primary objective of the museum, as defined by Jesup, was to provide an uplifting

American Museum of Natural History, 1937

place where the public could both learn about nature and find respite from the bustling city.

As the curator of vertebrate paleontology Osborn furthered Jesup's interests by promoting expeditions and publications that illuminated evolutionary biology. A wealthy aristocrat, he formed close ties to the trustees and rose quickly through the ranks of the museum's administration, becoming president in 1908. During a tenure that lasted 25 years he sponsored the search for human ancestors in Mongolia, led by Roy Chapman Andrews, and expeditions to Africa, led by Carl Akeley. These dramatic undertakings captured public attention and led to the establishment of new scientific departments and large exhibit halls. Osborn drew considerable philanthropic support for these and other expeditions and tripled contributions from the city, efforts that allowed the museum to build a new wing in the 1930s. Like Jesup he channeled contributions into disciplines that documented evolution, such as vertebrate paleontology, anthropology, mammalogy, and ornithology. New exhibits such as the Hall of the Age of Man and the Akeley African Hall revealed his interest in protecting nature from encroaching urbanization and his attachment to maintaining the power and prestige of peoples of northwestern European ancestry. A program in astronomy, promoted by Osborn in the 1920s, was given greater attention by the museum in the 1930s with the construction of the Hayden Planetarium (1935).

In the 1940s and 1950s traditional taxonomic studies continued, while at the same time scientists such as Ernst Mayr and George Gaylord Simpson offered important new interpretations of evolution and Margaret Mead, head of anthropology at the museum, emphasized social and cultural anthropology. G. K. Noble and other scientists conducted research on animal behavior at the department of experimental biology, and Albert E. Parr, appointed director of the museum in 1942, replaced many of the displays on evolution with ones that reflected new findings in ecology and physical geography. The importance given to expeditions continued and in the 1950s led to the opening of several new field stations for biological research. In the 1960s civil rights groups attacked the few remaining displays that reflected Osborn's racist beliefs; the Hall of the Age of Man was replaced in 1961 by a Hall of the Biology of Man. Efforts were begun in the 1980s to revamp mammal and dinosaur displays in the light of new knowledge and interpretations. The Rose Center for Earth and Space was opened in 2000, containing the new Hayden Planetarium. In 2007 the Bernard and Anne Spitzer Hall of Human Origins replaced the Hall of the Biology of Man and depicted the process of human evolution. In 1999 the *New York Times* helped choose the items and design for a time capsule that was on display briefly and is now permanently stored in the building. In 2008 the museum had about four million visitors annually, a staff of about 1300, and an operating budget of over $120 million.

American Numismatic Society. Association formed in 1858 by collectors of coins, medals, and similar items. In 1907 the society settled at its first permanent home at Audubon Terrace, a beaux-arts complex in Washington Heights in Manhattan. The society moved to 96 Fulton Street in 2004, and again to One Hudson Square at Varick and Canal streets in 2008. In the early twenty-first century it maintains one of the world's largest and most valuable collections, composed of 800,000 coins, bills, medals, and other artifacts; its library contains 100,000 items. With 2000 members, it offers training programs and fellowships and publishes monographs and journals. The society's collection includes one of the oldest coins in the world, issued in 650 B.C. by a Lydian king, as well as a rare 1861 $1000 bill of Confederate money.

Howard L. Adelson, *The American Numismatic Society, 1858–1958* (New York: American Numismatic Society, 1958)

Kate Lauber

American Peace Society. Its forerunner was the New York Peace Society, formed in 1815 by the devout Presbyterian layperson David Low Dodge (1777–1852) and dedicated to the condemnation of all warfare, defensive as well as offensive, based on biblical principles. This group joined with others of similar beliefs in May 1828 to form the American Peace Society. The society favored negotiation, arbitration,

Medal commemorating the tercenary of the purchase of Manhattan Island, struck for the American Numismatic Society (designed by Hermon A. MacNeil)

and a "Congress of Christian Nations" to resolve international conflicts. After a period of stagnation in the years following the Civil War the society reemerged during the Progressive movement. In the early twenty-first century its national offices were in Washington, D.C.

American Revolution. New York City in the eighteenth century embodied many of the complexities of the Revolution and experienced all of its turmoil. Politically, it was an important base for the Sons of Liberty, but it was also the capital of Loyalist America, a position solidified by the British conquest of the city in 1776. Militarily, the city was considered the greatest strategic prize on the continent by both sides. By controlling the Hudson River, and the city at its mouth, the British hoped to split New England from the rest of the colonies and crush the rebellion. George Washington spent the next seven years trying to retake the city, and failing that, to turn the occupation into a liability for the British. With the end of the war in 1783 the city had been heavily damaged.

1. Early Developments, 1764–74

New York City in the late colonial period was second in importance in British America only to Philadelphia. By the mid-eighteenth century it was wealthier and more populous than Boston, and at independence it had about 25,000 inhabitants, who were crowded into the area below what is now City Hall. Well to the north lay the village of Harlem; most of Staten Island and the counties of Queens, Kings, and Westchester (which began at the Harlem River) were farmland. The racial, ethnic, religious, and economic divisions in the city helped to build a tradition of turbulent politics. Some New Yorkers gained wealth in transatlantic trade and wartime supply contracts: the Loyalist Oliver De Lancey (1718–85) asserted after the Revolution that his confiscated estate had been worth £115,000. These traders had luxuries and maintained connections with people of high social rank in England; they adapted elements of English culture to their colonial environment. Their culture was denounced in New York's first literary magazine, the *Independent Reflector,* which folded under political pressure in 1753 only a year after it started. Written by William Livingston, William Smith, Jr., and John Morrin Scott and modeled after the *Independent Whig* of London, the magazine took aim at petty royal functionaries and showy affluence; it was an influential early expression of the ideals and rhetoric that culminated in the Revolution. Artisans and independent craftspeople, another important group, made products that competed with merchants' imports, and to protect their interests they banded together, sometimes instigating riots.

The city prospered when the British made it their headquarters during the Seven Years' War (1756–63) but experienced a depression when the war ended. Spending on relief for the poor tripled, and merchants' profits were halved. The growing poverty was denounced in the press, especially in the *New-York Journal,* a militant newspaper operated by John Holt. Merchants were incensed by the Sugar Act of 1764, which imposed British control on the American sugar market, and the provincial assembly, in which many had seats, inveighed against it. The Stamp Act of 1765, which mandated the use of stamps on all legal and commercial documents, led the colonies to create the Stamp Act Congress, which met in the city. About this time a group of popular leaders emerged who came to be known as the Sons of Liberty. They included both artisans like Holt and Marinus Willett and small merchants like Isaac Sears and Alexander McDougall. They had a network throughout the colonies. The Sons of Liberty were committed to direct action and in late October 1765 led their first uprising, in which they destroyed carriages and sleighs belonging to Lieutenant Governor Cadwallader Colden, the enforcer of the Stamp Act, and an elegant house rented by Major Thomas James, who had trained the guns of Fort George on the city. One of their last public riots was the sacking the following May of a new theater that was considered an irresponsible luxury in a time of public distress.

Tensions continued to rise over issues of commerce and military supply. The Quartering Act required the colonial assemblies to appropriate supplies for British troops garrisoned in America. When the assembly in New York refused to grant supplies for redcoats stationed in the city, Parliament passed the New York Restraining Act of 1767. This forbade the city to act at all until it appropriated the supplies. By the time news of the act arrived, the assembly had in fact complied, but John Dickinson's influential *Letter from a Pennsylvania Farmer* cited the Restraining Act as a major colonial grievance. During the same year that the act was passed, many merchants joined in the nonimportation movement against the Townshend taxes, but their alliances shifted as they quarreled among themselves and with other revolutionaries. The elections of 1768 and 1769 led to a division in the assembly between the Livingstons, who were landholders, and the De Lanceys, who were merchants who gained the support of the Sons of Liberty by berating the Livingstons for supplying British troops. The presence of such troops in Manhattan led to increased tension. They competed with New Yorkers for work, which they were permitted to seek while off duty; and they made relations worse by tearing down successive liberty poles erected by colonists in the Fields (later City Hall Park). The Sons of Liberty were alarmed by the large garrison at the upper barracks (near the Fields) and lower barracks (near the Battery), and they ended their alliance with the De Lanceys when the assembly controlled by the De Lanceys voted that surrounding British troops should receive supplies. The De Lanceys became Loyalists, and under their control from 1769 to 1775 the assembly ceased to be militant. In his broadside "To the Betrayed Inhabitants of the City and Colony of New-York," McDougall in 1769 lambasted the assembly for voting to supply the British and was imprisoned. In the same year the merchants of New York City joined those of Philadelphia and Boston in a boycott of British commerce to protest the Townshend taxes. In January 1770 tensions between colonists and British troops led to the Battle of Golden Hill and the Nassau Street Riot; although no lives were lost, the issues being fought over were the same as those that led to the killing of five civilians in the Boston Massacre two months later. Merchants in the city repealed their boycott of British commerce later that year after Parliament rescinded all the Townshend taxes except the one on tea. Artisans protested the

By His EXCELLENCY

GEORGE WASHINGTON, Esquire,

General, and Commander in Chief of the Army of the United States of North-America.

WHEREAS a Bombardment and Attack upon the City of New-York, by our cruel, and inveterate Enemy, may be hourly expected: And as there are great Numbers of Women, Children, and infirm Persons, yet remaining in the City, whose Continuance will rather be prejudicial than advantageous to the Army, and their Persons exposed to great Danger and Hazard: I Do therefore recommend it to all such Persons, as they value their own Safety and Preservation, to remove with all Expedition, out of the said Town, at this critical Period,—trusting, that with the Blessing of Heaven, upon the American Arms, they may soon return to it in perfect Security. And I do enjoin and require, all the Officers and Soldiers in the Army, under my Command, to forward and assist such Persons in their Compliance with this Recommendation.

Given under my Hand, at Head-Quarters, New-York, August 17, 1776.

GEORGE WASHINGTON.

NEW-YORK:—Printed by John Holt, in Water-Street.

George Washington's notice to the citizens of New York City, August 1776

rescission because they had benefited from the boycott and been excluded from the decision to end it, and when rumor arose about a new crisis over the tax on tea, they formed their own Committee of Mechanics and purchased a place to hold meetings. The first tea ship headed for the city during this time was turned back at Sandy Hook, New Jersey. When tea was found aboard the *London* in April 1774, revolutionaries began costuming themselves as "Mohawks," as the participants in the Boston Tea Party had done; during their preparations a crowd boarded the ship, dumped the tea, and burned the empty chests at the Fields.

2. Tensions Leading to War, 1774–76

A month after the *London* was stormed, the city elected 51 men to its first Revolutionary committee, in which moderates outnumbered radicals. At the meeting that chose the committee, the young aristocrat Gouverneur Morris likened members of the city's "mob" to "poor reptiles" who were casting off "their winter's slough" and would bite "ere noon."

Eleven radical members resigned from the committee in July 1774 to protest its timid policies. The second Revolutionary committee comprised 60 members elected in November to enforce the Continental Association; this was the trade boycott ratified by the Continental Congress in response to measures taken by the British in retaliation for the Boston Tea Party. It was replaced by a Committee of One Hundred, elected in April 1775 after the battles at Lexington and Concord. The province of New York had already chosen the first of its Revolutionary congresses, which elected delegates to the Second Continental Congress. At the outset of the war full power was gradually assumed by the congress, which met in the city, and by local committees such as the Committee of One Hundred. Governor William Tryon called an assembly election at the end of 1775 to undercut these Revolutionary bodies, but the new assembly never met; he escaped to a British ship in the harbor, and the mayor and aldermen found themselves powerless. Loyalists nevertheless remained strong in the city, and the Sons of Liberty met fierce resistance from merchants engaged in transatlantic trade: 57 members of the Chamber of Commerce became Loyalists, 21 remained neutral, and only 26 were revolutionaries. The De Lanceys strongly opposed the Revolution, as did the printer James Rivington and the Anglican ministers Samuel Seabury and Myles Cooper.

In the rural counties around the city the Revolution found virtually no support: the sparsely populated counties of Queens, Kings, and Richmond (Staten Island) were prosperous and shunned the political turmoil of the city, even after resistance had turned to revolution. In January 1776 Queens was captured, its firearms seized, and its leaders arrested by General Charles Lee, one of Washington's most zealous officers. He inspired no support there, and when British troops invaded during the following August, 1300 people signed a congratulatory address, and 800 joined the first militia under the renewed royal government.

After the American siege of Boston forced British commander in chief General William Howe to evacuate in March, Washington prepared for a British invasion of New York by moving his troops to the city and its environs, occupying lower Manhattan, Brooklyn Heights, and Bay Ridge. By this time, 80 percent of the prewar population had fled, leaving 5000 inhabitants, a sign that the British had overestimated the depth of loyalism, which prevailed among a once-powerful minority. *Common Sense* by Thomas Paine had become popular in the city for its condemnation of monarchy and its call for simple republican institutions. In May the Committee of Mechanics, the largest radical faction that remained, called for the popular acceptance of whichever new constitution the province might adopt to become an independent state. Although some in the city urged the abolition of the old order, many others, especially the mercantile elite, had to be forced to accept independence and wanted no political experiments. On 2 July 1776, the day Congress approved the Declaration of Independence, General Howe landed his expeditionary force—then the largest in British history—on Staten Island. Meeting no resistance, he established a staging area for an invasion of Long Island, Manhattan, and Westchester County. A week later, New Yorkers toppled the statue of George III that had stood at Bowling Green.

General Howe's brother, Admiral Richard Howe, arrived from England on 12 July. He had convinced the Crown to empower the two brothers not only as commanders in chief, but as peace commissioners authorized to grant pardons to the American rebels if they renounced independence. The Howe brothers' feelings of friendship for the Americans—stemming from the Massachusetts government's funding of a marble monument to their slain brother George—apparently made them ambivalent in battle and had important repercussions during the impending military campaign. On 22 August they invaded western Long Island, crossing below the Narrows and establishing camps of British and Hessian soldiers in an arc from Gravesend Bay to Jamaica Bay. Most of Washington's troops on Long Island were dug in on Brooklyn Heights to protect that vital ground dominating lower Manhattan. Others were stationed along Gowanus Heights, an east–west ridge that provided an outer line of defense where they planned to ambush the British at four passes, including two still visible today in Green-Wood Cemetery and Prospect Park. The Jamaica Pass, the farthest to the east, was defended only lightly, and the British used it to turn the American flank during the Battle of Long Island on 27 August, the largest battle of the war and the first for the United States as an independent nation. Washington's forces were routed, with some 200 Americans killed and 800 captured. With the Americans nearly trapped on Brooklyn Heights, General Howe declined to storm their lines, and Washington organized a nighttime withdrawal across the East River (29–30 August). Instead of pursuing the Americans, the British convened a fruitless peace conference on Staten Island (11 September) and did not invade Manhattan until 15 September. Again they failed to cut off an American retreat, this time to the northern end of the island. Mary Murray served cakes and Madeira to the British generals during the invasion (at today's 37th Street and Park Avenue), giving rise to the legend that she deliberately detained them for two hours and saved thousands of fleeing American troops. On 16 September the Americans won a small, morale-building victory, the Battle of Harlem Heights. A mysterious fire on 20–21 September destroyed a quarter of the city, some 1000 buildings, angering the British, who hanged Nathan Hale as a spy the following day.

In October the British again tried to encircle Washington's forces, by landing troops in lower Westchester County. Again Washington escaped, by marching his troops to White Plains, fighting a battle there, and retreating into the hills to the north. Howe gave up the chase and on 16 November captured Fort Washington, which, in conjunction with Fort Lee, the Americans had hoped would keep British ships out of the Hudson River. Instead, some 2800 American soldiers were captured, the second-worst loss of the war (after Charleston, South Carolina, where 5500 Americans were captured). Until the loss of Fort Washington, American commanders were satisfied that the campaign in New York—and the Americans' many escapes—had done more damage to General Howe's reputation than it had to the American cause. With the American victories at Trenton and Princeton, the importance of Howe's missed opportunities to end the war at a stroke in New York became clear. The city remained under British control, but enough of Washington's forces had survived to prolong the war indefinitely.

3. From the Center of Loyalism to the National Capital, 1776–89

Loyalists fled to the city in large numbers, and the poorest lived in "canvas town," a foul-smelling encampment patched together amid the ruins of the fire. The failure to rebuild quickly, food shortages, hyperinflation, and the persistence of martial law all contributed to the gradual alienation of Loyalists

from the British war effort. Nonetheless, promises of freedom and skilled employment attracted many escaped slaves to the city and into the king's service. The population far exceeded what it had been before independence, and merchants reopened their businesses to serve the British army. Rivington, whose press had been smashed in November 1775 by a group under the leadership of Sears, began publishing the *Royal Gazette*, a Loyalist paper. Tryon returned, and Smith, once an advocate of rebellion and later a member of the royal council, was appointed the chief justice. Wealthy Loyalists and officers in the British army and navy entertained one another in style. Real power remained in the hands of the military, and although some talked of restoring civil government, no attempt was made to reconvene the provincial assembly. The British commanders Sir William Howe, Sir Henry Clinton, and Sir Guy Carleton maintained martial rule, and for much of the war the city was governed by the aged major-general James Robertson, who had a reputation for promiscuity and corruption. When commerce with the mainland was almost closed off, privation set in and worsened when American privateers were successful against British merchant vessels.

The colonial government had convened in the city, but the state's Revolutionary government-in-exile met in Kingston, New York. In April 1777 the state's "Convention of the People" adopted a relatively conservative state constitution, with a strong governor and state senate. The occupied counties were represented in both the assembly and the senate by appointed members until the British evacuation. The British preoccupation with holding the city continued to influence events, even as major combat moved elsewhere. General Howe unhinged the British grand strategy by sailing for Philadelphia in July 1777, leaving General Henry Clinton to protect the city and assist General John Burgoyne's invasion of the Hudson River corridor from Canada. Without that support, Burgoyne surrendered at Saratoga, precipitating a French alliance with the Americans the following year. Howe was soon replaced by Clinton. Hoping to retake the city with help from the French navy, Washington settled his forces in an arc stretching from New Jersey through the Hudson Highlands to Connecticut. He also developed an extensive spy network in the city that relayed intelligence to Long Island and across the Sound. James Rivington was later revealed as one of Washington's best sources. From 1778 to 1781 the war in the north became a stalemate between the field armies, focused on New York City. When the British captured Charleston in 1780, they opened a new front in the war, but Clinton left his second-in-command, General Charles Cornwallis, in the south and returned to New York, fearful of a Franco-American assault on the city. Washington preyed on this fear, keeping pressure on New York City to weaken British efforts in the south.

In the city itself some 3800 Loyalists organized themselves into a militia to aid the British; this was not much more than a home guard and was never deployed against the American army. Early in 1781 the Associated Loyalists were organized under their own board of directors. The group was led by Loyalist gentlemen, including Oliver De Lancey and Benjamin Franklin's son William, who had been governor of New Jersey, and included in its ranks many refugees from areas under Revolutionary control. Until April 1782 they conducted raids across the Hudson and into Westchester and southern New England but were disbanded after one of their captains, Richard Lippincott, incurred the anger of both Americans and British by hanging a prisoner, Joshua Luddy, whom he had agreed to exchange. New York City became the main site for holding American prisoners of war, who were kept initially in public buildings and warehouses; ships moored in Wallabout Bay later became the most infamous prisons. As many as 1100 men at a time were held on the *Jersey,* where misery was extreme and death rates high. Some prisoners were soldiers, but many were privateers captured at sea. Their conditions did not improve until Carleton became the British commander of the city in 1782.

By the summer of 1781 the French and Americans had shifted their plans for a joint attack from New York City to Chesapeake Bay. Pinning the British to the city with a feigned attack, the allies marched to Virginia. Like Burgoyne at Saratoga, Cornwallis surrendered at Yorktown in October after pleading in vain for assistance from British forces concentrated in New York. The city's large harbor provided a naval base but proved to be a trap: the sandbars between Coney Island and Sandy Hook delayed the movement of the British fleet, which left to rescue Cornwallis the day he surrendered. The war continued for two more years, and Washington kept up his vigil outside New York City.

The Treaty of Paris in 1783 created two difficult tasks for Carleton: to evacuate British troops and Loyalists, and to transfer power. Many Loyalists realized that they could not regain their confiscated property or escape punishment under the laws that the independent state had passed to punish them, and they sought refuge in Britain. The large number of black Loyalists knew that returning to their American owners meant reenslavement; some who tried to evacuate were taken off their ships by their owners. The reincorporation of the city and the rest of the southern district by the government of New York State caused other hardships for Loyalists who stayed. Those whose property had not been confiscated had to pay double tax and were denied the protection of the courts, and the entire southern district was made to pay a special tax to share the cost of the war. The Citation Act allowed patriots to bring damage suits against people who had used their property during the occupation.

After the peaceful transfer of the city to the Americans on Evacuation Day, 25 November 1783, the city faced tremendous obstacles to prosperity. Its physical structure was seriously damaged, its currency devalued, its commerce in chaos owing to the dumping of British goods, and its political and economic prospects in doubt. In 1784 the formation of a new city government paved the way for restructuring, and from 1789 to 1790 New York City was the nation's capital. Most of those who had fled the city returned, businesses emerged, and a stable municipal and federal government laid the foundation for a strong city that became the largest and most successful in the nation during the following decades.

American Society for the Prevention of Cruelty to Animals [ASPCA]. Humane society, formed in 1866 by Henry Bergh as the first humane society chartered in the United States. In addition to performing rescue work its agents were empowered by state legislation to issue summonses for violations of animal cruelty and animal control laws. The national headquarters on East 92nd Street in Manhattan house the Bergh Memorial Animal Hospital, an animal shelter open 24 hours a day, and an adoption center. The society also maintains a shelter and hospital in Brooklyn, and pet receiving centers in the Bronx, Queens, and Staten Island. The concerns of the organization now include education; the treatment of animals used for food, for clothing, and in laboratory research; and the protection of endangered species.

John J. Gallagher

American Society of Composers, Authors, and Publishers [ASCAP]. Performance rights organization. It was founded in 1914 at the Claridge Hotel in Manhattan largely by artists associated with Tin Pan Alley, including Victor Herbert. Its purpose was to protect the copyrighted materials of its members and to provide compensation when their works were performed publicly. The advent of radio provided a new source of income for ASCAP, which was responsible for implementing the first radio-licensing fees. As new media such as television and the Internet became part of the culture, ASCAP continued to expand its oversight of artists and artistic material. As of 2008 ASCAP had 330,000 members, among them Lauryn Hill, Dr. Dre, and Marc Anthony. Former members include Jimi Hendrix, the Ramones, the Beatles, the Rolling Stones, John Denver, Carly Simon, and Janis Joplin.

Max Seppo

American Standard. Firm of plumbing and building-fixture manufacturers. It was formed in 1929 as the American Radiator and Standard Sanitary Corporation after a merger of the American Radiator Company (formed in the city in 1905) and the Standard Sanitary Corporation, and took its current name in 1967. Between 1968 and 1971 the firm sponsored vocational training, improvements in public transit, and affordable housing. Among its programs was Construction for Progress, which sponsored several low-income housing projects in Harlem and the southern Bronx. During the 1980s the firm sold mostly plumbing and air conditioning supplies. It was taken private in 1988 and moved its executive offices to 1114 Sixth Avenue the following year. The company again became public in 1999 and moved its corporate headquarters to suburban Piscataway, New Jersey. The American Standard Building on 40 West 40th Street, Raymond M. Hood's first commission in the city, is a municipal landmark.

James Bradley

American Stock Exchange. Stock exchange in the financial district of New York City. It was originally composed of dealers with insufficient funds to become members of the New York Stock and Exchange Board (1817; later the New York Stock Exchange, NYSE) and was known as the Curb because members met their clients in the streets and became known as "curbstone brokers" who traded mostly the stocks of firms smaller, younger, and riskier than those represented on the older exchange. In the 1860s shares were sold in mining companies formed after the discovery of gold in California in 1848. The volume of activity was heavy: on a busy day, when 6000 shares of stocks might be sold at the New York Stock and Exchange Board, 70,000 shares might be sold at the Curb, where after the Civil War new securities and stocks in small manufacturing companies were first sold. By tacit agreement the New York Stock and Exchange Board concentrated on established issues and on maintaining high standards for listing and trading. Determined to cleanse the Curb of marginal brokers and securities, a curbstone broker named Emmanuel S. Mendels, Jr., in 1904 published an official Curb directory of 209 reliable brokers and in 1908 organized the New York Curb Market Agency. In 1911 the exchange became known simply as the New York Curb Market and drew up a constitution; it moved indoors to 113–23 Greenwich Street in 1921 and in 1929 was renamed the New York Curb Exchange.

The volume of stocks and bonds traded during the 1920s, especially that of foreign securities, grew rapidly. By 1930 the exchange had more foreign issues on its list than all other American securities markets combined. The price of a seat rose from $6800 in 1921 to $254,000 in 1929. As firms became well known, they often moved to the NYSE, but the Curb continued to attract new and foreign firms. It took its current name in 1953 and soon became known as Amex. During the 1960s and 1970s it introduced a number of innovations, including the listing of stock options, automation, and surveillance of trades. In 1998 the American Stock Exchange merged with NASDAQ, which had overtaken it as the main competitor to the NYSE. The American Stock Exchange, located near the World Trade Center, was significantly affected by the terrorist attacks of 11 September 2001 but recovered in the ensuing years. In 2008 the exchange was acquired by NYSE Euronext and was later renamed the NYSE Amex Equities.

Stuart Bruchey

American Sunday School Union. Interdenominational Protestant philanthropic organization formed in 1824 as an offshoot of the Sunday and Adult School Union and based in Philadelphia. It organized a national network of Sunday school supporters, developed standardized curricula and pedagogical techniques, and published moral and religious literature for American youths. Chapters in New York City were active throughout the nineteenth century. The union altered its focus toward rural areas after the Civil War and ultimately evolved into the American Missionary Fellowship in 1974.

Peter J. Wosh

American Symphony Orchestra. Orchestra formed in 1962 in New York City by Leopold Stokowski, who announced that his aims were "to afford opportunity to gifted musicians, regardless of age, sex, or racial origin, and to offer concerts of great music within the means of everyone." Carnegie Hall was chosen as the site of its concerts, which initially numbered six each season. Perhaps its most notable performance was the world premiere of Burl Ives's Symphony no. 4 in 1965. The orchestra was reorganized as a cooperative in 1973. In the 1980s it suffered a decline in subscribers, but it regained visibility under the direction of Leon Botstein, who became its conductor in 1992 and reoriented the programming to emphasize lesser-known works of the nineteenth century. In the early twenty-first century the orchestra's main subscription series was at Avery Fisher Hall in Lincoln Center. It also performed at Columbia University and Bard College, toured regularly, and recorded various classical pieces.

American Telephone and Telegraph [AT&T]. Telecommunications firm, formed in 1885 in Boston as a subsidiary of the American Bell Telephone Company to develop long-distance communications channels and maintain the parent company's control of telephony in the United States. In 1899 the offices were moved to 195 Broadway in New York City, where AT&T became the parent firm of several regional telephone companies and of the manufacturing subsidiary Western Electric. It briefly acquired control of Western Union in 1909 before the two firms were separated by antitrust action. AT&T kept competitors out of the long-distance market by providing "universal service" at low cost and making constant technological improvements. Its control of telephony was strengthened by passage of the Mann–Elkins Act (1910), the "Kingsbury Commitment" (1913), and subsequent federal regulation, which established the Bell system as the manager of the national telephone network. In 1925 Bell Telephone Laboratories was incorporated as a subsidiary. The firm launched a number of radio stations in the 1920s, and on 7 April 1927 it made the first television broadcast from its laboratory on West Street. In the late 1930s the Federal Communications Commission reaffirmed the firm's position as the dominant carrier of telecommunications, but in 1949 AT&T and Western Electric were sued for antitrust violations, and a consent decree prevented AT&T from engaging in business other than telephony. During the following years the firm's monopolies in telephone equipment and long-distance service were gradually weakened by regulators, and in 1982 an antitrust action led to a settlement under which the firm (then the largest in the world) agreed to divest itself of its regional operating companies, though it remained free to enter such new, unregulated fields of business as computer hardware and data transmission. In 1983 AT&T moved its offices to 550 Madison Avenue. From the mid-1990s through the first decade of the

twenty-first century AT&T became increasingly involved in new technologies related to computer, broadband, and wireless services. Over that time AT&T formed several entities from divisions of the original company that specialized in various aspects of the new technologies. In 2010 AT&T was based in New Jersey, and its former location on Madison Avenue had been taken over by the Sony Corporation.

George David Smith

American Temperance Union. Union formed in 1836 in Saratoga, New York, and based in New York City for its three decades of existence. It sought to unify, coordinate, and structure the work of hundreds of societies throughout North America favoring abstinence from alcohol. Its first president was Stephen Van Rensselaer. The union relied on moral suasion, religious publications, and legislative action to further its goals and was influential in reformist circles from its founding to the late 1840s. It represented the wealthier, more evangelical, avowedly prohibitionist wing of the temperance movement. In 1865 the union was absorbed by the newly formed National Temperance Society and Publication House, also based in Manhattan.

Permanent Temperance Documents of the American Temperance Union (New York: American Temperance Union, 1846)

Peter J. Wosh

American Tract Society. Protestant organization formed in 1825 by the merger of societies based in New York City and Boston. It became one of the largest publishers in the antebellum United States, producing each year thousands of religious books, pamphlets, tracts, and hymnals that enterprising peddlers circulated throughout the country as they preached salvation. After the Civil War the society increasingly concentrated its efforts on freed slaves, and the focus of its publishing operations shifted away from tracts and toward books and foreign-language publications. In the late 1940s it reaffirmed its traditional emphasis on small, English-language gospel tracts. The society left its landmark building at 150 Nassau Street in 1963 and eventually moved to Garland, Texas.

America's Cup. International yacht racing trophy and competition. Created and long dominated by New Yorkers, America's Cup racing took place off the city for 50 years. In 1850 the founding commodore of the New York Yacht Club, the steamboat tycoon John Cox Stevens, formed a syndicate to build a 100-foot yacht called *America* and take her to England to represent New York shipbuilding at the Great Exhibition, and also to race English yachts. (Other members of the syndicate were Alexander Hamilton's son James and his son-in-law George L. Schuyler.) *America* was designed by a Brooklyn naval architect, George Steers, along the lines of his breakthrough New York pilot schooners.

On 22 August 1851, *America* beat 14 English yachts in a 53-mile race around the Isle of Wight. The prize was a silver ewer presented by the Royal Yacht Squadron that the New York Yacht Club donated for international competition in accordance with a few simple rules: racing is held after a foreign yacht club challenges the club that last won the cup, the defender chooses the waters for the race course, and other details are negotiated between challenger and defender. The America's Cup trophy came to be called for the yacht that first won it.

The first match, in 1870, consisted of one race between the lone English challenger, *Cambria,* and the New York Yacht Club's fleet. They raced on the club's "inside course," starting off Staten Island, sailing out into New York Bay, and returning. *Magic* won the race, with *America* in fourth place and *Cambria* finishing tenth. The race was a public sensation. According to one reporter, "New York emptied itself out through the Narrows until the offing was like a crowded port with pillars of steam and glimmer of sails, and the shores of Staten Island were like swarming cities." From 1871 onward, it was a true match, with one yacht in each side. Most competitors were big schooners or, beginning in 1881, huge single-masted racing sloops sailed by professional crews. The race course was eventually moved to the New York Yacht Club's "outer course" in the Atlantic Ocean off Sandy Hook. Public interest remained immense; U.S. Navy patrol boats were required to prevent spectators from interfering with the racing yachts.

Thanks to better organization and to sailing in familiar waters, the New York Yacht Club's defenders won all 13 New York matches against English, Canadian, and Irish yachts, although Sir Thomas Lipton's *Shamrock*s came close to winning in 1901 and 1920. After cup racing was moved to Newport, Rhode Island, in 1930, the New York Yacht Club continued to win through 11 matches, until Australia's victory in 1983. Several defenders were built or equipped at shipyards on City Island and in the Bronx, or were owned by the New York Maritime College, at Fort Schuyler. When Dennis Conner (representing the San Diego Yacht Club) won the cup in 1987, he and his crew were accorded a parade down Fifth Avenue.

In seven matches between 1987 and 2007 in Australia, California, New Zealand, and Spain, the New York Yacht Club mounted three challenges, none successful. Many of its members were active in the cup as sailors or administrators.

Americas Society. Organization dedicated to education, debate, and dialogue in the Americas. In 1965 a group of business leaders led by David Rockefeller founded the Center for Inter-American Relations to educate leading government officials, artists, and businesspeople about Latin America, the Caribbean, Canada, and North America in order to better establish their impact on U.S. national interests. The center was absorbed by the Americas Society in 1985. Its programs promote its agenda of free trade, democracy, and general cultural awareness. The society also works closely with the Council of the Americas, a business organization dedicated to free trade and open markets between countries in the western hemisphere. The Americas Society is located at 680 Park Avenue.

Stephanie Miller

Ammann, Othmar H(erman) (*b* Schaffhausen, Switzerland, 26 March 1879; *d* Rye, N.Y., 22 Sept 1965). Engineer. He graduated from the Swiss Polytechnic Institute and left for America in 1904. For several years he worked in engineering firms in Pennsylvania and New York City, where in 1912 he joined the firm of Gustav Lindenthal, serving as the chief assistant on the Hell Gate Bridge (1917). He left the firm in the early 1920s to design a bridge over the Hudson River. In 1925 the Port of New York Authority adopted his plan and appointed him the chief engineer of what would later be named the George Washington Bridge (1931). Ammann also built the Bayonne Bridge (1931) for the Port Authority. For the Triborough Bridge and Tunnel Authority he designed the Triborough Bridge (1936), the Bronx–Whitestone Bridge (1939), the Throgs Neck Bridge (1961), and the Verrazano–Narrows Bridge (1964).

Rebecca Read Shanor

AM New York. Free daily newspaper owned by the Tribune Company. Launched in 2003, *AM New York* is distributed primarily by employees who hand out the paper at major commuting hubs during the morning rush hour and at newspaper boxes located on street

corners throughout the city. *AM New York* competes primarily with the New York edition of *Metro.*

Michael C. Repka

amphibians and reptiles. At the time of European settlement, amphibians and reptiles thrived in the varied estuarine, aquatic, and terrestrial habitats of what is now New York City. In 1927 G. K. Noble, curator of herpetology at the American Museum of Natural History, listed 70 species for the New York City area, including 3 lizards, 5 marine turtles, 11 aquatic turtles, 15 salamanders, 15 frogs and toads, and 21 snakes, among them the Copperhead and the Rattlesnake, which were rapidly disappearing. As the city grew, streams, marshes, and swamps were filled in or drained, uplands cleared, and critical habitats lost, severely reducing the number and diversity of amphibians and reptiles.

Species that survived in the area tend to be aquatic species found in large lakes, and small, secretive species with simple requirements and the ability to live in parks, cemeteries, and other green areas. In addition, beginning in the 1980s, efforts to restore species to natural areas of parks were undertaken by the National Park Service and the New York City Department of Parks and Recreation. These efforts helped to reverse some of the declines. Among the native species still common in New York City are the Spring Peeper, Fowler's Toad (in Staten Island and Long Island), Green Frog, Bullfrog, Red-Backed Salamander, Eastern Garter Snake, Northern Brown Snake, Snapping Turtle, Painted Turtle, and Diamond-Backed Terrapin (in Jamaica Bay). Several rarer species are still found in the Greenbelt in Staten Island, in Pelham Bay and Van Cortlandt parks in the Bronx, in Floyd Bennett Field in Brooklyn, and in Jamaica Bay Wildlife Refuge, Forest Park, and Alley Pond Park in Queens. Aquatic turtles are among the only species in the ponds of such landscaped and heavily trafficked parks as Central Park, Prospect Park, and Flushing Meadows–Corona Park; many exotic pet turtles are also released into these ponds, but few survive.

Robert P. Cook

Amsterdam News. James Henry Anderson published the first edition of this Harlem newspaper from his home at 135 West 65th Street in 1909. It sold at two cents per copy and covered local African American achievements and social events. The paper soon moved to 17 West 135th Street and in 1916 moved again, to 2293 Seventh Avenue. C. B. Powell and P. M. H. Savory purchased the weekly in 1935. Under their ownership the paper became a nationally recognized voice for black Americans and supported Republican politics until the 1930s. In the early 1970s the tabloid

Office of the Amsterdam News

changed hands again; its new owners included Percy E. Sutton, H. Carl McCall, and Clarence E. Jones, who became its publisher and editor. In the 1980s Wilbert A. Tatum became editor and was succeeded by his daughter Elinor Tatum in 1997. In 2007 a new magazine section called "The Focus" was introduced, the purpose of which was to highlight topical information and offer in-depth reporting.

Mario A. Charles

Amtrak [National Railroad Passenger Corporation]. Government-owned corporation that provides intercity and interstate passenger rail service in the United States. Amtrak trains in New York run on tracks formerly operated by the New York Central Railroad and the Pennsylvania Railroad. The first Amtrak train left from Pennsylvania Station en route to Philadelphia in 1971. Pennsylvania Station, owned by Amtrak, is the busiest train station in the United States, serving 600,000 passengers daily, and Amtrak's only station in New York City. Amtrak trains from Pennsylvania Station operate in the Northeast and Empire corridors, providing service to Boston, Washington, D.C., Albany, and as far north as Montreal.

Max Seppo

anarchism. New York City became a center of anarchism during the mid-nineteenth century, when European anarchists moved there and joined with libertarians in challenging perceived injustices of capitalism and the state. Many radicals were inspired by the writings and rousing speeches of Johann Most, who published the newspaper *Freiheit* (1882–1910) and organized German anarchists. The leading advocate of terrorism, he sought to redress class grievances with dynamite. The execution of anarchist leaders in 1886–87 after a riot in Haymarket Square in Chicago incited anarchists in New York City to action. Jews on the Lower East Side formed the Pioneers of Liberty (1886), protested the Haymarket affair, organized workers' educational clubs, and between 1880 and 1930 launched more than a dozen anarchist publications, including the Yiddish-language newspaper *Fraye arbeter shtime* (1890–1977), which became the most prominent and enduring periodical of its kind in the country. Italian anarchists settled in Brooklyn and Paterson, New Jersey. *L'Anarchico,* the first Italian anarchist newspaper in the United States, was launched in 1888.

The assassination of President William McKinley by the anarchist Leon Czolgosz in 1901 led to widespread violence against anarchists in the city: anarchist headquarters were vandalized, immigrants were attacked, and many public figures called for the "lynch law" and the "extermination" of anarchists. Johann Most was arrested and imprisoned for inciting violence, and in 1903 foreigners known to be anarchists were barred by federal legislation from entering the country. Among anarchists, McKinley's assassination widened the division between advocates of violence and those who sought change peacefully. Education and aid were emphasized in modern schools, among them one named for the Spanish anarchist and educational reformer Francisco Ferrer: they stressed the history of revolution and of the working class and avoided that of religion and capitalism. In 1907 an anarchist Red Cross was formed in the city to assist

political prisoners of the Russian Revolution. After Most's death in 1906 Emma Goldman and Alexander Berkman became leading figures of anarchism in the United States; they published the journal *Mother Earth* (1906–17), addressed May Day rallies in Union Square, protested against World War I, organized strikes, gave lectures on contraception and "free love," and helped to renew the intellectual vigor of anarchism. Carlo Tresca published the newspaper *L'Avvenire* in New York City from 1913 and also helped to organize a strike by hotel workers that was led by the Industrial Workers of the World.

In 1918 Mollie Steimer, Jacob Abrams, and other anarchists in Harlem affiliated with the journal *Der Shturm* were convicted of criticizing American intervention in the Russian Revolution. Their cause was taken up by Louis Brandeis and Oliver Wendell Holmes, who together dissented from a decision by the Supreme Court to uphold the conviction. The anarchist movement was weakened after 1919, when Steimer, Goldman, Berkman, and others were exiled during a "red scare" inspired by fear of the Russian Revolution, and between 1920 and 1960 most anarchist newspapers ceased publication. Although the decline of anarchism was partly due to repression, a more important cause was the rise of communism, which attracted many of those on the fringes of the anarchist movement. Libertarian ideals were preserved by anarchists, liberals, and socialists opposed to fascism; anarchist philosophy was the basis of Dwight Macdonald's periodical *Politics* and of Dorothy Day's newspaper the *Catholic Worker* (1933), and the Libertarian Book Club was formed in the 1940s. The assassination of Tresca in July 1943 marked the end of a period when anarchism was inextricably associated with immigrants.

The civil rights movement and the Vietnam War revitalized interest in anarchist ideals during the 1960s and 1970s. At the New School for Social Research Herbert Marcuse inveighed against consumerism and political conformity. Ayn Rand praised capitalism in discussions of objectivism broadcast by the radio stations WKCR and WBAI; her books were available at the Objectivist Book Service on 34th Street. Paul Goodman denounced statist policies and "compulsory miseducation" and argued that student protests of the time were anarchic in origin. Many anarchists scorned the radical group Students for a Democratic Society for being too conciliatory toward established society. Abbie Hoffman and other "yippies" organized relief for the poor and in 1967 aided blacks during riots in Newark, New Jersey. In March 1968, 6000 radicals including Hoffman disrupted service at Grand Central Terminal until dispersed by police officers in full riot gear. During the early 1980s self-described anarchists took over abandoned buildings on the Lower East Side. In the early twenty-first century anarchism continued to be supported in the city by the Libertarian Book Club, which organized lectures and provided information about anarchist history as well as contemporary social and political issues.

Anastasi, Anne (*b* New York City, 19 Dec 1908; *d* New York City, 4 May 2001). Psychologist. She was a key architect of psychological testing in the twentieth century and author of *Psychological Testing* (1954), which is still considered a classic in the field. She attended Rhodes Preparatory School in Manhattan for two years and then went to Barnard College when she was only 15 years old, majoring in psychology and receiving her bachelor's degree in 1928. She completed her doctoral degree at Columbia University in 1930 at age 21 and then taught at Barnard (1930–39); Queens College of the City University of New York (1939–47), where she was chair of the psychology department; and Fordham University (1947–79). In 1972 she became the third woman to be elected president of the American Psychological Association. Her many awards included the National Medal of Science in 1987, the nation's highest award for scientific achievement. She died in her home at 138 East 39th Street.

Harold Takooshian

Anastasia, Albert (*b* Calabria, Italy, 1902; *d* New York City, 25 Oct 1957). Organized-crime figure. After growing up in Sicily he moved to New York City, where with his brother "Tough Tony" he took control of the waterfront in Brooklyn in the 1920s and gained power in its union. After killing a fellow longshoreman he spent 18 months on death row at Sing Sing, the state penitentiary at Ossining, New York; he was released after key witnesses disappeared. With Louis "Lepke" Buchalter he became an enforcer for Murder Incorporated, a criminal organization responsible for 500 deaths and disappearances. Nicknamed the "Mad Hatter," he was protected and controlled by Lucky Luciano (until he was deported) and Frank Costello (until he became preoccupied with his own legal problems). Shortly after threatening Meyer Lansky, Anastasia was murdered by two gunmen in a barber shop at the Park Sheraton Hotel.

James E. Mooney

Anchor Savings Bank. Established as the Bay Ridge Savings Bank in 1909 to serve a neighborhood of sailors. In 1968, looking to expand, it took on the name Anchor Savings Bank in honor of its original customers. The following year it merged with Bushwick Savings Bank. By 1994, when it merged into Dime Savings Bank, Anchor had taken over 15 banks, had $9.9 billion in assets, and operated 65 branches in New York State, New Jersey, and Florida.

Leslie Gourse

Ancient Order of Hibernians. Roman Catholic society formed in Ireland in 1565. Its first branch in the United States was founded as a social and benevolent society in 1836 at St. James Roman Catholic Church in Manhattan. The society is made up of separate men's and women's groups that work in close cooperation. There are about 80 local divisions in New York City, based mainly in neighborhoods that have a large Irish population. The Ancient Order of Hibernians is nonpartisan in American politics but has a strong tradition of support for nationalist movements in Ireland. It organizes dances, concerts, educational programs, and religious celebrations.

Thomas F. McGrath, *History of the Ancient Order of Hibernians* (Cleveland: Thomas F. McGrath, 1898); John T. Ridge, *Erin's Sons in America: The Ancient Order of Hibernians* (New York: Ancient Order of Hibernians, 1986)

John T. Ridge

Anderson, Alexander (*b* New York City, 21 April 1775; *d* Jersey City, N.J., 17 Jan 1870). Engraver and physician. Apprenticed to a physician after his 14th birthday, Anderson graduated with an MD from Columbia College in 1796, at the same time providing engraved illustrations for the New York City book trade in his spare time. His parents discouraged him from pursuing a career in art. He worked at Bellevue Hospital during the yellow fever epidemic of 1795, and again in 1798, when he lost his mother, father, wife, infant son, brother, and close relatives. After the tragedy, he abandoned medicine in favor of his preferred calling, engraving. Inspired by the illustrations on end-grain boxwood that he had seen in Thomas Bewick's *General History of Quadrupeds* (1790), Anderson taught himself the requisite skills; his edition of the *Quadrupeds* (1804) brought him wide recognition. He was the first to introduce this artistic and commercially successful medium to American bookmaking and has been called the father of American wood engraving. In the next three or four decades, he was this country's most popular illustrator, with his work appearing in fiction, poetry, history, religion, Bibles, medical texts, and, particularly, children's books. His skill and his amused and

affectionate portrayals of children in storybooks and in Webster's spellers have claimed a permanent place for him in the history of American illustration. He continued to work until he died in his 95th year.

His proof books, with over 9000 engravings, are in the New York Public Library. A selection of his tools is at the New-York Historical Society and the Connecticut Historical Society. The majority of his surviving woodblocks are at the New-York Historical Society, the University of Florida, Gainesville, and Columbia University. His manuscript diary, from 1793 to June 1799, is at Columbia University.

Anderson, Charles W(illiam) (*b* Oxford, Ohio, 28 April 1866; *d* New York City, 28 June 1938). Public official. After moving to New York City in 1886 he became active in Republican politics, and in 1890 he was elected president of the Young Men's Colored Republican Club of New York County. He was a gauger in the district office of the Internal Revenue Service, the private secretary to the treasurer of New York State (1895–98), and the supervisor of accounts for the state racing commission (1898–1905). In 1905 President Theodore Roosevelt appointed Anderson as the collector of internal revenue for the second district of New York City (encompassing Wall Street and the major piers), considered one of the most important federal positions in the city. He reportedly received the appointment through the influence of his friend and close political associate Booker T. Washington. Dismissed from office by President Woodrow Wilson in a purge of black Republicans, he later held senior positions in state government and again served as collector of internal revenue from 1923 to 1934.

James S. Kaplan

Andrew W. Mellon Foundation. Charitable organization. It began operations in June 1969 with the merger of two foundations set up by the children of Andrew W. Mellon: the Avalon Foundation, formed in 1940 by Ailsa Mellon Bruce (*d* 25 Aug 1969) and based in New York City, and the Old Dominion Foundation, formed in Virginia in 1941 by Paul Mellon (*d* 1 Feb 1999). The foundation makes grants in the areas of higher education, cultural affairs and the performing arts, population, conservation and the environment, and public affairs. In 2008 the foundation had an endowment of more than $5 billion, with annual grants making appropriations of about $210 million. Its offices are at 140 East 62nd Street.

Kenneth W. Rose

Androvetteville. Name applied in the eighteenth century to Charleston.

Annadale. Neighborhood in southwestern Staten Island, overlooking the Raritan Bay. It was once inhabited by Raritan Indians and was given its current name about 1860 in honor of Anna Seguine, a member of a prominent local family. The first houses in the area were fishing bungalows. There was relatively little development until the opening of the Verrazano–Narrows Bridge in 1964; the construction of private houses on a large scale began only about 1975. The neighborhood is the site of Blue Heron Pond Park, to the north of which is a station of Staten Island Rapid Transit. The housing stock in Annadale varies from the modest to the opulent; there is a large Italian population, and the neighborhood is ethnically diverse.

Gertrude M. Egish, *Next Stop, Annadale!* (New York: Staten Island Historical Society, 1997)

Martha S. Bendix

Annexed District. Name applied to the lands annexed by New York City in 1874 (the present neighborhoods of Kingsbridge, Morrisania, and West Farms in the Bronx) and 1895 (the rest of what is now the Bronx).

Gary Hermalyn, "The Bronx at the Turn of the Century," *Bronx County Historical Society Journal* 36 (1989): 92–112

Gary D. Hermalyn

Ansonia. Seventeen-story apartment building on Broadway between 73rd and 74th streets. Designed in a beaux-arts style by the architectural firm of Graves and Duboy, it was built in 1904 by the developer W. E. D. Stokes and soon became well known for attracting such residents as Babe Ruth, Enrico Caruso, Theodore Dreiser, Igor Stravinsky, Arturo Toscanini, Florenz Ziegfeld, Mischa Elman, Sol Hurok, Lauritz Melchior, Ezio Pinza, and Lily Pons. During renovations in the 1980s some portions were converted into studios for voice coaching and space for theater rehearsals. Ornamented facades, balconies, and corner towers make the Ansonia Hotel an outstanding structure on the West Side. It was declared a New York City landmark in 1972.

Thomas E. Bird

Anthology Film Archives. Museum dedicated to avant-garde cinema. Formed in 1969 by the filmmakers Jonas Mekas and Jerome Hill, it was the first of its kind in the United States. From 1970 it mounted exhibitions at Joseph Papp's Public Theater in an "invisible cinema" designed by Peter Kubelka, in which viewers were separated from each other by black partitions and a seat hood that minimized perceptual interference while allowing for a communal sense of viewing. Its collection, the Essential Cinema Repertory, was selected by a committee of theoreticians, filmmakers, and poets to celebrate the aesthetics of cinema and provoke discussion about alternative cinema. The archive introduced the Independent Film Preservation program and began its library collection in 1972, introduced video exhibitions in 1974, and maintained a theater at 80 Wooster Street from 1973 to 1980. In 1979 the Anthology Film Archives acquired a former courthouse building at Second Avenue and Second Street, which came to house two theaters, a film preservation department, a library, and a gallery. As of the early twenty-first century, the archives held 11,000 films and 3,000 videotapes. In 2007 it was among several institutions that received funding from a $20 million grant provided by the Carnegie Corporation. The building itself has also been used in film, most recently in *Spider-Man 2* (2004).

Grai St. Clair Rice

anthropology. New York City became noted for its contributions to the field of anthropology even before the Civil War through the work of Albert Gallatin, who conducted research on American Indian languages and helped to organize the American Ethnological Society in 1842. The American Museum of Natural History opened an anthropology department in 1874, but it was not directed by trained curators until 1894, when it was reorganized by Frederic Putnam of Harvard University. Prominent anthropologists in the department included Franz Boas, who was curator from 1895 to 1905, Clark Wissler, Robert Lowie, Herbert Spinden, Harry Shapiro, Margaret Mead, and Colin Turnbull. The New York Academy of Sciences opened an anthropology division in 1896. After 1900 the center of anthropology in New York City gradually shifted toward Columbia University, where Boas began teaching in 1896. Among his first students were Alfred Kroeber (to whom Columbia awarded its first PhD in anthropology in 1901), Lowie, Edward Sapir, Paul Radin, and Alexander Goldenweiser, who all centered their work on salvaging the vanishing culture of the American Indian. In the 1920s Boas's students included Mead, Ruth Benedict, Gladys Reichard, Ruth Bunzel, and Melville Herskovits. Ralph Linton, who like Benedict studied culture and personality, became a professor at Columbia in 1937 after Boas's retirement.

Between the two world wars many schools in the city introduced anthropology into their curricula, including all four public colleges in New York City (City College, Hunter College, Brooklyn College, and Queens College) and the New School for Social Research, where Elsie Clews Parsons and Goldenweiser taught when the school opened in 1919. The French anthropologist Claude Lévi-Strauss taught at the New School from 1942 to 1945 and was the cultural attaché to the French embassy from 1946 to 1947. In 1941 the Viking Fund (later known as the Wenner–Gren Foundation for Anthropological Research), an important source of grants for anthropological study abroad, established its headquarters in the city. Although the city's preeminence as a center of anthropology declined as the field gained popularity throughout the country after World War II, in 1966 doctoral programs in anthropology were launched at New York University, the New School, and City University of New York. In the early twenty-first century the New York Academy of Sciences also remained an important center for anthropologists throughout the city.

Ira Jacknis

Anti-Defamation League. Nonprofit organization formed as an affiliate of B'nai B'rith in 1913 to combat negative portrayals of Jews in books, periodicals, and advertising. Initially the league supported the censorship of texts that it believed would encourage anti-Semitism, including works of Shakespeare and Dickens. In 1946 the organization moved to New York City from Chicago and broadened its mission to include defending the rights of all Americans: it filed a brief in the school desegregation case *Brown v. Board of Education* (1954) and drafted the first anti-discrimination bill, the Ives–Quinn Act. In later years the league supported the Civil Rights Act of 1964 and defended the rights of Jews in the Soviet Union. In the late twentieth and early twenty-first centuries, the league's activities included monitoring terrorist groups, working on Israeli–Palestinian relations, and promoting Holocaust awareness. The league's headquarters in the twenty-first century remain in Manhattan, although it has offices all over the United States and in Israel, Russia, and Italy.

Anti-Slavery Society. See American Anti-Slavery Society.

Antonetty, Evelina Lopez (*b* Salinas, Puerto Rico, 19 Sept 1922; *d* New York City, 19 Nov 1984). Activist. She moved in 1933 with her family to New York City, where in the 1940s she organized unions and worked to improve educational opportunities for Puerto Ricans. In 1965 she founded and became the first executive director of United Bronx Parents, an organization that encouraged parents to take part in the school system and that offered various social services in the South Bronx. After her death, the Puerto Rican Studies Library and Archives at Hunter College were named for her.

Nélida Pérez

Antonini, Luigi (*b* Vallata Irpina, Italy, 11 Sept 1883; *d* New York City, 29 Dec 1968). Labor leader. He joined the International Ladies' Garment Workers' Union as a dress presser in 1913 and became a leader of Italian workers in New York City. In 1919 he organized Italian Dressmakers Local 89, of which he served as general secretary. Elected vice president of the union in 1934, he joined with its president, David Dubinsky, to form the American Labor Party in New York City in 1936 and the Liberal Party in 1944. Antonini later led the Italian-American Labor Council in opposition to Mussolini and assisted in rebuilding democratic trade unions in Italy after World War II.

Philip V. apartments. The first apartment building in New York City was the Stuyvesant, designed in 1869 by the architect Richard Morris Hunt, the first American to attend the École des Beaux-Arts. The building was also called the French Flats, a term later used more broadly for any dwellings of the same kind (which were not known as apartments until the 1880s). Early apartment buildings in Manhattan were constructed at a time when most middle-class families in the city lived in row houses. In contrast to row houses and their descendants, the brownstones, which had dark interiors and were costly to maintain, apartment buildings symbolized modern technology and new ways of family living. Apartments signaled a shift in the cultural ideals of the upper middle class from its colonial Anglo-Saxon origins to the culture of the Continent, especially that of Second Empire Paris. In 1871 Hunt completed the Stevens House, an eight-story building with a passenger elevator and other technological innovations. Dozens of similar apartment buildings were erected in Manhattan in the 1880s, some having as many as 20 rooms: one of the best known was the Dakota (1884, Henry J. Hardenbergh). To counter the prejudice against apartments that was still common among wealthy residents, many of the new buildings were developed as cooperatives; this arrangement gave residents a financial interest in their apartment that was tantamount to ownership and offered services such as catered meals and domestic help.

Not all apartment buildings were luxurious, however. Tenements provided compact rental housing for poor and working-class immigrants at a monthly rent of two to three dollars a room. Before the late nineteenth century most tenements in New York City were railroad apartments, or railroad flats, which contained several rooms in a line, usually without windows, that entered into one another and lacked a hallway. The Tenement House Law of 1879 set standards for space, ventilation, and hygiene and implemented the dumbbell design: between the front and back rooms the exterior walls were indented, creating large air shafts between adjacent buildings. In 1901 the law was amended to mandate a toilet for each dwelling, separate living and sleeping rooms, and adequate light, which brought the tenement closer to the level of other apartment buildings in the city. At the same time the number of luxury apartments increased in Manhattan, especially on the Upper East Side and Upper West Side, where three large apartment buildings along Broadway were each briefly promoted as the world's largest: the Ansonia (1904, 17 stories, Graves and Duboy), the Apthorp (1908, 12 stories, Clinton and Russell), and the Belnord (1908, 12 stories, Hiss and Weeks). The great number of apartments built in the 1920s had become less luxurious than their forerunners, for the new large-scale apartment building was now the modest domain of the middle class. The gap between tenement and apartment building was further narrowed by the Multiple Dwellings Law (1929), which eliminated the legal distinction between the two types of dwelling and united all categories of housing under a uniform set of design controls. With the onset of the Depression, luxury apartments became smaller: in the Century on Central Park West (1931, Jacques Delamarre), each apartment had only one or two bedrooms.

Most innovations in the building of apartments from the late 1920s on were made in the outer boroughs, where low-rise garden apartments for the expanding middle class were built on cheap land newly accessible by subway. Large developments were constructed in Jackson Heights and later along the Bronx River Parkway, the Pelham Parkway in the Bronx, and the Eastern Parkway in Brooklyn. Some apartment buildings in Manhattan had small gardens enclosed in courtyards, among them the Hudson View Gardens (1924, George F. Pelham), Tudor City (1928, H.

Douglas Ives), and London Terrace (1930, Farrar and Watmaugh). Many of the housing projects built with government sponsorship in the 1930s were garden apartments, including Hillside Homes in the Bronx (1935, Clarence Stein) and Harlem River Houses in Manhattan (1937, Archibald Manning Brown); public funds also subsidized the construction of such large complexes as Parkchester in the Bronx (1940, Richmond H. Shreve) and Stuyvesant Town in Manhattan (1949, Gilmore D. Clarke). After World War II, pressures to reduce construction costs and the movement of the middle class to the suburbs encouraged the development of a design known as "tower in the park," characterized by a large apartment building surrounded by open space. The design was further encouraged by changes in zoning in 1961 and was seen in such developments as the Kips Bay Plaza (1965, I. M. Pei and Partners) and Co-op City (1968–70, Herman J. Jessor), the largest postwar apartment complex in New York City. Among the most innovative apartment complexes of the 1960s and 1970s were Riverbend (1967, Davis, Brody), made up of duplex apartments facing terraces, several projects sponsored by the Urban Development Corporation at Twin Parks in the Bronx, and Battery Park City in lower Manhattan (1979, Alexander Cooper and Associates).

Tax policy and rent regulation encouraged landlords in the 1980s to convert several hundred thousand rental apartments in New York City to cooperatives and condominium units. There was considerable new construction in Hell's Kitchen (which became known as Clinton) and along upper Broadway. Trump Tower on Fifth Avenue (1983, Swanke, Hayden, Connell) became a symbol of the lavish lifestyle of the 1980s. In the outer boroughs many of the spacious apartment buildings of the 1920s were abandoned or destroyed by arson. The city made plans to replace them not with apartment buildings but with owner-occupied houses, entailing subsidized home-ownership programs. By the turn of the twenty-first century, this strategy was eclipsed by several factors. As land became less available, low-density housing could no longer be expected to satisfy housing-production requirements related to increased population growth.

The demand for increased production has been effectively met only on the luxury level, with little innovation in terms of the basics of New York apartment design. There have been some spatial influences related to "loft-style living," and the first "green" apartment buildings have appeared, such as the Solaire in Battery Park City (2003, Cesar Pelli and Associates), but perhaps the most pervasive new tendency in luxury housing has been project branding by high-style practitioners. The marketing success of the Perry Street Towers in the West Village (1999–2002, Richard Meier and Partners) set an important precedent. Numerous international architects including Frank Gehry, Zaha Hadid, Santiago Calatrava, and Jean Novel have followed suit.

Apgar, Virginia (*b* Westfield, N.J., 7 June 1909; *d* New York City, 7 Aug 1974). Anesthesiologist who invented the Apgar Score. She worked for most of her professional life at the Columbia–Presbyterian Medical Center, where in 1938 she became the first woman to lead a department; she was also the first female physician to hold a full professorship at the College of Physicians and Surgeons and in 1949 became the first professor of anesthesiology there, remaining until 1959. She is best known for developing the Apgar Score (1952), a quick method for determining whether newborn infants require special medical attention. Apgar ended her career at the National Foundation–March of Dimes, where she held several prominent positions. With Joan Beck she wrote *Is My Baby All Right?: A Guide to Birth Defects* (1972).

Joseph S. Lieber

Apollo Association for the Promotion of the Fine Arts in the United States. Original name of the American Art-Union.

Apollo Theater. Constructed by New York architect George Keister in 1913 as an all-white theater named Hurtig and Seamon's Burlesque at 253 West 125th Street, it opened as a black theater in 1934, borrowing its name from owner Sidney Cohen's other nearby venture. Harlem had just undergone the cultural resurgence of the Harlem Renaissance, and along with popular nightspots like the Cotton Club, Connie's Inn, Minton's Playhouse, Monroe's Uptown House, and Smalls' Paradise, several theaters had opened to black audiences by the 1920s—namely, the Lafayette Theatre and neighboring Crescent. The Lafayette, which preceded the Apollo as a performer's rite of passage, featured acts such as Louis Armstrong, Bill "Bojangles" Robinson, and Bessie Smith. However, the emergence of Cohen's Apollo Theater, managed by Morris Sussman, eventually created healthy competition for cutthroat businessman Frank Schiffman, who managed the Lafayette and worked for Leo Brecher at the nearby Harlem Opera House on 125th Street. Though Cohen reportedly contacted notorious talent scout John Hammond to book shows, he died just before the arrangement could be finalized, and consequently the Apollo and Harlem Opera House merged, with the latter turned into a movie house and the Apollo as the sole interest of Brecher and Schiffman, billed as "The Only Stage Show in Harlem."

The Apollo quickly became central to Harlem's social life and gained national notoriety for its "Amateur Night in Harlem," broadcast live on WMCA and 21 of its affiliates across the country. Initially, the Apollo presented what was essentially a vaudevillian act, equipped with a line of chorus girls that rivaled the Cotton Club's. Despite being a black theater, the early years also featured top white performers such as Harry James, Woody Herman, and Charlie Barnet; furthermore, the audience was roughly 40 percent white during the week and as high as 75 percent on Amateur Night. During the swing era the theater acted as the stringent trial ground for bandleaders Duke Ellington, Count Basie, and Andy Kirk, as well as a nascent star of Basie's orchestra, Billie Holiday. Much to the consternation of the Harlem elite and the National Association for the Advancement of Colored People (NAACP), the theater featured comedy acts in blackface, many—such as Butterbeans and Susie's "I Want a Hot Dog for My Roll"—embedded with sexual innuendo. The Apollo also offered dance performers such as the Berry Brothers, Nicholas Brothers, Bill "Bojangles" Robinson, and the act of Buck and Bubbles.

What distinguished the Apollo Theater was its Amateur Night, which launched the careers of countless artists, including King Curtis, Wilson Picket, Pearl Bailey, Sarah Vaughan, Rush Brown, James Brown, and Dionne Warwick. The amateur night idea was a remnant of Schiffman's Harlem Amateur Hour with Ralph Cooper at the Lafayette Theatre. Apollo crowds were notorious for their willingness to show displeasure with a poor performance, and stagehand Norman Miller, known as Porto Rico, began a tradition that lasted until the 1970s of chasing a floundering singer offstage by firing a cap gun. From then on, the audience's displeasure would be buttressed by a wailing siren from backstage and a wild Porto Rico (later played by Bob Collins) chasing the chastised performer offstage with his cap pistol.

The 1950s saw the decline of the Apollo variety show, largely because of the great success of a rhythm-and-blues group, the Orioles, which Schiffman billed alongside a range of older acts throughout the decade. The theater continued to have occasional variety shows and comedy acts. Gospel acts also became popular, including the Staple Singers, Sister Rosetta Tharpe, Clara Ward, and the Soul Stirrers with Sam Cooke. The 1960s was the Apollo's most successful decade, in no small part because of the charismatic James Brown. The Schiffmans (Frank and his son Bobby) also became more active in community politics and the civil rights movement. Along

Apollo Theater, 2009

with soul performers like Ray Charles, Aretha Franklin, and Sam Cooke, the Apollo responded to the surge in jazz with hard boppers Art Blakey and Horace Silver, as well as white acts Dave Brubeck, Stan Getz, and Apollo favorite Buddy Rich, who once charmed the audience by playing drums with one arm broken and in a cast. Comedians like Richard Pryor and Redd Foxx also continued to make their mark at the theater.

In early 1976, after the community's drug and theft problems overflowed to the theater and a shooting killed an 18-year-old boy, the Apollo Theater closed. Two years later it reopened with old performers such as James Brown and newer groups like George Clinton and Parliament-Funkadelic. The theater gained landmark status in 1983 and was purchased by Inner City Broadcasting Company, led by former borough president Percy E. Sutton. New York State bought the Apollo in 1991 and ran it as the nonprofit Apollo Theater Foundation, Inc. It became home to a syndicated television show, *Showtime at the Apollo,* in 1987. In the early twenty-first century the Apollo attracted about 1.3 million visitors annually and began a significant renovation and expansion. To celebrate its 75th anniversary season during 2009–10, the theater created an archive of documents, photographs, and other historic materials and collaborated on an oral history project with Columbia University.

Garrett Felber

Apple Bank for Savings. Savings bank formed in 1863 as the Harlem Savings Bank. It took its current name in May 1983. In the early twenty-first century the bank was the fourth largest savings bank in New York State and had 33 branches in New York City.

David White

apprenticeship. During the colonial period apprentices in New York City trained in crafts through legal attachments to master tradesmen. In return for labor they received food, clothing, shelter, rudimentary education, and religious training. Although the standard period of apprenticeship in America was seven years or until age 21, terms were often shorter in colonial New York City because of a labor shortage. Indeed, apprenticeship was most common in the wealthier crafts and among orphans, with short-term labor contracts often used in other trades, contracts that allowed apprentices to become in part wage-earning journeymen. This trend was reinforced by the growth of the marketplace after independence and led semi-skilled youths to enter the workshop as journeymen at progressively earlier ages. The authority of the master was further undermined by the individualistic emphasis of republican ideology and evangelical religion, and by technological advances that obviated full understanding of a trade. In the early nineteenth century an apprentice would often live apart from his master's household and demand a cash wage. Between 6000 and 8000 apprentices labored in the city in 1820. With the introduction of heavy machinery in many trades at the time of the Civil War apprentices virtually disappeared from New York City.

W. J. Rorabaugh, *The Craft Apprentice: From Franklin to the Machine Age in America* (New York: Oxford University Press, 1986)

Howard Rock

Apthorp Apartments. Residential building between Broadway and West End Avenue south of 79th Street. Designed for the Astor estate as luxury rental housing by the firm of Clinton and Russell and built in 1908 in the style of an Italian Renaissance palazzo, it covers 86 percent of the block, is 12 stories high, and has two vaulted carriageways leading from the street to an interior courtyard with an impressive fountain. At the time the Apthorp was completed its size and full range of concierge services surpassed those of the Ansonia, its rival in luxury hotel housing. In 2008 conversion of the 100 rental apartments to condominiums was completed.

Aquarium. See New York Aquarium.

Aqueduct. Neighborhood in southwestern Queens, adjoining the western edge of Aqueduct Racetrack between Rockaway Boulevard and the Southern Parkway. One of the first developments was a cemetery (now nearly obliterated), begun in 1680 at what is now 149th Avenue and Redding Street. In the eighteenth and early nineteenth centuries the area was sparsely populated and tilled by families of Dutch descent, including the Ryders, Duryeas, and Rapalyes. The neighborhood was first known as South Woodhaven; the current name became used locally after a conduit for the Brooklyn Water Works was

Apthorp Apartments, 2009

built in 1854–58 south of what is now the parkway, and more widely after the Long Island Rail Road opened a station there in 1880. The railroad station, paid for by the track's owners, later became the Aqueduct subway station. The Centerville (Eclipse) Race Course stood south of Rockaway Boulevard and east of Cross Bay Boulevard and was popular in the 1850s and 1860s. The Queens County Jockey Club bought land in 1892 and opened a racetrack on 15 September 1894, which was rebuilt in 1959. A new winter track was installed in 1978. A flea market operates there three days a week. In 2005 the grandstands were renovated, and 4500 lottery machines were installed. The racetrack and nearby John F. Kennedy International Airport provide many jobs to residents.

Vincent Seyfried

Aqueduct Racetrack. Thoroughbred racetrack in Ozone Park, opened on 27 September 1894 and operated by the Queens County Jockey Club. A minor facility at its inception, it eventually became the site of such famous races as the Carter Handicap on 10 July 1944, which ended in a triple dead heat. In 1959 the New York Racing Association spent $33 million to renovate the track, which opened on 14 September with a capacity of 80,000. Thirty minutes by express subway from Times Square, it became the leading betting track in the United States in 1960, when it achieved a daily handle of $2,698,419. By the early 1990s attendance had declined. The track underwent renovations in 2001 and 2006. Beginning in 2007 the racing season ran from October through late April.

Steven A. Riess

Arabs. The first Arabic-speaking residents of New York City were Syrians and Lebanese who began immigrating to New York from the Ottoman province of Greater Syria in the late 1870s. By the 1890s the area around Rector and Washington streets in lower Manhattan had become known as Little Syria; eventually other Syrian neighborhoods would form in Cobble Hill, Park Slope, and Bay Ridge in Brooklyn. Much later, Steinway Street in Astoria, Queens, would become another recognizably Arab neighborhood, the inhabitants being largely North African.

Many early immigrants started out as peddlers and went on to become business people and merchants. Some became wealthy in the import-export trade. In the early 1900s New York City had a vibrant Arabic literary establishment: such émigré writers as Kahlil Gibran and Elia Abu Madi greatly influenced Arabic letters, both in the Americas and in the Arab world. Because of its size, vibrant press, and commercial strength, New York's Arab community was considered the mother colony of all other Arabic-speaking communities in the United States, and until the 1960s it was the most influential. In 1965, when the immigration restrictions imposed in 1924 were lifted, immigration from Arab countries resumed, spurred this time by military and political upheavals, the unfulfilled economic expectations of a newly educated Arab elite, and economic pressures in the poorer Arab countries. Between 1965 and 2008 the number of New Yorkers of Arab origin more than tripled, to over 200,000. In addition to descendants of the early immigrants, there were newcomers from Syria, Lebanon, Palestine, Yemen, Egypt, Morocco, Sudan, Jordan, Iraq, Algeria, Tunisia, Libya, Saudi Arabia, and Kuwait. Christians accounted for 95 percent of the early immigrants, but Muslims account for the overwhelming majority of arrivals in the twenty-first century.

Among most Arabs, religious affiliation defines public identity, an attitude fostered by the Ottoman practice of governing subjects according to their membership in a religious community. The Arab world is the birthplace of Islam, Christianity, and Judaism, and in a reflection of this varied heritage Arabs in New York City practice all three in about a dozen variations, almost all indigenous to the Arab East. These include Sunni and Shiite Islam, whose followers worship with their coreligionists from other nations and language groups at more than 100 mosques in all five boroughs, the most prominent of which is the Islamic Cultural Center at 96th Street and Third Avenue in Manhattan (opened 1989). Also represented is the Druze religion, whose adherents are served by the head of the Druze Council of North America in New Jersey. Arabs, both here and in the Middle East, also practice Roman Catholicism and various forms of Protestantism.

Arab-owned store, Atlantic Avenue, 2009

Arab Christianity is 2000 years old; its diversity stems from the development of local liturgies and theological differences among Christian communities in the early centuries of the church, localisms that were further complicated by the split between the Roman Catholic and Eastern Orthodox churches in 1054 and by the succession, over the centuries, of alliances and realignments among smaller Christian groups. The Lebanese Maronites, whose liturgy is partly in Aramaic, the language of Jesus, are Catholic; they worship at Our Lady of Lebanon Cathedral on Remsen Street in Brooklyn Heights. Melchites, also under papal jurisdiction, were actually aligned with the Antiochian Arab Orthodox until the two split in 1724, but they still share the same Byzantine rites and liturgy. Melchites worship at the Church of the Virgin Mary in Park Slope, in Brooklyn; Antiochian Orthodox worship at St. Nicholas Orthodox Cathedral on State Street and St. Mary's Orthodox Church in Bay Ridge, also in Brooklyn. New York's Egyptian Copts, also Orthodox, worship at St. George's Coptic Orthodox Church in Brooklyn, St. Mary's and St. Anthony's Coptic Orthodox Church in Queens, and the Coptic Orthodox Church of Archangel Michael and St. Mena in Staten Island.

In addition to its Arab Christians and Muslims, New York has roughly 100,000 Arab Jews. Seventy-five percent descend from Syrians who immigrated at the beginning of the twentieth century; the rest immigrated later from Syria, Iraq, Yemen, and North African countries. Arab Jews have much in common linguistically and culturally with other Arabs, and many, particularly Syrian Jews from Aleppo, a city in northern Syria, have retained their Arabic language and cultural values at least as successfully as other Arabs have.

Although second-, third-, fourth-, and fifth-generation Arabs are for the most part assimilated and middle class, more recent immigrants have a wider range of experiences and ways of life. Those on the bottom of the economic ladder are drawn to the city's fluid service economy and work at whatever jobs they can find, living in enclaves scattered around the city, particularly in Brooklyn, and maintaining a traditional way of life as best they can. For wealthier, educated Arabs, immigration often reflects a decision to start a new life, despite the personal social costs that some aspects of Americanization may entail. Many Arabs are self-employed. Arab entrepreneurs work in wholesale and retail trades (food, clothing, furniture, jewelry) and services (automotive repair, food catering, real estate, accounting, insurance). In the professions of medicine, law, architecture, academia, banking, and finance, Arabs are prominent. Professional societies include the Arab Bankers Association of North America (ABANA) and the New York chapter of the National Arab American Medical Association. Interest in Arabic culture has been growing since the 1990s. It was during that decade that Simon Shaheen, perhaps the most well known of the city's Arab (Palestinian) musicians (as an oudist, violinist, composer, and teacher), produced a series of annual Arabic arts extravaganzas called *Mahrajan al-Fan* (Festival of the Arts) at the Brooklyn Museum of Art, bringing poets and dancers from all over the country and the Arab world for days of performance and celebration.

When the World Trade Center was attacked on 11 September 2001, Arab Americans suffered twice, for they were the group that was subsequently blamed for the event—or at least associated with those who were to blame. In the months following the attacks, hundreds of hate crimes and incidents of discrimination were perpetrated on members of the community, and, along with other Middle Easterners and South Asians, almost 3000 Arab Americans were detained, and many were deported. The tragedy had an unanticipated impact: it intensified the cultural ferment that had been building in the previous decade. In early 2002, the Museum of the City of New York mounted a huge installation entitled "A Community of Many Worlds: Arab Americans in New York City." The exhibit had actually been in the planning stages since 1997, but after the events of 11 September, the opening was delayed and its size was tripled, because it had suddenly become, in the words of its president, "the most important exhibit the museum had ever put on."

After the 2001 attacks, new Arab American cultural outlets were born. One was the New York Arab American Comedy Festival, which, since 2004, has been an annual multi-evening event featuring dozens of Arab American standup comics from all over the country. Each July New York celebrates Arab Heritage Week, when over a dozen Arab American organizations from many countries and interest groups hold performance events and street festivals around the city, attracting thousands. Inaugurated in 2004 by Mayor Michael Bloomberg, the festivities begin with the Arab American Street Festival, at Bond Street and Broadway in Greenwich Village, under the aegis of the Network of Arab-American Professionals (NAAP). In March 2008 the Brooklyn Arts Council sponsored the Brooklyn Maqam Arab Music Festival, which presented a full month of free Arabic music making in 15 venues in Brooklyn and Manhattan, showcasing more than 100 Arab, Arab American, and other artists.

Paula Hajar

Arbeiter Ring. See Workmen's Circle.

Arbeiter Union. Central labor council formed to consolidate 26 German unions in 1864. Led by Conrad Kuhn, it published the *Arbeiter Union* (edited by Adolf Douai), the first daily German labor newspaper in New York City, which was published weekly between 13 June 1868 and 15 May 1869, and daily between 20 May 1869 and 17 September 1870. The union became the leading labor organization in the city, and with affiliated unions it led a strike for the eight-hour workday in 1872. Although more than 100,000 persons took part, the strike was crushed and the Arbeiter Union disbanded.

Stanley Nadel

Arbitron Inc. Largest U.S. provider of audience measurement for the radio industry and a major research firm. Formed in 1949 as the American Research Bureau by Jim Seiler, it launched television viewing surveys in New York City in 1950 and opened an office in the city in 1953. By 1955 the bureau issued television ratings for more than 140 markets; in 1964 it began issuing ratings of radio broadcasts, which became its primary business. The bureau was acquired in 1961 by the Council for Economic and Industry Research, which was then bought in 1967 by the Control Data Corporation. The name was changed to Arbitron in 1973, and in 1995 the firm stopped producing local television ratings. Early in the twenty-first century the company had about 1900 employees and was headquartered in Columbia, Maryland.

George Winslow

Arbus [née Nemerov]**, Diane** (*b* New York City, 14 March 1923; *d* New York City, ?27 July 1971). Famous photographer. She began her career as a fashion photographer in New York City, studied with Lisette Model from 1958 to 1960, and became known during the 1960s as a photographer of the absurd who often captured her subjects in unflattering poses: her subjects ranged from beauty contestants to nudists. She taught at the Parsons School of Design (1965–66) and Cooper Union (1968–69) and had an exhibition of her work at the Museum of Modern Art in 1967.

A posthumous traveling exhibition sponsored by the Museum of Modern Art in 1972 established Arbus as an important figure in photography. She lived at 319 East 72nd Street (1954–58), 71 Washington Place (1958–59), where she also opened a studio, 1211/2 Charles Street (1959–68), 120 East 10th Street (1968–70), and 463 West Street (from 1970 until her death).

Patricia Bosworth, *Diane Arbus: A Biography* (New York: Alfred A. Knopf, 1987)

Laura Gwinn

archaeology. The first formal, professional archaeological investigations in New York City were undertaken after deposits of seventeenth-century artifacts were discovered during construction at Old Slip and excavations for the World Trade Center. Other excavations began in 1979 at the former site of the Stadt Huys, built as a tavern at Pearl Street and Coenties Alley and used as the town hall of New Netherland and then New York City from 1653 to 1699. Sites at Broad Street (1983) and 60 Wall Street (1984) were also dug in the original part of Manhattan. Excavations were conducted at Hanover Square (1981), the Telco (telephone company) Block (1981), 175 Water Street (1981–82), the site of Barclays Bank (1984), and the site of the Assay Office (1984), blocks built on landfill amassed from the seventeenth century onward. The excavations uncovered such architectural remains as the foundations of houses, warehouses, taverns, and shops as well as hundreds of thousands of artifacts, both whole and fragmentary, including ceramics, bottles, smoking pipes, buttons, coins, gun parts, toys, large deposits of food, and materials used as ballast in merchant ships, such as English flint, coral from the Caribbean, and yellow bricks from the Netherlands. Smaller deposits from later periods were found before construction of the American Express Building at the World Financial Center and of a block at 53rd Street near Third Avenue, as well as a site at Sullivan and Third streets, which contained important material from a late eighteenth-century "suburb."

Excavations for a new federal building in 1991 led to the discovery of the African Burial Ground, used for slaves and free New Yorkers of African descent throughout the eighteenth century. That site provided from human remains information on health, disease, and some kinds of physical trauma. A Five Points site, examined about at the same time, revealed material from the city's most notorious nineteenth-century slum. Excavations have also occurred at a number of prehistoric sites, including Ryder's Pond in Brooklyn, Clason's Point and several sites in Pelham Bay Park in the Bronx, and Ward's Point in Staten Island; at the site of such historic houses as those of Pieter Claessen Wyckoff (circa 1641) in Brooklyn, Adrian Onderdonck (1731) in Queens, and John Bowne (1661) in Flushing; and in the nineteenth-century free black communities of Weeksville in Brooklyn and Sandy Ground in Staten Island.

Artifacts from these studies have provided important insight into the history of New York City, especially during the colonial period. Aspects of community planning were revealed in a number of sites, especially methods of landfill in swampy areas, a procedure controlled by the local legislature throughout colonial times. At Hanover Square archaeologists discovered a wall built shortly after 1687 by six Dutch families to hold fill in place. A similar joint effort was made almost 60 years later at 175 Water Street where a vessel used in the Caribbean trade until the 1740s (now known as the Ronson Ship, after the developer of the office building on the site) was sunk across several lots, also to hold fill. By the next stage of filling, which occurred after the American Revolution as revealed at the Assay site, the techniques for making land had become more sophisticated.

Most of the excavations were done in what was at the time an affluent neighborhood, and some of the deposits have been linked to important colonial figures, including the merchants Robert Livingston (Hanover Square), Cornelius Van Tienhoven (Broad Street), and Lewis Carre (Stadt Huys); the well-known silversmith and goldsmith Simeon Soumaine (Hanover Square); and the physician Hans Kierstede (Broad Street). Information about colonial social life has been inferred from objects found at such tavern sites as that of the Lovelace Tavern, which stood next to the Stadt Huys and served briefly as the city hall. Taverns were important social centers of the early city, and analysis of ceramics and pipes from the Lovelace Tavern reveals not only that its patrons did more drinking and smoking than eating but also that smuggling from the Netherlands occurred during the English trade embargo and that fashions in the city were different from those in surrounding areas. Deposits from later periods have yielded evidence about changing family organization and sex roles and health practices.

Excavations continued in the early twenty-first century. In 2003 archaeologists were granted permission to dig at the former Tomb of the Martyrs, an 1808 crypt containing the remains of Americans who died in British prison ships during the American Revolution. The coffins were moved to Fort Greene Park in 1873, but archaeologists believed some remains had been left behind in Vinegar Hill; a portion of the tomb's wall was uncovered, but no remains were found. Construction of Coenties Slip Park in 2004 revealed pre-1808 water mains made of bored logs, part of the Manhattan Water Company system. As the city built a new South Ferry subway station in 2005–6, workers encountered four pre-Revolutionary stone walls that were likely part of a military battery, plus dishes, glass, bones, and a 1744 British coin. Another dig continued at Lott House, an eighteenth-century Dutch house in Flatlands, Brooklyn. In the early twenty-first century artifacts from local sites were held by several institutions, including the South Street Seaport Museum, Columbia University, and New York University. A permanent outdoor exhibition about the Stadt Huys was maintained at the headquarters of Goldman Sachs at 85 Broad Street.

Archbishop Molloy High School. Catholic high school for boys at 85-53 Manton Street in Briarwood, Queens, opened in 1892 as an elementary and secondary school by the Marist Brothers at 151 East 76th Street in Manhattan. Later named St. Ann's Academy, it drew most of its students from Brooklyn and Queens by the 1950s, when the Marist Brothers decided to replace the aging plant at 76th Street. In 1957 it moved to its new building in Queens and was renamed for Thomas Molloy, the bishop of Brooklyn from 1921 to 1956. In the early twenty-first century enrollment was around 1500.

Gilbert Tauber

Architectural League of New York. Organization formed on 18 January 1881 at a meeting of 50 young architects convened by Cass Gilbert, who sought to promote their artistic development. Most of the members recognized that their training was inferior to that offered by the École des Beaux-Arts in Paris but doubted whether they could look to the American Institute of Architects for help. At frequent meetings that continued for several years members took turns assigning sketch problems and having their solutions evaluated by prominent architects. After a brief dormant period the league was reconstituted in 1886 by Russell Sturgis, who inaugurated a program of exhibitions, lectures, dinners, and tours. The same year marked the inception of annual exhibitions of the best new work in architecture and the related arts (continued to 1938), and the league soon became influential in defining architectural taste in New York City and nationally. By the early 1930s the league had become staid, and it was overtaken as an aesthetic arbiter by the Museum of Modern Art, newly established and vehemently modernist. The league reemerged in the 1960s as an important forum for architectural debate through exhibitions of the work of a new generation of architects, a series of avant-garde installations called

"Environments." It also sponsored design studies and held an annual competition for young architects. Its presidents have included George B. Post, Henry Hardenbergh, Grosvenor Atterbury, Raymond M. Hood, Wallace K. Harrison, Ulrich Franzen, and Robert A. M. Stern.

Rosalie Genevro

architecture. Architecture has reflected New York City's rise as the country's economic and cultural capital. The city's architects have led the nation in innovative design and engineering techniques, making the city famous for its vertical skyline, among the first in the world. This produced an extraordinary population density in Manhattan.

Early New York City architecture was influenced by Dutch settlers. Seventeenth-century New Amsterdam adopted the style of its mother city, with narrow multistory buildings marked by stepped gables and low swooping roofs. In the late seventeenth and eighteenth centuries, British style dominated, featuring mostly Georgian and Federal row houses that were characterized by design symmetry; the use of brick, timber, and masonry; and ornate sashes and linteled doorways. The few examples that survive include residences in Historic Richmond Town in Staten Island, the Friends Meeting House (1694, 1719) in Flushing, St. Paul's Chapel (1768, 1794) in Manhattan, and the Old New Dorp Moravian Church (1764) in Staten Island.

1. Federal and Antebellum New York City, 1784–1860

Local builders, rather than architects, were responsible for most of the design and construction in the growing metropolis. They copied the work of others or relied on pattern books that supplied everything from the detail of a stair banister to a complete plan. Most early nineteenth-century buildings were small, stood one to three stories tall, and were used for both work and residence. Three- and four-story brick buildings near the piers of South Street had merchants' countinghouses on the first story and manufacturing and storage facilities in lofts in the upper stories. Until the mid-1820s the few buildings with architectural details copied those of the late Georgian and early Federal styles. A notable exception was the French-inspired City Hall, one of the first important public buildings in the city, designed by the émigré architect Joseph-François Mangin with his American-born colleague John McComb, Jr.

During the 1840s and 1850s, as land became more costly in the business districts of Manhattan and Brooklyn, houses were demolished or converted to commercial use. Residential neighborhoods moved away from the original downtown area. Brooklyn Heights and Greenwich Village became popular residential areas, with new row houses modeled after the terraces of English cities. Built by speculators for craftspeople and the middle class, these row houses were suited to the city's grid plan, which created narrow lots, and to its market, shaped by high land costs. The wealthy often supplemented their small town houses with large country houses on the outskirts of the city, among them Gracie Mansion (1804, now the mayor's residence), Hamilton Grange and Wave Hill (1802, 1844, now museums), and Litchfield Villa (1857, now borough offices of the city's parks department).

The few formally trained architects in New York City during this time were usually educated in England, France, or Germany. They took on American pupils, as there were no architectural schools in the United States; a few Americans were self-taught. Their residential designs included mansions on Fifth Avenue and the grander row houses of the 1840s and 1850s surviving around Washington Square, at Colonnade Row on Lafayette Street in Manhattan, and in Brooklyn Heights. The leading architects of the time, Alexander Jackson Davis and his partner Ithiel Town, Minard Lafever, Richard Upjohn, and Detlef Lienau, received commissions for religious, institutional, commercial, and government buildings. These public buildings were large, costly structures with complex plans or "programs" that required knowledge of sophisticated construction technology and appropriate style. In 1857 two dozen architects in the city founded the American Institute of Architects (AIA), which continues in the twenty-first century as the main professional organization. Their goals were to distinguish architects from carpenters, to improve architectural training, and to educate the public through newspaper and journal articles.

Architects and builders favored Greek Revival style in the first half of the nineteenth century. It was used by Lafever as early as 1833 for Sailors' Snug Harbor, a home for retired mariners in Staten Island, and in 1848 by Gamaliel King for Brooklyn City Hall (now Brooklyn Borough Hall). After the Great Fire of 1835, new architecture included the U.S. Custom House (now Federal Hall) by Town and Davis and the Merchants' Exchange (now Citibank) by Isaiah Rogers, both completed in 1842. Greek Revival details also adorned two innovative commercial buildings. The Astor House (1836) was the city's first modern hotel: it had ornate public rooms, comfortable bedrooms, and running water, unusual for the time. The most important antebellum store, which revolutionized retail practices and paved the way for the department store, was A. T. Stewart's "Marble Palace," opened in 1846 on Broadway. Sizable religious buildings also appeared during this period. In the third Trinity Church (1846) Richard Upjohn introduced the Gothic Revival style to American religious architecture, followed by St. Patrick's Cathedral, begun in 1853 and designed by James Renwick, Jr., in a style inspired by German Gothic.

In the 1850s two technological advances originated in the city. The use of cast iron for mass-produced structural columns and ornamental facade elements, first promoted in the 1840s by James Bogardus as a means of fireproofing, made it possible to build larger and better-lit commercial buildings (see CAST-IRON ARCHITECTURE); and after the introduction of the passenger elevator, first installed in 1857 in the Haughwout Building at Broadway and Broome streets, space in the upper stories of buildings became more accessible and profitable. These innovations later led to the development of steel cage construction and the skyscraper. Cast-iron architecture flourished from the mid-1850s to the 1880s and created the streetscape of loft buildings and stores in the neighborhoods of lower Manhattan now called Tribeca and SoHo, and in Williamsburg and the Fulton Ferry district in Brooklyn.

2. From the Civil War to the Depression, 1860–1930

From the 1870s through the 1930s, the skyline of Manhattan took shape and became world famous as the city's population soared to seven million from one million. The development of steel cage construction, along with fast elevators, electric lighting, and sophisticated heating and plumbing systems, made possible the construction of SKYSCRAPERS, which became icons of the city's global importance. The skyscraper and the apartment building became the two definitive architectural norms.

In 1913 Cass Gilbert's Woolworth Building was one of the first skyscrapers in lower Manhattan. Most skyscrapers were office towers housing national and international corporations and their thousands of workers. Along with the Woolworth Building, the Singer Building (1908) and Metropolitan Life Insurance headquarters (1909) became world famous, as did the Empire State Building (1931), reaching the equivalent of 102 stories and setting a record for height that remained unbroken for more than 40 years. The completion of the 40-story Equitable Building at 120 Broadway in 1915 helped to ensure the passage in 1916 of the city's first comprehensive zoning code, which regulated land use and limited the height of buildings according to a formula involving their street frontage. As a result, the straight tower was replaced by the setback form, some striking examples of which are the Williamsburgh Savings Tower (1929, Halsey, McCormack and Helmer), the only skyscraper built outside Manhattan; the Chrysler Building (1930, William van Alen); the Bank of Manhattan Building (1930, H. Craig Severance with Yasuo Masui); and the

Cities Service Building (1932, Clinton and Russell).

Entertainment architecture boomed and produced opulent buildings such as Carnegie Hall (1891), the Brooklyn Academy of Music (1907), the Metropolitan Opera (1883), and the Palladium (1949); these had fantastic ornamentation ranging in style from Baroque to Egyptian. During the 1920s and 1930s majestic movie houses were built for the national chains of Loews and Paramount. A few firms specialized in such projects, such as Rapp and Rapp, and Herts and Tallant; their commissions in the city set the standard for the country. Motion-picture production facilities were built in both Astoria and Manhattan before the industry moved west. Hotel construction rose dramatically and resulted in opulent, dramatic buildings, such as the Plaza Hotel and Waldorf=Astoria. At the same time, New York City became an important manufacturing center, filled with slaughterhouses, markets, warehouses, breweries, and sugar-refining plants.

The need to house the surging immigrant population resulted in the construction of thousands of TENEMENTS. These basic multiunit buildings, built at low cost, lacked sufficient windows, running water, and indoor toilets and were so badly constructed that they posed health and safety hazards, leading eventually to municipal regulation. The infamous DUMBBELL TENEMENTS, so-called for their shape, were finally outlawed by the Tenement House Law of 1901. American architects such as Ernest Flagg and I. N. Phelps Stokes pursued schemes for model housing for the poor that originated in Europe. Examples included the Home and Tower Buildings (1877, 1879, Hicks and Baltic streets, Brooklyn) and the York Avenue Estate (1901–13, 79th Street and York Avenue, Manhattan); investors like Alfred T. White and the limited-dividend housing company City and Suburban Homes sought to create housing that was affordable for the working class yet had basic amenities and returned a small profit. Increasingly, a market emerged for apartments for the working and middle classes, built in upper Manhattan, Queens, Brooklyn, and the Bronx from 1910 to the 1930s.

The Daily News Building, designed by Raymond M. Hood and John M. Howells, 1950

The small but growing number of architectural firms focused on designing residences for the wealthy; these included Edward and George Blum, Schwartz and Gross, George Pelham, Emory Roth, and J. E. R. Carpenter. Richard Morris Hunt popularized the "French flat" in 1869 with the Stuyvesant on East 18th Street. In the 1880s Henry J. Hardenbergh created even more elegantly finished and larger apartments such as the Dakota (1884) on 72nd Street and Central Park West, which pioneered the design of the large internal courtyard. The architectural firm of Clinton and Russell made the courtyard a prime feature at the Apthorp (1908) at Broadway and 79th Street. By the 1920s Park and Fifth avenues were lined with luxury apartment buildings that had rooms for servants, and large complexes such as Tudor City and London Terrace occupied full city blocks surrounding courtyard gardens. Delano and Aldrich designed 925 Park Avenue (1907) and 1040 Park Avenue (1923); the work of Charles A. Platt ranged from the palazzo-like Studio Building (1906) on East 66th Street to the austere tower at 120 East End Avenue (1929) commissioned by Vincent Astor, which contained apartments ranging from five to 23 rooms. As early as the 1880s a number of apartment buildings for the wealthy were set up as cooperatives, a financial arrangement later adopted more broadly. Decorative styles of apartment houses of the 1920s and 1930s were varied: Georgian was fashionable in Manhattan, Tudor in Jackson Heights, and art deco on the Grand Concourse. Some architects specialized in free-standing one-family houses, ranging from modest brownstones to luxurious MANSIONS. A. T. Stewart's mansion (1869), designed by John Kellum, was the first of the luxury mansions to move to Fifth Avenue, which at 34th Street was considered uptown at the time. Babb, Cook and Willard designed the Upper East Side mansion of Andrew Carnegie (1901) and J. A. Stenhouse and C. P. H. Gilbert that of Otto H. Kahn (1918). The Astors and Vanderbilts built their mansions on Fifth Avenue in the 1880s and 1890s. "Country estates" were built from the 1870s to the 1920s in Staten Island (New Brighton), the Bronx (Riverdale), and Queens (Jamaica Estates), and successful business leaders built mansions in Brooklyn Heights, Park Slope, and Fort Greene.

Row houses, often called BROWNSTONES because of the local stone used in construction, became popular among the middle classes and proliferated in Manhattan and Brooklyn from the 1870s until the eve of World War I, when the need for more housing drove up the price of land and resulted in taller units. Brownstones were popular in the Upper East Side, Harlem, Park Slope, Carroll Gardens, and Mott Haven. Town houses, individually designed large row houses, were built in Manhattan for the wealthy, especially on the Upper East Side where such families as the Roosevelts, the Pratts, and the Morgans lived. The simplest row houses, intended for workers in the trades and factories, were usually erected by local builders and consisted of two stories with brick facades. The most elaborate stood four, five, or six stories tall; had libraries, multiple parlors, bedrooms, and servants' quarters; and featured ornate facades of limestone, brownstone, or combinations of masonry and brick.

New York City also attracted architects interested in innovative urban housing design. Grosvenor Atterbury and Frederick Law Olmsted, Jr., designed the planned community of Forest Hills Gardens (begun 1910), a gardenlike suburb of one-family houses and terraces; Clarence S. Stein, Henry Wright, and Frederick Ackerman designed Sunnyside Gardens (1924–28), a neighborhood of densely developed row houses. These experiments were sponsored by groups that favored more rational land use to lower housing costs and create better communities. Springsteen and Goldhammer designed apartments in the Bronx for the Amalgamated Clothing Workers Union (Amalgamated Cooperatives, 1927–37) that allowed working-class residents to be owners instead of tenants and to enjoy a large number of communal social activities.

In the twentieth century New York City became a magnet for talented designers who practiced in firms, contracting their services one job at a time; a few were employed by government agencies supervising public construction projects and sometimes designing buildings. Patrician firms such as Carrère and Hastings and McKim, Mead and White obtained the majority of large public commissions. Ethnicity played a role too: firms run by Jews and Catholics were usually small and often specialized in particular building types such as churches or apartment houses. Firms varied in size, from one principal employing a single draftsman to large establishments with several prominent partners supported by a large staff. Platt had a medium-sized firm with 17 employees in 1920. McKim, Mead and White employed 110 people in 1909; they designed the Municipal Building (1914) and Pennsylvania Station (1911). Architect training often took place in these firms through a studio system brought to the city in 1857 by Richard Morris Hunt, the first American to graduate from the École des Beaux-Arts in Paris. Dozens of others followed

him to France, studying at the École after obtaining a college degree or an architectural degree in the United States. (Although drafting courses had been offered in New York City since the founding of Cooper Union in 1859, the city had no degree program in architecture until one was established in 1881 at Columbia University by William R. Ware.) On their return they apprenticed young students who studied the classical architecture of Greece and Italy, as well as the interpretations of the classics in the Renaissance and seventeenth- and eighteenth-century Europe that were at the heart of the beaux-arts curriculum.

Until the 1920s few female or minority architects practiced in New York City. Marcia Mead (1879–1967) became the first woman to graduate from the Columbia School of Architecture in 1913. She established her own firm in the city but built most of her important commissions elsewhere. The best-known building by a woman before 1930 was the reconstructed Theodore Roosevelt Birthplace (1923), designed by Theodate Pope Riddle (1868–1946), a wealthy and successful designer of country houses and private schools in Connecticut. There were even fewer black architects. Vertner Tandy (1885–1949) was a graduate of Tuskegee Institute and the designer of a number of buildings in Harlem, including St. Philip's Church and Rectory (1911, with George W. Foster), Madame C. J. Walker's town house (1917), and Smalls' Paradise (1925), a jazz club. Among those who trained with him was John L. Wilson (1898–1989), who became the first black graduate of Columbia in 1928. He worked on the plans for the Harlem River Houses (1936–37, Archibald Manning Brown) and then was employed by the parks department and had his own practice. Julian Abele (1882–1950), the first black graduate of the École des Beaux-Arts and the chief designer for the firm of Horace Trumbauer and Associates in Washington, D.C., designed the James B. Duke Mansion (1912, now the Institute of Fine Arts) at Fifth Avenue and 78th Street.

IAC Building (designed by Frank Gehry), 2009

Between 1890 and 1920 the beaux-arts style dominated, with its ornamental language, a preference for monumental scale, and use of symmetry, axial composition, and grand spatial progressions. Buildings in this style include the New York Public Library (1911), the Brooklyn Museum (1897), Audubon Terrace (1904), the Metropolitan Museum of Art (1902), the American Museum of Natural History (founded in 1869), Grand Central Terminal (1913, by Reed and Stem, and Warren and Wetmore), the New York Stock Exchange (1903), and the campuses of Columbia University (planned 1894) in Morningside Heights and New York University (planned 1892–94) in the Bronx (both designed by McKim, Mead and White). Among the largest public commissions of these years were the Municipal Building (1913), the U.S. Custom House (1907, Cass Gilbert) at Bowling Green, the Hall of Records (1899–1907, John R. Thomas and Horgan and Slattery, also known as the Surrogate's Court) on Chambers Street, and Grand Army Plaza in Brooklyn. Architects also designed bathhouses, precinct stations, firehouses, public toilets, and public schools; a leader in this last area was Charles B. J. Snyder, who worked for the Board of Education from 1891 to 1923. New York City supported innovative designs of public hospitals, including Bellevue Hospital (1908, McKim, Mead and White) on First Avenue at 25th Street, and Seaview Hospital (1914, Raymond F. Almiral) in Staten Island, the largest municipal tuberculosis hospital. The firm of Heins and LaFarge designed the New York Zoological Park, or Bronx Zoo (1899), and all the stations of Interborough Rapid Transit (1904), the first subway line in Manhattan. The New York Public Library engaged several firms, among them Carrère and Hastings and McKim, Mead and White, to design its branch buildings.

Other designs were also used in this prosperous period from the 1870s through the 1920s. Religious buildings favored the medieval style: the Episcopal Cathedral of St. John the Divine (1892–1911, Heins and LaFarge; 1911–42, Cram and Ferguson) combined Byzantine, Romanesque, and French Gothic elements, and many smaller neighborhood Episcopal churches were influenced by English parish buildings. Large synagogues often drew on sources that were "Moorish":

Washington Mews, nineteenth- and twentieth-century low-rise buildings, 2009

examples include the Central Synagogue (1871–72, Henry Fernbach) on Lexington Avenue and the Eldridge Street Synagogue (1886–87, Herter Brothers). Settlement houses, such as the University Settlement (1901, Howells and Stokes, 184 Eldridge Street), favored the Colonial Revival style. Building in the city was marked by an eclecticism of styles, including Second Empire, Romanesque, Italianate, Renaissance, Victorian Gothic, neo-Greco, and art deco. George B. Post, for example, designed the Long Island (now Brooklyn) Historical Society (1881) in the Queen Anne style, the campus of City College (1897–1908) in Collegiate Gothic, and the New York Stock Exchange (1903) in beaux-arts Roman Revival. Buildings designed in one style were often enlarged or completed in another, such as the former New York County Courthouse (1861–71, John Kellum; also called the Tweed Courthouse), a building in Renaissance style with a medieval wing (1874–77) added by Leopold Eidlitz.

Professional architectural associations flourished. In 1881 the Architectural League of New York was formed; this was followed by the Society of Beaux-Arts Architects in 1893 and the Beaux-Arts Institute of Design in 1916. Architects secured a position on the Art Commission created by the new municipal charter of 1898, worked to raise state standards for education and licensing, and were influential members of the Improvement Commission and the Committee of the Regional Plan of New York and Its Environs (1922–31). Architectural criticism was published in specialized journals as well as in newspapers and magazines such as *Harper's.* Mariana Griswold Van Rensselaer's essays were published in the *Century* in the 1880s, and in the 1890s Russell Sturgis and Montgomery Schuyler wrote a column for that publication. Herbert Croly edited and wrote for the *Architectural Record,* and Royal Cortissoz was the art critic of the *New York Tribune* for more than 50 years and the author of monographs and articles on local architects. Lewis Mumford made the *New Yorker* a forum for architectural comment beginning in the 1920s.

3. From the New Deal to the Twenty-first Century

The Great Depression hit the architecture profession deeply. A few large projects already under way were completed, such as the Daily News Building (1930, Howells and Hood) and the McGraw–Hill Building (1931, Raymond M. Hood, Godley and Foulhoux). In the 1930s, under the auspices of the Public Works Administration and later the New York City Housing Authority, the city became the site of the country's first public housing projects: the Harlem River Houses (1937) and the Williamsburg Houses (1937). Among the federally funded projects of the time were the charming buildings of the Central Park and Prospect Park zoos, designed by Aymar Embury. Local architects also designed post offices, hospitals, schools, playgrounds, municipal swimming pools, and beach facilities, as well as the new roads and bridges that reshaped the city. One of the few major private commissions to proceed was Rockefeller Center (designed 1929, built 1932–40), sponsored by John D. Rockefeller, Jr., who was also responsible for Riverside Church (1930) and the Cloisters (1934–38), the medieval branch of the Metropolitan Museum of Art.

By the late 1940s the International style became popular. Based on the sleek lines and modern materials favored in Europe by the 1920s and formally introduced in a major exhibition at the Museum of Modern Art in 1932, the style sought to convey an image of modernity and industrial progress. The World's Fair of 1939–40 was an example of its use, and it increasingly became popular for office buildings from the 1950s to the early 1980s. One element associated with the International style was the glass curtain wall, which became common after it was introduced at the United Nations Building (1947–53), designed by an international group of architects led by Wallace K. Harrison, and at Lever House (1952), designed by Gordon Bunshaft of Skidmore, Owings and Merrill. The metal-and-glass Seagram Building (1958, Ludwig Mies van der Rohe with Philip Johnson) and the Chase Manhattan Bank Tower (1955–61, Gordon Bunshaft, Skidmore, Owings and Merrill) were the first office towers set in plazas, a model adopted in the zoning code in 1961 that replaced the setback and prevailed for 30 years.

During the 1950s and 1960s the federal government encouraged new construction with slum clearance and urban renewal programs. Sites of several acres called "superblocks" were initially used for public housing projects as well as for housing projects sponsored by labor unions, insurance companies, and private developers. These projects contained hundreds to thousands of units of working- and middle-class housing, stores, schools, and other amenities. The largest projects included Stuyvesant Town, Peter Cooper Village, Park West Village, and Washington Square Village and Washington Square South in Manhattan; Parkchester and Co-op City in the Bronx; Lefrak City, Rochdale Village, and Electchester in Queens; and Cadman Plaza and Starrett City in Brooklyn. Although many of these complexes became successful communities, urban renewal also changed neighborhoods and displaced people and small businesses. Jane Jacobs's seminal book *The Death and Life of American Cities* (1961) provoked discussions of the impersonal nature of urban renewal projects and the importance to the city's vitality of small-scale buildings and neighborhoods. Her ideas eventually led to scaled-down housing projects: "scatter-site" building and smaller scale construction prevailed in the 1970s and 1980s. Promoted by variously sponsored local development corporations such as the church-sponsored Nehemiah Houses and the Housing Partnership, middle-income families were provided with row houses, small apartment buildings, and garden apartments, and in one instance with one-family houses of suburban character (1986, Charlotte Street in the Bronx). Urban renewal also resulted in the construction of Lincoln Center, a cultural hub that inspired similar projects elsewhere. Lincoln Center

also proved influential in having been designed by a team of architects, an approach taken in designing Roosevelt Island and Battery Park City in the 1970s, Metrotech Center in the 1980s, and Queens West in the 1990s, all sponsored by local development authorities.

The number of women and African American architects increased. Natalie de Blois was a senior designer at Skidmore, Owings and Merrill from 1944 to 1965; Lynda Simmons worked on Riverbend Houses (1967) while at Davis, Brody and then became president of Phipps Houses, the largest nonprofit manager of middle-income housing in New York City; Kathryn Wilde became president of the innovative Housing Partnership; Frances Halsband became dean of the Pratt School of Architecture; Susana Torre became head of the architecture department at Parsons School of Design. Architectural critics included Catherine Bauer, who condemned public housing design in the 1950s; in 1963 Ada Louise Huxtable was appointed architectural critic of the *New York Times*. The foremost black architect of the postwar years was J. Max Bond, Jr., dean at the City College School of Architecture; from 1969 to 1990 his firm (Bond, Ryder Associates) designed the Schomburg Center for Research in Black Culture in Harlem and apartment towers in Battery Park City and elsewhere. The firm eventually merged with Davis, Brody, for which Bond worked on several buildings at the Audubon Biomedical Science and Technology Park (Broadway and 165th Street) of Columbia University, site of the assassination of Malcolm X. Harry J. Simmons, Jr., of Simmons Architects, founded the Coalition of Black Architects; Robert Washington designed the Harlem International Trade Center; and William E. Davis, Jr., became a member of the New York City Landmarks Preservation Commission and the head of the African Burial Ground Competition Coalition in 1994.

Tallest Building in Each Borough, 2009

Borough	Name	Height, feet / (meters)*	Floors
Manhattan	Empire State Building (1931), 350 Fifth Ave.	1250 / (381)	102
Queens	Citicorp Building (1990), One Court Square	658 / (200.5)	50
Brooklyn	Brooklyner (2009), 111 Lawrence St.	515 / (156.7)	51
Bronx	Tracey Towers Apartment I (1972), 20 West Mosholu Pkwy. South	400 / (121.9)	41
Staten Island	Church at Mount Loretto (1894), 6581 Hylan Blvd.	225 / (69)	N/A

By the 1950s architecture in New York City was characterized by innovative design. The Guggenheim Museum (1959), a concrete spiral by Frank Lloyd Wright (his only major building in New York City); the Whitney Museum of American Art (1966, Marcel Breuer), a cantilevered, masonry-covered concrete box; the Trans World Airlines Terminal at John F. Kennedy International Airport (1960, Eero Saarinen), singular for its expressionistic curves; and the undulating, aluminum-sheathed buildings of the Bronx Developmental Center (1976, Richard Meier) all attracted widespread comment. The twin towers of the World Trade Center (1970, Minoru Yamasaki) became the city's tallest buildings. The Jacob K. Javits Convention Center (1986, James Ingo Freed of I. M. Pei and Partners) is a faceted glass box supported by an innovative space frame. The granite facing of the IBM Building (1983, Edward Larrabee Barnes) marked the first departure from the ubiquitous glass and metal. The North River Sewage Treatment Plant was designed with a 20-acre (8-hectare) state park (1991, Richard Dattner) on its roof overlooking the Hudson to provide recreational space to a densely populated neighborhood. Citicorp broke with the flat-roofed profile that had become the norm in the 1950s and 1960s when it adopted a steeply slanted roofline for its headquarters building (1978, Hugh Stubbins) in Manhattan. The company also built a 48-story tower (1989, Skidmore, Owings and Merrill) in Long Island City, the first postwar skyscraper outside Manhattan. In the last decades of the twentieth century, postmodern architecture became popular, with its softening of hard modernist lines and use of eclectic and unusual forms and ornamentation. Robert Venturi became a pioneer of this form, along with Robert Stern (15 Central Park West, 2008); Michael Graves; Skidmore, Owings and Merrill (Time Warner Center, 2003); and Johnson/Burgee (AT&T Building, 1984, later the Sony Building).

In 1965 the Landmarks Preservation Law was passed to prevent the destruction of older buildings, spurred on after the tearing down of Pennsylvania Station failed in 1963. Private groups took on the care of preserving historic buildings such as the Bowne House (1661) in Flushing, the Old Merchant's House (1832) on East Fourth Street, and the Weeksville Houses (circa 1830–70) in Brooklyn, while the city's parks department administered more than a dozen historic houses, including the Alice Austen House (circa 1695) in Staten Island and King Manor (1733–55) in Queens. The South Street Seaport area was developed as a multiuse area for commercial and museum purposes. Preservationists promoted "adaptive reuse" projects, such as Giorgio Cavaglieri's conversion into a public library of the Jefferson Market Courthouse, a Victorian Gothic structure in Greenwich Village. Warehouses became artists' housing at Westbeth and market-rate housing at the Eagle Warehouse and the Ansonia Piano Factory in Brooklyn; churches became apartments and discothèques; mansions became libraries, organizational headquarters, and museums. The Carnegie Mansion on Fifth Avenue was converted into the Cooper–Hewitt Museum (under the direction of Hardy Holzman Pfeiffer Associates). The International Design Center in Long Island City was developed from commercial buildings that had been chewing gum, cracker, and electric battery factories. Artists gained loft space, studios, and galleries from the transformation of Public School 1, a century-old building in Long Island City, while an old city asphalt plant became a neighborhood recreation center, Asphalt Green. Unused motion-picture studios in Astoria were converted into the Museum of the Moving Image. In the 1980s Ellis Island, New York's immigration center, was restored and turned into a museum (Beyer Blinder Belle, restoration specialists, oversaw the project). The gradual renovation of Grand Central Terminal and the New York Public Library started in the 1980s and 1990s. B. Altman's beaux-arts department store (1906, 1914, Trowbridge and Livingston) was transformed into an office center and New York Public Library branch in the early 1990s (Hardy Holzman Pfeiffer). The refurbished U.S. Custom House at Bowling Green, a project directed by Ehrenkranz Eckstut and Whitelaw, created space in the 1990s for the Museum of the American Indian as well as federal offices and courts.

From the 1950s to the 1980s large architectural firms came to dominate the market: Eggers and Higgins; Davis, Brody; Emery Roth and Sons; Fox and Fowle; Gruzen Sampton Steinglass (originally Kelly and Gruzen); Gwathmey Siegel; Harrison and Abramovitz; Pei Cobb Freed (originally I. M. Pei); Kohn Pedersen Fox; and Skidmore, Owings and Merrill. At the same time, much of the city's commercial and residential architecture was designed by small firms, such as Schuman Lichtenstein Claman and Efron (SLCE Architects), which developed thousands of typical middle-class apartment buildings. By the 1980s architectural plans had to pass through an increasingly complex approval process before construction could begin. Community planning boards involved neighborhoods in decisions regarding construction; civic organizations such as the Municipal Art Society and architectural critics weighed in on historic preservation and design; city and state environmental agencies enacted measures to protect resources; and special needs organizations, such as the Mayor's Office for the Handicapped, ensured that new buildings would accommodate all. Architects took advantage of new laws that gave developers more building space in return for constructing open, semipublic spaces; allowed for the sale of air rights in return for more building flexibility; and gave concessions to developers in return for reducing the number of market-rate apartments in any building to allow for rent-reduced apartments, called "80–20."

archives. The history of archives in New York City mirrors the broader development of archival management in the United States, where a strong archival tradition did not exist before the first half of the twentieth century. It was not until 1934 that the National Archives and Records Service (now the National Archives and Records Administration) was created. New York State was the last state in the country to have a formal archives program, which was established by legislation in 1971 but not in full operation until the late 1970s.

The most efficiently managed collections were within libraries. The Astor Library, formed in 1848, included among its holdings the extensive records of the U.S. Sanitary Commission, a private relief organization of the Civil War era. The Astor Library's holdings were supplemented by those of the Lenox Library when the two institutions merged to form the New York Public Library (NYPL) in 1895. The New-York Historical Society, founded in 1804, collected the records of the John Jacob Astor's American Fur Company, the New York Board of Trade and Transportation, and the records of the American Art Union, as well as numerous eighteenth- and nineteenth-century account books of merchants from New York City and New York State. By the middle of the twentieth century, organizations such as the Carnegie Endowment for International Peace and Citizens Union had transferred their records to the Columbia University Libraries. The papers of individuals and families were also collected by these libraries and others, including the Brooklyn Historical Society (formerly the Long Island Historical Society) and the Staten Island Institute of Arts and Sciences. Archives were kept less formally by some cultural and nonprofit organizations (such as the New York Philharmonic) and by some businesses. In 1946 Time Inc. became the first corporation in the city to establish a formal archival program; others followed after nearly a decade.

In the middle and late twentieth century, the city's archival repositories increased in number and in importance, and they were found in a wide range of government agencies, nonprofit organizations, and corporations. *A Guide to Archives and Manuscripts in the United States* (1961), edited by Philip M. Hamer, counted 56 repositories in New York City; its successor, the *Directory of Archives and Manuscript Repositories in the United States* (1988), counted 168, and according to the New York State Historical Documents Inventory, the number of publicly accessible archives in the city in the late 1980s was 285. Inspired by the growing influence of social history, new and often identity-centered archives were established, such as the Lesbian Herstory Archives (1974) and the archives of the Center for Puerto Rican Studies at Hunter College (1981). Archival management emerged as a professional field, owing in part to the growing historical awareness fostered by the bicentennial of the United States in 1976. That year, New York University's graduate history department established a two-year master's degree program in archives and documentary editing. Later, Columbia University, St. John's University, Pratt Institute, and Long Island University (with campuses in Manhattan and Brooklyn) added courses in archival management to their graduate library schools. The Archivists Round Table of Metropolitan New York was formed in 1979; in the early twenty-first century it had almost 300 individual members representing 155 institutions, making it one of the largest regional archival organizations in the nation. In 1989 the Archivists Round Table initiated the first annual "Archives Week," which featured publicity campaigns, family history fairs, awards, tours, and exhibitions to increase public awareness of archives. The idea spread to many states and cities; since 2007 American Archives Month has been observed annually across the country in October.

In difficult economic times, archives in many corporations and nonprofit institutions were seen as expendable. Chemical Bank, the Bowery Savings Bank, and the Young Men's Christian Association of Greater New York all ended their archival programs; after a corporate merger the archives of J. Walter Thompson were closed and the records given to Duke University. As the cost of real estate in New York City increased in the 1980s, some corporations (such as J. C. Penney) and nonprofit organizations (such as the American Institute of Physics and the Salvation Army) left the city, taking their archives with them. Columbia University closed its School of Library Service in 1992. In 2002 the Teachers College Library closed its Special Collections Department, which had held almost 3000 linear feet (915 linear meters) of records of the history of education and nursing.

The largest repositories in the city are those of governmental and quasi-governmental agencies, in particular the Municipal Archives, which holds most of the records of city government. This collection is complemented by the holdings of the Office of the New York County Clerk and autonomously held city agency records, such as those of the Department of Environmental Protection. The records of federal agencies with offices in the Greater New York area are in the custody of the National Archives–Northeast Region in lower Manhattan. The archives of the United Nations (UN) contain historical records relating to the UN and its agencies.

Libraries, historical societies, and research institutes account for the next largest segment of repositories, holding personal papers and organizational records from a wide range of sources. The collections of archival materials in the NYPL are divided among several divisions within the Research Libraries. The largest of these is the Manuscripts and Archives Division in the Center for the Humanities, housing general historical and literary collections as well as the records of the library itself. Also at the NYPL are the Berg Collection of English and American Literature; important special collections in the Theater, Dance, and Music Divisions of the Performing Arts Research Center at Lincoln Center; and original records that chronicle the African diaspora at the Schomburg Center for Research in Black Culture. The New-York Historical Society holds more than two million items that illuminate the history of New York City and New York State from colonial times to the twenty-first century. Its collections include the papers of Rufus King, the Livingston family, Aaron Burr, and James and William Alexander, as well as extensive military records. Smaller but nonetheless important collections of original records are maintained at the Pierpont Morgan Library, the Brooklyn Historical Society, the Bronx County Historical Society, and the Staten Island Historical Society. In 2000 five major Jewish archival and cultural organizations joined as partners in the Center for Jewish History, bringing under one roof the archival holdings of the American Jewish Historical Society, the Leo Baeck Institute, the YIVO Institute for Jewish Research, and the American Sephardi Federation along with the art and artifact collections of the Yeshiva University Museum.

Among colleges and universities in the city, the largest repositories are at Columbia University and New York University. The Rare Book and Manuscript Library at Columbia includes not only extensive general holdings with particular strengths in publishing and political history, but also the distinctive collections of the Herbert H. Lehman Papers, the Bakhmeteff Archive of Russian and East European History and Culture, the Carnegie Collections, the Center for Human Rights Documentation and Research, and the Oral History Research Office. Columbia's Avery Architectural Library houses one of the most important collections of architectural archives in the world. Notable repositories at New York University include the Wagner Labor

Archives, the Tamiment Library, the University Archives, and the Fales Collection of literary manuscripts. University archives and historical collections are also maintained by Fordham University, Pace University, Yeshiva University, the Jewish Theological Seminary, and the City University of New York, as well as by many of the latter's individual colleges, particularly City College, the College of Staten Island, and the LaGuardia and Wagner Archives at LaGuardia Community College.

Other important archives in New York City are maintained by businesses (for example, the JPMorgan Chase Bank, the New York Stock Exchange, MetLife, Teachers Insurance and Annuity Association–College Retirement Equities Fund, the Shubert Organization); religious institutions (Trinity Church, Central Synagogue, the Roman Catholic Archdiocese of Brooklyn); museums (the Museum of Modern Art, the Brooklyn Museum, the Frick Collection); cultural organizations (Carnegie Hall, the New York Philharmonic); medical and scientific institutions (New York Hospital–Cornell Medical Center, the Mount Sinai Medical Center, the New York Zoological Society); and a variety of not-for-profit organizations (the 92nd Street Young Men's and Young Women's Hebrew Associations; the Ford Foundation). The role of New York City as a center of the arts and the communications industry is reflected by the presence of such diverse repositories as the Anthology Film Archives, the Archive of Contemporary Music, and archives of film and video at the major television networks.

The terrorist attacks of 11 September 2001 prompted a response among the city's archivists and historians seeking to document the catastrophe. Within a few weeks of the attacks, the Columbia University Oral History Research Office began interviewing individuals who were in some way affected by the attacks and their aftermath, eventually sponsoring five different projects that recorded more than 300 interviews. Similarly, city archivists began meeting in late September 2001 to discuss documentation strategies, and the Archivists Round Table subsequently undertook a two-year study funded by the New York State Documentary Heritage Program, identifying more than 260 major repositories holding 9/11 documents and objects. Some institutions, notably the New-York Historical Society, found themselves inundated with memorabilia such as banners and posters, which were costly to preserve and often of negligible informational value, but so laden with symbolic significance that any discussion of sampling or deaccessioning could engender accusations of sacrilege.

As they moved into the twenty-first century, the city's archival repositories faced the unprecedented challenges of the information age—challenges ranging from the ways information about holdings was delivered, to the content of the records themselves, to the preservation of "born-digital" records. Most major academic and research libraries made collection-level information for their archival collections available online via their Web sites. Some, such as the NYPL, Columbia University, and the New-York Historical Society, began to provide Web access to selected digitized documents from their collections. In 2005 Columbia University's School of Continuing Education inaugurated a new Master of Science program in Information and Archive Management. The curriculum reflected society's shifting understanding of the meaning of archives, de-emphasizing the historical significance of documents in favor of the management of current or recent electronic records.

Phyllis A. Klein, *Our Past Before Us: A Five-Year Regional Plan for METRO's Archives and Historical Records Program, July 1, 1989–June 30, 1994* (New York: New York Metropolitan Reference and Research Library Agency, 1989), METRO Miscellaneous Publications, no. 40

Mary B. Bowling

Arden, Elizabeth [née Graham, Florence Nightingale] (*b* Woodbridge, Ont., 31 Dec 1878; *d* New York City, 18 Oct 1966). Pioneering cosmetics businesswoman. After moving to New York City in 1908 to work for the chemical firm Squibb she worked as a cashier in Eleanor Adair's beauty salon and in 1910 changed her name and opened the Salon D'Oro at 509 Fifth Avenue, which offered elaborate and expensive beauty treatments. With $6000 borrowed from her brother she opened other salons and in 1915 developed her first important product, Venetian Cream Amoretta. She later made such preparations as Ardena Skin Tonic and Venetian Cleansing Cream, and was the first person to introduce mascara into the United States and to employ traveling demonstrators as saleswomen. She produced her cosmetics in small quantities, sold them at high prices through exclusive department stores, and attracted customers with innovative packaging and strategically placed advertisements. By 1929 she had moved her salon to 691 Fifth Avenue, bought a factory at 212 East 52nd Street and a penthouse at 834 Fifth Avenue, and become a prominent member of fashionable society in Manhattan. By the mid-1930s she sold 108 products in 595 shapes and sizes. She weathered the Depression partly by developing a line of multicolored lipsticks designed to match clothing. Her salons numbered 29 in the United States and 19 abroad and continued to thrive; in 1939 she bought a factory in Long Island City. During the 1940s Arden opened two resort spas. By the time of her death in 1966 she oversaw an immensely profitable cosmetics conglomerate, which was purchased in 1970 by the pharmaceuticals firm Eli Lilly.

Marc Ferris

Arden Heights. Neighborhood in west central Staten Island. Some houses were built before the Civil War, but the area remained mostly rural into the twentieth century. The neighborhood was once the site of a resort called the Woods of Arden. Townhouses, schools, and shopping centers were built from the 1960s; a few of the older houses remain. The Village Greens (1972–74) is the largest housing complex in the area and one of the more thoughtfully planned developments in Staten Island. The principal thoroughfare in the neighborhood is Arden Avenue.

Martha S. Bendix

Arendt, Hannah (*b* Hannover, Germany, 14 Oct 1906; *d* New York City, 4 Dec 1975). Philosopher. After studying at the universities of Königsberg (BA 1924), Marburg (where she was a student of Martin Heidegger), and Heidelberg (PhD 1928), she lived as an exile in Paris (1933–40) and in 1941 fled to New York City. She lived first on West 95th Street (1941–51) and then at 130 Morningside Drive (from 1951 to the late 1960s). At this time Arendt worked as research director of the Conference on Jewish Relations, editor of Schocken Books, and executive secretary of Jewish Cultural Reconstruction. She was a guest professor at Columbia University in the 1950s. Arendt devoted her intellectual life to exploring the philosophy of Immanuel Kant and the conflicts facing a Jew living in a Christian culture. In *The Origins of Totalitarianism* (1951) she examined the relationship between anti-Semitism, imperialism, and the "phenomenology" of totalitarianism. In *The Human Condition* (1958) she explored the nature of freedom within the realm of politics. Her report on the trial of Adolf Eichmann, *Eichmann in Jerusalem* (1963), contrasted Kantian rationalism with the "banality of evil" inherent in Nazism. In 1967 Arendt joined the graduate faculty of the New School for Social Research in Manhattan, where she taught until her death. She and her husband are buried at Bard College in Annandale-on-Hudson, New York.

Peter M. Rutkoff, William B. Scott

Argosy Book Store and Gallery. Retail bookshop opened in 1925 by Louis Cohen, specializing in secondhand books and initially situated on Fourth Avenue, then known as Book Row. It moved in 1931 to 114 East 59th Street and in 1964 to its present location, a curious nineteenth-century structure with an indented facade at 116 East 59th Street. Cohen used the lower stories of the building before acquiring it in the 1950s and expanding to all six stories. In addition to secondhand books Argosy deals in antique prints, first editions, and other rare printed items, many of which are displayed in the store's gallery. In the twenty-first century the store is in its third generation of family ownership and maintains its overflow in a warehouse in Brooklyn.

Thomas M. Hilbink

Arion Gesangverein. German singing society formed by a group that split from the Deutscher Liederkranz in 1854. The comic performances were popular, especially after 1863, when they adopted the carnival format of the Mainzer Karneval-Verein. It met in Pythagoras Hall in 1863–71, and after absorbing the Teutonia Männerchor bought its own clubhouse in the German neighborhood of Kleindeutschland and brought Leopold Damrosch from Germany to direct its chorus. The club built a lavish new clubhouse in upper Manhattan in 1885, and by 1892 it was the leading German social organization in the United States. After World War I the Arion merged with the Liederkranz.

Arion, New York, von 1854 bis 1904 (New York: Arion Gesangverein, 1904)

Stanley Nadel

Arledge, Roone (*b* Forest Hills, Queens, 8 July 1931; *d* New York City, 5 Dec 2002). Television broadcaster and producer. After receiving his undergraduate degree from Columbia in 1952, he worked briefly at WRCA (later WNBC) and at the DuMont Television Network. In 1960 Arledge started working for the struggling American Broadcasting Company (ABC). Taking control of ABC Sports, he transformed sports broadcasting by using such techniques as slow-motion instant replays and freeze-frames and by moving sports to prime time. In 1961 he created *Wide World of Sports,* which would become the longest-running sports show in history. He also popularized *Monday Night Football* and produced 10 Olympic Games. In 1977 Arledge was made president of ABC News. There he produced the shows *World News Tonight* and *Nightline,* among others.

Max Seppo

Arlen, Harold [Arluck, Hyman] (*b* Buffalo, N.Y., 15 Feb 1905; *d* New York City, 23 April 1986). Composer, singer, and songwriter. The son of a cantor, he moved to an apartment on West 57th Street in 1925 and played at venues such as the Palace Theater and Monte Carlo. In the early 1930s he wrote music for and performed at the Cotton Club in Harlem, and he composed scores for Broadway musicals and films into the early 1950s. Some of his songs are in a jazz and blues idiom, others in the ballad style of Tin Pan Alley. Among his outstanding works are his first hit, "Get Happy" (1930, lyrics by Ted Koehler), "Over the Rainbow" (1939, lyrics by E. Y. Harburg), and "Blues in the Night" (1941, lyrics by Johnny Mercer). Some of his pieces were inspired by New York City: "Harlem Holiday" (1932), "Let's Take a Walk around the Block" (1934), "It's a Long Way to Broadway" (1937), and "I Love a New Yorker" (1949). At age 81, Arlen died in his apartment on Central Park West in Manhattan. He is buried in suburban Hartsdale, New York.

Edward Jablonski, *Harold Arlen: Happy with the Blues* (Garden City, N.Y.: Doubleday, 1961)

Nicholas E. Tawa

Arlington. Neighborhood in northwestern Staten Island bounded to the north by Richmond Terrace, to the east by the neighborhood of Mariners Harbor, to the south by the Staten Island Expressway, and to the west by South Avenue. The area was originally the western part of the township of Northfield and at one time was the site of a station of Staten Island Rapid Transit on the North Shore line (now defunct). To the west of the neighborhood is a rail yard that once belonged to the Chesapeake and Ohio Rail Road. The area consists principally of Victorian houses, high-rise apartment buildings, and small businesses. Many of the oldest houses belonged to oystermen in the nineteenth century. Arlington has grown considerably since the 1980s; major developments have included Arlington Terrace and Heron Place Apartments.

Martha S. Bendix

Armenian Apostolic Orthodox Church. The first Armenian liturgy was offered at Grace Episcopal Church on 22 September 1889 by Hosvep Sarajian. After resigning from his missionary assignment in 1894 he left the United States, was consecrated a bishop in Armenia, and returned to America in October 1898; he established his headquarters in Worcester, Massachusetts, and in 1927 moved to New York City, where the church rented space until May 1949 and then occupied a complex at St. Vartan Cathedral, at 630 Second Avenue. Before 1920 an administrative split within the church formed two parishes, each named St. Gregory the Illuminator: the older, at 221 East 27th Street, became known as St. Illuminator's Cathedral; the other began in a rented space at 337 East 17th Street, made several moves within midtown, and from 1950 was located on East 35th Street. St. Vartan Cathedral was rebuilt as a diocesan cathedral; it absorbed St. Gregory's parish and was consecrated as St. Vartan on 28 April 1968.

The Holy Cross Church of Armenia (580 West 187th Street), purchased in 1928 and rebuilt in 1952–53, houses the tomb of the diocesan primate Archbishop Ghevont Tourian, who was assassinated on 24 December 1933. In Queens the Armenian Church of the Holy Martyrs (209–15 Horace Harding Expressway) was completed in 1955. The St. Sarkis Church of Bayside was destroyed by lightning on 21 May 1985; the new St. Sarkis Church was built in Douglaston in 1990. Early in the twenty-first century the Armenian church had about 50,000 adherents in New York City.

Arten Ashjian

Armenian Evangelical Church. Dating from 1921, the Armenian Evangelical Church at 152 East 34th Street is the oldest of the 13 Armenian church buildings (Protestant, Roman Catholic, or Orthodox) in New York's five boroughs. In 1881 a series of Manhattan prayer meetings was begun by the Reverend Garabed Nergararian upon his arrival from Constantinople. These meetings grew over the years, and on 14 November 1896 the congregation held its first Sunday service as the Armenian Evangelical Church, in rented space on East 13th Street. With the influx of Armenian refugees following the 1915 Turkish massacre of Christian Armenians, the church in 1921 purchased the imposing building it currently occupies (a former bank). This is the flagship church among the 32 congregations in the Armenian Evangelical Union of North America. This church had had 15 pastors by the time it celebrated its 100th anniversary in 1996, which also marked the 150th anniversary of the origin of Armenian Protestantism on 1 July 1846 in Constantinople.

Harold Takooshian

Armenians. Armenians descend from an ancient ethnic group that inhabited eastern Anatolia (now in Turkey) from 800 B.C. The first Armenian in the United States, a sericulturist known as Martin the Armenian, arrived at the Virginia colony in 1619, and Armenians settled in New York City from the 1830s. The 70 Armenians in the United States before 1870 included Khachadur Osganian, who became president of the New York Press Club and wrote *The Sultan and His People* (1857), a popular book introducing Americans to the Ottoman Empire; and pharmacist Kristapor Seropian, who invented the durable green dye still used in U.S. currency. During

the nineteenth century many Armenians developed successful import-export firms (some dealing in Oriental rugs); others became craftspeople or managers in the photoengraving trade.

After the Ottoman Empire began its decline in 1890, Armenians were systematically persecuted by Turkish authorities. About 64,000 Armenian refugees reached the United States by 1914, and another 30,771 arrived between 1919 and 1924. Perhaps 20,000 remained in New York City, where they concentrated in the East 20s or Washington Heights in Manhattan. A vibrant first-person account of this Armenian community later appeared in the best-selling novel *A House Full of Love* (1954) by Marjorie Housepian Dobkin.

In 1915 a group of business leaders led by Cleveland H. Dodge met at 1 Madison Avenue to form the Near East Relief Foundation, which aided Christian victims of the Ottoman Empire, most of whom were Armenians; by 1930 it had sent $110 million overseas, more than any other humanitarian organization in history up to that time. In the 1920s Armenian political parties reestablished themselves in the city, and the continuation of old rivalries resulted in bloodshed. On Christmas Eve 1933 members of the Armenian Revolutionary Federation (known as Dashnags) assassinated the Armenian archbishop of New York, Leon Elisee Tourian, during Mass at the altar of the Holy Cross Church of Armenia, causing a deep schism within the Armenian Apostolic Church of North America (as a result of which the parishes of the original diocese and the new prelacy are now under separate archbishops). The next phase of immigration (1948–91) brought an additional 70,300 Armenians to the United States from the Soviet Union and a somewhat larger number from Eastern Europe and the Muslim countries of the Middle East. Perhaps 10 percent of these immigrants settled in New York City.

The Armenian community remains factional, especially in religious affairs. In the United States more than 85 percent of Armenians identify with the Armenian Apostolic Church of North America; about 10 percent are Protestant and 3 percent Roman Catholic. As of 2008, 10 of the 19 Armenian churches in Greater New York are in the city's five boroughs, including the Armenian cathedral at 34th Street and Second Avenue (headquarters of the Eastern Diocese of the Armenian Apostolic Church of North America), seven Orthodox Apostolic churches (four under the diocese, two under the prelacy), one Armenian Catholic cathedral, and one Protestant church.

The *Armenian Reporter International,* by far the largest of a dozen U.S. Armenian weeklies, was launched in Queens in 1967 by Edward K. Boghosian (1927–2006); a large Armenian collection is housed in Queens College.

Many Armenians have gained notice in the life of the city, such as political reformer Edward N. Costikyan, educator Vartan Gregorian, and television personality Arlene Francis. As of 2000 about 100,000 Armenians lived in Greater New York, the third-largest community in the United States after Los Angeles and Boston.

armories. Headquarters for the civilian volunteer militia in the United States. In New York City they housed the National Guard of the State of New York and were built in the nineteenth and early twentieth centuries. Prior to 1872, only a few armories existed in New York City, including the Centre Market Armory, the Downtown Arsenal, the Central Park Arsenal, the Tompkins Market Armory, and the Twenty-second Regiment Armory; most militia units were housed in rented quarters. A burst of construction occurred from 1872 to 1936, when 24 armories were built in the city under state mandate. From 1872 to 1895, six publicly funded armories went up in Manhattan and five in Brooklyn; one privately funded armory was constructed in Manhattan. In the twentieth century, four were built in Manhattan, three in Brooklyn, two in the Bronx, two in Queens, and one in Staten Island. The demand for armories reflected the fact that the National Guard was the nation's main military body until the early twentieth century, when new laws established professional military forces (prior to that the 1792 Militia Act had required states to establish forces of white males aged 18 to 45). The name National Guard came into use in New York State in 1862; previously, it had been used only by the Seventh Regiment. Often referred to as citizen-soldiers, these volunteers were supported by private funds, whereas the armories were paid for by public money. The National Guard and the armories served a variety of nonmilitary purposes (though in the twenty-first century they were once again pressed into active military service in Iraq and Afghanistan). As membership and activity declined in the nineteenth and twentieth centuries, so did the place of the armory, which had originally provided space for drill rooms, weapons storage, and sleeping quarters. After the Civil War armories increasingly became the setting for major social and cultural events, and the Guard became known for its popular dress parades on city streets. By the twentieth century armories gradually became community centers, emergency resource facilities, and homeless shelters; many were torn down or sold. With membership in the Guard on the decline, the armory itself became an inducement for joining, in that the structures built after 1872 were famous for their clublike facilities and well-appointed interiors.

The history of the armory in New York differs from that of the state and the nation, where armories were built because of fears of popular uprisings and labor agitation in the latter half of the nineteenth century. Although the

National Guard was often used elsewhere to quell strikes and labor unrest, in post–Civil War New York it was deployed for peacekeeping purposes only during the 1871 Orange Riots (which resulted in dozens of deaths) and the 1895 Brooklyn Transit strike. Afterward, most deployments were for noncivil disturbances, such as natural disasters and assistance during the terrorist attack of 11 September 2001 on the World Trade Center. New York built armories reluctantly, a reflection of the conviction that the city could control its own security, that police were in charge, that diversity would benefit the city, and that money would be better spent on other things. City authorities resisted legal mandates to build, claiming that no sites were available, costs were too high, and alternative drill spaces were available. The public complained that armories would produce higher taxes, infringe on private property, displace businesses, and result in eminent domain or eviction.

Until the 1870s, most National Guard units in New York had only temporary, rented quarters, which were notorious for poor quality and high rent. A major change took place in 1873, when the state legislature established a board of commissioners of armories and drill rooms, with the power to purchase or take public land through taxes and floating bonds (Central Park, Reservoir Square, Union Square, and Madison Square were specifically excluded from available sites). City politicians did not want to relinquish valuable real estate for armories or use public money to build them, but they were left with little choice after 1884, when the state established the Armory Board, charged with building local armories. This board consisted of the mayor, the commissioner of Public Works, the commander of the First Division, three guardsmen, and other public officials. Although New York State paid for most armories, the city had to pay for its own. In response, city officials pursued a policy of delaying or deterring such construction, particularly under the influence of Andrew Haswell Green, a civic leader and comptroller, who was an outspoken critic of the costs involved in supplying armories to the militias. In 1884, the Armory Board succeeded in getting the Sinking Fund to authorize $2 million in bonds in order to purchase sites for new armories for the Eighth, Ninth, Twelfth, and Twenty-second regiments; funding was later obtained for armories for the Seventy-first and Sixty-ninth regiments. A major scandal rocked the Armory Board in 1885, when the Gibbs Commission learned of huge profits from real estate deals involving land for armories; this event resulted in the indictment of Alexander Shaler, head of the New York State National Guard First Division. Shaler resigned in disgrace following two hung juries.

In the early twenty-first century, the 20 structures that still existed in the city were used mainly for nonmilitary purposes, such as cultural centers or homeless shelters. Only seven of the old armories continue to be used for their original purposes. The six publicly funded headquarters for the National Guard are at 68 Lexington Avenue and 2366 Fifth Avenue in Manhattan; 355 Marcy Avenue and 1579 Bedford Avenue in Brooklyn; 168th Street in Jamaica, Queens; and 321 Manor Road in Staten Island. Two other buildings currently in use as armories are at 150-74 Sixth Avenue in Queens and 10 West 195th Street in the Bronx. Of the nine armories or arsenals built prior to the 1870s only one exists, the arsenal in Central Park, which serves as headquarters for the Department of Parks and Recreation. The only privately built armory was that of the prosperous Seventh

Temporary/Rented Headquarters (Armories/Arsenals) of National Guard Regiments, through the 1870s

First Militia

- 69th (Irish or Highlanders) Regiment, at the Essex Market (Delancey) until 1857, and then at 23rd Street and Sixth and Seventh avenues
- 11th (German) Regiment, moved into the Essex Market at Chrystie and Delancy until it disbanded
- Fifth (German or Jefferson Grenadiers) Regiment, moved from a saloon on Hester Street to stables at Ninth Avenue and 27th Street
- 79th Regiment, on the fifth floor at Greene and Houston streets
- 96th Regiment, moved from Germania Hall in the Bowery to Centre Street
- Sixth Regiment, at the top of Tammany Hall at 14th Street
- First Regiment, over a stable at 32nd Street
- 12th Regiment, at Broadway and 45th and 46th streets
- 22nd Regiment, at 14th Street and Sixth Avenue
- 71st Regiment (consolidated with the 37th), at Broadway and Sixth Avenue
- 84th Regiment, at Broadway and Fourth Street

Third Brigade

- Eighth Regiment, at the Excelsior Building at 23rd Street and Seventh and Eighth avenues
- Ninth Regiment, over a stable at West 26th Street
- Seventh Regiment, at Tompkins Market
- Washington Grays, at Broadway and 45th Street
- First Cavalry, at 46th Street and Broadway
- Third Cavalry, at the Bowery
- B, C, G, and K Batteries, shared the City Arsenal on Elm Street

though it still serves as headquarters for the Seventh Regiment.

Architecturally, the armories are distinctive for the medieval or castellated style that dominated in the nineteenth century. In the twentieth century, architectural styles included Collegiate Gothic, beaux arts, art deco, and art moderne. Among the prominent architects and architectural firms that designed the armories were Clinton and Russell, Hunt and Hunt, William Mundell, John Rochester Thomas, Horgan and Slattery, Walker and Morris, Pilcher and Tachau, and Van Wart and Wein.

Armory Show [International Exhibition of Modern Art]. Art exhibition held from 17 February to 15 March 1913 at the 69th Regiment Armory, at Lexington Avenue and 25th Street in Manhattan. It presented modernist trends in European and American art and had an immeasurable influence on the American public. The show was conceived in December 1911 at a meeting of the artists Walt Kuhn, Jerome Myers, Elmer MacRae, and Henry Fitch Taylor, who soon gained the sponsorship of the Association of American Painters and Sculptors; Mabel Dodge, Gertrude Vanderbilt Whitney, and other arts patrons also agreed to contribute funds. Kuhn, the secretary of the association, went to Paris with the painter Arthur B. Davies and met with the critic Walter Pach to secure the loans of European art. The controversial show was both praised and denounced in the press. It consisted of about 1600 works of art, including van Gogh's *Mountains at Saint-Rémy,* Marcel Duchamp's *Nude Descending a Staircase,* Constantin Brancusi's *Mademoiselle Pogany,* and Francis Picabia's *Dances at the Spring.* Works from abroad accounted for about a third of the total and for 123 of 174 works sold. A smaller version of the show traveled to Boston and Chicago.

Armory Track and Field Center. Indoor track and field facility and site of the National Track and Field Hall of Fame located at 168th Street and Broadway in the Washington Heights section of Manhattan. Built initially in 1909 as a training center for the National Guard, the 168th Street armory hosted a number of track meets beginning in the 1920s. By the 1960s it had become one of the city's leading indoor track and field facilities. The economic downturn of the 1970s and 1980s led the city to turn the building into a homeless shelter, and track competitions ceased by 1987.

In 1993 the Armory Foundation was established to convert the building back into a track facility that would serve the community and the city's youth. The foundation refurbished the building and installed a new Mondo-surface track (a fast and durable synthetic surface ideal for top-level track competitions) that made the armory a world-class facility and one of the best venues for indoor track in the country. Adjacent to the 200-meter track is a throwing cage for the shot put, a sand pit for the long and triple jumps, a pole-vault runway, and a high-jump bar and mat. By the early twenty-first century the facility was the center of high-school track in the city, if not the nation. Nicknamed "the fastest indoor track in the world," the armory garnered national attention in 2001 when Alan Webb, a boy from Virginia and a future Olympian, became the first American high-school student to run a mile in less than four minutes indoors. In addition to holding more than 100 high-school meets and a number of collegiate and professional competitions each winter during the indoor season, the track is heavily used and sought after by local high-school teams and athletes for practice throughout the year. It also hosts children from the Police Athletic League and many free clinics in which former track and field stars come to teach and coach aspiring young athletes. The facility sold corporate naming rights in 2003 and was renamed the New Balance Track and Field Center.

David White

Armstrong, Edwin H(oward) (*b* New York City, 18 Dec 1890; *d* New York City, 31 Jan 1954). Electrical engineer and inventor. While a student at Columbia University (graduated 1913) and a faculty assistant to Michael Pupin, he experimented in the basement of Philosophy Hall with Lee De Forest's Audion tube, enabling him to amplify, as well as transmit, radio signals through regenerative circuits (1912). This earned him the Institute of Radio Engineers' Medal of Honor. Stationed in France during World War I, he invented the superheterodyne circuit (1918)—the basic circuit in analog radio and television receivers—for tuning in frequencies of the ignition systems of enemy aircraft. In 1931 he improved the frequency modulation (FM) method of radio broadcasting, which eliminated the static of amplitude modulation (AM) radio while increasing fidelity. He ran tests from atop the Empire State Building and broadcast the opening of the World's Fair of 1939–40. In 1942 he won the Edison Medal of the American Institute of Electrical Engineers. Legal battles ruined Armstrong financially and contributed to his suicide; by 1967, however, his widow had won millions in damages on his behalf. Armstrong was inducted into the National Inventors Hall of Fame in 1980.

Armstrong, Louis [Pops; Satchmo] (*b* New Orleans, 4 Aug 1901; *d* New York City, 6 July 1971). Trumpeter, singer, and important jazz performer. After an apprenticeship in New Orleans he became the second cornetist in King Oliver's Creole Jazz Band in Chicago (1922–24). As a member in New York City of Fletcher Henderson's big band (1924–25) Armstrong introduced a conception of tone, technique, improvisation, and swing previously unknown in the city. In Chicago he made recordings with his Hot Five and Hot Seven (1925–28) that document his position as one of the most important figures in jazz. During this period he changed from the cornet to the more brilliant and penetrating trumpet, and developed a technique of improvising delightful nonsense syllables called scat singing. He began working with big bands, often mediocre ones. While appearing in the Broadway revue *Hot Chocolates* (music by Fats Waller) he popularized "Ain't Misbehavin'" and the racial protest song "(What Did I Do to Be So) Black and Blue(?)" (1929). He also appeared in films, including *Pennies from Heaven* (1936). A concert at Town Hall on West 43rd Street in 1947 marked his return to playing with small groups, which he continued to do in performances for the remainder of his career. On record he played with other ensembles as well, and he had several popular hits: "Blueberry Hill" (1949), "Mack the Knife" (1955), "Hello, Dolly!" (1963), and "What a Wonderful World" (1967). His home from 1942 to the end of his life was at 34-56 107th Street in Corona in Queens; it is now the Armstrong House National Historic Landmark. Armstrong is buried in Flushing Cemetery in Queens.

Barry Kernfeld

Arno, Peter [Peters, Curtis Arnoux] (*b* New York City, 8 Jan 1904; *d* Port Chester, N.Y., 22 Feb 1968). Cartoonist and writer. He graduated from Yale in 1924 and in the following year joined the staff of the *New Yorker,* where his urbane, satirical cartoons of café society helped to set a breezy tone. He also wrote and produced musical reviews and motion pictures, designed automobiles, painted, and played the piano. A member of the Society of Illustrators, he published several collections of cartoons, including *Whoops Dearie* (1927), *Peter Arno's Parade* (1929), and *Sizzling Platter* (1949). Arno lived for many years at the Dorset Hotel at 30 West 54th Street.

James E. Mooney

Arnold Constable. Firm of retailers, one of the oldest in New York City. It was formed in 1825 by Aaron Arnold (1794–1876) and his nephew George Arnold Hearn (1835–1913), who opened a small dry-goods shop at the corner of Mercer and Canal streets; Hearn left the firm in 1837 and was replaced by James Mansell Constable. The firm in 1868 opened a lavish store of five stories on Broadway and 19th Street, in the fashionable shopping district later known as Ladies' Mile. The store became known especially for its mourning clothes and also sold household goods. In addition to retailing the building was used for wholesaling and manufacture. In 1914 the firm followed many other large retailers by moving its store uptown, to Fifth Avenue and 39th Street. The store closed in 1975.

Leslie Gourse

Arrochar. Neighborhood in northeastern Staten Island bounded to the north by the Staten Island Expressway, to the east by Fort Wadsworth, and to the west by Hylan Boulevard. The area was originally inhabited by Lenni Lenape Indians. Its name is derived from that of a sizable estate built in 1840 by the first European settler, W. W. MacFarland, which was named in turn after the village in Scotland from which he originated; his house is now the oldest building on the grounds of St. Joseph Hill Academy. At the turn of the century the area was the gateway to the popular resort areas of South and Midland beaches, and in 1914 the local chamber of commerce described it as the "Riviera of the harbor." In the following decades the neighborhood became settled by Italians and later by members of other ethnic groups. Arrochar is a quiet enclave of large homes and small businesses.

Martha S. Bendix

arson. Arson has been a problem in New York City since its earliest days. The fear of conflagrations in extremely fire-prone structures made arson a real concern throughout the seventeenth, eighteenth, and nineteenth centuries; a fire set in one building could spread to others.

Following the seizure of New Amsterdam by the British in 1664, laws prohibiting arson (based on English common law) were passed in an attempt to control the problem. While most arson crimes were the acts of individuals, the first organized arson scheme was the alleged "Great Negro Plot" during the winter of 1741. Soon after the arrest of several black slaves for burglary, a series of fires erupted throughout lower Manhattan. Believed to be arson, one of these fires was started in Fort George, the key to the city's military defense. Although the supposed plan to burn down the city never reached significant proportions, more than 200 people were arrested and more than 30 executed. The city's first large conflagration was the Great Fire of 21 September 1776. As George Washington's Continental army was withdrawing from Manhattan, a fire began in the Fighting Cocks tavern in Whitehall Street. It was alleged that the retreating soldiers set fire to the city to leave little of value to the advancing British soldiers. Some believe that Nathan Hale, who was executed as a spy, was part of a Revolutionary plot in which fire destroyed nearly 500 buildings in the southwestern portion of the city, including Trinity Church. As the city grew after the Revolutionary War, the number of fires increased.

The Great Fire of 1835, which destroyed much of the southeast districts of the city, was not thought to have been arson related. A number of minor fires in the city at that time, however, were thought to have been related to economic discontent. In 1838 insurance companies called for the passage of a city ordinance to appoint commissioners specifically for investigating fires. It was not until 1854, however, that the idea became a reality when *New York Herald* reporter Alfred Baker called on Chief Engineer Alfred Carson to create the post of fire marshal. Baker noted that a number of fires of "doubtful origin" needed to be investigated and prosecuted. Insurance companies paid the marshal's salary and allowed for the hiring of an assistant in subsequent years. The marshal was also given a police sergeant's shield. Arson was at the center of the Civil War draft riots of 1863. Numerous buildings were burned throughout Manhattan between 13 and 16 July, including the Colored Orphan Asylum on Fifth Avenue. The following year, at the behest of President Jefferson Davis of the Confederate States of America, a mission to torch the city was hatched. Presumably, a conflagration would demoralize New Yorkers and cause them to seek an end to hostilities. Although six Confederate soldiers started fires in 12 of the city's hotels, the flames were quickly extinguished.

Thomas Brophy, a news reporter, became the city's most famous fire marshal. Hired in 1907, he ascended to the rank of chief fire marshal in 1915 and held the title until his retirement in 1949, having investigated more than 100,000 fires (more than any other person in the world). Brophy was called in to investigate the 1916 Black Tom explosion in Jersey City, the 1942 Cocoanut Grove nightclub fire in Boston (492 killed), and the Barnum & Bailey Circus fire in Hartford, Connecticut, in 1944 (167 killed). Early in World War II he led the investigation of the burning and capsizing of the French luxury liner Normandie, which was being converted into a troop carrier. Brophy's investigation concluded that the fire was an accident, not sabotage. More than 1000 people attended his 1949 retirement dinner at the Waldorf-Astoria hotel.

The largest arson wave in the city occurred from the late 1960s through the early 1980s in Bushwick in Brooklyn, East Harlem in Manhattan, and the South Bronx. At the heart of the arson epidemic were a variety of motivating factors: tenants who burned their own apartments to be put at the head of the list for public housing, apartment building owners seeking insurance payouts (which led to "redlining" by insurance companies, making it impossible for legitimate apartment building owners to get insurance), and vandals who set fires in order to make structures uninhabitable so that they could steal copper tubing. The best-selling book *Report from Engine Company 82* by Dennis Smith chronicled this period. The fire department stemmed the tide of arson by the 1980s. The "red cap" program placed highly visible fire marshals wearing red baseball hats in a specific community as a deterrent to arson. In addition, the Fair Access to Insurance Requirement (FAIR) program was instituted to combat redlining and make insurance accessible to building owners in areas with high levels of arson.

The deadliest arson fire in New York City's history (excluding the terrorist attacks of 11 September 2001) was the Happy Land fire, which occurred in the Bronx at the Happy Land Social Club on 25 March 1990. Eighty-seven people died when their only means of escape was blocked by fire.

Glenn P. Corbett

art. See Architecture, Art criticism, Murals, Painting, Photography, and Sculpture, as well as entries on individual figures and institutions.

Art Commission. Appointed group authorized to approve public art projects and to regulate the permanent installation on city property of works of art and architecture (including parks and bridges). Modeled after similar commissions in Europe, Boston (1890), and Baltimore (1895), it was established by the charter of 1898 through the efforts of

the architect John M. Carrère and art organizations such as the Municipal Art Society, the Society of Beaux-Arts Architects, and the Fine Arts Federation. By 1907 the commission had to approve the plans and designs of all structures proposed for city-owned lands, a mandate that eventually came to encompass fire stations, schools, libraries, hospitals, parks and recreational facilities, bridges, sewage disposal plants, streetlights, and newsstands. The members of the commission, who serve without pay, include the mayor and representatives of the Metropolitan Museum of Art, the New York Public Library, and the Brooklyn Museum; the commission must also include one painter, one sculptor, one architect, one landscape architect, and three laypersons. All are appointed by the mayor and serve staggered three-year terms. The commission meets at City Hall and holds a monthly hearing and confidential ballot on the fine art and urban design proposals of various city agencies. Its many influential members have included the painters John La Farge and Robert Ryman, the sculptors Daniel Chester French and Alexander Calder, and the architects Charles F. McKim and Wallace K. Harrison. Under the administration of Mayor Edward I. Koch (1978–89) the commission assumed a larger and more active role than previously: it took inventory of the art owned by the city, began several conservation programs, and became responsible for the administration of the Tweed Gallery at 52 Chambers Street, which mounts exhibitions in conjunction with other municipal agencies.

Harriet F. Senie

art criticism. Critical writings on art range widely in their aims and methods: from personal appreciation of subject matter and artistic skills, to didactic essays aimed at a popular audience, to highly theoretical treatises. In early nineteenth-century New York City painters were measured against the perfection of the Old Masters and the advanced techniques of contemporary European artists. Such standards informed William Dunlap's *History of the Rise and Progress of the Arts of Design in the United States* (1834) and the criticism found in the periodicals *Port Folio, New York Review,* and *Atheneum Magazine.* James Jackson Jarves, in *The Art-Idea* (1864), valued art that strove toward an ideal perfection.

In the 1830s and 1840s excellence in landscape painting meant fidelity to the scenic details of the American countryside. Truth to nature, a principle advanced by John Ruskin, was supported by William James Stillman and John Durand, editors of the art journal *Crayon* (1855–61), and by the Society for the Advancement of Truth in Art (1863) in its publication *New Path.* Simultaneously, the American Art-Union (1839–52), in its *Bulletin,* called on artists to paint patriotic subjects for a democratic patronage. Similarly, Henry T. Tuckerman, in his *Book of the Artists* (1867), praised genre artists such as Eastman Johnson, who met the needs of cultural nationalism while painting pictures with a moral sentiment.

Postbellum art criticism became increasingly professionalized within newspaper journalism. By the 1880s American artists turned from a moralizing and didactic art to one concerned with beauty and art for art's sake. Critics open to the new aesthetics included Russell Sturgis, Jr., Clarence Cook, Mariana Griswold Van Rensselaer, S. G. W. Benjamin, and Charles de Kay.

In the first decade of the twentieth century Mary Fanton Roberts (writing under the name of Giles Edgerton) praised Robert Henri and the Ashcan School for painting "the spirit of the people." Influenced by European cubism and fauvism, New York artists strove to be modern, which meant antitraditional, antiacademic, and experimental. Critics sympathetic to the modernizing tendencies were Charles Caffin, James Gibbons Huneker, Sadakichi Hartmann, Benjamin de Casseres, Paul Haviland, Waldo Frank, and Marius De Zayas, all of whom contributed to Alfred Stieglitz's journal *Camera Work.* Willard Huntington Wright and Arthur Jerome Eddy wrote influential books explaining the new art to the American public.

More traditional views were taken by Royal Cortissoz and Peyton Boswell, founders of *Art Digest.* Art critics during the 1920s and 1930s, more moderate about semi-abstract art and urban realism, included Frank Jewett Mather, Jr., Joseph Edgar Chamberlain, Elizabeth Luther Cary, Edwin Alden Jewell, Henry McBride, Lloyd Goodrich, and Forbes Watson. Cultural critics such as Edmund Wilson, Lewis Mumford, and Alain Locke also made forays into art criticism. During the 1930s many art critics returned to a populist standard, measuring art by its capacity to communicate with working people; among them were Meyer Schapiro (writing as John Kwait for *New Masses*), Elizabeth McCausland (writing as Elizabeth Noble for *Art Front* and *New Masses*), and Harold Rosenberg.

In the late 1940s abstract expressionism was championed by Rosenberg, Schapiro, Tom Hess, and especially Clement Greenberg, who became the city's most theoretically oriented and influential mid-century art critic. Unlike Hess, Dore Ashton, Brian O'Doherty, and Robert Coates, Greenberg was unreceptive to experimental art forms. The artist Fairfield Porter and the poet Frank O'Hara wrote with a heightened sensitivity toward postwar art, without Greenberg's theoretical apparatus. The art historian Leo Steinberg, who had written art criticism in the 1950s, was one of the first to challenge Greenberg's theories in his book *Other Criteria* (1972). The early writings of Rosalind Krauss, Michael Fried, and Barbara Rose followed Greenberg's lead but eventually moved away from what Fried saw as his reductionist views.

By 1970 art criticism had become more diverse. Lawrence Alloway and Lucy R. Lippard wrote favorably on pop art, photorealism, feminist art, and political art. Cindy Nemser launched the *Feminist Art Journal,* and in 1977 a collective of New York women published the first issue of *Heresies,* a feminist journal on art and politics. Max Kozloff, of *Artforum,* wrote on photography, which along with video art had become a vanguard art form. In 1976 Annette Michelson and Krauss began the journal *October,* which included features on conceptual art. Gregory Battcock, Carter Ratcliff, John Perreault, Kim Levin, Kay Larsen, Robert Pincus-Witten, Grace Glueck, Thomas McEvilley, Peter Schjeldahl, and Arthur Danto displayed openness toward different artistic styles. Among the most influential magazines were *Art in America, Arts, Artnews,* and *Artforum.*

More traditional critics included Robert Hughes of *Time,* Douglas Davis of *Newsweek,* and John Canaday and John Russell of the *New York Times.* The art critic Hilton Kramer left the *New York Times* in the 1980s to launch the *New Criterion,* which took a purist approach to evaluating art. His successors at the *Times,* Michael Brenson, Roberta Smith, Michael Kimmelman, and Holland Cotter, were more willing to write about political and feminist artists, while criticism by feminists, gays and lesbians, and racial minorities became more prominent. The New Museum of Contemporary Art published the writings of Marcia Tucker, Brian Wallis, Craig Owens, Kate Linker, Lowery Stokes Sims, and William Olander. This diversity continues into the early twenty-first century; among the newer critics are Douglas Crimp, Robert Storr, and John Perrault.

Patricia Hills

art galleries. The earliest commercial art galleries in New York City opened around 57th Street, largely because of the proximity of the Museum of Modern Art (1929) on West 53rd Street. Among the most important early galleries were the Julien Levy Gallery and Peggy Guggenheim's Art of This Century on 56th Street, which launched the career of Jackson Pollock. During the 1950s the Betty Parsons Gallery, the Sidney Janis Gallery, the Hirschl and Adler Galleries, the Leo Castelli Gallery, and the Ronald Feldman Gallery became some of the leading outlets of the pop art movement. At the same time, several new

galleries along East 10th Street, largely artists' collectives, showed works by the second generation of abstract expressionists. In 1969 Paula Cooper opened the first art gallery in SoHo on Wooster Street, launching the evolution of the neighborhood into an artistic center. Artists could take advantage of large, open loft and warehouse spaces both for living and for exhibitions. The hub of the SoHo scene was 420 West Broadway, which housed the Leo Castelli Gallery (which moved downtown in 1971), the Sonnabend Gallery, and the Charles Cowles Gallery. In the same area two important alternative spaces, White Columns (1969) and Artists Space (1972), provided exhibition space for socially engaged art that was regarded as unsalable.

A new gallery district took shape in the East Village after the Fun Gallery opened in 1980. Within a few years the area was the site of about 50 galleries, including the Gracie Mansion Gallery, the Civilian Warfare Gallery, and the International with Monument Gallery. These establishments were run for little money (often out of private residences) and helped bring about the gentrification of the neighborhood. But when the aesthetic represented by virtually all the galleries fell out of favor around the time the stock market crashed in 1987, the district disappeared.

By this time SoHo was enjoying a revival. Several gallery owners from the East Village attempted to move their operations to the thriving neighborhood, but because of higher costs in the area, most failed. The continuing search for cheaper rents eventually led to the development of a gallery district on 22nd Street between 10th and 11th Avenues, aided by a sense that the former edginess of SoHo had been superseded by an ostentatious consumerism.

In the early twenty-first century there were about 600 galleries in New York City focused in four major neighborhoods. About 300 of those galleries were located in Chelsea, mostly exhibiting contemporary, oftentimes avant-garde artists. Galleries on Madison Avenue on the Upper East Side of Manhattan were known for exhibitions featuring museum-quality works by well-established and historically renowned artists. Modern masters were often exhibited in 57th Street galleries, while other neighborhoods like Williamsburg in Brooklyn offered space to experimental artists with little name recognition.

Arthur, Chester A(lan) (*b* Fairfield, Vt., 5 Oct 1829; *d* New York City, 18 Nov 1886). Twenty-first president of the United States. The son of a Baptist minister, he moved to New York City in 1852, four years after graduating from Union College. An ambitious lawyer, Arthur focused on civil rights cases. His success in *Jennings v. Third Avenue Railroad Co.* (1855) helped make possible the racial integration of passenger railroads in the city. He was also an active member of the newly formed Republican Party and as the quartermaster general for New York State was responsible for providing care to troops passing through the state. In 1871 President Ulysses S. Grant, influenced by Republican city boss Roscoe Conkling, appointed Arthur customs collector for the Port of New York, but Arthur was soon accused of corruption and was forced from office in 1878. Arthur was then elected vice president in 1880 on a ticket with Republican James Garfield. Upon Garfield's assassination in September 1881, Arthur became the first president since George Washington to take the oath of office in New York City. He was sworn in at his townhouse at 123 Lexington Avenue, near 28th Street. Arthur returned to the city after failing to be renominated for the presidency. In 1899 a 17-foot (5-meter) bronze statue of Arthur designed by George Edwin Bissell was erected on the northeast corner of Madison Square Park.

Arthur Ashe Stadium. Open-air tennis stadium located on the grounds of the National Tennis Center in Flushing Meadows–Corona Park in Queens. It is named in honor of Arthur Ashe, a champion tennis player and civil rights pioneer who became the first African American man to win a major tennis tournament when he won the 1968 US Open tennis tournament. In the early 1990s Mayor David Dinkins negotiated with the United States Tennis Association to keep the US Open in Queens for the next 25 years in return for 21 acres (8.5 hectares) of parkland; it was paid for through tax-exempt bonds. Opened in 1997, the stadium seats more than 22,000 and is the largest tennis stadium in the world. In the twenty-first century the US Open drew more than 700,000 fans annually during the two-week event in late summer. Unlike Wimbledon and the French Open, the two major tennis tournaments held each summer in Europe, the US Open plays matches under stadium lighting at night, and Arthur Ashe Stadium is well known for capacity crowds filled with celebrities who remain past midnight.

David White

Arthur Kill. Tidal strait about 10 miles (16 kilometers) long between Staten Island and New Jersey. It opens at its northern end into Newark Bay and at its southern end into Raritan Bay, and is lined with industrial sites (mostly in New Jersey) and salt marshes (in Staten Island). Two islands in the waterway belong to Staten Island: Pralls Island (a bird sanctuary of about 30 acres, or 12 hectares) and the Island of Meadows (about 40 acres, or 16 hectares), which is situated at the entrance to a deepwater creek known as the Fresh Kills. Arthur Kill sees considerable marine traffic, which led the New York Port Authority to deepen it from 35 feet (10.7 meters) to 41 feet (12.5 meters) in 2007 to accommodate larger ships. It is spanned by the Goethals Bridge, by a lift bridge of Conrail (formerly used by the Baltimore and Ohio Railroad), and by the Outerbridge Crossing.

Gerard R. Wolfe

artisans. Skilled craftsmen played a critical role in early America. They were most heavily concentrated in towns and cities, especially the major seaports, where they constituted the largest sector of the population. They worked in a panoply of trades ranging from goldsmithing, silversmithing, and cabinetmaking at the top to baking, butchering, and carpentry in the middle, to tailoring and shoemaking at the bottom. The most populous trades were the building crafts, particularly carpentry and masonry, that might

Arthur Ashe Stadium, 2009

employ 40 percent of craftsmen during construction season. Tailoring and shoemaking followed in size.

Mid-eighteenth-century artisans could be classified as either wage earners (the beginning of a working class) or master craftsmen, (incipient bourgeois entrepreneurs), and in the course of a colonial career they were often both. Normally a lad of 13 or 14 would contract with a master craftsman to learn a trade. He boarded with his master, who was responsible for his rudimentary education and clothing as well as teaching the secrets of the trade. Learning cabinetmaking or watchmaking took many hours at the hands of the ablest craftsmen. Shoemaking, with awl and hammer skills, took less time to master.

Following release from indentures at age 21, an artisan would be a wage earner or journeyman, often working for master craftsmen. If competent and savvy he would subsequently open his own business. A master's dwelling commonly included a lower-story shop with his family living above. Mobility to master craftsman standing was common except in the poorest trades. Artisans in those trades, even those owning small shoemaker or tailoring shops, often earned only a subsistence living. Shoemaker George Robert Twelves Hewes, the last survivor of the Boston Tea Party, was imprisoned early in his career for small debts, such were the perils of his trade. Still, artisans were above unskilled laborers, indentured servants, and slaves.

Skilled craftsmen were products in part of English guild traditions that supervised their trades, limiting admission, controlling prices, and setting rules of their trade. Colonial America had no guild tradition, nor did it develop one. On the one hand this meant that it was a more open society. Also, artisans were generally literate and politically aware and proud of their craft skills, even if they lacked the legal imprimatur of a guild. On the other hand, they were unable to gain guild privileges with regard to price control, limitation of craft membership, or status. Moreover, while men who possessed demanding skills and well-fashioned tools were clearly above the level of laborers who worked on the docks, they were subject to a tradition that classified anyone who performed manual labor, however refined, as beneath the rank of gentlemen. Lacking breeding, wealth, and education, they were expected to defer to their mercantile and professional betters who regarded mechanics (as they were commonly known) with a measure of condescension. There was no guild membership to mediate that standing.

Skilled craftsmen had a strong social identity. They dressed in a common manner, kept common hours, and shared social traditions that separated them from the elite as well as unskilled laborers. As independent entrepreneurs who owned their shops, they were freemen entitled to vote, part of the political mix in eighteenth-century urban politics. Although they seldom attained significant political positions, their voices were considered by elite factions seeking office. They could easily make the difference in factional struggles such as the one between the De Lanceys and Livingstons in New York.

During the Revolutionary era skilled craftsmen became central players in the movement toward independence. In Boston, New York, and especially in Philadelphia artisans formed their own committees and took on part of the ad hoc governing committees that emerged in New York and Philadelphia.

The period from 1790 to 1830 was the golden age of the American craftsman. The era left a great legacy in craftsmanship; federal furniture remains the greatest craft work produced in the American experience, and artisan crafts gave birth to the American labor movement and to manufacturing and entrepreneurship innovation.

The work of such cabinetmakers as Duncan Phyfe and Charles-Honoré Lannuier, to name but two, are almost priceless in the antique market of the twenty-first century. Replacing the Chippendale style that dominated the eighteenth century, a style that combined Chinese, rococo, and pseudo-Gothic styles in ornately carved furniture, was a new style emphasizing grace, linearity, proportion, and artful display of color, including inlays and painted designs. Based on neoclassical design, this new design became popular in England beginning in the 1770s. American furniture and craftsmanship drew on the English, Greek, and Roman models but with subtle differences in proportions. Given the spirit of republicanism that pervaded the era, it is not surprising that much of the furniture and silver and grandfather clocks and other fine works displayed American eagles and other symbols of the new American nation, blending them with classical republican symbols.

The business of a craft in the early national period was more extensive than in the colonial era. First, independence meant the opportunity to enter the marketplace. Craftsmen were deft users of advertisement, credit, and banking. Indeed, New York in 1810 incorporated the Mechanics Bank, the highest capitalized bank ($1.5 million), which specified that $600,000 be devoted to mechanics. Duncan Phyfe employed more than 100 journeymen, with sections of turners, upholsterers, carvers, and gilders. His quarters included a workshop, a warehouse, and display rooms. Furniture was built and stocked in Manhattan, ranging in quality, for sale to the mercantile elite in the city and to brokers in the West Indies and other American cities.

Many crafts prospered with the economic growth of the Napoleonic Wars. Shipbuilding contractors employed large numbers of craftsmen in production of clipper and naval vessels. In construction master builders would contract to construct a home and then hire carpenters, masons, and stonecutters. The city's most common crafts, notably printing, cabinetmaking, construction, shoemaking, and tailoring, became large-scale enterprises requiring considerable capital investment; type and printing presses, for example, cost well beyond the means of an aspiring journeyman. In these trades masters tended to become cost-conscious employers rather than the paternal master craftsman who nurtured journeymen and apprentices on their way to master standing. Journeymen, as well, had to accept that fact that they were unlikely to become master craftsmen. In so doing, journeymen formed their own benevolent associations to provide benefits in case of illness or death, and negotiate with employers. More and more journeymen lived in boarding-houses rather than with masters, and more apprentices left their indentures early for wages in crafts that demanded less skill.

In the age of Andrew Jackson the labor supply was increased by the influx of Irish and German immigrants. In addition, work now turned to ready made or "slop" production rather than custom orders. Masters became foremen who were pressured by competition to lower wages. A few highly skilled cutters might do well, as would a number of industrialists, but the average wage for an artisan slipped below the subsistence level, and all family members had to work to stay afloat. Not surprisingly, artisans resented the loss of their income and standing and in 1829 organized a Workingman's Party that was influenced by radical thinkers such as Thomas Skidmore, who called for the equalization of property, and George Henry Evans, who demanded free land distribution. This party lasted only a couple of years and was beset by divisions, but the new economy pushed artisans to form stronger unions such as, in New York City, the General Trades Union that called 40 strikes and included 50 separate unions in the early 1830s. The union movement was hurt by the Panic of 1837 but re-emerged in the 1850s.

Artisans became the core of the emerging working class of America, forming organizations that would lead to the modern labor unions and third parties that would offer ideas that would influence major party politics in years to come.

Artkraft Strauss Sign Corporation. Firm of billboard and sign makers formed in 1935 by Jacob Starr, a Russian electrician. In the 1930s Starr was among the first advertisers to use electric signs to promote motion pictures. Douglas Leigh, a designer for the firm in the 1950s, created such well-known signs as one for Camel cigarettes on the Hotel Claridge that depicted a man blowing smoke rings (with steam provided by Consolidated Edison) and one for Pepsi-Cola atop the Bond Building in which the company's logotype glimmered behind a waterfall that circulated 10,000 gallons (38,000 liters) of water. Artkraft Strauss later controlled most of the sign display space in Times Square, where it was also responsible for lowering the "time ball" at midnight on New Year's Eve. In 2000 the firm employed more than 170 artists, designers, engineers, carpenters, welders, electricians, plumbers, and sign painters to build its signs, which are as large as 1000 square feet (93 square meters).

Kathleen Hulser

Art Students League. Art school founded in 1875 as an offshoot of the National Academy of Design. Founded by a group of male students from the academy, along with several female artists, it sought to be a more liberally minded school for aspiring artists. The first classes were held in rented rooms on the top floor of a building on the corner of Fifth Avenue and 16th Street. In 1878 the league received a charter from New York State establishing a 12-member Board of Control, a governing council including no fewer than three students from the school. In 1892, after assisting in the founding of the American Fine Arts Society, the league, along with several other arts associations, commissioned a headquarters on 57th Street between Broadway and Seventh Avenue. This landmarked building designed by Henry J. Hardenbergh has been the location of the school's main campus ever since. Many of the country's most popular and influential artists have either taught or studied at the Art Students League. Early instructors included Augustus Saint-Gaudens, Daniel Chester French, Thomas Eakins, Thomas Hart Benton, and Childe Hassam. The league's influence stretched into the twentieth century with George Bellows, Helen Frankenthaler, Georgia O'Keeffe, Norman Rockwell, Man Ray, Jackson Pollock, Robert Rauschenberg, Roy Lichtenstein, and Mark Rothko all maintaining some connection to the school. The school opened a second campus in Sparkill, New York, in the Hudson River Valley in 1995.

Art Students League (building designed by Henry J. Hardenbergh), ca *1900*

Arverne. Neighborhood on Rockaway Peninsula in southeastern Queens. It began as a number of streets and villas laid out in April 1882 between Beach 47th and Beach 74th streets by the developer Remington Vernam, whose signature on checks, "R. Vernam," inspired the community's name. A fashionable resort between 1888 and 1908, the neighborhood declined in the 1950s owing to an increase in low-income housing. The area became an urban-renewal site in 1964 and in 1990 was sold by the city to private companies for the expansion of condominiums. Two new and upscale projects, Waters Edge and Waters Edge II, were completed in 1999 and 2001. Arverne by the Sea is an ongoing and larger high-end development of one- and two-family homes. Plans for the Arverne by the Sea community include a new school, parks, a transportation center, retail space, and a Young Men's Christian Association.

Vincent Seyfried

Ashbery, John (Lawrence) (*b* Rochester, N.Y., 28 July 1927). Poet and art critic. He published poems in a number of well-known literary magazines and anthologies by the late 1940s. After studying at Harvard College (BA in English 1949) and Columbia University (MA 1951), he worked as a copywriter for Oxford University Press (1951–54) and McGraw–Hill (1954–55). During these years he became the most prominent member of the New York School of poets. In 1958 he moved to Paris, and after returning to New York City in the autumn of 1965 he became the executive editor of *Art News*, a position he held until 1972. In 1983 Ashbery received the New York City Mayor's Award of Honor for Arts and Culture. In 2006 April 7th was declared " 'John Ashbery Day' in the City of New York" by the New York City Council in conjunction with a three-day tribute to the artist's work at the New School's John Ashbery Festival. Ashbery has published about 30 volumes of learned, witty, elliptical poetry informed by a strong visual sense, including *Self-Portrait in a Convex Mirror* (1975, Pulitzer Prize), and half a dozen plays; translated (sometimes under the name Jonas Berry) and edited a dozen other volumes; and taught at Brooklyn College, New York University, and Bard College.

Allen J. Share

Ashcan School. Popular name for a group of realist artists, including John Sloan, Stuart Davis, Maurice Becker, George Luks, William Glackens, Everett Shinn, Glenn O. Coleman, and Henry Glintenkamp, who drew naturalist depictions of street life for the radical socialist publication *The Masses* in the early twentieth century. They were also influenced by the growth of visual advertisements and commercial art in the entertainment and fashion industries. The term (also Ash Can School) was coined in March 1916 by the cartoonist Art Young and was intended to be derogatory, but it soon lost its negative connotations and came to be applied to all the early realists, including Robert Henri and George Bellows.

Rebecca Zurier, *Picturing the City: Urban Vision and the Ashcan School* (Berkeley: University of California Press, 2006)

Patricia Hills, Meghan Lalonde

Asia Society. International nonprofit organization created to initiate awareness of Asian culture and to strengthen relationships and cultural understanding between Asians and Americans. Founded in 1965 by John D. Rockefeller III, the Asia Society has headquarters at 725 Park Avenue and 70th Street. The society offers art exhibitions, including a collection of nearly 300 pieces of Asian art, dating from 2000 B.C.E. Additionally, the society holds dance and music performances, films, and lectures, and produces publications to educate Americans about the 30 countries and their respective cultures that compose the Asia–Pacific region, including Japan, China, Korea, Iran, New Zealand, and others.

Stephanie Miller

Asimov, Isaac (*b* Petrovichi, Russia, 2 Jan 1920; *d* New York City, 6 April 1992). Science fiction writer. His family emigrated from Russia to the East New York neighborhood of Brooklyn when he was three years old. He spoke both Yiddish and English at home, graduated from Boys' High School at the age of 15, and attended Columbia University (BS 1939, MA 1941, PhD 1948 in chemistry); he taught biochemistry at Boston University

from 1949 to 1958. He sold his first science fiction story at age 18. A prolific writer, Asimov consistently released between 10 and 12 books a year, including the *Foundation* and *Robot* series. Although his best-known works were science fiction novels and stories, he also wrote nonfiction, history, mysteries, and literary guides to the Bible and the works of Shakespeare. In 1975 Asimov moved into the Park Ten Apartments overlooking Central Park with his second wife, Janet. He lived there until his death from complications associated with the human immunodeficiency virus, which he contracted from a blood transfusion during heart surgery in 1983.

James E. Mooney, Anne Epstein

ASPCA. See American Society for the Prevention of Cruelty to Animals.

Aspinwall, William Henry (*b* New York City, 16 Dec 1807; *d* New York City, 18 Jan 1875). Merchant. After attending public schools he worked as an apprentice in the mercantile firm of his mother's brothers, G. G. and S. Howland, and by the age of 30 was a partner in Howland and Aspinwall, the city's largest mercantile firm. He set up railroads and steamship lines in Latin America in time to profit from the traffic of miners across the Isthmus of Panama during the California gold rush and by the time of the Civil War was among the city's wealthiest men. Aspinwall supported Abraham Lincoln, formed the Union League Club, and amassed an art collection that he opened to the public; he was also a director of the Lenox Library and the Chamber of Commerce.

James E. Mooney

William Henry Aspinwall

ASPIRA. Nonprofit organization formed in 1961 in New York City by Antonia Pantoja and other Puerto Rican leaders. ASPIRA engenders Puerto Rican leadership development through educational attainment. School-based ASPIRA chapters, youth conferences, and career, college, and financial aid counseling encourage young Puerto Ricans to complete high school and attend college. Thousands of ASPIRA graduates have become leaders in the public and private sectors, including politician Fernando Ferrer, actor Jimmy Smits, journalist Aída Alvarez, and educator Isaura Santiago. In 1972 the Puerto Rican Legal Defense and Education Fund represented the group in a suit against the New York City Board of Education. The resulting consent decree mandated the provision of transitional bilingual education programs in New York City. Serving Puerto Rican and Latino youth beyond New York City, ASPIRA of America was formed in 1968, with offices in six states, Puerto Rico, and Washington, D.C.

Virginia Sánchez Korrol

Associated Press [AP]. News service formed in 1848 by six newspapers in New York City: the *Sun,* the *New York Herald,* the *Courier and Enquirer,* the *Journal of Commerce,* the *New York Tribune,* and the *New York Express.* The original members were joined in 1851 by the *New York Times.* The organization faced competition from the Western Associated Press (1865), which criticized it for monopolistic practices in gathering news and setting prices. An investigation in 1891 revealed that several principals of the AP had entered into a secret agreement with a rival organization, a disclosure that led to the complete reformation of the service in 1892 as a nonprofit cooperative called the Associated Press of Illinois. In 1900 the service reincorporated in New York State and took its present name, while retaining its nonprofit cooperative status.

The AP grew rapidly under the direction of Kent Cooper from 1925 to 1948, adding a photographic service in 1927 and a wirephoto network in 1935, and greatly enlarging its overseas distribution. In later years it expanded into radio, television, automated picture reception, and satellite transmission. In 2006 the AP had 242 bureaus worldwide, providing material for over 10,000 subscribers in 121 different countries, and its headquarters were at 450 West 33rd Street in Manhattan.

Shan Jayakumar

Association for a Better New York. Civic foundation. Founded in the 1970s by real estate developer Lew Rudin and several others, it serves as a forum where elected officials and private sector leaders come together to explore potential solutions to New York City's economic and social problems. In the twenty-first century the foundation was under the leadership of Lew's son, William Rudin.

Jessica Montesano

Association for Improving the Condition of the Poor. Charity organized in 1843 to morally uplift and help the deserving poor. An offshoot of the New York City Mission Society, it was led by such prominent New Yorkers as the merchant Robert Minturn. Its first general secretary, Robert M. Hartley, supervised more than 300 upper-class men who volunteered to visit persons in need; his careful records demonstrated a relationship between mortality and filthy, crowded living conditions and became an example for scientific philanthropists in the late nineteenth century. The association constructed public bathhouses in 1852, 1892 (the People's Baths), and 1904 (the Milbank Memorial Bath, donated by Elizabeth Milbank Anderson). In 1855 it sponsored the Working Men's Home for black men at 151 Elizabeth Street, considered by many the country's first model tenement, and it was an important advocate of the Metropolitan Health Act of 1866 and other sanitary reforms. After Hartley's retirement in 1876 the association no longer relied solely on men as volunteers, and in 1879 it became one of the first organizations of its kind to employ women as visitors. With the Charity Organization Society, the New York City Mission and Tract Society, and the Children's Aid Society the association in 1891 became an owner of the United Charities Building at 105 East 22nd Street, donated by John M. Kennedy. Among the other facilities that it established and supported were medical dispensaries and dental clinics, the Neponsit Beach Hospital at Rockaway Beach for nonpulmonary tuberculosis patients, summer camps for children, families, and the elderly, and Sea Breeze, a vacation home for mothers and children at Coney Island. In 1939 the Association for Improving the Condition of the Poor merged with the Charity Organization Society to form the Community Service Society.

Alana Erickson Coble

Association of American Publishers. Trade association for book publishers, formed in 1970 by the merger of the American Book Publishers Council and the American Educational Publishers Institute. In addition to informing its members on such issues as copyright and marketing, it represents the publishing business to both government and the public. The association has offices at 51 Fifth Avenue in New York City, as well as in Washington, D.C.

Eileen K. Cheng

Association of Catholic Trade Unionists [ACTU]. Labor organization formed in New York City in 1937 by John Cort, Martin Wersing, and John P. Monaghan, who hoped to "make Catholic social principles an effective force for sound unionism and industrial relations." It established "labor schools" where Catholic workers studied religious and social principles, and published the *Labor Leader,* a national newspaper dedicated to Catholic social teaching and workers' rights; it also mediated labor disputes, supported more than 300 strikes nationwide, and provided legal defense for striking workers. The association was closely allied with the Congress of Industrial Organizations (CIO). At its peak in 1940 there were 10,000 members drawn from many occupations; non-Catholics were welcomed as associate members and numbered 90,000. By the early 1940s the association had its national headquarters in New York City and 24 chapters nationwide. It lost support in the following years as it worked with growing intensity to eliminate the influence of communists in the CIO and other labor organizations, and by 1950 its membership declined and many chapters closed. The chapter in New York City lasted until 1973.

Edward T. O'Donnell

Association of Neighborhood Workers. Nonprofit organization formed in December 1900 by Mary Simkhovitch and John Elliott to "effect cooperation among those who are working for neighborhood and civic improvement, and to promote movements for social progress." It met regularly at neighborhood centers, which provided some financial support. The association accomplished much of its work through committees; it investigated conditions in housing, the workplace, and schools; published pamphlets; organized neighborhood groups; produced exhibitions; and promoted legislative reforms. In 1919 it incorporated as the United Neighborhood Houses at 70 Fifth Avenue.

Betty Boyd Caroli

Association of the Bar of the City of New York [ABCNY]. Association organized on 1 February 1870 after Manhattan lawyers were disturbed by the corruption and judicial malfeasance rampant in William M. "Boss" Tweed's government; a petition to organize the bar for "mutual protection and benefit" circulated in December 1869 was endorsed by more than 200 lawyers by late January 1870. William Evarts was chosen as the first president on 15 February and remained in office for a decade. Most original members were Protestant graduates of elite universities who worked for large firms. The association formed law, grievance, and judicial committees in November 1870 and became a model for subsequent bar associations in Brooklyn (1872), New York State (1876), and the nation (1878). It quickly gained influence through its battles with Tweed and assumed the authority to discipline members of the profession and establish ethical standards. In 1884 the ABCNY's responsibility for policing professional conduct was recognized by the appellate division of the state supreme court, which lacked the resources to carry out the task itself. It opened elegant headquarters, first at 20 West 27th Street and then at 7 West 29th Street, while elaborate screening procedures and high fees ensured that membership remained exclusive. Until the 1920s every president of the ABCNY was listed in the *Social Register,* and the organization resisted incorporation into the state bar association. Its conservative leadership opposed David Dudley Field's civil codification of legal precedents, preferring to rely on the traditional but arcane system of common-law precedents. In the 1890s Joseph Choate and Elihu Root led a successful ABCNY campaign that changed the state constitution and established the appellate division that consolidated the process of legal review. In 1896, when the association moved to 42 West 44th Street, a New York City Landmark building designed by Cyrus Eidlitz, it had fewer than 1400 members but enjoyed unparalleled influence. Its plan for international arbitration was presented to the Hague Conference of 1899.

From the 1920s the association consolidated its influence, as its leadership included national figures such as Charles Evans Hughes, Henry L. Stimson, and John W. Davis. A progressive–conservative split among its membership became apparent during a bitter fight that condemned the state legislature for expelling five duly elected socialists (1920). As the society's president from 1924 to 1925, Henry Taft sought to expand membership, only to have his efforts nullified by his successor. In 1929 President Charles C. Burlingham orchestrated investigations of municipal corruption that led to the resignation of Mayor James J. Walker. Not until 1937 did the ABCNY amend its charter to admit women; the first female attorney was installed three years later. Under Harrison Tweed (1945–48) it established the position of executive secretary and began publishing the *Record.* From 1953 to 1956 it led the fight against the Bricker Amendment (which would have empowered Congress "to regulate all Executive and other agreements with any foreign power or international organization"), opposed the American Bar Association by denouncing federal loyalty oaths, and published reports that led to the New York State Court Reorganization Act of 1962.

Long reluctant to recognize the importance of Jewish lawyers in Manhattan, the ABCNY began to appoint them to important committees, and in 1956 elected its first Jewish president, Louis Loeb. Archaic membership requirements were eased during the 1960s, and a more liberal association actively joined social protest movements: it defended the Civil Rights Acts (1964–65), supported the civil rights efforts of Martin Luther King, Jr., and sent 1200 lawyers to Washington, D.C., to protest intervention in Cambodia (1969). By the 1970s some positions on the board were reserved for women and members of ethnic and racial minorities. In 1980, after a century of policing the profession, the association ceded authority for disciplining lawyers but continued to advocate high professional standards, efficiency in the courts, and increasing the number of elective judgeships. In the 1980s and 1990s, the ABCNY worked to reform New York's mental health and divorce laws, encouraged lawyers to work pro bono for charities, and established committees on the environment, sex and law, and consumer affairs. It opposed the nomination of Robert H. Bork to the U.S. Supreme Court, elected Conrad K. Harper as its first black president, and led opposition to American detainee policy during the second Gulf War. In the early twenty-first century it had over 23,000 members and maintained a reference library of almost half a million volumes.

George J. Lankevich

Astor [née Russell]**, (Roberta) Brooke** (*b* Portsmouth, N.H., 30 March 1902; *d* Briarcliff Manor, N.Y., 13 Aug 2007). Philanthropist and socialite. As a child she lived in Beijing and Shanghai. Married at 16 to J. Dryden Kuser, she divorced him and moved to New York with her son, where she studied creative writing at Columbia University. She remarried stockbroker Charles Marshall, who died in 1952, and then worked as a feature editor for *House and Garden.* She married Vincent Astor in 1953 and assisted him in philanthropic pursuits; upon his death in 1959 she devoted herself to the Vincent Astor Foundation. When the foundation closed in 1997, she had overseen the donation of nearly $200 million in grants benefiting cultural and educational organizations, notably the New York Public Library and the Metropolitan Museum of Art, as well as projects for the poor and the disadvantaged. She believed that Astor money, which was made in New York real estate, should be spent in New York. Astor socialized and danced well into her 90s, and the New York Landmarks Conservancy named her a

living landmark in 1996. Astor, who suffered from Alzheimer's disease in her waning years, died at her country home at age 105. Her published memoirs include *Patchwork Child* (1962) and *Footprints* (1980); she also wrote two novels, *The Bluebird Is at Home* (1965) and *The Last Blossom on the Plum Tree* (1986).

Kate Lauber

Astor [née Schermerhorn]**, Caroline (Webster)** (*b* New York City, 22 Sept 1830; *d* New York City, 3 Oct 1908). Society figure. She was born into an established family and was educated in New York City and in France. Determined to lead the city's elite, she married William Astor and with Ward McAllister chose a group known as the "400," named for the number of guests who could be accommodated in her ballroom; her dinner parties, balls, and musicales became well known. After McAllister's death she chose Harry Lehr, a much more flamboyant figure, as his successor. In 1894 she had a mansion built at Fifth Avenue and 65th Street, where she remained until the end of her life.

James E. Mooney

Astor, John Jacob (*b* Waldorf, Germany, 17 July 1763; *d* New York City, 29 March 1848). America's richest man before the Civil War. He began his career as a fur trader in the Pacific Northwest and in March 1784 arrived in New York City, where he lived at what are now 362 Pearl Street (1785–90) and 149 Broadway (1794–1803). In the following years he amassed a real estate empire that included buildings and parcels of land in Manhattan acquired from 1810. Unlike most real estate investors he did not engage in short-term speculation or develop property for sale: instead he bought land at low prices and waited for the market to change and for urban growth to drive up the value of his properties. While waiting for these long-term increases he collected a large income in rents from his extensive commercial and residential holdings, seldom investing in improvements; he generally sold only if he needed money to buy more property and occasionally when values were increasing quickly. After selling his fur business in 1834 he focused solely on real estate in Manhattan, particularly in what is now midtown.

For a time Astor lived at 223 Broadway in a building that became the Astor House hotel in 1836 (demolished 1913) and later at 585 Broadway; he also had a summer home known as "Astoria" or "Hell Gate Farm" at what is now East 87th Street between York and East End avenues. During the panic of 1837 he bought many distressed properties and foreclosed on hundreds of others for which he held or obtained mortgages. By 1840 he was the country's wealthiest man and one of the city's best-known businessmen, owning an estate worth more than $20 million; his urban properties were estimated to have increased ten times in value from the time he purchased them. In twenty-first century terms, his fortune would have been worth more than $100 billion. Shortly before his death he declared: "Could I begin life again, knowing what I now know, and had money to invest, I would buy every foot of land on the island of Manhattan."

When Astor died in 1848, his wealth was already legendary. The *New York Daily Tribune's* obituary stated, "The question is often asked, how rich is Mr. Astor? But who can answer." The New York press pointed out that Astor's fortune reflected the economic success of the city, but that Astor had not left much to the city to show his gratitude; his estate was left to his family. His only major gift to New York was $400,000, which was used to create the Astor Library in 1849. The Astor Library, located at Sixth Avenue and Lafayette Street, opened to the public in 1854 and offered a large collection of free-of-charge noncirculating books. The holdings were later incorporated into the New York Public Library. The Astor Library building became home to the Joseph Papp Public Theater in 1967.

Astor's vast empire was managed by his heirs and descendants into the twentieth century. A great-grandson, William Waldorf Astor, built luxury hotels and apartment buildings in Manhattan during the 1890s, including the Waldorf Hotel, erected on the site of the family's mansions at Fifth Avenue and 34th Street and later merged with the Astoria Hotel (owned by John Jacob Astor IV) to form the Waldorf=Astoria. Astor's great-great-grandson Vincent Astor worked from 1942 with the developer William Zeckendorf to increase the value and returns of the family's holdings, which declined after World War II in a changing market.

Marc A. Weiss

Astor House. A five-story hotel on the west side of Broadway between Barclay and Vesey streets. Designed by Isaiah Rogers in the Greek Revival style for John Jacob Astor and erected in 1834–36, it was the first luxury hotel in New York City. There were many fine public rooms and more than 300 guest rooms, and running water was pumped by steam even to the upper stories before the Croton water system opened in 1842. For several decades the hotel was an internationally renowned meeting place for prominent statesmen and literary figures; it was the site of an impromptu speech by President-elect Abraham Lincoln on 19 February 1861. In its later years newer uptown hotels surpassed its services, and in 1913 construction of the subway system forced demolition of part of the building. The rest was destroyed in 1926.

May N. Stone

Astoria. Neighborhood in northwestern Queens, constituting the part of Long Island City north of Broadway. The area was originally called Hallett's Cove after William Hallett in the mid-seventeenth century. Renamed for John Jacob Astor, who invested $500 in local real estate, it was developed in 1839 by Stephen A. Halsey, a fur merchant. During the 1840s and 1850s it grew slowly inland from the ferry landing at the foot of Astoria Boulevard. Wealthy New Yorkers built mansions on 12th and 14th streets and on 27th Avenue. The German United Cabinet Workers bought four farms in 1869 between 35th and 50th streets and developed a German town. In the following year Schuetzen

Astor House, 1899

Park was laid out at Broadway and Steinway Street. William Steinway, an immigrant piano maker who founded the famous piano company in 1853, bought a large tract on both sides of what became Steinway Street from Astoria Boulevard to the East River. He built Steinway village, home to factories, housing, and community services. In 1870 Astoria, Hunter's Point, Steinway, and Ravenswood consolidated to form Long Island City. Treacherous reefs in Hell Gate were dynamited in 1876 and 1885 at the behest of the federal government.

In the late nineteenth and early twentieth centuries Astoria became a popular residential neighborhood with booming commercial construction spurred on by new bridges and public transport. A signature building style for the area was the six-family apartment building, which created a low-skyline profile for the neighborhood. In 1909 the Queensboro Bridge was finished, connecting the area to Manhattan. The shore of the East River became a park in 1913, and the first rapid transit line, the Astoria elevated, opened on 31st Street on 1 February 1917. The Independent subway connected Astoria to Manhattan in 1933, extending service along Steinway Street and Broadway. On 11 January 1936 the Triborough Bridge (now the Robert F. Kennedy Memorial Bridge) connected it to Manhattan and the Bronx. In the twenty-first century it is connected to Manhattan by four subway lines, two of them elevated lines.

Astoria is home to the Museum of the Moving Image; the Isamu Noguchi Museum; the Socrates Sculpture Park; Astoria Park, site of the city's largest public swimming pool; and Bohemian Hall, the city's oldest beer garden, founded in 1910. The area has been particularly popular for movie and television projects. The Kaufman Astoria Studios, part of which was converted to the Museum of the Moving Image, filmed movies with Rudolph Valentino, the Marx Brothers, and Paul Robeson. In the 1970s the defunct studio was revitalized for television filming, including *All in the Family* and *The Cosby Show*. Astoria has become a popular location for movie shoots, including *Goodfellas* and *A Bronx Tale*.

Always a popular ethnic enclave, Astoria has changed significantly in the past century. Originally populated by Dutch and Germans, it attracted Czechs (Bohemians) and Slovaks in the early twentieth century. After World War II Italians settled there, and by the 1960s it became the center for Greeks. One-third of all Greeks who moved to New York City in the 1980s settled in the neighborhood, and by the mid-1990s they accounted for almost half its population. St. Demetrios Cathedral, one of 11 Greek Orthodox churches in the area, is probably the largest outside of Greece. Greek immigrants who settled in the neighborhood received aid from the Hellenic Americans Neighborhood Action Committee, a locally based social services agency.

At the start of the twenty-first century Astoria was one of the most diverse neighborhoods of New York City, attracting a broad array of ethnic groups. While the Greek population remained large, the area included Brazilians, Colombians, Bangladeshis, Chinese, Guyanese, Koreans, Ecuadorians, Romanians, Indians, Filipinos, Albanians, and Bosnians. Astoria's Arab population included immigrants from Lebanon, Egypt, Tunisia, Yemen, and Morocco, all of whom settled in the Steinway Street area in the 1990s.

Lisa Keller, Vincent Seyfried

Astoria Federal Savings and Loan Association. Thrift institution, formed in 1888 as the Central Permanent Building and Loan Association by residents of Long Island City. Soon one of the chief lenders of home mortgages in Queens, in 1937 it adopted its current name and built headquarters at 37-16 30th Avenue in Long Island City. It opened branches in Ditmars, Forest Hills, and Flushing from the late 1950s, merged with the Metropolitan Federal Savings and Loan of Middle Village (1973), and bought Citizens Savings and Loan of Woodside (1979) and the Whitestone Savings and Loan (1990). The firm moved its headquarters in 1989 to Bulova Corporate Center in Jackson Heights. In 1997 it acquired the Greater New York Savings Bank. By the early twenty-first century, Astoria Federal was the largest thrift depository headquartered in New York, with deposits of $13.1 billion.

James Bradley

Astoria Silk Works. Factory in Astoria, Queens, established in 1820. Part of the West Point foundry owned by Gouverneur Kemble, it was one of two factory sites; the other was in Cold Springs, Long Island. Astoria Silk Works was owned by investors that included Jacob Ruppert and William Steinway. The mill was located on Steinway Avenue (now Street) near Potter Avenue (now 23rd Avenue). It was composed of brick buildings, marked by "ASW," that still stand today. A fire in 1914 closed the factory permanently.

Jessica Montesano

Astoria Studio. See Kaufman Astoria Studios.

Astor Library. See New York Public Library.

Astor Place. Neighborhood on the East Side of Manhattan, bounded to the north by Eighth Street, to the east by Third Avenue, to the south by Fourth Street, and to the west by Broadway. On 10 May 1849 the Astor Place Riot broke out at the Astor Place Opera House on a site now occupied by the District 65 Building (1890, George E. Harney), which houses the district offices of the United Auto Workers. For a brief period before the Civil War some of the city's wealthiest families lived at Astor Place, including the Astors, the Vanderbilts, and the Delanos. By the 1860s manufacturing and warehousing concerns moved into the neighborhood, which fell into disrepair after the turn of the twentieth century. It was revitalized in the 1960s and 1970s as a shopping district catering largely to students, and Broadway and Fourth Street became lined with shops selling clothes, records, books, and novelties. Notable buildings in the neighborhood include the Astor Place Building at 444 Lafayette Street (1876, Griffith Thomas), an attractive structure of brick and painted cast iron; and 428–34 Lafayette Street, which is all that remains of a once-elegant row of buildings known as Colonnade Row (1833). The Public Theater, in a building that once housed the Astor Library and from 1921 to 1965 was the headquarters of the Hebrew Immigrant Aid Society, is where the producer Joseph Papp first staged the musicals *Hair* and *A Chorus Line;* it is now a complex of seven performance spaces for plays, concerts, films, and readings and also houses the headquarters of the New York Shakespeare Festival. A subway station at the corner of Eighth and Lafayette streets, restored in 1986, has a cast-iron replica of the original kiosk and bas-relief ceramic plaques depicting beavers, an allusion to the fur trade, in which John Jacob Astor made his first fortune. Balanced en point between Lafayette Street and Fourth Avenue is Bernard Rosenthal's steel cube *Alamo* (1967). The magnificent Cooper Union Foundation Building (1859) dominates Astor Place between Third and Fourth avenues. In the early twenty-first century the area has experienced a gentrifying influence, especially from New York University students.

Linda Elsroad

Astor Place Riot. Violence that occurred from 10 to 11 May 1849 at the Astor Place Opera House, triggered by a feud between the English actor William C. Macready and the American actor Edwin Forrest. See Riots.

Astral Apartments. Housing project at 184 Franklin Street between Java and India streets in Greenpoint, Brooklyn, built in 1886 for kerosene refinery workers and Charles Pratt's Astral Oil Company nearby. A Queen Anne structure a block long with many entrances, it became known for its light and airy rooms. There was a settlement house, library, and kindergarten on the premises. At the

beginning of the twenty-first century, the Astral Apartments remained a monument to the hopes of nineteenth-century housing reformers.

Kenneth T. Jackson

AT&T. See American Telephone and Telegraph.

Atlantic Basin. Basin constructed in the mid-1800s in a swampy area of south Brooklyn known as Red Hook to accommodate shipping. Along with Erie Basin in the same area, it was a relatively rare feature in U.S. seaports. Construction was begun in 1841 on the shore of Buttermilk Channel directly opposite Governors Island. It was eventually completed in the form of a large H parallel to the channel, adding many berths for cargo transfer to the Brooklyn waterfront. Most berths were lined with cargo sheds, but large multistory warehouses were built on the inland side of the basin with grain elevator towers, making Atlantic Basin an important facility for the shipment of grain. The original brick warehouses were replaced with fireproof reinforced concrete warehouses early in the twentieth century. Atlantic Basin and the second-generation warehouses survive into the twenty-first century. The warehouses underwent preliminary renovation for conversion into apartments, but the stevedoring company operating the Red Hook Container Port immediately to the north would like to see them returned to warehouse use. The outer berth south of the entrance to Atlantic Basin is now a passenger terminal built specifically for the Cunard ocean liner *Queen Mary 2*.

Norman J. Brouwer

Atlantic Mutual Insurance Company. Chartered by the state legislature on 11 April 1842, it opened offices at the corner of Wall and William streets and took over the business of a former marine insurer, Atlantic Insurance, a stock company established in 1824. The appeal of the reorganized firm to shipowners and merchants seeking a share of the profits from marine insurance lay in its structure as a mutual firm (owned by policyholders rather than stockholders). A reinsurance agreement with the Insurance Company of North America enabled it to provide larger amounts of insurance for single ships. Under the leadership of Walter Restored Jones, Atlantic Mutual prospered while American clipper ships were in demand: it was the only major American mutual marine insurer to survive the intense competition from British companies at the end of the nineteenth century. Even as the market for marine insurance was declining, the firm expanded by organizing subsidiaries in 1931 to provide fire and casualty insurance. Except for the disastrous year of 1854 it paid a dividend every year for a century and a half. Located at 100 Wall Street, it employed 1200 people and had sales of $93 million in 2007.

Robert J. Gibbons

Atlantic Yards. Large rail yard complex located in central Brooklyn adjacent to the intersection of Flatbush and Atlantic avenues and operated by the Long Island Rail Road and the Metropolitan Transit Authority. A predecessor to the Long Island Rail Road built a line in 1836 to the end of Atlantic Avenue at the East River to connect with a ferry to Manhattan, although efforts to restrict or outlaw steam locomotives by the City of Brooklyn led to construction of a tunnel and the use of horses; the line west of Flatbush Avenue was abandoned in 1877. The freight-handling facilities at Flatbush Avenue were expanded over the next century, but in 2008 they were the focus of a large-scale redevelopment project that would be built over them and include a basketball arena, hotel, retail and office space, and middle-income and market-rate housing, along with landscaped public spaces. The project encountered opposition from neighborhood residents concerned about potential crowds and traffic, lack of low-income housing, and the condemnation of adjacent buildings. As of 2010, however, the project had received court approval and was slated to proceed.

Norman J. Brouwer

Atlantic Basin, 2009

Atlantic Yards, 2009

Atterbury, Grosvenor (*b* Detroit, 7 July 1869; *d* Southampton, N.Y., 18 Oct 1956). Architect and planner. He grew up in New York City and after graduating from Yale University studied architecture at Columbia University; he later joined the firm of McKim, Mead and White and received a patent for prefabricated construction materials. Some of his first commissions were for country houses and townhouses of family and friends, followed by model tenements on East 31st Street and Forest Hills Gardens in Queens, a development of prefabricated houses that became a model for garden suburbs. He also helped to design City Hall, another building for the Russell Sage Foundation at Lexington and 22nd Street, the American Wing of the Metropolitan Museum of Art, and the Amsterdam Houses. Atterbury formed the National Housing Association and the National City Planning Institute and was president of the Architectural League of New York.

James E. Mooney

Auburndale. Neighborhood in north central Queens. It was laid out in 1901 by the New England Development and Improvement Company on 90 acres (36 hectares) of farmland previously owned by Thomas Willet, the first mayor of New York City, and bounded to the north by Crocheron Avenue, to the east by Auburndale Lane, to the south by Northern Boulevard, and to the west by the Clearview Expressway. A railroad station was opened by the Long Island Rail Road in May 1901. The name is derived from that of Auburn, Massachusetts, hometown of the president of the company. It is home to the Flushing Cemetery, established in 1853, and borders on the Kissena Park Golf Course and Kissena Park. At Martins Field on 46th Avenue between 164th and 165th streets lies an old African American and Native American cemetery that was paved over to build a playground opened in 1935. In the early twenty-first century Auburndale was a residential suburb of one-family brick houses and tree-lined streets known for its fine homes and well-kept neighborhood.

Vincent Seyfried

Auchincloss, Louis (Stanton) (*b* Lawrence, N.Y., 27 Sept 1917; *d* New York City, 26 Jan 2010). Writer and lawyer. He grew up in New York City, joined the law firm of Sullivan and Cromwell, and from 1954 until his retirement in 1987 practiced law at the firm of Hawkins, Delafield and Wood on Wall Street. He also served as president of the Museum of the City of New York from 1966 to 1990. He authored 31 novels, 17 nonfiction works, and 17 short-story collections. Auchincloss is often regarded as a novelist of manners in the tradition of Henry James and Edith Wharton. *Tales of Manhattan* (1967), *Skinny Island* (1987), and *Manhattan Monologues* (2002) center around life in New York City. He received the National Medal of Arts in 2005.

B. Kimberly Taylor

auction system. The auction system of sales dates to the early years of colonial rule, with the first regulatory laws enacted in 1676. The state in 1784 passed a tax of 2½ percent on goods sold at auction. In 1801 the law allowed for 24 auctions licenses, a number increased to 36 in 1813. Yet auction sales amounted to little until the Jeffersonian Embargo of 1807 and the British blockade during the War of 1812 created the conditions for the vast expansion of auction sales. Denied access to their largest foreign market for almost a decade, British manufacturers were eager to rid themselves of excess inventories, and at the same time Americans were eager for British imports. Auctions allowed British manufacturers to reduce inventories and quickly reestablish their market dominance. Manufacturers' agents based in New York City sold directly to auction houses and offered long credit periods of 12 to 18 months. In 1817 the city consolidated its dominance of the auction trade by passing laws lowering the tax on auction sales and requiring that all goods put up for auction be sold regardless of the price offered. Opportunities for bargains drew rural retailers and (more importantly) local jobbers who assembled various goods into packages for rural retailers while offering one-year credits. In turn the auction houses made the most of their money by offering six and eight months' credit, called *del credere,* to the large jobbers and shorter credits to rural retailers. The dominance of auction sales was felt in the 1820s when $160 million passed through such important auction houses as John Hone and Sons; Hicks, Lawrence, and Company; and Haggerty and Austin. This figure accounted for 44 percent of the city's imports and a fifth of the nation's.

At first auctions outraged traditional merchants. Having bought quantities of goods in the months immediately following the peace of 1815, merchants were caught with inventories at high and inflexible prices in a quickly glutted market. The dominance of auctioneers produced a futile political backlash among regular merchants, who mounted an unsuccessful slate of candidates in the elections of 1828. The merchants' economic response proved more successful. After 1830 American merchants began sending representatives to Europe, and by offering immediate cash sales to manufacturers they regained control over the import trade. Specializing in one line of business and buying in quantity allowed for more competitive pricing.

After peaking in the late 1820s auction sales stagnated during the 1830s at about $160 million for the decade. This figure, the same as that for the preceding decade, now represented less than 20 percent of the city's vastly expanded trade. Ultimately, auction sales were destroyed by the credit crunch of 1836–37 and the subsequent depression: because of their low selling prices, auctioneers' profits accrued from the credit they offered their customers, and they suffered when credit dried up after 1836. Despite its brief history the auction system radically transformed the ways goods were sold throughout the United States.

James Ciment

Auden, W(ystan) H(ugh) (*b* York, England, 21 Feb 1907; *d* Vienna, 28 Sept 1973). Poet and writer. He grew up and was educated in England, where he became well known as a writer before moving to New York City in 1939. During World War II he abandoned Marxism and became an Anglican. He lived at 7 Cornelia Street from about 1945 until 1953, when he moved to quarters at 77 St. Mark's Place, remaining there until April 1972. His long poem *The Age of Anxiety* (1947), set in a bar and an apartment in the city, won the Pulitzer Prize. Auden also wrote librettos for operas including Igor Stravinsky's *The Rake's Progress* (1951), edited collections of poetry, and taught at Oxford University and a number of colleges in the city.

James E. Mooney

Audubon, John J(ames) (*b* Les Cayes [now in Haiti], 26 April 1785; *d* New York City, 27 Jan 1851). Artist and ornithologist. He worked as an apprentice clerk in New York City in the winter of 1806–7 and practiced taxidermy for Samuel Latham Mitchill. During 1808–26 he engaged in the study of birds, working in various capacities around the United States, and in 1824 he became a member of the Lyceum of Natural History. In 1826 he traveled to England, where he found a publisher for *Birds of America*, a series of his watercolors engraved by Robert Havell, Jr.; the series was published in installments between 1827 and 1838 in London, where he sought subscribers and exhibited the original watercolors for the prints in 1839. He settled with his family at 86 White Street in New York City in 1836. The mayor granted him permission in 1841 to shoot rats on the Battery at dawn in order to obtain specimens for the illustration of his *Viviparous Quadrupeds of North America* (1845–48). In the early 1840s he bought a parcel of 24 acres (10 hectares) overlooking the Hudson River near what is now 155th Street and Audubon Terrace; he built a mansion there and named the estate Minnie's Land after his wife. He died at Minnie's Land and was buried in Trinity Cemetery. In 1863 the New-York Historical Society purchased

John J. Audubon, American Avocet *(1821)*

from his widow 430 of the 433 original watercolors in *Birds of America* for $4000.

Susan M. Sivard

Audubon Park. An obsolete name for a hilly plot of land in northern Manhattan, bounded to the north by 156th Street, to the east by Amsterdam Avenue, to the south by 153rd Street, and to the west by the Hudson River. It was part of the site in 1776 of the Battle of Washington Heights. In 1841 the land was acquired by John J. Audubon, who named it Minnie's Land and built his estate there. In the following year he sold a parcel of 23 acres (9 hectares) to Richard F. Carmen; in 1843 this became Trinity Cemetery, where Audubon is buried under a runic cross 16 feet (5 meters) tall. Much of the rest of the land is occupied by the museums and institutions of Audubon Terrace.

George Bird Grinnell, *Audubon Park: The History of the Site* (New York: Trustees of Audubon Park, 1927)

Rachel Shor

Audubon Terrace. Beaux-arts complex on Broadway between 155th and 156th streets in Manhattan, built as an educational and cultural center by Archer Milton Huntington (1870–1955), a railroad magnate, philanthropist, and devotee of Hispanic culture. In 1904 Huntington bought sections of Audubon Park, the former estate and game preserve of the naturalist John J. Audubon and formed the Hispanic Society of America, dedicated primarily to establishing a free public museum and library for the study of Hispanic culture. The nucleus of its holdings consisted of books, paintings, sculptures, architectural fragments, and examples of the decorative arts that Huntington had collected from the Iberian peninsula. The Italianate headquarters of the society were designed by his cousin Charles Pratt Huntington and opened in 1908. Anna Hyatt Huntington, Archer's wife, produced the equestrian statue of El Cid in the courtyard, the lions flanking the doorway of the society, and the bas-reliefs of Don Quixote and Boabdil in its library. During the next few decades Charles Pratt Huntington designed much of the rest of the complex, including the buildings for the American Numismatic Society (built 1906–7), the Church of Our Lady of Esperanza (1909–11, the second Spanish Roman Catholic Church in New York City), the American Geographical Society (1909–11), and the Museum of the American Indian (1916–22). Those for the American Academy of Arts and Letters and the National Institute of Arts and Letters (1921–30) were designed in an Italian Renaissance Revival style by William Mitchell Kendall of McKim, Mead and White and Cass Gilbert. As the surrounding neighborhood of Washington Heights changed, the institutions of Audubon Terrace, which was designated a city historic district in 1979, attracted fewer patrons. The Geographical Society moved in the early 1970s and was replaced by Boricua College, which serves the Latino community. The Smithsonian Institution took over the Museum of the American Indian in the 1980s and moved most of the collections to Washington, D.C.; the remainder became the George Gustav Heye Center of the National Museum of the American Indian at the U.S. Custom House in lower Manhattan. The American Numismatic Society left in 2004 and sold its building to the Academy of Arts and Letters.

Ella M. Foshay

Audubon Theatre and Ballroom. Building at Broadway and West 165th Street that covered a full block and contained a 2368-seat theater, street-level retail space, offices, and a ballroom on the second story. It was designed by Thomas W. Lamb and built in 1912 by Hungarian immigrant William Fox; the Audubon was known for its polychrome terracotta facade on Broadway, adorned with a line of three-dimensional fox heads. One of the first theaters in Fox's chain, it showed films and presented vaudeville shows; by the 1920s Fox had built a film production empire worth $300 million. After the Depression he lost his fortune and was jailed for fraud; the Fox Film Corporation merged with Twentieth Century Pictures in 1935 and became Twentieth Century–Fox Film Corporation. The theater was successively called the Beverly Hills and the San Juan. During the 1930s the ballroom was the site of efforts to organize transit workers. The IRT Brotherhood and Transport Workers Union of America both met there, with labor leader Michael Quill in attendance. In 1964 Malcolm X formed the Organization of Afro-American Unity and held weekly meetings in the ballroom; in February 1965 it was the site of a rally during which he was assassinated. The Audubon was closed and the city took ownership when back taxes accumulated. Columbia–Presbyterian Medical Center announced plans to demolish the deteriorating Audubon and to build a new research center during the late 1980s; the announcement met with opposition from preservation groups that stressed the building's importance to the history of the civil rights movement. Columbia compromised and restored portions of the facade and ballroom; the Malcolm X and Dr. Betty Shabazz Memorial and Educational Center, designed by Davis Brody Bond, opened there in 2005. Most of the building was incorporated into the Audubon Biomedical Science and Technology Park, managed by Columbia and jointly developed by the university and the state and city of New York.

Eric Wm. Allison, Kate Lauber

Austen, (Elizabeth) Alice (*b* Staten Island, N.Y., 17 March 1866; *d* Staten Island, 9 June 1952). Renowned photographer. Born to a middle-class family, she learned techniques of photographic processing at an early age. She depicted the life of the middle class in the 1890s by photographing objects and buildings, as well as everyday events and unusual pastimes in her circle of friends; Austen also photographed scenes in lower Manhattan, including many that captured the animation and vitality of immigrant street life. Photographs, such as *Hester Street: Egg Stand* (18

April 1895), were taken solely for her own interest and pleasure. Emotionally more distant than the work of her contemporaries Jacob A. Riis and Lewis Hine, her photographs are elegantly composed and display fine technique. In her later years Austen supported herself with income from an inheritance, the value of which was drastically reduced by the stock market crash of 1929, so she was forced to vacate her home, Clear Comfort, on bluffs overlooking New York Bay. Just before her death, her work was acquired by the Staten Island Historical Society. Later her home was preserved as a landmark and is now open to the public as a museum.

Naomi Rosenblum

Auster, Paul (Benjamin) (*b* Newark, N.J., 3 Feb 1947). Writer. A graduate of Columbia University (1970), Auster spent several years as a translator in France in the mid-1970s before returning to the United States in 1979. He has received international recognition for his fiction and nonfiction pieces, often set in New York, such as *The Invention of Solitude* (1982), *The New York Trilogy* (1987), *Timbuktu* (1999), and *The Brooklyn Follies* (2005). Auster, one of the more prominent postmodern American writers, is noted for his absurdist crime-fiction works, for his conflation of French metaphysical and American transcendental thought, and for his use of the New York landscape (especially Brooklyn). He has lived for many years in Park Slope and has been vice president of the PEN American Center.

Cecilia Magnusson

automats. Self-service restaurants operated by the Horn and Hardart Company of Philadelphia; the first in New York City opened at 1557 Broadway in Times Square on 2 July 1912. Initially automats offered only buns, beans, fish cakes, and coffee (widely considered the best in the city). Each item cost five cents, was displayed in a compartment behind a glass door, and was bought by dropping a nickel into a slot. By the early 1930s the automats introduced a full range of lunch and dinner entrees. Soon a symbol of life in the city, automats reached the height of their popularity during the 1940s and 1950s, when more than 50 automats in the city served more than 350,000 customers a day. In 1952 Horn and Hardart raised the price of coffee to ten cents, news met with grief by New Yorkers who regarded the nickel coffee of the automats as one of life's great certainties. After fast-food restaurants opened in the early 1970s automats declined in popularity; during the 1970s and 1980s Horn and Hardart replaced many automats with Burger King restaurants. The last automat in the city stood at 42nd Street and Third Avenue and closed on 8 April 1991.

James Bradley

automobile manufacture. During the first decade of the twentieth century New York City was a center for the manufacture of steam and electrically powered vehicles for both passenger and freight transport. In 1900 six factories that together employed nearly 500 people manufactured automobiles in the city. The largest producer of electric cars, the Electric Vehicle Company, made cars in factories just outside the city limits but was owned by financiers on Wall Street. In 1899 the firm launched a fleet of taxicabs in several major cities, and several hundred ran on the streets of New York City. By 1916 the internal combustion engine had proved itself more powerful, reliable, and cost-effective than its competitors, and the automobile industry shifted to the Midwest, the center for the development of gasoline-powered automobiles that ran on internal combustion engines.

Joanne Abel Goldman

Autrey, Wesley (*b* New York City, 1956). Construction worker known variously as the Subway Hero or Subway Samaritan for a random act of bravery in New York City. On 3 January 2007 he and his two daughters were waiting for a downtown no. 1 train at 137th Street and Broadway. As the train approached Cameron Hollopeter, a 19-year-old student at the New York Film Academy, suffered a seizure and fell off of the platform onto the tracks. Autrey jumped to the track bed, covered the ailing passenger with his body, and pressed him into the roughly 1-foot-deep (30.5-centimeter deep) trench between the rails as the train passed overhead. The pair remained under the train until workers were able to shut down the electrified third rail and free them. Both he and Hollopeter suffered only minor injuries. As a result Autrey garnered national and even international acclaim for his courage. In the aftermath of the event Autrey received New York City's Bronze Medallion from Mayor Michael Bloomberg, $10,000 from Donald Trump, and $5000 in cash plus $5000 in scholarship money for each of his daughters from the New York Film Academy. The Metropolitan Transit Authority (MTA) rewarded him with a year's worth of free subway rides. On 23 January 2007 Autrey attended the State of the Union address in Washington, D.C., and was honored by President George W. Bush. In late 2008 Autrey announced his intentions to start a foundation aimed at keeping children off of the street.

Michael C. Repka

Avedon, Richard (*b* New York City, 15 May 1923; *d* San Antonio, Tex., 1 Oct 2004). Photographer. Son of Russian-Jewish immigrants

Berenice Abbott, Automat (ca *1935*)

in New York City, he briefly attended DeWitt Clinton High School and was appointed poet laureate of the New York City high schools. After studying at Columbia University (1941–42), serving in the U.S. Marine Corps (1942–44), and studying photography at the New School for Social Research, he joined *Jr. Bazaar* in 1945, later moving to *Harper's Bazaar*. During these years he worked principally as a fashion photographer. From 1966 his photographs appeared in such varied publications as *Vogue* and *Rolling Stone*. Over the years his work covered a wide range, from portraits to journalistic photographs of the civil rights and antiwar movements. Published collections of Avedon's photographs include *Observations* (1959), *Nothing Personal* (1964), *Portraits* (1976), *Avedon Photographs, 1947–1977* (1978), *In the American West* (1985), and *Evidence, 1944–1994* (1994). His work is also held in the permanent collections of the Metropolitan Museum of Art, the Smithsonian Institution, and the Victoria and Albert Museum. He was the visual consultant for the film version of George Gershwin's musical *Funny Face* (1956).

Shan Jayakumar

aviation. The first "aeronaut" born in the United States, Charles Durant of Jersey City, New Jersey, made a 30-mile (48-kilometer) balloon flight on 9 September 1830, commencing at Castle Garden in lower Manhattan and witnessed by more than 30,000 spectators. Similar exploits remained popular with New Yorkers throughout the nineteenth century: the first major attempt to fly across the Atlantic took place in Brooklyn in 1873.

In 1906 James Gordon Bennett, Jr., publisher of the *New York Herald,* sponsored the first international aviation races, which were staged in New York City the following year. In 1910, by which time the city had more than a dozen firms catering to flyers, the world's largest air meet to date was held at Belmont Park, just outside the city limits. European and American aviators raced inside the park, then ended the meet with a dash across New York City, around the Statue of Liberty, and back to Belmont. Among several bankers who played an important role in promoting aviation in its early days were August Belmont and Cornelius Vanderbilt, who financed the manufacture of the Wright brothers' airplanes after 1909. The first transatlantic flight was launched in 1919 from Rockaway Naval Air Station (later Jacob Riis Park). In New York City, as elsewhere, one of the first practical uses of the airplane was the delivery of mail. From 1918 the U.S. Army Air Corps delivered mail destined for the city to Belmont Park, but this arrangement proved unsatisfactory. Newark Airport in New Jersey was designated the airmail terminus for the city by the United States Postal Service after the Kelly Act (1925), which allowed the letting of contracts with private carriers.

Colonial Airways established the first regular flights from the metropolitan region on 18 June 1926, with service to Boston. The manufacture of airplanes and related equipment became an important local industry. In 1929, 34 firms in the city and in nearby communities on Long Island were involved in aviation, including Curtiss–Wright Aviation Company, Curtiss Airports Corporation, Fairchild Aviation Corporation, and Sikorsky Aircraft; Wright engines were manufactured in suburban Paterson, New Jersey. The New York, Rio, and Buenos Aires line, based in Manhattan and led by Ralph O'Neill, began international seaplane service in 1930. With the connivance of the post office this line was taken over in 1930 by Pan American Airlines, based in suburban Port Washington, Long Island, and led by Juan Trippe. Pan American also used seaplanes, which at the time were both larger and easier to fly into the city than land planes. Daniel Guggenheim's Fund for the Promotion of Aviation sponsored important innovations in the late 1920s and 1930s and in 1929 helped form the first modern airline in the nation (Western).

By this time it was apparent that the city needed to build a new airport or expand an existing one. Roosevelt Field, the starting point for Charles Lindbergh's transatlantic flight in 1927, was considered too remote from the city's post office, and Mayor James J. Walker believed that there was insufficient space for expansion at Holmes Field (in Jackson Heights) or at Glenn H. Curtiss Airport (later North Beach Airport, now La Guardia Airport). Walker instead favored building an airport on Governors Island, but cost and military considerations foreclosed this plan, as well as a plan widely backed in 1930 for an artificial island of 783 acres (317 hectares) between Governors Island and Staten Island, complete with subway connections. In 1930 the city decided on Barren Island in Brooklyn. The following year the Ludington Line introduced hourly flights between Newark and Washington, D.C., and a flying school based in North Beach began scheduled sightseeing flights between Newark and North Beach Airport. By 1934 the airport at Barren Island was completed. Named for Floyd Bennett, a member of Admiral Richard Byrd's expedition to the North Pole, this field covered 367 acres (149 hectares) and accommodated the first scheduled land-plane service in the city (by American Airlines), but poor accessibility to Manhattan precluded airmail service. Some airlines continued to use Newark Airport, which after a major expansion in 1928–29 became the busiest airfield in the world. Several triumphant flights during what is considered the heyday of aviation (1929–39) ended in the city, including Howard Hughes's circling of the globe in three and a half days in 1937.

The dominant commercial position of the city, its topography, and its large population combined to make it a leader in domestic and international aviation and in related industries in the late 1930s. When La Guardia Airfield opened in 1939, it handled more than 250 flights a day in its first year of operation, giving New York City the heaviest air traffic in the United States. By 1938 the number of manufacturers of airplanes and related equipment in the region had fallen to 12 (reflecting consolidation during the Depression), but among these were such large firms as Fairchild, Grumman Industries, North American Aviation, and Chance–Vought Industries. World War II brought prosperity to these manufacturers and others in the area, notably Charles L. Norden and Company (1929–49), which produced the Norden bombsight in both Manhattan and suburban White Plains, New York.

The opening in 1948 of Idlewild International Airport (now John F. Kennedy International Airport) and the Port of New York Authority's takeover in 1947–48 of Idlewild, La Guardia, Newark, and Teterboro airports strengthened the position of the city as an innovator in regional airport planning and as the dominant force in intercontinental air travel. American Overseas Airlines (a subsidiary of American Airlines) began transatlantic land-plane service from La Guardia Airport on 25 October 1945; it was followed by Trans World Airlines on 5 February 1946 and by Pan American soon after. Commercial jet service began in New York City on 4 October 1958, with flights to London on the Comet IV by British Overseas Airways.

Plans for a fourth large airport in the region foundered in the 1960s, but New York City retained a central role in several new developments in aviation, including the establishment of the first modern air shuttle (by Eastern Airlines in 1961 to Boston and Washington, D.C.) and the introduction of the Boeing 747 (by Pan American). Military aviation manufacturing continued to prosper on Long Island: North American Aviation produced the F-105 (to 1986) and the A-10, Grumman the F-14 "Tomcat," the A-6A, and the space shuttle. In 2007 the three major airports in greater New York served more than 109 million passengers and employed about 65,000 people.

Paul Barrett

Avon Products. Global firm of cosmetics manufacturers formed in 1886 by David McConnell as the California Perfume Company. Originally a door-to-door Bible salesman based in Manhattan, McConnell began including a free vial of perfume with each book purchase as an incentive. He joined the cosmetics industry when he realized that his perfume was more popular than his Bibles. His company operated from a warehouse at 126 Chambers Street, and the products were manufactured in Suffern, a town in nearby Rockland County, New York. In 1939 the firm took the name Avon Products, Inc., in honor of Shakespeare's Stratford-on-Avon. After World War II it maintained McConnell's original door-to-door approach and grew into the world's largest direct seller of beauty-related products, with 5.1 million independent representatives and sales of $8.1 billion in 2005. Although the firm dispersed most of its manufacturing plants and administrative staff across the country in 1986, it still maintained corporate headquarters at 1251 Avenue of the Americas in Manhattan in the early twenty-first century.

Ayres, Anne (*b* London, 3 Jan 1816; *d* New York City, 9 Feb 1896). Nun. An admirer and associate of William Augustus Muhlenberg, the Episcopal rector of the Church of the Holy Communion, she dedicated herself to celibate religious service. Although no Episcopal sisterhoods existed at the time, she was unilaterally consecrated a sister of the Holy Communion by Muhlenberg in 1845. In 1859 she undertook the organization of his most ambitious enterprise, St. Luke's Hospital, on Fifth Avenue between 54th and 55th streets.

Allen C. Guelzo

B

Bacall, Lauren [Perske, Betty Jean] (*b* New York City, 16 Sept 1924). Actress. After working briefly in the theater she made her film debut opposite Humphrey Bogart in *To Have and Have Not* (1944), loosely based on the novel by Ernest Hemingway, in which she spoke the memorable phrase "If you want something, just whistle." She became known for her portrayal of assertive, elegant women and her languid delivery of scathing lines. One of her most celebrated roles was that of the older sister in a motion picture adapted in 1944 from Raymond Chandler's novel *The Big Sleep,* in which she engages in witty exchanges with Bogart. She married Bogart in 1945 and after settling in New York City continued to appear in plays (*Cactus Flower,* 1966–68), musicals (*Applause!,* 1969–71, winning a Tony Award for her portrayal of a fading actress modeled after Tallulah Bankhead), and films (*Harper,* 1967; *Murder on the Orient Express,* 1974; *Health,* 1980). Bacall wrote several books, including the autobiography *By Myself and Then Some* (2006), and lived for decades at the Dakota at 72nd and Central Park West.

S. D. R. Cashman

Bache and Company. Investment bank. Founded in 1879 in Manhattan, it was originally called Leopold Cahn and Company. Jules Bache, the nephew of the founder, renamed the company J. S. Bache and Company in 1892. By the turn of the twentieth century, the company was a leader on Wall Street, with seats on several stock exchanges. When Jules Bache died in 1944, his nephew, Harold Bache, became the head of the company and shortened its name to Bache and Company. It became a publicly traded company in 1971. In 1981 Bache and Company was acquired by Private Finance Initiative for $385 million. In 2007 the company was rebranded Bache Commodities, and as of 2010, in the United States, it operated as Prudential Bache Commodities.

Jessica Montesano

Badillo, Herman (*b* Caguas, Puerto Rico, 21 Aug 1929). Congressman, borough president, and deputy mayor. Orphaned at an early age, Badillo moved in 1941 to East Harlem, where he was raised by his aunt, Aurelia Rivera. He lived briefly near Chicago and Los Angeles, and then returned to New York City, where he graduated from Haaran High School (1947), City College of New York (1951), and Brooklyn Law School (1954). A progressive liberal as a young man, Badillo immersed himself in the organizational activities of the community, becoming involved in confrontational issues such as bilingual education, the establishment of Hostos Community College, and numerous other initiatives dedicated to advancing the Puerto Rican community. He became one of the first Puerto Rican political leaders in the city to achieve prominence in the Democratic Party. He served as commissioner of the city's Department of Relocation (1962–65); the first Puerto Rican borough president of the Bronx (1966–69); and the first Puerto Rican voting member of the U.S. House of Representatives, representing the city's 21st district (1970–77). Badillo ran unsuccessfully for the mayoralty in 1969, 1973, 1977, 1981, and 1985. He was a deputy mayor under Edward I. Koch. In 1993 Badillo was part of the fusion ticket formed by the mayoral candidate Rudolph W. Giuliani, remaining a registered Democrat but nominated for the office of comptroller by the Republican and Liberal parties; he lost the election to Alan G. Hevesi, but served as Mayor Giuliani's special counsel on educational policy. In 1999 Governor George Pataki appointed Badillo chairperson of the City University's board of trustees. Badillo formally joined the Republican Party and ran for mayor in 2001, losing the primary to Michael Bloomberg. More conservative in his later years, in the early twenty-first century he continued to practice law in New York City and became a senior fellow of the Manhattan Institute of Policy Research.

Herman Badillo, *One Nation, One Standard: An Ex-Liberal on How Hispanics Can Succeed Just Like Other Immigrant Groups* (New York: Sentinal HC, 2007)

Virginia Sánchez Korrol

bagels. Ring-shaped rolls first produced in Poland in the seventeenth century, made with malt (rather than sugar) and high-gluten processed flour, then boiled and baked, for a crisp outer crust and a chewy inside. The New York City bagel is typically fluffier and softer than the bagels from Montreal and other eastern European varieties. Eastern European Jews brought the bagel to New York City during the 1880s, and it soon became closely associated with the city. They were sold by street vendors who carried them around on dowels through the hole in the middle. In 1907 the International Bagel Bakers Union was founded in New York City, joining 300 local bakers together. Only sons of union members could know the secrets of the trade, making bagel apprenticeship more competitive than medical school admission during the years following the union's conception. Bagel Bakers Local 338, based in New York City, had nearly 300 members by 1915. By the 1950s the popularity of bagels extended beyond Jewish neighborhoods and continued to spread during the 1960s with the development of the bagel-making machine (before which they were produced by four-person teams: two rolled the dough, one boiled the dough, and one baked the bagels) and the frozen bagel.

Thomas M. Hilbink, Cecilia Magnusson

Baha'is. Members of a religion founded in 1897 in Persia by followers of Baha'u'llah (1817–92), a Persian nobleman whom adherents of the faith accept as the last messenger of God after Muhammad. The Baha'i religious community in New York City numbers about 900 ethnically diverse followers in the metropolitan area. Followers are committed to the elimination of prejudice, the equality of women, the achievement of universal education, and tolerance of all religions; the religion is governed through local, self-governing communities. The Baha'i Center on East 11th Street and First Avenue in lower Manhattan provides public meetings, including weekly jazz and children's theater programs, worship services, and offices for the local assembly. New York City was home to the Second Baha'i World Congress (1992) held at the Jacob K. Javits Convention Center and attended by nearly 30,000 individuals, according to organizers.

Leyli Shayegan

Baker, Ella Josephine (*b* Norfolk, Va., 13 Dec 1903; *d* New York City, 13 Dec 1986). Civil rights leader. She lived in Littleton, North Carolina, from the age of eight. After graduating from Shaw University she moved to New York City in 1927. During the Depression she taught consumer education in Harlem for the Works Progress Administration and also helped to organize the Young Negroes' Cooperative League and chapters of the National Association for the Advancement of Colored People (NAACP) throughout the South. She directed the branch of the association in the city during World War II and in 1953 ran unsuccessfully as a Liberal for a seat in the state assembly. At the request of Martin Luther King, Jr., she led the Southern Christian Leadership Conference in 1958. After a meeting of sit-in protesters at Shaw University in 1960, she helped to form the Student Nonviolent Coordinating Committee and became its adviser. In 1964 she attended the Democratic National Convention and helped to organize the Mississippi Freedom Summer and the Mississippi Freedom Democratic Party office in Washington, D.C. Baker returned to Harlem after the 1960s.

Sule Greg C. Wilson

Baker, Russell Wayne (*b* Morrisonville, Va., 14 Aug 1925). Journalist, humorist, and author. He was raised in an itinerant family that, he would write, "treasured words," which could "take you all the way to New York City."

H & H Bagels, 2009

Baker was a correspondent for the *Baltimore Sun* and, beginning in 1954, was the chief White House correspondent for the *New York Times*. In 1962 the *Times* gave him a twice-weekly column called "Observer," which won Baker the Pulitzer Prize for Distinguished Commentary in 1979. He also won the Pulitzer for Biography with a memoir of his youth, *Growing Up* (1982). In 1974 Baker and his wife moved to Manhattan, where they lived in a town house on the East Side. He regarded his adopted city with a New Yorker's mixed skepticism and affection. For instance, he explained the large plant in his living room this way: "All the vital people in New York go in heavily for parlor greenery, which is natural, considering that when they step outside the landscape is mostly cement and high blood pressure." He also wrote: "Life in New York is a matter of constantly testing laws, most of which prove much less inflexible than the law of gravity, at least if you can afford a lawyer." Baker later moved to Virginia and wrote his final "Observer" in 1998. He has served as host of PBS Television's *Masterpiece Theater* and written essays and book reviews for the *New York Review of Books.*

Russell Baker, *The Good Times* (New York: William Morrow, 1989)

John Rousmaniere

Baker Field. Columbia University's athletic complex. Located in upper Manhattan along 218th Street, it includes a football stadium; tennis courts; soccer, softball, and baseball fields; boathouses; and a field hockey venue. Financier George F. Baker purchased the 26-acre (10.5-hectare) area for the university on 30 December 1921 for $700,000. It was dedicated in April 1922 and hosted spring football practice that same year. In the fall of 1923 the first stadium at the site, then known as Baker Field, opened with 15,000 seats in temporary stands. Five years later the university built the 32,000-wooden-seat stadium that served Columbia until the spring of 1983. A new stadium was constructed the following year and used for football, lacrosse, and track and field. In the twenty-first century the field remained Columbia's primary athletic complex.

Jessica Montesano

bakeries. Although most baking was done at home in the eighteenth century, there were seven retail bakeries in New York City in 1700, which sold mostly bread. Some of the bakers in lower Manhattan were V. J. Cortlandt (Broadway), Coevrad and House (Broad Street), and George Dieterich (Pearl Street). Bakery workers conducted their first strike in the city in 1741. The number of retail bakeries rose to 12 in 1800 and 38 in 1840, but by 1850, after an influx of immigrants, there were 476 in the city. At the time the leading bakers were Robert Spier, Erastus Titus, and C. T. Goodwin; Treadwell and Harris, formed by E. Treadwell in 1825, was one of the most popular establishments until the end of the nineteenth century. By the 1850s bakeries offered not only bread, but cakes and other sweets, biscuits, and bagels. Wholesale bakeries, formed during the second half of the nineteenth century, established routes and sales territories, delivering their products by horse and wagon to grocery stores. Among the first successful firms were Holmes and Coutts, the Purssell's Manufacturing Company, and the S. B. Thomas Company, which introduced English muffins. The first large bakers' union in the city, the Journeymen Bakers Union of New York and Brooklyn, was formed in 1880 and had its headquarters alternately in Manhattan and Brooklyn until the turn of the twentieth century, when the headquarters were moved to Chicago and the union was renamed the Bakery and Confectionery Workers International Union. There were more than 100 locals in New York City, most divided along ethnic lines; some of the best-known were those operated by Germans, Italians, Jews, and Bohemians.

By the 1890s mergers and trusts characterized the business. The most important trust was the New York Biscuit Company, an amalgamation of firms from the Northeast. Its plant at 10th Avenue and 14th Street housed its headquarters and the country's largest baking factory. The National Biscuit Company (formed in 1898; later Nabisco), which dominated baking in the Northeast, had headquarters in Chicago and many factories in New York City (including one on 10th Avenue), where it developed Animal Crackers, Lorna Doones, and other well-known

Cheesecakes at Junior's, 2009

products. By 1900 there were nearly 2500 bakeries in New York City.

Antitrust battles exacerbated tension between management and labor. The Ward Baking Company, which made Tip-Top Bread and operated in Brooklyn and the Bronx, was the dominant baker in the city during the 1920s. Innovations were made in baking technology, and many firms became manufacturers of baking ovens and machines; the most prominent was Fowler and Rockwell. The Continental Baking Company, which was formed by Ward and which made Wonder Bread and Hostess cakes, had its headquarters in New York City from 1923 to 1984. Other manufacturers included Dugan Brothers of Queens Village, Silver Cup Bread of Long Island City, Fink Baking, and the General Baking Company.

By the early twenty-first century more than 1000 bakeries remained in the city. Wonder Bread had a factory in Jamaica, the Taystee Baking Company had headquarters in Flushing, and Drake Bakeries was in the Bronx; two other major Bronx bakeries closed: Stella D'Oro Biscuit Company (2009) and Old London Foods (2010). Brick-oven bread remained popular, and bakeries of a traditional sort were scattered throughout the city, among them Orwasher's on East 78th Street in Manhattan (1916), Parisi Bakery on Mott Street in Little Italy, and Mosha's Bakery on Wythe Avenue in Williamsburg (1890). Notable bakery chains included Au Bon Pain and Hot and Crusty; notable independent bakeries included Magnolia Bakery, City Bakery, and Blue Ribbon Bakery. Among the leading ethnic bakeries were Patisserie J. Lanciani in Greenwich Village (French), the White Eagle in Greenpoint (Polish), the Franczoz Bakery Shop in Borough Park (kosher), the Damascus Bakery on Atlantic Avenue in Brooklyn (Middle Eastern), and the International Bake Shop in Ridgewood (eastern European). There were also many shops specializing in Caribbean, Latin American, and Asian baked goods.

James Bradley

Berenice Abbott, Bread Store *(1937)*

Balanchine, George (*b* St. Petersburg, 22 Jan 1904; *d* New York City, 30 April 1983). Choreographer. He trained in Russia and became a successful choreographer in western Europe with Serge Diaghilev's Ballets Russes. At the invitation of the arts patron Lincoln Kirstein he immigrated to the United States and settled in New York City in 1933, with a vision of creating a permanent ballet company. In 1934 the two opened the School of American Ballet at 637 Madison Avenue. His first ballet in the United States, the group composition *Serenade* (to Tchaikovsky's music), was performed by students in June 1934; the ballet's emphasis on choreography rather than plot, costumes, or star dancers reflected principles that Balanchine followed for the rest of his career. During these years he lived at 11 East 77th Street and 120 East End Avenue in Manhattan. He continued his collaboration with Kirstein in his work for such companies as the American Ballet, which was the resident dance troupe of the Metropolitan Opera (1935–38), and the Ballet Society (1946–48), a chamber company that produced original ballets with newly commissioned music and decor. He also provided choreography for several Broadway shows, notably *On Your Toes* (1936) by Richard Rodgers and Lorenz Hart, which includes the famous ballet "Slaughter on Tenth Avenue." Between 1944 and 1946 he was a choreographer for the touring company Ballet Russe de Monte Carlo.

From the 1940s Balanchine forged a new style of classical dance. In the ballets *Concerto Barocco* (1941), *Ballet Imperial* (1941), and *Symphony in C* (1947) he heightened, quickened, and inverted traditional movements, but unlike other revolutionaries such as Martha Graham and Merce Cunningham he never abandoned classical technique. He further developed this idiom in *The Four Temperaments* (1946). At the invitation of Morton Baum, chairman of the executive committee of the City Center of Music and Drama, he joined with Kirstein in 1948 to form a resident company that became known as the New York City Ballet. With the company he created such reductive masterpieces as *Agon* (1957), *Episodes* (1959), *Movements for Piano and Orchestra* (1963), *Violin Concerto* (1972), and *Symphony in Three Movements* (1972). He also provided choreography for such narrative ballets as *The Nutcracker* (1954) and *Coppélia* (1974), spectacles such as *Vienna Waltzes* (1977) and *Jewels* (1967), and many classical display pieces.

In 1964 the New York Ballet moved to the New York State Theater at Lincoln Center. Balanchine trained many dancers there in a style characterized by sharp, precise, and often large movements. Among the most celebrated dancers with whom he worked were Maria Tallchief, Tanaquil LeClercq, Melissa Hayden, Suzanne Farrell, Patricia McBride, Merrill Ashley, Jacques d'Amboise, Edward Villella, and Peter Martins, who with Jerome Robbins became a ballet master of the company on Balanchine's death. In 1990 a segment of West 63rd Street near the New York State Theater was renamed George Balanchine Way.

Nancy Reynolds

Baldwin, James (Arthur) (*b* New York City, 2 Aug 1924; *d* St. Paul de Vence, France, 1 Dec 1987). Writer and civil rights activist. Born in Harlem to Emma Berdis Jones, he was raised by his mother and David Baldwin, the man she married when James was three years old. At Frederick Douglass Junior High School, he began contributing short stories and editorials to the school magazine at the encouragement of a French instructor, Countee Cullen, a notable poet of the Harlem Renaissance. In 1938, at age 14, he underwent what he later described as a "prolonged religious crisis" and became a preacher at the Fireside Pentecostal Assembly at 71 Thayer Street. He preached for three years while attending the prestigious DeWitt Clinton High School in the Bronx, where he stood apart both for his color and for his intellectual gifts, working as an editor of the *Magpie,* a school magazine. At age 16 he was introduced to the artist Beauford Delaney at his Greenwich Village studio. Baldwin credits Delaney with introducing him to the music (not allowed in his home) of Ma Rainey, Bessie Smith, Louis Armstrong, and Marian Anderson. In 1942, Baldwin graduated, left the church, and took a job laying railroad track in New Jersey. During the following year of odd jobs, he wrote short stories and essays (many of which would be published in his 1955 collection *Notes on a Native Son*) before returning to Harlem in June 1943. Encouraged by Delaney, Baldwin moved from his family's apartment to a Greenwich Village room. In 1944, struggling to write an autobiography of his childhood titled *Crying Holy,* Baldwin became friends with the influential author Richard Wright.

In 1948 Baldwin moved to Paris. His first novel, *Go Tell It on the Mountain,* was published in 1953. After a frustrated attempt at theater, he published *Notes on a Native Son* in 1955 and his second novel, *Giovanni's Room,* which drew controversy surrounding its homoeroticism, the following year. In 1957, he returned to the States, feeling the need to participate in the burgeoning civil rights movement. Commissioned for an article by *Harper's* magazine, Baldwin traveled to the South for the first time, where he was deeply impressed upon meeting Dr. Martin Luther King, Jr.; Baldwin would later remember his time during the civil rights years in essays published in *No Name in the Street* (1972). In 1961, his second collection of essays, *Nobody Knows My Name,* received critical attention and was also a surprising financial success.

Baldwin had become a national figure by this time and was also engaged politically through his writing. His long essay "Down at the Cross" (later published in *The Fire Next Time* [1963]) explored themes of race and religion, in particular the relationship between Christianity and the Black Muslim movement. While immersed in the civil rights struggle, he wrote *Blues for Mr. Charlie* (1964), a play based on the murder of Emmett Till that explored themes of racism and oppression. By the late 1960s, however, he seemed to fall out of favor politically as the Black Power movement took hold, and he was criticized by the Black Panthers' Eldridge Cleaver in his autobiography *Soul on Ice.* Baldwin lent support through his writing to various causes and continued to publish through the mid-1980s; he divided time between living abroad and in the United States until his death in 1987. A memorial service was held at the Cathedral of St. John the Divine at 112th Street and Amsterdam Avenue in Manhattan.

Garrett A. Felber

Baldwin, Roger (Nash) (*b* Wellesley, Mass., 21 Jan 1884; *d* New York City, 26 Aug 1981). Civil libertarian. After graduating from Harvard he became a nationally known social worker in St. Louis. In April 1917 he moved to New York City to assist Crystal Eastman and the Civil Liberties Bureau (CLB) in defending conscientious objectors, freedom of speech, and freedom of the press during World War I. He spent nearly a year in prison (1918–19) for refusing to be inducted into the armed forces. In 1920 he helped reorganize the CLB as the American Civil Liberties Union (ACLU), of which he became the director. After retiring from the ACLU in 1950 Baldwin devoted himself to international human rights issues. He was awarded the presidential Medal of Freedom in early 1981.

Ball, Thompkins and Black [Ball, Black and Company]. Firm of jewelers that later became Black, Starr and Frost.

Ballantine Books. Firm of book publishers, formed in 1952 by Ian Ballantine, formerly of the firm Bantam, and his wife, Betty. The firm distinguished itself by publishing paperbound books simultaneously with clothbound editions issued by established houses, and by offering royalties to authors of 7.5 percent, then thrice the going rate. The book trade was aghast but the firm was a success. It published science fiction by Ray Bradbury and others, as well as anthologies based on the magazine *Mad.* After the firm was acquired in 1973 by Random House, Ballantine resigned to form a book packager, Rufus Publications, that had a short life.

James E. Mooney

Ballet Hispanico of New York. Dance company founded in 1970 by Tina Ramirez to represent Hispanic culture through performance dance. It is known for its innovative fusion of Latin, classical, and contemporary dance. The company has commissioned more than 70 pieces from internationally acclaimed choreographers and performs nationally and internationally. In addition to its performance group, the Ballet Hispanico also operates a school, which trains 600 students in dance and performance techniques and has such notable alumni as Nancy Ticotin, Jennifer Lopez, and Michael DeLorenzo. It also administers programs such as "Primeros Pasos" or "First Steps," which provides after-school programs, classroom programs in public schools, and residency programs to students throughout New York City. It is located on

West 89th Street between Columbus and Amsterdam avenues.

B. Altman. Firm of high-end clothing retailers, founded in April 1865 by Benjamin Altman as a small dry-goods shop at 39 Third Avenue between Ninth and 10th streets. It moved in the early 1870s to larger quarters on Sixth Avenue between 21st and 22nd streets and in 1876 to an elegant six-story building at 627 Sixth Avenue (at 19th Street). Altman began buying land in the block diagonally across from the Empire State Building bounded by 35th Street, Madison Avenue, 34th Street, and Fifth Avenue, and in 1905 work began on a twelve-story building in the Italian Renaissance style. Completed in 1914, it was built largely of French limestone and took up the entire block; its elegant interior had broad aisles, high ceilings, parquet floors, and crystal chandeliers. Known as one of the most fashionable department stores and for its extravagant Christmas decorations, Altman attracted many visitors with its window displays of mechanized tableaux during the winter holidays. The building received landmark status in 1985. In 1987 Altman's was bought by L. J. Hooker, a firm owned by the Australian corporate raider George Herscu, and at the end of 1989 it ceased operations. At the end of the twenty-first century the building was occupied by the New York Public Library's Science, Industry, and Business Library as well as the CUNY Graduate Center.

Bancroft [Italiano], **Anne (Maria Louisa)** (*b* Bronx, 17 Sept 1931; *d* New York City, 6 June 2005). Actress. Born to an Italian immigrant family, her mother a telephone operator and her father a patternmaker, Bancroft was intrigued by performance art at a young age. After graduating from the Christopher Columbus High School in the Bronx in 1948, she attended a series of acting schools in New York City and Los Angeles. She made her film debut in *Don't Bother to Knock* in 1952 and then continued her career in Hollywood and on Broadway with hits like *New York Confidential* (1955), *Two for the Seesaw* (1958), *The Miracle Worker* (1962), and, most prominently, *The Graduate* (1967). A Catholic, she converted to Judaism to marry director and writer Mel Brooks in 1964 at New York City Hall after meeting him on the set of a talk show. Bancroft was known for her Method acting, her sultry voice, and the versatility of her roles. The Emmy-, Tony-, and Academy Award–winning actress split her time between Los Angeles and New York City homes until her death in 2005. Her memorial service in New York City featured Paul Simon singing Simon and Garfunkel's song "Mrs. Robinson," which was written about her role in *The Graduate.* Bancroft is buried at the Kensico Cemetery in suburban Valhalla, New York.

Cecilia Magnusson

bands. The first military band in New York City was the 11th Regiment Militia Band, led by Thomas Brown and stationed on Bedloe's Island (now Liberty Island). The military tradition inspired a civilian brass band movement in the early to mid-nineteenth century. Thomas Dilks's Independent Band, formed in 1825 as the city's first professional wind band, played for several seasons at Castle Garden before dividing into two factions in 1835, one of which was directed from the following year by Allen Dodworth and became the most successful and influential band in the city. Dodworth invented and patented specially designed marching instruments in 1838 and published the highly regarded manual *Brass Band School* in 1853. He managed the group until 1860, when his brother Harvey took charge. In the same year John F. Stratton, a manufacturer based in New York City, began mass production of brass instruments. After the Civil War a number of leading bandmasters were based in the city: Harvey Dodworth led the Dodworth Band and the 13th Regiment Band of the New York National Guard, Claudius Grafulla led the 7th Regiment Band until he was succeeded in 1881 by the trombonist Carlo Cappa, and David L. Downing led the 9th Regiment Band. All three derived prestige and steady financial support from their association with the armed forces, and all were given free artistic rein. In 1873 Patrick S. Gilmore assumed leadership of the 22nd Regiment Band, widely known from then on as Gilmore's Band. Under his direction the 22nd regularly toured the nation with the best-known soloists of the time and set new standards for performance. After Gilmore's death in 1892 19 of his musicians joined a band based in the city and formed by John Philip Sousa that became nationally renowned.

One of the most popular bands in New York City was that formed in 1887 by Frederick Innes, a trombonist and former leader of the 13th Regiment Band in Brooklyn. It often gave summer concerts at Prospect Park and performed regularly throughout the city until Innes moved to Denver in 1913. After 10 years as a renowned trombone soloist with Sousa's band, which he also helped to lead, Arthur Pryor in 1903 formed his own ensemble, which in the same year made its debut at the Majestic Theatre (3 November) and recorded the first commercial discs issued by the Victor Company; for several seasons it also played at Luna Park in Coney Island. By this time several bands based in New York City maintained regular touring schedules and appeared at such venues as Manhattan Beach, Hamilton Fish Park, and Madison Square Garden. In 1915 Sousa's band gave daily concerts between May and September at the Hippodrome, and Pryor performed during the summers of 1921–25 at Lido Beach in Coney Island. The New York Military Band was formed in 1911 by Edwin Franko Goldman, formerly a cornetist with the Metropolitan Opera Orchestra and an instructor at Columbia University; known from 1918 as the Goldman Band, it performed annual summer concerts at Columbia and the Central Park Mall, commemorated in Goldman's popular march "On the Mall" (1923). Other Goldman compositions inspired by New York City include "Central Park," "New Yorker," "Hail, Brooklyn," and "On the Hudson." The Goldman Band also played on the first radio broadcast of the National Broadcasting Company on 15 November 1926.

From the 1920s professional concert bands diminished in number, and bands became associated primarily with school, civic, and fraternal organizations. Bands were formed by the fire department (1922), the police department, the Knights of Columbus, City College (1925), Columbia University (1928), and Fordham University (1928). The Goldman Band performed until 1979 under the direction of Goldman's son Edward, who died the following year; under the direction of Ainslee Cox the group continued as the Goldman Memorial Band and performed throughout the five boroughs into the 1990s, by which time it was the city's longest-lived band and the third-oldest professional musical association of any kind. The city's most visible bands are those of local high schools, which regularly perform at parades throughout the city.

Marc Ferris

Bangladeshis. Immigration to the United States from Bangladesh began in the early 1970s and grew slowly into the 1990s. In 1990 about 5000 Bangladeshis lived in the five boroughs, the majority in Queens (2567) and Brooklyn (1313). In Manhattan, Bangladeshis formed a small enclave on East Sixth Street. By 2000 the Bangladeshi population had grown to about 28,000, 18,310 of which lived in Queens and 6243 in Brooklyn. According to the Department of City Planning, about 4000 Bangladeshi immigrants were arriving legally in New York City each year early in the twenty-first century, making them one of the fastest-growing immigrant groups. Unofficial estimates that account for undocumented immigrants put the Bangladeshi

population as high as 100,000 in 2009, when the Consulate General of Bangladesh in New York was located at 211 East 43rd Street.

Jessica Montesano

Bangs, Nathan (*b* Stratford, Conn., 2 May 1778; *d* New York City, 3 May 1862). Minister and editor. A leading exponent of American Methodism in New York City, he served the Methodist Book Concern as its director from 1820 to 1828. He also edited the important Methodist periodicals *Christian Advocate and Journal and Zion's Herald* and the *Methodist Quarterly Review,* and led the American Methodist missionary organization. Bangs was later the pastor of three congregations in the city.

Charles Yrigoyen, Jr.

Bankers Trust Company. Firm of commercial bankers formed in 1903 by Henry Davison with J. P. Morgan and his associates in response to stricter regulations of trusts. It was designed to perform fiduciary work for commercial banks. The first head office was in the Jersey Central Building at 143 Liberty Street, but it soon moved to 7 Wall Street. In 1909 the firm leased a building at 16 Wall Street and added a pyramid to the top, which became a symbol of the financial district. The firm pursued commercial banking in the 1920s and 1930s. It moved its headquarters to Fifth Avenue and 44th Street in 1936 and introduced retail banking operations after World War II. Between 1955 and 1965, 22 branches were added. In 1962 executive headquarters were erected at 280 Park Avenue. In 1974 a new headquarters was opened adjacent to the World Trade Center. In 1999 it was acquired by Deutsche Bank.

Susan Aaronson

Bankhead, Tallulah (Brockman) (*b* Huntsville, Ala., 31 Jan 1902; *d* New York City, 12 Dec 1968). Actress. The daughter of a Speaker of the U.S. House of Representatives, she made her debut on Broadway in 1918 and after a number of mixed performances became well known in *Dark Victory* (1934), by George Brewer, Jr., and Bertram Bloch, and a revival of W. Somerset Maugham's *Rain.* From 1931 to 1938 she lived at the Hotel Elysée at 56–60 East 54th Street. One of her most memorable roles was that of Regina Giddens in Lillian Hellman's *The Little Foxes* (1939). Her performance in Thornton Wilder's *The Skin of Our Teeth* (1942) was well received, and she toured in a successful revival of Noël Coward's *Private Lives* (1945–50). During the 1940s she had permanent quarters at the Hotel Gotham at 2 West 55th Street. Known for her deep voice, she was the host of the city's last important radio variety program, *The Big Show* (1945–50). Bankhead made a few motion pictures; of these only Hitchcock's *Lifeboat* (1943) conveys her distinctiveness. She bought the building at 230 East 62nd Street in 1956 and lived there until 1962, when she moved to 447 East 57th Street, her home for the last six years of her life.

banking. See Commercial banks, Credit unions, Investment banking, Savings and loan associations, and Savings banks, as well as entries on individual figures and institutions.

Bank of New York. The first chartered bank in New York City. Its formation followed the placing of a small advertisement in the *New York Packet* on 23 February 1784, only three months after British troops left New York City, calling on the "Gentlemen of this City to establish a Bank on liberal principles." The bank was organized during a meeting at the Merchants' Coffee House, with Alexander Hamilton authoring its constitution. It opened for business at the Walton House on 9 June 1784. The charter called for a capital stock of $500,000; shares of $1000, payable in gold or silver, were all bought up immediately. In 1797 the bank erected its headquarters at 48 Wall Street. The center of the city's financial life, it provided financing for importers and helped the federal government to establish a firm financial basis. After four years on the board of directors Hamilton became the secretary of the Treasury under President George Washington in 1789 and soon negotiated the government's first loan from the bank, which put up $200,000 against warrants drawn by the U.S. Treasury. The bank became a major lender to New York City, New York State, and foreign governments. The bank eventually merged with such prominent institutions as the New York Life Insurance and Trust Company (1922), the Fifth Avenue Bank (1948), the Empire Trust Company (1966), Empire National Bank (1980), and the Long Island Trust Company (1987). After acquiring the Irving Bank in 1988 the Bank of New York became the tenth-largest bank holding company in the United States, with assets of about $50 billion. As of 1 October 2007 the bank changed its name to the Bank of New York Mellon following its merger with the Mellon Financial Corporation. Before this, it had been the oldest bank in the United States operating under its original name. In 2008 its headquarters remained at 48 Wall Street.

Allis Wolfe

Bank of United States. Commercial bank formed in 1913 by Joseph Marcus, formerly a garment manufacturer. It was situated at first on the corner of Orchard and Delancey streets; from 1918 the head office was at Fifth Avenue and 32nd Street. The bank catered specifically to a clientele of Jews and recent immigrants. Control of the bank was assumed in 1927 by Bernard Marcus (son of the founder) and his partner Saul Singer, who acquired five other banks at inflated prices and used depositors' money to pursue speculative personal ventures. By the time of its failure on 11 December 1930, the bank had 440,000 depositors and 59 branches, making it then the largest bank in American history. In the ensuing crisis in the banking system some members of the New York Clearing House were accused of anti-Semitism for having allowed the bank to fail, although even those who made the accusation acknowledged that the bank had engaged in questionable practices. Bernard Marcus and Singer were sent to Sing Sing Prison in March 1931.

Bank Street College of Education. Private institution formed in 1916 as the Bureau of Educational Experiments by Lucy Sprague Mitchell (1878–1967), a former pupil of John Dewey at Columbia Teachers College who sought to study the physical, social, and emotional growth of children and to develop environments conducive to learning. With her colleague Harriet Johnson she organized the first all-day nursery schools (1918) and adopted a scientific and creative approach to pedagogy. Under her leadership the bureau funded health and nutrition studies, vocational projects, sex education programs, and schools where educational theories could be tested and students' behavior observed. In 1930 the bureau moved from six brownstones on West 12th and 13th streets to 69 Bank Street and organized the Cooperating School for Student Teachers; it was granted a charter by the Regents of the State of New York in 1941 and certified under its current name in 1950. Bank Street College has been active in public and private schools in the city and has gained national recognition for its participation in such programs as Head Start, Follow Through, and Right to Read and for its role in publishing the Little Golden Books and Bank Street Readers for children. In 2010 it was located at 610 West 112th Street in Manhattan and enrolled about 1000 students, all at the graduate level, and conferred master of science in education and master of education degrees. It also operated the Bank Street School for children which, in 2010, enrolled about 450 students.

Linda Elsroad, Alfonso J. Orsini

Bank Street School. Nursery school opened in 1918 by Lucy Sprague Mitchell under the auspices of the Bureau of Educational Experiments (later known as the Bank Street College of Education). Initially situated in her brownstone in Greenwich Village, the school moved with the bureau in 1930 to a disused factory of the Fleischmann Yeast Company on 69 Bank Street, where it expanded into a full elementary school. The educational methods at the school reflected the influence of Mitchell's study with John Dewey at Teachers College and her collaborations with Caroline Pratt at the Play School and Elisabeth Irwin at the Little Red School House. The school is a demonstration school with a curriculum that focuses on the emotional, social, physical, and intellectual well-being of its students. Eventually the school moved to West 112th Street, where it served both as a community

school and as an experimental facility for education students and experts. In 2006 it enrolled 450 children from 3 to 13 years old.

Alfonso J. Orsini

Bantam Books. Firm of paperback book publishers, formed in 1945 by Ian Ballantine. He opened his headquarters at 1107 Broadway and moved to 25 West 45th Street in 1950. With its parent firm, Grosset and Dunlap, Bantam was sold in 1968 to National General Corporation. Headquarters were moved to 666 Fifth Avenue in 1970, and the firm was sold in 1974 to IFI International, an Italian conglomerate. In 1977 a controlling interest was bought by the Bertelsmann Publishing Group, which became the sole owner in 1981. Bantam produced the popular children's "Choose Your Own Adventure" series from 1979 to 1998. It was also known for its science fiction and mystery novels, and the Bantam Classics series included such books as Jane Austen's *Pride and Prejudice* and Fyodor Dostoevsky's *Crime and Punishment.* In 1999 Bantam merged with Dell Publishing.

Bantam Dell Publishing Group. Book publisher. In 1999 Bantam Books and Dell Publishing were merged to form the Bantam Dell Publishing Group. This became the largest division of Random House, which had been acquired the year before by Bertelsmann Publishing Group International, one of the largest media companies and mass-market book publishers in the world. Bantam Dell Publishing Group superseded Bantam Doubleday Dell, which had been created in 1988 after Bertelsmann acquired Doubleday and Company late in 1986. The Bantam Dell Publishing Group includes books published under the following imprints: Bantam Hardcover, Bantam Mass Market, Bantam Trade Paperback, Spectra, Delacorte Press Hardcover, Dell Mass Market Paperback, Delta Trade Paperback, the Dial Press Hardcover, and Dial Press Trade Paperback. In the early twenty-first century the firm's offices were at 1745 Broadway.

Allen J. Share

Baptists. The first notice of Baptist activity in New Netherland is a report from the pastors of the Reformed Church in 1657 that "a fomenter of error," a cobbler from Rhode Island named William Wickenden, "began to preach at Flushing, and then went with the people into the river and dipped them," for which he was banished from the province. A congregation was organized in 1724 by Nicholas Ayres, who had been converted to the Baptist position in meetings held in his house. A meetinghouse was built, and Ayres remained its pastor until he resigned in 1731. In the following year the property was claimed by one of the trustees, and the congregation dissolved. First Baptist Church (1762) was organized by a group that had first met informally and had then become members of the Scotch Plains Baptist Church in New Jersey. John Gano was called as pastor, and a meetinghouse was built on Gold Street. The church was closed during the Revolution and used for a stable by British troops. Gano served as a chaplain to the Continental army and returned in 1784, finding only 37 of the 200 members still in the city. Abyssinian Baptist Church (1808) was organized by "free colored" members of First Baptist. The first Baptist churches in what later became the other boroughs were Baptist Temple (organized as First Baptist Church, 1823) in Brooklyn, Park Baptist Church (1841) in Staten Island, Ridgewood Baptist Church (organized as First German Baptist Church, 1855) in Queens, and Fulton Avenue Baptist Church (organized as German Bethel Baptist Church of Morrisania, 1857) in the Bronx. The first African American congregations in Brooklyn, Queens, and the Bronx were, respectively, the Concord Baptist Church of Christ (1847), Ebenezer Baptist Church of Flushing (1870), and Day Star Baptist Church (organized 1888 in Manhattan). In 1830 Baptists were among the four leading denominations in New York City, with 2931 members. By 1870 this number increased to 11,203 in Manhattan and 6812 in Brooklyn. Successive phases of immigration brought new groups of people to the city from Europe, the Caribbean, Latin America, Asia, and Africa, prompting the formation of many foreign-language Baptist congregations: First German Baptist Church (1846), Trinity Baptist Church (First Swedish Baptist Church, 1853), First Italian Baptist Church (1897), First Norwegian–Danish Baptist Church (1903), First Czechoslovak Baptist Church (Bohemian Baptist Church, 1905), First Latvian Baptist Church (1905), First Hungarian Baptist Church (1906), First Estonian Baptist Church (1919), First Spanish Baptist Church (1919), First Russian Baptist Church (1923), First Chinese Baptist Church (1926), First Polish Baptist Church (1926), Haitian Baptist Church (1965), Korean Baptist Church (1976), First Rumanian Baptist Church (1979), First Portuguese-Speaking Baptist Church (1982), Bronx Bible Church (Filipino, 1986), and First Indonesian Baptist Church (1993).

The first organization of Baptists in Greater New York was the New-York Association, formed in 1791 by three churches in the city, three from New Jersey, and one from Long Island. In time this body became the Southern New York and the Long Island Baptist associations, in fellowship with American Baptist Churches USA. The Baptist Female Missionary Society (1806), Baptist Sunday School Society (1816), and Baptist Widows and Orphans Fund (1839) were also sponsored by churches in New York City. In 1841 they organized the Representative Mission Society of the Baptist Association, incorporated in 1893 as the New York City Baptist Mission Society, which together with the Baptist Church Extension Society of Brooklyn and Queens (1918) conducted mission work throughout the city. Edward S. Judson developed Judson Memorial Baptist Church (1890) as an institutional church serving the Italian community in Greenwich Village. In 1901 the Mission Society conducted five daily vacation Bible schools, the first in the city. Charles Hatch Sears, executive secretary from 1904 to 1943, was an outstanding mission planner and administrator who greatly increased the scope of the society's work in the city to encompass the organization of many new churches, educational work with African American churches, and Christian Friendliness programs to serve immigrant families. In 1972 the two Baptist associations (Southern New York; Long Island) and the two city mission societies (New York; Brooklyn and Queens) merged to form American Baptist Churches of Metropolitan New York (ABC Metro), which by the mid-1990s had 148 member churches in the five boroughs; because of congregational autonomy, many of these also belong to other Baptist bodies.

A strong sense of ethnic identity, as well as theological and political conflicts, led to the formation of other bodies of Baptist churches that also included congregations in the city. Among these were the North American Baptist Conference (1865, with two churches in the city in the mid-1990s), founded by German Baptists, and the Baptist General Conference (1879, with six churches), founded by Swedish Baptists. African American churches have three national conventions: National Baptist Convention USA (1895, with 285 member churches in New York City), the parent convention of black Baptists; the National Baptist Convention of America (with 23 churches), which divided from the other body in 1915; and the Progressive National Baptist Convention (1961, with 63 churches), which had as its first president Gardner C. Taylor, then pastor of Concord Baptist Church of Christ in Brooklyn. Theological controversies with American Baptists caused the formation of the General Association of Regular Baptists (1932, three churches in New York City) and the Conservative Baptist Association of America (1947, 27 churches). The Southern Baptist Convention, organized in 1845, began missionary activity in the city in 1957; in the mid-1990s the Metropolitan New York Baptist Association included 75 churches in the five boroughs.

New York City has also been a center for national Baptist organizations. The American Baptist Home Mission Society was organized on 27 April 1832 in the Mulberry Street Baptist Church. Some sessions were also held at the Oliver Street Baptist meetinghouse: its pastor, Spencer H. Cone, was elected the first president. The Northern Baptist Convention, founded in 1907 in Washington, D.C., with Governor Charles Evans Hughes of New York as its president, was incorporated in the state and established headquarters in the city. In 1911 American Baptists organized the Ministers and Missionaries Benefit Board, which was incorporated with offices in New York City. From 1920 to 1963, when national American Baptist headquarters were moved to Valley Forge, Pennsylvania, the city was the site of the national offices of the American Baptist Foreign Mission Society, the Woman's American Baptist Foreign Mission Society, the American Baptist Home Mission Society, the Woman's American Baptist Home Mission Society, and the Northern Baptist Convention, as well as the Benefit Board, which all remain in the city. Many important Baptist national meetings and conferences have been held in the city, but only the National Baptist Convention USA has conducted its national convention there (in 1935 and 1993).

Several leading Baptist leaders and thinkers have lived and worked in New York City. William Colgate, founder of the soap manufacturing company bearing his name, was a Baptist deacon. Walter Rauschenbusch, a leading exponent of the Social Gospel, developed his theological perspective as the pastor of a German congregation near Hell's Kitchen from 1886 to 1902; he joined with his fellow Baptist pastors Samuel Zane Batten, Nathaniel Schmidt, and Leighton Williams to form the Brotherhood of the Kingdom, devoted to social thought and action. The first woman to be ordained by a Baptist congregation was Mabel Lee in 1925: she succeeded her father as minister of the Morningstar Chinese Mission, which became First Chinese Baptist Church. John D. Rockefeller, Jr., was a Baptist layman and philanthropist who financed the move of Park Avenue Baptist Church to Morningside Heights, where it became the Riverside Church. Its first pastor was Harry Emerson Fosdick, an advocate in the pulpit of liberal theology and biblical criticism, whose sermon "Shall the Fundamentalists Win?" was bitterly attacked by John Roach Straton, pastor of Calvary Baptist Church. Adam Clayton Powell, Jr., who succeeded his father as pastor at Abyssinian Baptist Church, led civil rights demonstrations in Harlem before being elected to Congress in 1944. Bertha Grimmell Judd was president of the Woman's American Baptist Home Mission Society from 1937 to 1942 and wrote the society's 50-year history. Marguerite Hazzard was its president from 1951 until 1955 when it merged with the American Baptist Home Mission Society. In the early twenty-first century, there were about 600 Baptist churches in New York City and almost 400,000 members of Baptist congregations in the five boroughs.

George D. Younger

Barbadians. Immigrants from Barbados began settling in New York City around 1900. The Sons and Daughters of Barbados Benevolent Society, formed in 1913, was an early center for the community. Several thousand Barbadians, most of them black, arrived during the following decades. Throughout the 1950s racial prejudice confined them almost exclusively to the black neighborhoods of Harlem and Bedford–Stuyvesant and to menial and unskilled work even though most were literate and skilled. Tens of thousands of Barbadians arrived in the city after the passage of the Hart–Celler Act in 1965. They settled primarily in Brooklyn and in a few racially integrated neighborhoods.

Barbadians in New York City work in management, technical occupations, and the professions; the unskilled continue to account for a large part of the workforce. Barbadians are active in the Combermere School Alumni Association of New York, the Barbados Nurses' Association of New York, and the Barbados Ex-police Association of New York, as well as in a number of cricket clubs. In 2000 more than 27,000 New Yorkers claimed Barbadian ancestry, and two-thirds of them live in Brooklyn.

Calvin B. Holder

Barber, Red [Walter] (*b* Columbus, Miss., 17 Feb 1908; *d* Tallahassee, Fla., 22 Oct 1992). Sports broadcaster. Raised in Florida, he began broadcasting baseball in Cincinnati, covering the Reds from 1934–38. In 1939 the Brooklyn Dodgers hired Barber to broadcast games, breaking a 1934 radio ban the Dodgers, Yankees, and Giants had signed. That same year he broadcast the first-ever televised baseball game when the Dodgers hosted the Cincinnati Reds, his former employer. His accurate, unbiased descriptions and homespun southern wit earned Barber a reputation as baseball's best broadcaster. He also announced football and was the first sports director for Columbia Broadcasting System Radio. After 1953 Barber left the Dodgers for the New York Yankees, broadcasting on radio and television for the Yankees through 1966, when he was fired after reporting that only 413 spectators were at a rainy Yankee Stadium for a meaningless September game. He retired to Florida, writing and broadcasting until his death.

Andrew Sparberg

Barbetta. Restaurant. Located at 321 West 46th, it is the oldest restaurant in New York City that is still owned by the family that started it. Founded in 1906 by Sebastiano Maioglio, it serves Italian Piemonte cuisine in the midst of eighteenth-century Italian furnishings. In 1963 the owner Laura Maioglio added a garden for open-air dining behind four nineteenth-century row houses that she bought from the Astor family on West 46th Street. Several rooms in the row houses serve as private party spaces.

Jessica Montesano

Barbicide. Brand of disinfectant products. Invented by Maurice King in 1947 in Brooklyn, the trademark blue liquid that disinfects combs and brushes has become a standard at barber shops and salons nationwide. King also invented a solution that dissolves the hair off synthetic brushes. King, a chemist and chemistry teacher, began King Research in a one-story factory on 12th Street and Second Avenue in Brooklyn. In 1988 King died and his son Ben took over the business, expanding the product line to include hospital-grade salon disinfectants and hair and skin care. In 1997 Ben King gave a gift of Barbicide to the Smithsonian Institution; it is now on display at the National Museum of American History. In the twenty-first century the company's production is located in Wisconsin.

Jessica Montesano

Bard, Samuel (*b* Philadelphia, 1 April 1742; *d* Hyde Park, N.Y., 24 May 1821). Educator and physician. The son of the prominent physician John Bard, he moved to New York City as a young man. He studied medicine from 1760 to 1765 in London and Edinburgh and in 1767 helped found at King's College the first medical school in New York City; this was later absorbed by the College of Physicians and Surgeons, of which he became the second president (1811–21). Throughout his career in New York City he maintained an extensive private practice; he was also at one time George Washington's physician. Bard wrote several major works, including *A Compendium of the Theory and Practice of Midwifery* (1808).

John Brett Langstaff, *Doctor Bard of Hyde Park* (New York: E. P. Dutton, 1942)

Joseph S. Lieber

Barent Eylandt. Former name of Randalls Island.

Bargemusic. Floating concert hall moored in the East River at Fulton Ferry Landing, Brooklyn Heights, since its founding by Olga

Bloom in 1978. A former violinist and violist, Bloom purchased a 100-foot-long (30.48 meters) decommissioned coffee barge built in 1899, which she renovated as a "safe harbor" for chamber music. The only enduring nautical establishment of its sort in the world, Bargemusic boasts a spectacular setting, the windows backing its stage offering a view of lower Manhattan. Its scale and limited seating for an audience of about 100 make it well suited to chamber music. Directed since 2000 by the violinist Mark Peskanov (in association with Bloom), Bargemusic produces four concerts each week, featuring a changing lineup of small ensembles.

James M. Keller

Barnard College. Undergraduate college for women within Columbia University, formed on 1 April 1889 with its own buildings, faculty, curriculum, administration, budget, and trustees. It was named for Frederick A. P. Barnard, the president of Columbia from 1864 to 1888, who was unable to persuade the trustees of Columbia to admit women as undergraduates. Annie Nathan Meyer, the young wife of a doctor, was largely responsible for raising the initial funds and assembling the first board of trustees, of which Barnard was a member. The first secular institution in New York City to grant the AB degree to women, it opened with a student body of 14 and a faculty of six and occupied a brownstone building at 343 Madison Avenue, near the site then occupied by Columbia at Madison Avenue and 49th Street. After Columbia moved to Morningside Heights in 1897, Barnard followed in 1900 to a site of 1 acre (0.4 hectares) at Broadway and 119th Street where a single building was erected. The college was led by a dean until 1952 and from that time by a president; among those to occupy these positions were Virginia C. Gildersleeve (1911–47), Millicent Cary McIntosh (1947–62), Ellen Futter (1980–93), Judith Shapiro (1994–2008), and Deborah L. Spar (2008–present). Most students lived off campus until 1980, but many dormitories were built in the following years and by the mid-1990s about 90 percent of the students lived on campus. Despite several proposals to merge with Columbia College, Barnard remained independent, even after Columbia decided to admit women for the first time in 1983. In 2007 construction began of a new multifunction student center called the Nexus. As of 2009 the campus occupied 4 acres (1.6 hectares) and had 11 buildings, 319 faculty members, 2400 students, and more than 25,000 alumnae. Famous alumnae include Martha Stewart, Joan Rivers, Zora Neale Hurston, and Twyla Tharp.

Barnes, Djuna (*b* Cornwall-on-Hudson, N.Y., 12 June 1892; *d* New York City, 18 June 1982). Novelist and playwright. As a reporter for the *Brooklyn Daily Eagle* shortly before World War I she wrote about Greenwich Village, where she settled about 1915. Associated with a circle of radical poets and artists who frequented Bruno's Garret on Washington Square South, she wrote innovative plays for the Provincetown Players, experimental verse, and droll vignettes of manners, and at the end of the war moved to Paris, where she wrote her best-known work, the novel *Nightwood* (1936). After returning from Europe in 1940 she lived in Patchin Place. Some of her later novels draw on the eccentric types of Greenwich Village. Toward the end of her life she became regarded as one of the earliest exponents of an avowedly lesbian sensibility in American letters.

Barnes and Noble. Firm of book publishers and booksellers. It began in 1873 as a firm of wholesale book jobbers operated by William R. Barnes and G. Clifford Noble, who supplied schools, colleges, libraries, and book dealers with new and used books; they opened their first bookstore at 105 Fifth Avenue in

1917. The first publishing venture, launched in 1931, was the College Outline Series, which provided summaries of college courses. The firm was bought by Ampel in 1969 and the publishing division was sold to Harper and Row in 1971. During the 1970s Barnes and Noble became one of the country's first discount retail booksellers; it bought the firm of B. Dalton in 1986 and Doubleday Book Shops, a chain of 40 stores, in 1990. The firm went public in 1993 and throughout the 1990s opened a number of megastores. In 2010 a typical Barnes and Noble store averaged 25,000 square feet (7620 square meters) and held as many as 200,000 books; the company sells 300 million books per year. Its headquarters are at 122 Fifth Avenue. Just down the block the original 105 Fifth Avenue location remains the flagship store.

Barnet and Doolittle. Firm of lithographers formed in 1821 by William Armand Barnet and Isaac Doolittle (*b* New Haven, Conn., 13 Oct 1784; *d* Rochester, N.Y., 17 April 1852), both trained in France. Situated at 23 Lumber Street (later Trinity Place), it was the first commercial lithography firm in the United States. The firm was responsible for creating the incunabula of the lithographic art, and it produced the first American book with lithographs (*A Grammar of Botany,* comp. Henry Muhlenberg, 1822, drawings by Arthur J. Stansbury), an untitled view of the Black River falls, bridge, and mill near Brownville, New York, illustrations for the *American Journal of Science* (1822), and other works, some of which are held by the New-York Historical Society.

Barneys New York. Firm of men's clothing retailers, formed in 1923 at Seventh Avenue and 17th Street by Barney Pressman (1895–1991). In the early years Pressman angered competitors and manufacturers by purchasing brand-name suits from independent retailers in the South and reselling them at low prices. The firm owed its early success in part to his skill at developing clever promotions and radio and print advertising. By the 1960s Pressman's son Fred shifted the focus from discount toward high-priced retailing, and the store became the first in New York City to sell the work of famous European designers. It added women's apparel and elegant housewares in 1976, and in 1986 opened a separate women's branch in six brownstone buildings adjacent to the main store. An outlet at the World Financial Center opened in 1988, and in the following year three joint venture agreements were reached with the Japanese retailing concern Isetan, which called for the opening of stores across the United States and in Japan and Southeast Asia. In 1993 Barneys opened a large uptown branch at Madison Avenue and 61st Street. It remained privately held in the beginning of the twenty-first century.

Marc Ferris

Barnum, P(hineas) T(aylor) (*b* Bethel, Conn., 5 July 1810; *d* Bridgeport, Conn., 7 April 1891). Impresario. In 1841 he took over the site and contents of Scudder's Museum, a defunct institution at the intersection of Broadway and Ann Street, and opened the American Museum. His astute promotion of appearances there by such performers as the midget Charles Stratton (General Tom Thumb) and the Swedish soprano Jenny Lind made this the most successful of the many dime museums in the city. The museum was destroyed by fire on 13 July 1865, reopened on Broadway at Spring Street, then burned again in 1868. Barnum retired briefly to work on a revised edition of his autobiography (first published 1855, revised 1927), and on 10 April 1871 he opened with William Coup in Brooklyn what is generally acknowledged to have been the first three-ring circus. The various circuses with which he was associated were the first large-scale entertainments to travel by railway; they performed annually in New York City at the Hippodrome on 27th Street and later at the original Madison Square Garden. In 1882 he had the giant elephant Jumbo sent from England and paraded him through the streets of New York City. Often accused of perpetrating hoaxes (he once exhibited a "Fejee mermaid"), Barnum cheerfully capitalized on the gullibility of an amused public. Along with baby contests, melodramas, and poultry shows he exhibited live animals, scientific specimens, and curiosities of the natural world, providing inexpensive entertainment to a wide and varied audience. Although a permanent resident of Bridgeport (where he served as mayor), he maintained homes in Manhattan throughout his career, including one at 52 Frankfort Street from 1835 to 1840 and another at 438 Fifth Avenue from 1868.

Jean Ashton

Baron, Salo Wittmayer (*b* Tarnow, Galicia, 26 May 1895; *d* New York City, 25 Nov 1989). The most prominent scholar of Jewish history in the twentieth century. He taught from 1930 at Columbia University, where he directed the Center of Israel and Jewish Studies from 1950 to 1968. His apartment on Claremont Avenue was known nationally as a gathering place for scholars. Baron was president of the American Academy for Jewish Research, the Conference on Jewish Social Studies, and the American Jewish Historical Society. He wrote hundreds of articles and 13 books, including *A Social and Religious History of the Jews* (1937–89), published in 18 volumes.

Baron de Hirsch Fund. Charitable organization. It was incorporated in February 1891 with $2.4 million from Baron Maurice de Hirsch (1831–96), a German immigrant who also established the Jewish Colonization Association in London. The fund is dedicated to assisting Jewish immigrants from Russia and Romania and offers various forms of aid, including English instruction. It operated solely within the United States until a change in its constitution in 1970 enabled it to begin assisting immigrants in Israel, providing financial assistance for education in the United States.

Kenneth W. Rose

Barondess, Joseph (*b* Kamenets-Podolsk [now Kamanets-Podolski], Ukraine, 3 July 1867; *d* New York City, 19 June 1928). Labor leader. He emigrated from England to the United States, where he helped organize a union for cloakmakers in New York City. In 1891 he was unjustly convicted of extortion in

a labor dispute, but he was pardoned in the following year. He later helped to organize the International Ladies' Garment Workers' Union, the Hebrew Actors' Union, and the Hebrew–American Typographical Union. A Zionist from 1900, he represented American Jewry at the Paris Peace Conference in 1919; he also served two terms on the New York City Board of Education. Barondess spent the last years of his life as an insurance broker.

Robert D. Parmet

"barrel murder." A murder committed in 1903, discovered on 14 April when a man was found stabbed and nearly decapitated in an ash barrel on a corner of East 11th Street. The crime led to widespread panic that an international criminal syndicate based in Sicily was preparing to launch attacks on non–Italian Americans. Public fears diminished after police identified the man as Benedetto Madonia and determined that the crime had been motivated by a matter within the syndicate. Tomasso Petto was suspected of complicity in the crime but never convicted.

Mary Elizabeth Brown

Barren Island. A former island in Jamaica Bay near the shoreline of Flatlands, lying within the borough of Brooklyn and far from residential areas. In the mid-nineteenth century it was the site of the largest dump in New York City, fed by barges carrying garbage and animal remains. Local factories used the remains, boiling bones and making fertilizer, glue, and fish oil. The last factory closed in 1935. In 1930 the island became the site of Floyd Bennett Field after the municipal government filled in marshland to connect it to the mainland. The island's population of 400 was evicted in 1936 to make way for the Belt Parkway. The U.S. Navy bought the airfield in 1942 and owned it until 1971, when control reverted to the city. Since 1972 Barren Island has been part of the Jamaica Bay Unit of the Gateway National Recreation Area.

Stephen Weinstein

Barrymore, John (Sidney Blythe) (*b* Philadelphia, 15 Feb 1882; *d* Los Angeles, 29 May 1942). Actor. Born into "America's First Family of Theater," Barrymore's good looks earned him the nickname "The Great Profile." In 1920, at the Plymouth Theater in New York City, Barrymore made his Shakespearean debut in *Richard the Third.* His performance was hailed by critics as the beginning of a new era for Shakespeare on the American stage. He went on for 101 performances—one more than Edwin Booth—before withdrawing from the production. Barrymore's starring role in *Hamlet* (1922) also won critical praise in both New York and London. An early star of silent films, he was acclaimed as one of the screen's greatest performers; during his 25-year career, he played the leading man in more than 60 films. By the mid-1930s, Barrymore's reckless lifestyle and hard drinking had taken its toll. To pay off debts to his ex-wives and the Internal Revenue Service, Barrymore accepted whatever roles were offered, but his memory became erratic and he had to resort to cue cards to remember his lines. He married four times and had three children; he is the grandfather of the popular actress Drew Barrymore. His sister, Ethel, and brother, Lionel, both had long and illustrious careers on the stage and in Hollywood. The Ethel Barrymore Theater, on West 47th Street, is named for his sister.

Frank Dyer

bars, taverns, and saloons. In 1641 the Stadt Herbergh, or City Tavern, sold wine and beer imported by the Dutch East India Company to the citizens of New Amsterdam, and the tavern became so central to the community that it was later made the town hall. Peter Stuyvesant complained in 1648 that 25 percent of the houses in the city were taverns and proceeded to impose strict regulations on their hours of business. The King's Arms at Cedar Street and Broadway became the rendezvous for opponents of Jacob Leisler in the 1680s. After the British captured New Amsterdam, the design of the English tavern came to predominate. Elaborately painted signs were mounted in front of such taverns as the Black Horse, the St. George, and the White Lion. At the center of the typical tavern stood a large fireplace that provided heat and was used for cooking; around the fireplace were tables and chairs for customers. The bar had a small, secure liquor cabinet to protect against thievery and destructive brawls. Ales and porters were the most widely consumed beverages, though rum, brandy, and Madeira also were popular. Most taverns offered two meals: a hot dinner at noon and a cold supper in the evening. Visitors from other cities and those in need of accommodations were quartered in small rooms on the second story or given pallets near the fireplace. Taverns were frequented only by men—merchants, lawyers, artisans, and sailors—and ranged in grade from the luxurious Fraunces Tavern (now rebuilt on its original site at 54 Pearl Street) to cheap taverns near the East River. Many were stopping places for stagecoaches, as well as centers for such entertainments as lectures, animal shows, bear baitings, cockfights, and rat killings. They served many other functions as well: in the early eighteenth century sailors seeking employment went to the Sign of the Pine Apple near the docks on the East River; politicians and businessmen often negotiated at the Merchants' Coffee House on Broad Street (from 1754) and the Black Horse Tavern at William Street and Exchange Place; drovers and butchers haggled over the price of cattle at the famous Bulls Head Tavern on the east side of the Bowery north of Canal Street; and early in the nineteenth century the Blue Boar on William Street was a national employment center for carpet weavers.

In the mid-nineteenth century the functions of the tavern were assumed by various other establishments: the hotel emerged as a place specifically for lodging, and the barroom or saloon (a term derived from the drinking salon of the 1850s) became a place where a working-class clientele consumed beer and other

Steve Brodie's Bowery Saloon, ca *1895*

liquors. As tens of thousands of Irish and German immigrants settled in the city, the saloon evolved into a central institution. Usually situated on a street corner, it was a single room dominated by a long, straight bar, usually without any chairs or seats. The change from tavern to saloon was accompanied by a growth in the popularity of lager beer, first brewed in the city in the late 1840s by Frederick and Maximilian Schaefer. By the 1860s and 1870s "stand-up" barrooms, owned mostly by breweries, were found throughout New York City. Some taverns suffered from the effects of the temperance movement and in particular from a decline in patronage among the middle class, but in tenement neighborhoods barrooms became integrated into the local way of life.

The saloon came to be regarded as the "poor man's club," providing young men with an appealing alternative to the lodging house and the tenement. Because saloons had no seats they could accommodate the rush of factory workers at midday and after work, and as early as the 1850s they served a free lunch to those purchasing beer. Workers could spend the evening playing shuffleboard, billiards, and cards or reading newspapers that the saloons provided; some men even received their mail there. Tammany Hall recognized the importance of saloons in working-class life and used them to muster votes from immigrants. Its last great leader, Charles Francis Murphy, began his career in politics in the 1880s as the owner of a saloon on 19th Street and Avenue C that sold customers a glass of beer and a bowl of soup for 5 cents. Toward the end of the century Jacob A. Riis took photographs of customers at "black-and-tans" (underground bars that were dimly lit and often dangerous). By 1885 there were 10,000 drinking places in the city, or one for every 140 residents. The great majority were local stand-up bars, but some were specialized establishments: beer gardens in Little Germany with tables, chairs, and brass bands (see Beer halls); elegant saloons in hotels; "sporting saloons" such as Harry Hill's at Crosby and Houston streets, where boxing matches attracted both the wealthy and the working class; concert saloons that provided musical and theatrical entertainment before the rise of vaudeville; and sailors' barrooms such as Jimmy the Priest's on Fulton Street (the model for the saloon in Eugene O'Neill's *The Iceman Cometh*).

Between the 1860s and 1919 there were only modest changes in the function and design of saloons. Although they remained overwhelmingly male, by 1910 women were sometimes admitted with a male escort. During Prohibition drinking moved from legal establishments to illegal speakeasies, which were ubiquitous and well attended despite a common view that they lacked ambience. Saloons reopened after the repeal of Prohibition but failed to regain the central position in the life of the city that they had occupied earlier, in part because improvements in housing conditions made evenings at home more bearable, and in part because restrictions on immigration in the 1920s decreased the city's population of single men. Female customers increased in number after World War II and were admitted to most drinking places by about 1960. The few bars that continued to admit men only were gradually forced by the women's movement to relent: the last was McSorley's Old Ale House in 1970, which had long been known by the slogan "good ale, raw onions, and no ladies." In the 1960s and 1970s bars were the backdrop for the city's changing sexual mores: singles bars began to open, especially on the Upper East Side (the best-known was Maxwell's Plum), as did gay bars, such as the Stonewall Inn on Christopher Street (site of the well-known rebellion in June 1969). Both types of bar declined in the 1980s and 1990s, however, owing to the spread of AIDS and other sexually transmitted diseases, as well as a worsening economy. At the same time brew pubs (which brewed their own beer) and sports bars increased in popularity.

The New York City Indoor Smoke-Free Air Act of 2002 banned smoking from nearly every business in New York, including bars. It was met with widespread opposition from bar and restaurant owners, who predicted a loss of income. Among the bars that have become well known in the history of New York City are the White Horse Tavern in Greenwich Village, Pete's Tavern at Irving Place, the Landmark Tavern at 46th Street and 11th Avenue, and the Ear Inn on Spring Street.

Richard Stott

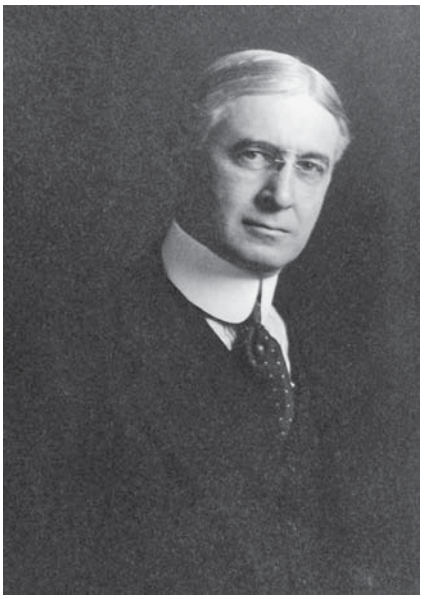
Bartholdi Inn. Theatrical boardinghouse founded in 1899. Theresa Bartholdi, often called "Mother" Bartholdi, was the founder of the boardinghouse, which began as two floors at 1536 Broadway. Five years later, it moved to a 110-room location on the corner of 45th Street and Broadway. The inn catered mainly to vaudeville performers, including Eva Tanguay, Fanny Brice, Pearl White, D. W. Griffith, John Gilbert, Mack Sennett, and Charlie Chaplin. The Bartholdi Inn was replaced by a movie theater and office building in 1920.

Max Seppo

Bartók, Béla (*b* Nagyszentmiklós, Hungary [now Sînnicolau Mare, Romania], 25 March 1881; *d* New York City, 26 Sept 1945). Composer and pianist. After spending most of his career in Budapest, he fled from the Nazis and in October 1940 arrived in New York City, living first at 110-31 73rd Road in Forest Hills in Queens. During the same year he was appointed a research assistant in music at Columbia University, where he transcribed and edited a collection of Serbo-Croatian women's songs. For three years he lived at 3242 Cambridge Avenue in Riverdale in the Bronx. He composed the Concerto for Orchestra (1943), a commission by Serge Koussevitzky that won him the attention of a wider public, and the Sonata for Solo Violin (1943), commissioned by Yehudi Menuhin. From 1944 until his death he lived at 309 West 57th Street in Manhattan.

S. D. R. Cashman

Bartow–Pell Mansion. Historic house in the Bronx. It stands on a tract now in Pelham Bay Park bought in 1654 by the English physician Thomas Pell. Built between 1836 and 1842 by Robert Bartow, a publisher and a



Bartow–Pell Mansion, 2009

descendant of Pell, it remained in the family until 1888, when it was acquired by the city. The mansion is an elegant stone building with lavishly decorated Greek Revival interiors and a grand spiral staircase. In 1914 an orangerie was added and the International Garden Club took over the maintenance of the mansion, carriage house, and grounds. The mansion served Mayor Fiorello H. La Guardia as a summer office in 1936 and was opened as a public museum in 1947. The carriage house was restored and opened to the public in 1993.

Jonathan Kuhn

Baruch, Bernard (Mannes) (*b* Camden, S.C., 19 Aug 1870; *d* New York City, 20 June 1965). Legendary financier. After moving to New York City with his parents and three brothers in 1880 he lived with his family at 144 West 57th Street, later at 345 West End Avenue, and until 1899 at 51 West 70th Street. He graduated from City College in 1889 and joined the brokerage firm of A. A. Housman as a clerk; by the time he was 30 he had amassed a fortune of more than $1 million. At age 33 he was elected to the governing committee of the New York Stock Exchange. A supporter of Mayor William J. Gaynor, he became a trustee of City College in 1910. His most successful investment was in the Gulf Sulphur Company (later Texas Gulf Sulphur) in 1912. He was appointed by President Woodrow Wilson as chairman of the War Industries Board in 1918, and after the war to a senior advisory position with the American peace delegation in Paris. In the 1920s he bought a mansion at 1055 Fifth Avenue, where he lived until 1946 (the site is now occupied by 1050 Fifth Avenue). Although he lost money during the stock market crash of 1929 he recovered quickly; his fortune was estimated at $20 million to $25 million during the Depression. In the early 1930s he had the foresight to buy gold. A conservative Democrat, he was a sometimes reluctant ally of President Franklin D. Roosevelt and an adversary of President Harry S. Truman, who named him the American representative to the United Nations Atomic Energy Commission in 1946. As a longtime member of the Committee on Unlisted Securities he worked to advance the acceptance of mining issues by the other governors. His greatest disappointment in business was his inability to gain control of a railroad. In his later years Baruch warned repeatedly against inflation. Bernard Baruch College of the City University of New York is named in his memory. From the mid-1940s until his death he lived at 4 East 66th Street. He wrote *Baruch: My Own Story* (1957) and *Baruch: The Public Years* (1960).

James Grant

Baruch College. College of the City University of New York (CUNY), formed in 1919 at 17 Lexington Avenue in Manhattan as a branch of City College dedicated to business and civic administration. Its landmark building is located on the site of the Free Academy, the first free institution of public education in the United States. In 1953 it was named after the financier Bernard Baruch, one of the most successful graduates of City College, who gave the college $9 million in 1965; it became an independent college of the city university system in 1968.

In the early twenty-first century it has three schools: the Zicklin School of Business, which enrolled 80 percent of its students; the School of Public Affairs; and the Weissman School of Arts and Sciences. The college also offers nondegree and certificate programs through its Division of Continuing and Professional Studies. Zicklin School of Business is the largest collegiate school of business in the nation and the only CUNY school that offers business programs accredited by the Association to Advance Collegiate Schools of Business. Formerly a predominantly male student body, by 2009 more than half the students were women; 65 percent of the almost 17,000 students were full time.

Lisa Keller

Baryshnikov, Mikhail (*b* Riga, Latvia, 28 Jan 1948). Dancer, choreographer, and dance promoter. He joined the Kirov Ballet in Leningrad (now Saint Petersburg, Russia) in 1967, and soon rose to prominence for his technical virtuosity and emotional fire before defecting to the West in 1974. He joined American Ballet Theatre, quickly becoming a star and helping to launch the "ballet boom" of the 1970s. In 1979 he moved briefly to New York City Ballet, returning to ABT in 1980 as principal dancer and artistic director, a position he held for 10 years. While at ABT he choreographed a number of works, including *The Nutcracker*. Active in both modern dance and ballet, he has performed with major companies worldwide, in films, on television (including *Sex and the City*), and in the theater. A dance promoter as well as a performer, he

The first home of Baruch College, Lexington Avenue and 23rd Street

founded the Baryshnikov Dance Foundation (1979) and the White Oak Dance Project (2002, with Mark Morris) and is currently artistic director of the Baryshnikov Arts Center (established 2005). Located at 450 W. 37th Street, the center offers performance space (including the Jerome Robbins Theater) and dance studios, as well as residencies and other support for artists.

Barzun, Jacques (Martin) (*b* Créteil, France, 30 Nov 1907). Historian. His association with Columbia University began when he enrolled there at age 15 in the fall of 1923 (AB 1927, MA 1928, PhD 1932). He went on to positions as a professor (1928–55), dean of the graduate faculties (1955–67), dean of the faculties and provost (1958–67), and university professor (1968–75). One of the most prominent intellectuals in the United States, he was featured on the cover of *Time* magazine in 1956. After retiring from Columbia, he was literary adviser to Charles Scribner's Sons (1975–93). He moved to San Antonio, Texas, but continued writing about his academic specialty, cultural history, and about higher education. His most recent works in these fields are *From Dawn to Decadence: 500 Years of Western Cultural Life, 1500 to the Present* (2001), *Begin Here: The Forgotten Conditions of Teaching and Learning* (1991), and *A Stroll with William James* (1991). A sampling of his work can be found in *A Jacques Barzun Reader* (2002).

baseball. Manhattan and Brooklyn played an important role in the early development of baseball. In 1846 a set of rules defining the "New York game" was issued by a committee led by Alexander J. Cartwright and comprising members of the New York Knickerbocker Club, an organization of white-collar workers from Madison Square and Murray Hill. The rules provided for a diamond-shaped infield with bases separated by a distance of 90 feet (27 meters); the pitcher stood in the center of the diamond at a distance from home plate of 45 feet, or 14 meters (changed in 1893 to 60 feet and 6 inches, or 18 meters). The first game played under these rules reportedly took place on 19 June 1846 in Hoboken, New Jersey. When Cartwright later joined the gold rush of 1849 he introduced the New York game in San Francisco. With continuing modifications it eclipsed such rival versions of baseball as "town ball" and the "Massachusetts game" and became standard. During the next 15 years some 60 organized baseball clubs played matches in and around New York City. In the 1850s the popularity of baseball in eastern cities surpassed that of cricket, and baseball was soon being called the national game. Its acceptance was promoted by the journalist Henry Chadwick, who reported on games for local newspapers and devised a box score for recording each player's achievements. In 1860 organized baseball was most popular in cities in the Northeast. Among the best-known teams in the area were the Knickerbockers, Eagles, Empires, and Gothams of Manhattan; the Eckfords, Atlantics, Putnams, and Excelsiors of Brooklyn; and the Unions of Morrisania. Some clubs like the Knickerbockers and the Excelsiors limited membership to white-collar workers; a few like the Uniques of Brooklyn were composed of black players. During the Civil War soldiers of both armies learned the game and helped to spread it to other areas of the country. At the same time strong amateur teams attracted large crowds.

The National Association of Base Ball Players was formed in 1857 by amateurs seeking to promote the game, and although it never organized a league or a championship schedule, more than 300 clubs belonged to it by 1867. Leading teams erected fenced parks, charged admission, and paid good players for their services. Gamblers openly accepted wagers and sometimes offered bribes to players. The association was unable to curb either these practices or the growth of professionalism. By 1869 the New York Mutuals paid their starting players; the first team to pay all its players, the Cincinnati Red Stockings, was managed by Harry Wright, a former professional cricket player with the St. George Club of Staten Island. The Red Stockings toured the nation and remained unbeaten until losing a game in extra innings to the Atlantics in the summer of 1870 before a large crowd at the Capitoline Grounds in Brooklyn. A meeting at Collier's Cafe on Broadway and 13th Street on 17 March 1871 led to the formation of the National Association of Professional Base Ball Players, which hastened the demise of the National Association of Base Ball Players. The new association lasted five seasons and is considered the first major league. Its teams in the metropolitan region included the Mutuals (1871–75), the Atlantics (1872–75), and the Eckfords (1872). Between 1872 and 1875 the Boston Red Stockings won the championship of the league in each year; the best effort during this period by a team from New York City was the second-place finish in 1874 by the Mutuals.

The National League of Professional Base-Ball Clubs was formed in 1876 by a group of club owners meeting at the Grand Central Hotel in New York City. The Mutuals were one of the first eight members of the league but were expelled after refusing to play their final games in the first season. From 1877 to 1882 no team from New York City played in the league, although several strong teams played from 1877 to 1879 in a rival one, the International Association. In 1882 the National League admitted a team from the city called the Giants, which won the championship of the league and the World Series in 1888 and 1889 and inspired several other teams in later years to take its name. In the following decade the fortunes of the New York Giants plummeted: they were able only to place second in 1894, and in the following year they came under the ownership of Andrew Freedman, a politician from Tammany Hall whose quixotic and abortive effort to dominate the league stirred dissension among other owners. New York City was also represented in the American Association, which was recognized by the National League as a major league under the National Agreement of 1883. The association lasted to the end of 1891 and fielded two teams in the area. The New York Metropolitans joined in 1883 and in the following season won the championship of the association before losing the first World Series to the champions of the National League (from Providence, Rhode Island). The owner of the Metro-

politans, John Day, also owned the Giants of the National League, the team to which he shunted his best players; the Metropolitans were severely weakened as a result and left the American Association in 1887. In the same year the Brooklyn Bridegrooms joined the association. Owned by Charles Byrne, they won the championship of the association in 1889, which had been won for four consecutive seasons by the St. Louis Browns. After losing the World Series to the Giants the Bridegrooms moved in the following year to the National League and won its championship, becoming the only team ever to win consecutive pennants in different major leagues. In the World Series of 1890 the Bridegrooms played to a draw against the champions of the American Association (from Louisville, Kentucky). In 1890 a third major league, the Players National League, was organized by John Ward, the captain of the New York Giants and the head of the Brotherhood of Professional Base Ball Players. The league opposed several practices of the owners in the other leagues, including those of selling players, extending their contracts unilaterally, and limiting their salaries. It had teams in Manhattan and Brooklyn and attracted many players from the other leagues but was declared bankrupt after one season. The American Association disbanded in 1891 under pressure from the National League, which absorbed four of its eight teams: the result was a single major league with 12 teams, the National League and American Association of Professional Base Ball Clubs. This operated to the end of 1899, when its championship was won by the team from Brooklyn, then known as the Superbas. The same team won the championship in 1900, when the league reduced the number of its teams to eight.

New York City in the early twentieth century was the home of several important baseball teams as well as the birthplace of some of the best-known baseball traditions: local fans were among the first to eat hot dogs at the ballpark (introduced at the Polo Grounds by Harry M. Stevens after 1900) and the first to hear the song "Take Me Out to the Ball Game" (1908), by Al Von Tilzer and Jack Norworth (who were both from New York City). The American League was formed in the city in 1901 and recognized as a major league under the National Agreement of 1903. Under the new system of two major leagues the World Series was revived and major league baseball began a half-century of unprecedented stability: after a team moved from Baltimore to New York City in 1903 and became the Highlanders, no other teams changed their location until 1952. The Highlanders played at a wooden stadium at 165th Street and Broadway called Hilltop Park until 1913, when they became tenants of the New York Giants at the Polo Grounds and were renamed the Yankees; in 1923 they moved to Yankee Stadium at East 161st Street and Jerome Avenue

2003	Florida Marlins	New York Yankees	4–2	—
2009	New York Yankees	Philadelphia Phillies	4–2	Hideki Matsui

Note: In 1904 the owners of the New York Giants refused to compete against the Boston Red Sox (then the Boston Americans); however, it is still considered a World Series appearance.

As of 2009 the New York Mets went to four World Series and won two, the Brooklyn Dodgers went to seven and won one, the New York Giants went to 15 and won five, and the New York Yankees went to 40 and won 27.

There have been 14 all–New York match-ups in the World Series. New York teams have played in 65 of the 104 World Series and won 34.

in the Bronx. Between 1903 and 1923 the Giants of the National League emerged as the most powerful and profitable team in the major leagues. During the tenure of their manager John McGraw (1902–32) they won the championship of the league 10 times and the World Series three times (their loss of the league championship in 1908 was brought on by the failure of "Bonehead" Fred Merkle to touch second base). During these years the league championship was won twice by the team from Brooklyn, now renamed the Dodgers. In 1914–15 the Federal League sought unsuccessfully to be recognized as a major league. One of its members was the Brooklyn Federals, a mediocre team owned by Robert Ward, an important financial backer of the league whose death in 1915 soon led to its dissolution.

A far more enduring challenge to the major leagues was mounted by the Negro leagues, the first of which was formed in 1920 by Rube Foster as the Negro National League and included teams from the Midwest. New York City was represented by the Lincoln Giants and the Brooklyn Giants in the Eastern Colored League, formed in 1923 by Nat Strong. Among the best-known players on these teams were the pitchers Smokey Joe Williams and Cannonball Dick Redding, the shortstop John Henry Lloyd (known as the "black Honus Wagner"), and the catcher Louis Santop. Both the Eastern Colored League and the Negro National League disbanded at the onset of the Depression. By this time the New York Yankees of the American League had begun to overshadow the New York Giants of the National League and during the next four decades were undeniably the best team in baseball. Between 1921 and 1964 they won 29 league pennants and 20 World Series, led by such prominent players as Babe Ruth, Lou Gehrig, Joe DiMaggio, and Mickey Mantle. The Yankees played against the Giants in six World Series (known as "subway series"), of which they lost two (1921, the first series to be broadcast on radio, and 1922) and won four (1923, 1936, 1937, and 1951). Among the best-known players on the Giants in these years were Mel Ott (1926–47) and Carl Hubbell (1928–43). A second Negro National League was formed in 1933, followed by a Negro American League in 1937. The Negro National League in 1935 included the Brooklyn Eagles and the New York Cubans, who won the second of two championships contested during each half of the season. From 1936 both the Cubans and the New York Black Yankees belonged to the league, but after Major League Baseball at last became racially integrated in 1947 when Jackie Robinson joined the Brooklyn Dodgers, the Negro

1936–48	New York Black Yankees	Negro National League
1962–	New York Mets	National League

1. Although primarily known as the Trolley Dodgers from the 1890s and as the Dodgers from 1910, the team had several other names. Official names: Bridegrooms (1884–98), Superbas (1899–1926), Robins (1927–31, for the manager Wilbert Robinson), Dodgers (1932–33), Brooklyns (1934–37), Dodgers (1938–57). Unofficial names: Ward's Wonders (for John M. Ward, who joined the team after the Brooklyn Wonders of the Players League disbanded in 1890), Foutz's Phillies (for Dave Foutz, manager 1893–96), Barney's Boys (for Billy Barney, manager 1897–98), Byrne's Boys (for Charles Byrne, president 1890–98), Infants (about 1910).

2. Also called Ward's Wonders, for the star player John M. Ward.

3. Originally called the Highlanders; the name Yankees first used in 1905, both names used for the next eight years. In 1912 the team moved to its new stadium, the Polo Grounds on East 155th Street, and in 1913 the name was officially changed to the Yankees.

4. The name Brookfeds was introduced but never widely adopted.

National League disbanded in the following year. The Cubans and the Black Yankees in 1949 joined the Negro American League, which played its final game in 1950 (by which time the Cubans were its only remaining team from the city).

The audience for baseball expanded rapidly with the introduction of broadcasts on television, the first of which was made from New York City in 1939 by Red Barber. In the 1940s the Dodgers became a formidable team in the National League, owing largely to the accomplishments of Duke Snider, Gil Hodges, and Robinson. The team played seven World Series against the Yankees but won only one (1955) and lost six (1941, 1947, 1949, 1952, 1953, 1956). Competition for the league championships and in the World Series during these years was marked by intense rivalry and several dramatic successes and failures: a missed third strike by the Dodgers' catcher Mickey Owen that helped the Yankees to win the World Series in 1941, a streak by DiMaggio in the same year during which he hit safely in 56 consecutive games, a home run by the Giants' outfielder Bobby Thomson that won a playoff against the Dodgers for the championship of the National League in 1951, and a perfect game pitched by Don Larsen of the Yankees against the Dodgers in the World Series of 1956. The popularity of baseball nationwide was encouraged by the status of New York City as the center of print and broadcast journalism: some 25 newspapers were published there in 1950.

Baseball in the city was dealt a severe blow in the winter of 1957, when both its teams in the National League announced plans to move to California in the following season: the Giants and their popular outfielder Willie Mays to San Francisco, and the Dodgers to Los Angeles. In 1962 the city was awarded one of two new teams in the league, the New York Mets, who performed at a rarely matched level of ineptness in their early seasons before astonishing observers by winning the World Series in 1969, earning the nickname "Miracle Mets." Led by Dwight Gooden and Darryl Strawberry, the Mets again won the series in 1986 against the Boston Red Sox after a critical error by Boston first baseman Bill Buckner allowed the Mets to win the sixth game of the series and force a decisive seventh game, which they won. The Yankees played poorly in the late 1960s and early 1970s but revived under owner George Steinbrenner (from 1973), winning the World Series in 1977 and 1978 with the play of such stars as Thurman Munson, Rich "Goose" Gossage, Bucky Dent, and Reggie Jackson, who famously hit three home runs in game six of the 1977 series at Yankee Stadium. The Yankees failed to make the playoffs from 1982 through 1994, but with stars such as Derek Jeter and Mariano Rivera and the leadership of manager Joe Torre, the team won four World Series in five years from 1996 to 2000 (losing only in 1997) and made the playoffs every year from 1995 through 2007. Under new manager Joe Girardi, the Yankees won the 2009 World Series. The Mets experienced more moderate success, with their best season ending at the hands of the Yankees in the 2000 World Series. Two minor league teams also played in the city in the early twenty-first century, with the Brooklyn Cyclones, a Mets affiliate, playing at Keyspan Park and the Staten Island Yankees playing at Richmond County Bank Ballpark since 2001. In the early twenty-first century many New Yorkers remained ardent fans of baseball, and the city continued to exert a strong influence on the game.

Basie, Count [William] (*b* Red Bank, N.J., 21 Aug 1904; *d* New York City, 26 April 1984). Pianist and bandleader. He moved to New York City about 1924; there he learned to play the pipe organ from Fats Waller. In 1927 he left New York City and became a leading performer of the hard-driving swing that developed in Kansas City. He returned to New York City in 1936 as the leader of the Count Basie Orchestra, which attracted such well-known soloists as the tenor saxophonists Lester Young and Herschel Evans, the trombonist Dicky Wells, the trumpeters Buck Clayton and Harry "Sweets" Edison, and the singers Billie Holiday, Jimmy Rushing, and Helen Humes; he played in the rhythm section with Walter Page, Jo Jones, and Freddie Green. For a while the members of the band lived at the Woodside Hotel in Harlem, inspiring the composition "Jumpin' at the Woodside" (1938). Basie dismantled the big band in 1950 and organized another one in 1951 that had tighter and more polished arrangements and performed around the world. With his wife, Catherine, he moved to St. Albans in the borough of Queens in 1946. His book *Good Morning Blues: The Autobiography of Count Basie* was published in 1985.

basketball. New York City is widely acknowledged to have become the spiritual home of basketball soon after the sport was invented in Springfield, Massachusetts, in 1891, and to have remained so for the next century. By 1900 basketball was played throughout the metropolitan area at chapters of the Young Men's Christian Association and in settlement houses, school gymnasiums, lofts, armories, and dance halls, and amateur and semiprofessional teams soon flourished. The year 1914 marked the formation of the New York Celtics, who played for three seasons before disbanding when the United States entered World War I. After the war the promoter Jim Furey and his brothers sought to reorganize the team, which became known as the Original Celtics when the owner of the New York Celtics refused to relinquish his rights to their name. Along with the New York Whirlwinds, which had been organized by the well-known promoter Tex Rickard, the Original Celtics were one of the outstanding teams of the period. Their success and popularity stimulated the interest of the public in professional basketball, and in 1925 the American Basketball League (ABL) was formed with teams in Brooklyn, Washington (D.C.), Cleveland, Rochester (New York), Fort Wayne (Indiana), Boston, Chicago, Detroit, and Buffalo. The Original Celtics did not at first join the league (the owners believed that they could make more money by barnstorming), but teams that did belong to the league hoped to capitalize on the popularity of the

Original Celtics by challenging them to exhibition games, only to be embarrassed by losing decisively and regularly. The Original Celtics finally joined the ABL as a replacement for Brooklyn, which had the worst record in the league, and in two seasons won 72 games and lost only 14; in the playoffs the team won eight games and lost one. Professional basketball had a precarious existence in New York City in the next two decades, and by 1929 the ABL was defunct.

A number of notable black teams were formed in the 1920s. The best of these was the New York Renaissance (popularly known as the New York Rens), formed in 1922 by Bob Douglas and named after the Renaissance Casino in Harlem where the team played its home games. By the mid-1930s the Rens were acknowledged to have succeeded the Original Celtics as the leading team in New York City; they continued to play until after World War II. The well-known team the Harlem Globetrotters, notwithstanding its name, was based in Chicago.

New York University, St. John's College, and Fordham University all had powerful teams during the 1920s. Between 1928 and 1936 St. John's won 179 games and lost only 32 under the coaching of Buck Freeman, probably the greatest exponent of the deliberate style of play associated with the Original Celtics and the Rens. College basketball reached a new level of popularity in 1934, when both City College of New York and New York University finished their seasons undefeated and played against each other in March for the unofficial championship of the city. The game was staged at the 168th Street Armory by Ned Irish (1905–82), a sportswriter who had arranged games to benefit the city relief fund at the behest of Mayor James J. Walker, and drew a crowd of 16,000.

The city and the metropolitan area were the site during these years of some of the best collegiate basketball in the country. City College and New York University were always competitive, St. John's remained a consistent winner after Joe Lapchick replaced Freeman as the head coach in 1937, and other schools such as Long Island University, St. Francis College, and St. Peter's College and Seton Hall College in New Jersey were emerging as basketball powers. This success in collegiate basketball culminated in 1938 in the first staging of the National Invitation Tournament (NIT), sponsored by the Metropolitan Basketball Writers Association; the success of the NIT inspired the National Collegiate Athletic Association (NCAA) to organize its own tournament in 1939. In its first 13 years the NIT was won five times by teams from New York City, and in 1950 City College became the first school to win both the NIT and the championship of the NCAA. In the following year college basketball in the city was devastated by the results of an investigation led by the district attorney of Manhattan, Frank Hogan, into allegations of "point shaving" (deliberately reducing the margin of victory in a game to accommodate bettors). Thirty-two players were indicted from seven local schools, including City College, Manhattan College, New York University, and Long Island University. Madison Square Garden soon ceased to be a major venue for college games, the NIT lost some of its glamour, and most local colleges severely reduced their basketball programs or eliminated them entirely. Not until the late 1970s did another local school, St. John's University, field a team that achieved a high national ranking.

Professional basketball began to arouse the interest of fans after World War II. The Basketball Association of America, formed in 1946, included as one of its original members the New York Knickerbockers; after two years the association merged with the National Basketball League to form the National Basketball Association (NBA), which had 17 teams. The Knicks were among the first racially integrated teams in basketball: Nat "Sweetwater" Clifton, one of the first black players in the NBA, joined the team in the autumn of 1950. On the court the Knickerbockers achieved little distinction in their first 23 years and won only two divisional titles, but after several astute trades and drafts they won the championship of the NBA in 1969–70 and again in 1972–73. After a period of poor play the team's fortunes improved in the 1990s, but the Knicks failed to win the NBA championship, losing twice in the finals.

New York City is noted for having outstanding basketball players in its high schools and playgrounds. Hundreds of players each year are recruited in the city by colleges throughout the country, and brokers of high school basketball players, called "street agents," are often seen at high school and playground games. Among local players who have become prominent in college and as professionals are Kareem Abdul-Jabbar, who played in the city as Lew Alcindor, Connie Hawkins, Roger Brown, Julius Erving, Albert King, Nate "Tiny" Archibald, and Nancy Lieberman. The best-known playground players include Hermann "Helicopter" Knowings, Joe "the Destroyer" Hammond, Pablo Robertson, Jumpin' Jackie Jackson, Bobby Hunter, Ron Jackson, and Earl "the Goat" Manigault, considered by his peers to have been as talented as Abdul-Jabbar.

Basketball is a popular and visible game in the city's playgrounds in the early twenty-first century, reflected by the presence of weekend tournaments such as the Rucker Pro Tournament (first staged in 1950), played at the Holcombe Rucker Memorial Playground opposite the site of the old Polo Grounds on 155th Street and Frederick Douglass Boulevard (Eighth Avenue). Professional and college basketball played at Madison Square Garden also remains popular, with the Knicks playing their home games there and the NIT and Big East Conference tournaments held annually each spring.

Albert Figone

Basquiat, Jean-Michel (*b* Brooklyn, 22 Dec 1960; *d* New York City, 12 Aug 1988). Artist. When he was a child his family encouraged him to be artistic, and at the age of 17 he began spraying graffiti on blighted buildings in lower Manhattan with the tag "SAMO"; the *Village Voice* wrote a piece on his graphics the following year. In 1978 he moved to Manhattan and was involved in the thriving East Village art scene. His first recognition as a neoexpressionist artist was in 1980 when he participated in the exhibition *The Times Square Show*; in the early 1980s he continued to have his works shown around the city. In 1985 he was featured on the cover of the *New York Times Magazine* for the piece "New Art, New Money: The Marketing of an American Artist." He died of a drug overdose in his loft at 67 Great Jones Street. In 1996 a film biography *Basquiat* was made about his life. His work has soared in value since his death; in 2008 *Untitled (Boxer)* fetched $12 million.

Jessica Montesano

Bates USA. Advertising agency, formed in 1987 as Backer Spielvogel Bates Worldwide after Saatchi and Saatchi merged two of its subsidiaries: Ted Bates (founded in 1940 by Theodore L. Bates) and Backer and Spielvogel. In 1994 the firm was renamed Bates Worldwide; in 1997 its parent company was split into two companies, with Bates becoming part of Cordiant Communications Group. In 2003 the WPP Group acquired Cordiant and closed Bates.

George Winslow

Bath Beach. Neighborhood in southeastern Brooklyn, bounded to the north by 86th Street, to the east by Bay Parkway, to the south by Gravesend Bay, and to the west by 14th Avenue; a section of Bensonhurst. Named for the English spa of Bath, it was a resort known for its yacht clubs, fashionable villas, and a restaurant called the Captain's Pier at the foot of 19th Avenue until the creation of the Belt Parkway paved over the beachfront in 1939. The housing consists mostly of two- and three-family redbrick houses and six-story apartment buildings. The population is mostly Italian, and many residents work in Manhattan. In the early twenty-first century many

Bath Beach, 1992

Asian, Russian, and Jewish immigrants have moved into the neighborhood.

Stephen Weinstein

Bathgate. Neighborhood in the central Bronx, immediately west of Crotona Park. It is often said to include the neighborhood of Claremont. The name derives from a family that worked the lands of Morris Manor before establishing its own farm in Morrisania in 1841 on a tract of more than 140 acres (57 hectares), with a farmhouse situated near what is now Third Avenue and East 172nd Street. The land was sold to the city about 1883 as part of the Parks Act and became Crotona Park (plans to name it after the Bathgates were forestalled by a dispute between the family and the surveyors). Many Jews from the Lower East Side moved to new five-story apartment buildings in the area after the Third Avenue elevated line was extended north in the 1890s. By the mid-1950s there were increasing numbers of blacks and Puerto Ricans, and Bathgate Avenue became a thriving commercial strip known into the 1960s for its ethnic restaurants. The Bathgate Industrial Park occupies eight blocks along Bathgate Avenue between the Cross Bronx Expressway and Claremont Parkway. Built on the site of apartment buildings that were burned and abandoned in the 1970s, it is one of the most successful business zones in the Bronx. In the first decade of the twenty-first century the population is largely black and Hispanic, with a large Puerto Rican community.

Gary D. Hermalyn

bathhouses. A quick sponging off was considered adequate for personal cleanliness during colonial times in New York City. Gradually the elite began to enjoy bathing, and in 1792 Nicholas Denise opened a "very convenient Bathing House, having eight rooms, in every one of which Baths may be had with either fresh, salt or warm water . . . prices fixed at 4s per person." The opening of the Croton Aqueduct in 1842 made bathing easier for those who could afford to install running water in their homes; most of the city's population continued to rely on public hydrants. Interest in building public baths in New York City mounted about the mid-nineteenth century, when a national movement was organized to promote personal cleanliness in crowded tenements lacking adequate bathing facilities. The movement in New York City achieved its first success in 1849, when the Association for Improving the Condition of the Poor built the People's Bathing and Washing Establishment at 141 Mott Street, the first public bath. Open only during the summer, it provided laundry facilities, a swimming pool, and baths for men and women. The rates were prohibitive for the poor: 3 cents an hour to use the laundry, and from 5 to 10 cents to take a bath. Initially the bath attracted 60,000 persons a year and was hailed by the association as a great success, but it closed in 1861 for lack of patronage.

Concern over the cleanliness of the poor intensified after the Civil War, as immigrants from southern and eastern Europe crowded into the city's slums. In 1870 the Department of Public Works built its first floating baths, large wooden structures installed in the Hudson and East rivers that formed pools for bathing free of charge from June to October. By 1888 15 such baths attracted about 2.5 million men and 1.5 million women a year. Insisting that the pools were designed for cleanliness and not for recreation, the authorities imposed a 20-minute limit on their use. On hot days young boys evaded this regulation by moving from pool to pool, dirtying themselves en route. Soon after construction was completed, pollution became a serious problem, and from 1914 the floating baths were required to be watertight and filled with purified water. Spurred by the germ theory of disease, which lent new importance to the battle against dirt, reformers and the press urged the city government to open free baths during the 1880s. The city refused, on the grounds that the proposals lacked public support, and the physician Simon Baruch launched a campaign to seek

The Asser Levy Recreation Center, designed by Arnold W. Brunner and William Martin Aiken, opened as a public bath in 1908 (photo 1991)

Public bathhouse

other sponsors. He eventually persuaded the Association for Improving the Condition of the Poor to build a new bathhouse on the Lower East Side. Contributions to the venture included $27,000 from various sources and 80 pounds (36 kilograms) of soap from the firm of Colgate. The People's Baths opened in the early 1890s, its grand arch inscribed with the maxim "Cleanliness Next to Godliness"; this was the first successful indoor bathhouse in the country and was widely imitated. Built of concrete and iron and fitted with showers instead of tubs, it was easy to keep clean and inexpensive to operate. A 5-cent fee provided for a towel and soap. In 1898 alone the bathhouse attracted 115,685 patrons. Its success inspired other private charities to build similar facilities, and some businesses introduced baths for their employees.

The city did not begin to build a public bath until 1895, when the state legislature passed a law requiring municipalities with populations of 50,000 or more to build free bathhouses. During the same year the reform Republican William L. Strong won the mayoral election and endorsed the public bath movement. The first free bath began operation in March 1901 on Rivington Street. By 1914 the city had built 16 more public baths in Manhattan, seven in Brooklyn, and one each in Queens and the Bronx, most of them in neighborhoods populated by immigrants; the result was the most elaborate and expensive bath system in the country. Men and women entered separate waiting rooms and took a number. Once called, they were given 20 minutes to shower in a small cubicle divided into a changing area and a shower stall. Attendants controlled the timing and the temperature of the water. Most of the baths built after 1904 included gymnasiums and swimming pools to attract more patrons. People generally preferred to bathe at home if they could, and bathing facilities were increasingly provided by landlords under the Tenement House Law of 1901, which required tenements to have running water on all stories. Use of public baths declined, even before the last one was completed in 1914, whereas commercial bathhouses thrived. In 1897 there were 62 such facilities, including Russian (steam) baths, Turkish (hot-air) baths, vapor baths, and medicated baths, as well as swimming pools. More than half were owned and used by Jews from eastern Europe seeking to uphold religious and social traditions of bathing. The best known included the Russian and Turkish Baths on 10th Street between Avenue A and First Avenue.

Many municipal baths were renovated during the 1930s by the Works Progress Administration; after World War II most were demolished or converted to other uses (the last one, the Allen Street Baths, was shut down during the 1970s). Commercial bathhouses catering to gays played a central role in the gay liberation movement of the 1970s. A bitter controversy erupted during the 1980s over whether these bathhouses contributed to the spread of Acquired Immune Deficiency Syndrome by allowing casual sex on their premises; local health officials were ultimately given the power to close them by the state legislature in 1985. During the same years the growth of homelessness prompted the city to reintroduce free showers, this time in municipal shelters.

Few of the original municipal baths remain in the first decade of the twenty-first century. One, the Asser Levy Bath on East 23rd Street, was designated a landmark and reopened in 1990 as a swimming pool (without a bath) after $8 million in restorations. Private bathhouses, however, can still be found, and many gay bathhouses continue to operate, despite the closure of some by the Health Department. Russian bathhouses also remain, notably the Russian and Turkish Baths in the East Village.

Batten, Barton, Durstine and Osborn [BBDO]. Advertising agency formed in 1928 when the George Batten Company merged with Barton, Durstine and Osborn. Its accounts included General Electric and General Motors. In 1940 Alex Osborn, one of the company's founders, coined the term "brainstorming" to describe his technique for devising ideas for advertising campaigns. The agency was the first to set up a radio department and made plans for television advertising as early as 1931. Under the management of Ben Duffy in 1946–57 its work in television increased billings to more than $200 million, and the agency shifted its emphasis from advertising for banks, insurers, electric utilities, and other institutions to advertising for packaged goods. During the 1960s and 1970s it remained among the four largest advertising agencies in the United States, and in 1986 it merged with Doyle Dane Bernbach and Needham Harper to form a new public holding company, the Omnicom group, with total billings of $5 billion. In 1994, BBDO was selected advertising agency of the year by *Adweek* and *Advertising Age,* and in 2007 BBDO Worldwide was named Network of the Year at the Cannes Lions Advertising Festival. In 2008, BBDO New York was named Agency of the Year.

Chauncey G. Olinger, Jr.

Battery Maritime Building [BMB]. New York City's last intact, early-nineteenth-century ferry structure. Designed by the architects Walker and Morris, who also designed its neighboring twin, the original Whitehall Ferry Terminal, it opened in 1909 at the foot of Whitehall Street on the southern tip of Manhattan. At a time when 17 ferry lines plied the East River, the BMB served commuters who took the ferry from Manhattan to 39th Street in South Brooklyn. The BMB is an example of Beaux-Arts Structural Expressionism, mirroring the architecture of the Paris Exposition of the late nineteenth century. It is composed of several materials, including cast-iron columns, rolled-steel plates and angles, stucco-paneled walls and arches, lead-patterned glass windows, and a copper-paneled mansard roof. The ceiling vaults of the second-floor loggia deck are decorated with Gustavino tiles.

The BMB has had several lives. For 29 years ferry passengers lined up in the Great Hall, a 34-foot-high (7.3-meter-high), 8500-square-foot (790-square-meter) waiting area, one of the city's grand spaces. From there they boarded vessels at slips 5, 6, and 7 on the south side of the building. In 1938 the Brooklyn ferry service was discontinued, leaving the slips unused and the BMB structure to deteriorate. The U.S. Army, followed by the Coast Guard, ran ferry service to Governors Island from the BMB; the Governors Island Preservation and Education Corporation and the National Park Service continue that operation at slip 7. An occasional commuter ferry to New Jersey ran from slip 5 in the 1980s.

Various city agencies have found homes in the BMB, including the Department of Ports and Terminals (originally the Docks Department, housed in Pier A). In the 1980s the ferry level housed mothballed records of the Docks Department dating from 1870, a basketball court, and an out-of-tune piano. The latest tenant, the Department of Transportation, used the Great Hall for storage and the third and fourth floors for offices. The building was designated a city landmark in 1967; nine years later it earned a place on the National Register of Historic Places.

From 2001 to 2006, under the aegis of the city's Economic Development Corporation (EDC), the BMB underwent a $60 million structural restoration and exterior face-lift. With that work complete, EDC has selected developers from the Dermot Company and the downtown restaurateur Harry Poulakakis to bring the BMB back to life. Its latest reincarnation includes a specialty-foods market in the Great Hall and a new addition housing a boutique hotel and rooftop restaurant.

Ann L. Buttenwieser

Battery Park, with office district in background, ca *1935–40*

Battery Park. Public park at the southernmost edge of Manhattan. Dutch settlers in 1623 called the site Capske Hook, from the Native American word *kapsee,* which means "rocky ledge." Fort Amsterdam was constructed at the site in 1626, and Governor Thomas Dongan began building batteries along the shore in 1683, thus lending the area its name. Fort Amsterdam (which was successively renamed Fort James, Fort Willem Hendrick, Fort William, and Fort Anne) was occupied by the British and renamed Fort George during the Revolutionary War. In 1788 the fort was demolished, the rubble from which was used as landfill to expand the Battery, which became a public waterfront promenade. Between 1808 and 1811, a new, circular fort was built 200 feet offshore on an artificial island to prepare for the War of 1812.

Originally called the West Battery, it was named Castle Clinton in 1815 and was reborn in 1824 as Castle Garden, an entertainment venue. As Castle Garden, it was the leading entertainment hall in the city for more than 30 years, perhaps best known for a performance there in 1850 by the singer Jenny Lind, presented by P. T. Barnum. The building was later used as the federal immigration center for the East Coast (1855–90, before the opening of the facility at Ellis Island), and after being reconfigured by Stanford White as the New York Aquarium (1896–1941) was operated by the parks department. From 1940 to 1952 the park was closed while the Brooklyn-Battery Tunnel was built beneath it; on reopening it had new landscaping and an additional two acres of land. In 1963 President John F. Kennedy dedicated the East Coast Memorial to the 4596 servicemen who lost their lives in the Atlantic during the Second World War, one of the many monuments in the park honoring soldiers, explorers, inventors, and immigrants. In 1982 New York State designated Battery Park as part of Harbor Park, a group of historic waterfront sites.

By the late twentieth century the park had deteriorated; in response, the Battery Conservancy, a private nonprofit organization, was created in 1994. The conservancy has followed other public-private partnerships at city parks

Battery Park, 2010

and implemented improved landscaping, programming, and amenities; it has brought musical entertainment back to Castle Clinton, which is also slated for restoration. In the early twenty-first century a sea-themed carousel with a ferry link to the aquarium at Coney Island was planned, and a Frank Gehry–designed playground was in the works. The park today spans 25 acres (10.12 hectares) and receives 5 million visitors annually. Its more than 20 monuments include *The Sphere,* a sculpture by Fritz Koenig that originally stood in the World Trade Center plaza as a monument to peace. After the sculpture was damaged during the attacks of 11 September 2001, it was moved to Battery Park, where it now stands as a memorial to those killed.

Jonathan Kuhn, Kate Lauber

Battery Park City, 2009

Battery Park City. Commercial and residential complex in lower Manhattan, bounded to the north by Chambers Street, to the east by West Street, to the south by Pier A, and to the west by the Hudson River. It is built on 92 acres (37 hectares) of landfill, a quarter of which were dredgings from the construction of the World Trade Center. The complex was developed by the Battery Park City Authority, a public-benefit corporation formed in 1968 by the New York state legislature. The authority sold state bonds to fund the work, including landfill, infrastructure, and public parks. A portion of the profits was used to finance public amenities as well as to build and rehabilitate low- and middle-income housing elsewhere in New York City.

Wallace K. Harrison, one of Governor Nelson Rockefeller's main architects, oversaw the initial plans for the mixed-use community in the 1960s. M. Paul Friedberg and Partners were the original landscape architects. Construction began in 1974 on Gateway Plaza, a residential complex. A master plan drawn up in 1979 by Alexander Cooper and Stanton Eckstut allocated 42 percent of the land for housing, 30 percent for open space (including an esplanade along the river), 19 percent for streets and avenues, and 9 percent for commercial and office space. In the first phase, Olympia and York was the sole developer of the commercial area, the World Financial Center, which was adjacent to the financial district around Wall Street and connected to it by two walkways.

Battery Park City experienced serious problems during and after the terrorist attacks of 11 September 2001, which brought down the twin towers of the World Trade Center. Virtually all residents were required to leave their homes for an extended time. Environmental hazards that resulted from the destruction and the resultant fires, including airborne toxins, smoke, ash, and other pollutants, were major problems. But by 2009 Battery Park City had fully recovered. It consists of residential areas, including Gateway Plaza, a high-rise building complex; the Rector Place Residential Neighborhood and the Battery Place Residential Neighborhood; a hotel; Stuyvesant High School, which opened in 1992 (designed by Alexander Cooper and Partners); shopping and commercial outlets; the World Financial Center, designed by Cesar Pelli; and North Cove, a yacht basin. A ferry service was established in 1989 to Hoboken, New Jersey. Additional building in the 1990s and early 2000s resulted in the creation of an extensive waterfront park of 8 acres (3.2 hectares), designed by Carr Lynch Associates in conjunction with Oehme, van Sweden and Associates, and a park of 3 acres (1.2 hectares) at the southern end of the complex, designed by Alexander Cooper, Nicholas Quennell, and the artist Jennifer Bartlett. Also added was the Museum of Jewish Heritage, a Holocaust memorial, an Irish famine memorial, a luxury hotel, and more housing.

Among the architects who are represented at the complex are Charles Moore; Cesar Pelli; Davis, Brody and Associates; Skidmore, Owings and Merrill; Menz and Cook; Mitchell/Giurgola; the Gruzen Partnership; Bond Ryder James; Ulrich Franzen; the Vilkas Group; James Stewart Polshek and Partners; Ehrenkrantz, Eckstut and Whitelaw; Costas Kondylis; and Gruzen Samton Steinglass. Artists whose work may be seen at Battery Park City include R. M. Fischer (*Rector Gate,* 1989, a whimsical entryway between park and esplanade), Richard Artschwager (*Sitting/Stance,* 1989, a collection of fanciful street furniture), Ned Smyth (*Upper Room,* 1987, a small park with a variety of decorative architectural motifs), Siah Armajani, Scott Burton, and Mary Miss.

In 2006 city and state officials announced the creation of the New York City Housing Trust Fund, which would use revenue from Battery Park City for 4300 affordable units of housing; this was to be followed by another 30,000 units of affordable housing in the following decade. In 2009 approximately 10,000 people lived in Battery Park City's mostly middle-class and upper-middle-class apartments.

Lisa Keller, Nan Ellin

Battista, Vito P(iranesi) (*b* Bari, Italy, 7 Sept 1908; *d* Brooklyn, 24 May 1990). Architect and political leader. With his family he moved to New York City at the age of three and settled in the Brooklyn neighborhood of Bushwick. After attending night school he studied architecture at the Carnegie Institute, the Massachusetts Institute of Technology, the École des Beaux-Arts in Paris, and Columbia University. He helped to design structures for the World's Fair of 1939–40 and Cadman Plaza, became president of the Society of Architects in Brooklyn, and organized the Institute of Design and Construction (1947). A Republican in a predominantly Democratic city, he was known as a gadfly with a showman's flair and a perennial candidate for municipal office who spoke for ordinary people while inveighing against taxes, rent control, welfare abuse, and municipal waste. Battista was a state assemblyman from 1965 to 1975.

George J. Lankevich

Bauer, Catherine. See Wurster, Catherine Bauer.

Bayard, Nicholas (*b* Alphen, Netherlands, 1644; *d* New York City, ?1709). Mayor. A nephew of Peter Stuyvesant, he began his career as a clerk for the provincial secretary of New Amsterdam and held a similar position after the English conquest; he was appointed receiver general when the Dutch returned to power in 1673 but was removed from his offices when the English returned and was subsequently imprisoned by Governor Edmond Andros. He was a favorite of Governor Thomas Dongan, who appointed him mayor of New York City in 1685 and a member of the governor's council in 1687. A leading opponent of Jacob Leisler, Bayard was imprisoned by the Leislerians in early 1690 (see Leisler's Rebellion). On his release in 1691 he was reappointed to the governor's council and helped to ensure that Leisler was executed on charges of treason later the same year. Bayard was dismissed from office in 1697 and was himself convicted of treason and sentenced to death in 1702 when Leisler's former allies controlled the provincial government, but he was pardoned before the sentence was carried out.

David William Voorhees

Bayard, William (*b* New York City, 1761; *d* New York City, 18 Sept 1826). Merchant. The son of Loyalist parents, he remained in New York City after his family moved to England in 1783. With Herman LeRoy, Bayard formed an international shipping company that was one of the strongest of its kind for four decades. He also speculated in land upstate, was a privateer in the War of 1812, tried to obtain loans for the Erie Canal, was president of the Morris Canal Company and the Bank of America, and belonged to the Chamber of Commerce. Toward the end of his life Bayard was troubled by accusations that his firm, then managed by his sons, engaged in questionable practices. Bayard wrote *An Exposition of the Conduct of the Two Houses* (1826).

James E. Mooney

Bayard–Condict Building. Office building at 65 Bleecker Street between Broadway and Lafayette Street, erected in 1898. It is the only building in New York City designed by Frank Lloyd Wright's teacher Louis H. Sullivan. The building is ornamented with terracotta. Between the columns and an intricately filigreed cornice are six angels said to have been added over Sullivan's objections. The original capitals from the first-floor columns are now in the sculpture garden of the Brooklyn Museum.

John Voelcker

Baychester. Neighborhood in the northeastern Bronx and the site of Co-op City, bounded to the east by the Hutchinson River and Pelham Bay Park and to the southwest and west by the New England Thruway. The area was a marsh until it became the site of a cucumber farm and pickle factory from the 1870s to 1895; it was then used to farm strawberries and in the 1890s was given its current name by real estate developers. A few years later the land was sold to the Curtiss-Wright Aviation Company for a municipal airport that was never built; it was also considered a possible site for a racetrack. An amusement park called Freedomland occupied the area from 1960 until the construction in 1968–70 of Co-op City, one of the largest housing developments in the United States. Sixty thousand persons live in 15,372 apartments in the development, which has 35 buildings (mostly high-rise), movie theaters, eight multistory garages, five shopping centers, a firehouse, a heating plant, and an educational park. Apart from Co-op City the neighborhood consists principally of one- and two-family houses and a large shopping mall. Some residents of the area west of the New England Thruway also consider their neighborhood part of Baychester. At the beginning of the twenty-first century the population was largely black and Latin American.

John McNamara, *McNamara's Old Bronx* (New York: Bronx County Historical Society, 1989)

Gary D. Hermalyn

Bayonne Bridge. The longest steel arch bridge in the world when it opened in 1931, in the early twenty-first century it was the third largest in the world. The bridge serves vehicular traffic crossing the Kill van Kull waterway between Port Richmond in Staten Island and Bayonne, New Jersey. Designed by Othmar H. Ammann, a bridge engineer at the Port of New York Authority, it was completed in 1931 at a cost of $13 million. It has a dramatic, high arch of 266 feet (81.1 meters) that carries the roadbed for 1675 feet (511 meters) without intermediary piers. The total length of the bridge, including approaches, is 8460 feet (2580 meters), and the clearance above water at mid-span is 150 feet (46 meters). The original plan called for granite sheathing to be laid over the steelwork of the arch abutment, but this was eliminated to lower costs. In 1932 the Bayonne Bridge was awarded a prize as the most beautiful structure of steel completed in 1931, winning against Ammann's other 1931 project, the George Washington Bridge. The initial hope was that the Bayonne and Goethals bridges would serve as major routes across New Jersey to the Holland Tunnel. Alternative highways proved faster, however, and the Bayonne has typically carried only modest traffic.

Darl Rastorfer, *Bayonne Bridge* (New York: Port Authority of New York and New Jersey, 2007)

Rebecca Read Shanor, Jameson W. Doig

Bay Ridge. Neighborhood in southwestern Brooklyn, bounded to the north by 61st Street, to the east by the Gowanus Expressway, to the south by 86th Street, and to the west by Upper New York Bay. The land was part of a tract bought by the Dutch West India Company from the Nyack Indians in 1652. The neighborhood was called Yellow Hook for the color of the clay found in the area; so as not to evoke unpleasant associations with the yellow fever epidemic of 1848–49 this name was abandoned in 1853 in favor of the current one, which recalls the position of the neighborhood by the bay and the glacial ridge that runs along what is now Ridge Boulevard. After the Civil War the area became a retreat of the wealthy, whose mansions lined the bluffs above the Narrows. The Crescent Athletic Club (now Fort Hamilton High School) was the center of fashionable society. After the opening of the Fourth Avenue subway in 1915, high-rise apartment buildings replaced most of the earlier houses. At the turn of the twentieth century, the population

View of Bayonne Bridge from Staten Island to New Jersey, 1932

consisted largely of Italians and Scandinavians; after World War II Irish, Greeks, and Arabs joined the community. In the 1960s the building of the Verrazano–Narrows Bridge required that more than 8000 residents be displaced. The neighborhood was the setting in 1978 for the film *Saturday Night Fever,* several scenes of which were filmed at a local nightclub. During the 1980s the Chinese community centered at Sunset Park expanded into the neighborhood, and a number of abandoned factories and warehouses were converted into garment factories run by Chinese entrepreneurs. The Chinese are by far the largest single group in the first decade of the twenty-first century, accounting for more than one-quarter of all immigrants; there are also large numbers from Italy, Russia, Ukraine, Lithuania, Greece, Korea, Lebanon, Egypt, Syria, and Jordan. The neighborhood has an active army installation at Fort Hamilton and is the terminus in Brooklyn of the Verrazano–Narrows Bridge. Two mansions remain: the Fontbonne Hall Academy, at 9901 Shore Road (now a private school), and the Gingerbread House, at 82nd Street and Narrows Avenue (designated a landmark). Bay Ridge is a community of one- and two-family row houses and frame houses with bay fronts, garages, basements, and lawns. The main shopping streets are 86th Street and Third and Fifth avenues.

Elizabeth Reich Rawson

Bay Ridge Savings Bank. Original name of Anchor Savings Bank.

Bayside. Neighborhood in northeastern Queens, on Little Neck Bay, for which it is named. First inhabited by Matinecock Indians, it was part of the area for which William Lawrence received patents from King Charles I in 1644. During the American Revolution it was settled first by John Rodman, a Quaker, and later by Thomas Hicks, a resident of Flushing whose land was included in a parcel of 246 acres (100 hectares) bought in 1824 by Abraham Bell. About this time the Lawrence family also settled in Bayside, which grew after the North Shore Railroad was extended in 1866. During the next 30 years many mansions were built on the high ground around the bay by wealthy New Yorkers, including F. N. Lawrence, G. Howland Leavitt, and G. W. Harway; many of their estates were dissolved in the 1920s and 1930s, when film stars and sportsmen built houses there, among them Pearl White, Norma Talmadge, John Golden, and James J. Corbett. Between 1908 and 1928 J. Wilson Dayton and the McKnight Realty Company put up many houses on side streets of Bell Boulevard and on new streets built inland from Little Neck Bay. After World War II the character of Bayside was altered by highways and bridges built to the east and west, including the Cross Island Parkway, which cut off access to Little Neck Bay, the Throgs Neck Bridge (1961), and the Clearview Expressway (1961–63). Large apartment complexes such as Bay Terrace and Clearview Gardens were built in the late 1950s. Queensboro Community College opened in 1967 on the former site of the Oakland Golf Course. Bayside is a comfortable middle-class, suburban neighborhood, with a growing Chinese, Korean, and Indian population.

Vincent Seyfried

Bayswater. Neighborhood in southwestern Queens, constituting the part of Far Rockaway north of Bayswater Avenue and Mott Avenue. It was developed by William Trist Bailey, who built cottages and a brick hotel called the Bayswater House on land bought in 1878 from J. B. and W. W. Cornell, descendants of Richard Cornell, the first settler in Rockaway. Summer mansions were later built on large lots by many prominent residents of Brooklyn. In June 1905 Trist was declared bankrupt and his tract was sold piecemeal at auction. Bayswater Point, a site of 12 acres (5 hectares) on Jamaica Bay, was acquired in 1986 by New York State, which in 1991 designated the area a state park to be administered by the Audubon Society. By this time many older houses in the neighborhood had been demolished and replaced by housing for the middle class. In the twenty-first century Bayswater has a diverse population with significant numbers of African Americans and Orthodox Jews and remains an upscale neighbor to Far Rockaway.

Vincent Seyfried

Bay Terrace. Neighborhood in east central Staten Island, centered at a station of the same name of Staten Island Rapid Transit and lying within the neighborhood of Oakwood. It consists mainly of modern estates.

Martha S. Bendix

BBDO. See Batten, Barton, Durstine and Osborn.

Beach, Alfred Ely (*b* Springfield, Mass., 1 Sept 1826; *d* New York City, 1 Jan 1896). Newspaper and magazine publisher and inventor. With his brother Moses Sperry Beach he acquired control of the *New York Sun* in 1848 from their father, the newspaper publisher Moses Yale Beach; in 1852 he relinquished his share of the paper. An owner and editor of *Scientific American,* he helped to transform the magazine into a publication of national stature. He also contributed to the invention of the typewriter and took out a patent for a model in 1847; he invented a typewriter for the blind in 1857. Among his other inventions were pneumatic tubes for mail and passengers (1865) and a shield used for tunneling under streets and rivers (1868). In 1870 he built a section of pneumatic subway under lower Manhattan that many consider to have been the prototype for the subway system that was eventually built.

Steven H. Jaffe

Beach, Moses Yale (*b* Wallingford, Conn., 15 Jan 1800; *d* Wallingford, 19 July 1868). Newspaper publisher and inventor, father of Alfred Ely Beach. After inventing a rag-cutting machine for the manufacture of paper and a combustion engine, in 1834 he became the manager of the mechanical department at the *New York Sun,* which was owned by his brother-in-law Benjamin Day. He bought the *Sun* from Day in 1838 and transformed it into one of the country's most prosperous and widely read "penny papers." A prominent Democrat, he was sent by President James K. Polk on a secret mission to Mexico (1846), where he tried unsuccessfully to negotiate an end to the Mexican–American War. Between 1842 and 1855 he published a pamphlet, *The Wealth of New York,* in which he included himself on a list of the city's thousand richest citizens. He retired from the *Sun* in 1848 and turned it over to his sons, Alfred Ely Beach and Moses Sperry Beach (*b* Springfield, Mass., 5 Oct 1822; *d* Peekskill, N.Y., 25 July 1892). With five other newspaper publishers in 1848–49 he formed the cooperative news-gathering organization that later became the Associated Press.

beaches. The New York City Department of Parks and Recreation maintains beaches in four of the five boroughs, constituting 14 miles (22.5 kilometers) of shoreline. Orchard Beach and Promenade is located in the Bronx; Brighton Beach, Coney Island, and Manhattan Beach in Brooklyn; and Rockaway Beach in Queens. Midland Beach, South Beach, and Wolfe's Pond Beach comprise most of the beach land in Staten Island. The beaches are open annually from Memorial Day through Labor Day.

Beals, Jessie Tarbox (*b* Hamilton, Ont., 23 Dec 1870; *d* New York City, 31 May 1942). Photographer. She pursued photography as a hobby, married her darkroom assistant Alfred Tennyson Beals in 1897, and became a full-time photojournalist in 1900. After traveling widely she settled in New York City in 1905. There she recorded subjects ranging from society figures to the slums of the Lower East Side, and gained regular assignments for leading newspapers and magazines. After separating from her husband in 1917 she opened a tea shop in Sheridan Square that doubled as a photography studio, and in the following years she documented the bohemian milieu of Greenwich Village in a series of memorable print and postcard views. Other favorite photographic subjects were city gardens and cigar-store Indians.

Jan Seidler Ramirez

Beame, Abraham D(avid) (*b* London, 20 March 1906; *d* New York City, 10 Feb 2001). Mayor. His family emigrated from Warsaw via London to the United States in 1906 and settled in New York City. He earned an accounting degree from City College of New York, taught public school, and at the age of 24 joined the Madison Democratic Club in Brooklyn. During his early years in public service, he was appointed budget director (1952) and elected comptroller (1961). In 1965 he became the first Jewish candidate since the consolidation of New York City (1898) to win the Democratic nomination for mayor, but he lost the general election to John V. Lindsay. After winning reelection as comptroller in 1969, he was elected mayor in 1973. During his term, a serious fiscal crisis forced him to spend his time conducting financial negotiations with state and federal officials, banks, and municipal unions. To avert bankruptcy, he laid off large numbers of city employees and delayed maintenance and important capital expenditures. He was accused by the Securities and Exchange Commission of using unsound budgeting practices, but defended by others for having made politically difficult decisions in a time of economic difficulty. The formation of the Municipal Assistance Corporation and the Emergency Financial Control Board in 1975 severely restricted Beame's ability to exercise the traditional powers of the mayor. Discredited by the fiscal crisis, he sought reelection in 1977 but lost the Democratic primary election and retired from politics.

Chris McNickle

Beamon, Robert [Bob] (*b* New York City, 29 Aug 1946). Olympic champion long jumper. He was raised by his grandmother in Jamaica, Queens, where he became involved with gangs and ran afoul of the law several times. At age 14 he struck a teacher after a gang dispute spilled into his Queens Public School 40 classroom, and he was sent to the 600 School, a Manhattan facility for juvenile delinquents. Beamon then worked to resurrect his life so he could attend Jamaica High School and participate on the track team under legendary coach Larry Ellis. Beamon set numerous city high school track records, culminating with a New York State record in the long jump at age 16. Five years later he made the United States Olympic team and at the 1968 Mexico City Olympics won the gold medal and set a world record in the long jump.

Abraham D. Beame, 1974

Aided by the altitude of Mexico City and favorable weather conditions, Beamon's leap of 29 ft. 2.5 in. (8.9 meters) eclipsed the previous mark by more than 2 ft. in an event in which records typically fell by no more than a few inches. His record stood for 23 years and the term "Beamonesque" became a common phrase in sports for describing an unexpected and incredible record-breaking accomplishment. Beamon never again jumped within 2 ft. of his record. In the early twenty-first century Beamon lived in Florida and remained active in promoting sports for inner-city children and the Olympic movement.

David White

Beard, Charles A(ustin) (*b* near Knightstown, Ind., 27 Nov 1874; *d* New Haven, Conn., 1 Sept 1948). Historian. In 1902 he enrolled at Columbia University (MA 1903, PhD in political science 1904), where he became a lecturer in history (to 1907) and then taught public law as an adjunct professor, associate professor (from 1910), and professor (from 1915). He became an expert in municipal government, helped to establish public administration as a field of study, and wrote *American City Government: A Survey of Newer Tendencies* (1912). His highly influential work *An Economic Interpretation of the Constitution* (1913) reflected his belief in the primacy of economic forces in history. Several of his later works were written in collaboration with his wife, Mary Ritter Beard. In 1915 he became the director of the Training School for Public Service (the first graduate school of public administration in the United States), a branch of the New York Bureau of Municipal Research (the first research institute in the United States designed to promote efficiency in municipal government), and in 1918 he became the director of the entire bureau. He resigned from Columbia in 1917 (to protest the dismissal of his colleague James McKeen Cattell), and in 1919 he was one of the founders of the New School for Social Research. After leaving the Bureau of Municipal Research (1921) and the New School he moved to New Milford, Connecticut, and spent the rest of his life writing and lecturing. In his later years he appeared to disavow the progressivism of his early career when he became an outspoken critic of President Franklin D. Roosevelt.

Allen J. Share

Beard, James (Andrews) (*b* Portland, Ore., 5 May 1903; *d* New York City, 23 Jan 1985). Chef. After moving to New York City in 1938 he wrote his first book in 1940. He served in the army during World War II. In 1955 he launched Beard's Cooking Classes, which were later held in his townhouse in Greenwich Village. A food editor for the *New York Times* for many years, he also wrote a syndicated column for United Press and gave demonstrations on the television program *Elsie Presents*. Beard wrote more than two dozen books, including *Fowl and Game Cookery* (1944), *Cook It Outdoors* (1941), and his autobiography, *Delights and Prejudices* (1981).

James E. Mooney

Beard, Mary Ritter (*b* Indianapolis, 5 Aug 1876; *d* Scottsdale, Ariz., 14 Aug 1958). Historian and feminist. She moved to New York City in 1902, pursued graduate study in sociology at Columbia University until 1904, and worked with the National Women's Trade Union League in organizing the shirtwaist makers' strike of 1909. In the following year she became active in the Woman Suffrage Party of New York State, serving briefly as the vice chairman of its branch in Manhattan (1910–11) and as the editor of its official organ, the *Woman Voter* (1911–12). Her interest in municipal reform led to the publication of her book *Women's Work in Municipalities* (1915). She collaborated on several other works with her husband, Charles A. Beard. From 1935 she attempted to establish the World Center for Women's Archives, which incorporated and set up an office in New York City but disbanded in 1940 for lack of support and funds. At the age of 70 she published her most important and influential book, *Woman as a Force in History* (1946).

Beard, William Holbrook (*b* Painesville, Ohio, 13 April 1824; *d* New York City, 20 Feb 1900). Painter. At about age 20 he moved to New York City and became a portrait painter; he later worked in Buffalo and studied in Europe before returning to the city in 1860, where he became known for such paintings as *Bulls and Bears, Teddy Bear's Picnic,* and *Deer in a Wood* depicting animals behaving like people. Beard was a member of the National Academy of Design, the Century Association, and the Artists' Fund Society.

James E. Mooney

Bearden, (Fred) Romare (Howard) (*b* Charlotte, N.C., 2 Sept 1911; *d* New York City, 11 March 1988). Painter. The son of a well-known political activist and newspaper editor in Harlem, he became acquainted as a youth with such jazz musicians and writers as Fats Waller and Langston Hughes. He studied in 1936–37 at the Art Students League with George Grosz and then joined the 306 Group of black artists in Harlem; a friendship with Stuart Davis developed in part because of a shared interest in jazz. In the mid-1940s shows devoted exclusively to his work were mounted at the Samuel Kootz Gallery, where Robert Motherwell and Adolph Gottlieb also exhibited. After living in Paris in 1950 he returned to New York City, where he continued to paint, organize exhibitions, and write. From 1963 he created collages for the Spiral Group, initially as part of a collaboration with other black artists on themes drawn from black life, and in the following year he was appointed the art director of the Harlem Cultural Council. He was also an organizer of the Cinque Gallery, which showed the work of young black artists. A retrospective of his work at the Museum of Modern Art entitled *Romare Bearden: The Prevalence of Ritual* (1971) brought him wider recognition. Bearden worked in an improvisatory manner that he likened to that of a jazz musician. His work is characterized by a vivid and often jarring juxtaposition of disparate images from urban life. With the artist Carl Holty he wrote *The Painter's Mind: A Study of Structure and Space in Painting* (1969).

Bear Stearns. Firm of investment bankers formed as a brokerage firm in New York City in 1923 by Harold C. Mayer, Joseph Ainslie Bear, and Robert B. Stearns. It initially had offices at 100 Broadway and by 1940 had departments for institutional bonds, risk arbitrage, and municipal bond trading. The firm opened its investment banking division in 1943 and an international department in 1948; several domestic and European offices were opened in the 1950s and 1960s. Under the leadership of Alan C. Greenberg in the 1980s the firm became a leading worldwide investment banking and securities trading firm, with major American and international corporations among its clients. In March 2008 the firm collapsed, preceding a wider downfall of the investment bank industry on Wall Street in September 2008, and was sold to JPMorgan Chase.

Mary E. Curry

beats. Members of a literary movement centered from about 1950 to the mid-1960s in lower Manhattan (as well as San Francisco), characterized by bohemianism, a hostility toward commercialism and conformity, and an enthusiasm for visionary states induced by hallucinogenic drugs. The movement had its roots in informal discussions held in 1944 by Allen Ginsberg and Lucien Carr, both undergraduates at Columbia University, and William Burroughs and Jack Kerouac, all seeking what they called a new vision in literature; they often met at the West End Cafe, on Broadway and 113th Street near Columbia.

The most important texts of the beat movement date from the early 1950s: Kerouac's first novel, *The Town and the City* (1950); his most popular work, *On the Road* (1951, published 1957), written in an apartment at 454 West 20th Street in Manhattan; *Go* (1952), by John Clellon Holmes, a vivid description of the beat movement, which by the time the book was published had grown to include many friends and acquaintances of the original members; Burroughs's first novel, *Junkie: Confessions of an Unredeemed Drug Addict* (1953, under the pseudonym William Lee), which depicts the author's early years of drug addiction; and Ginsberg's *Howl and Other Poems* (1956), an influential collection of free verse. The members of what became known as the beat generation gained visibility after *On the Road* was reviewed in the *New York Times* and became a best seller. In 1957 Norman Mailer analyzed the aesthetics of the movement in his essay "The White Negro" (published in *Dissent*), Norman Podhoretz attacked the beats for "expressing contempt for coherent, rational discourse" in the spring issue of *Partisan Review* (his criticism was rebutted by LeRoi Jones and others), and an unruly symposium on the beats was held at Hunter College. In the same year Ginsberg returned from a visit to Europe to settle on the Lower East Side, where he joined other beat writers including Jones, Gregory Corso, Peter Orlovsky, and Diane Di Prima, poets like Frank O'Hara who did not belong to the movement but were sympathetic toward it, and poets associated with Black Mountain College (such as Robert Creeley) and San Francisco (such as Michael McClure). The work of the beats was circulated by small publishers like Grove Press, Totem Press, and Corinth Books, and by bookshop owners such as Ted Wilentz of the Eighth Street Bookshop, Robert A. Wilson of the Phoenix Bookshop, Andreas Brown of the Gotham Book Mart, and Ed Sanders of the Peace Eye Bookshop. Poetry readings and experimental plays flourished downtown at the Living Theater, the Artist's Studio, and the Gas Light Cafe. In 1959 Ginsberg, Corso, and Orlovsky read their poetry to a receptive audience at Columbia and made a film entitled *Pull My Daisy* with Kerouac, the artist Larry Rivers, the musician David Amram, and the photographer Robert Frank in the studio of the painter Alfred Leslie in Manhattan.

Kerouac described his favorite scenes of New York City in *Lonesome Traveler,* a collection of travel sketches published in 1960. That same year three popular anthologies of beat writing were published in New York City: *The Beats,* edited by Seymour Krim; *The Beat Scene,* edited by Elias Wilentz, with photographs by Fred McDarrah of the *Village Voice;* and *Beat Coast East: An Anthology of Rebellion,* edited by Stanley Fisher, who tried to define the word *beat* by walking the streets of Greenwich Village and asking "an assortment of squalid squares and plastered saints what they thought the word meant" (he was given 20 definitions). In 1961 Ted Joans, a young painter and poet, satirized the "beatniks" of Washington Square and the tendency of the press toward sensational coverage of the beat movement in his witty collage book *The Hipsters.*

In the early 1960s little magazines dedicated to experimental writing proliferated in Greenwich Village and on the Lower East Side, among them *Yugen, Floating Bear,* and *Fuck You: A Magazine of the Arts.* This period has been described by Di Prima in *Memoirs of a Beatnik* (1969), Sanders in *Tales of Beatnik Glory* (1975), Joyce Johnson in *Minor Characters* (1983), and Hettie Jones (at one time married to LeRoi Jones) in *How I Became Hettie Jones* (1990).

The beat movement was largely spent by the mid-1960s, but it strongly influenced the hippie movement of the late 1960s and early 1970s, in which some beat figures were active: Sanders and Tuli Kupferberg took part in protests on Fifth Avenue against the Vietnam War by performing with their rock group the Fugs, and Kupferberg's book *1001 Ways to Beat the Draft* (1966) enjoyed wide circulation. A new generation of experimental writers carried on the beat traditions of small-press publishing and poetry reading in New York City, perhaps best exemplified by the Poetry Project at St. Mark's Church in the Bowery. Ginsberg became a Distinguished Professor of English at Brooklyn College, continued to live on the Lower East Side, and remained a prominent figure in the literary, musical, and artistic avant-garde until his death on 5 April 1997.

Beaux-Arts Institute of Design. Institute opened by the Society of Beaux Arts Architects (1894) to promote the classical values of the French school among architects in the United States. It offered free classes to draftsmen and had unparalleled influence in architectural instruction from 1900 until the 1930s. The principal function of the institute was to sponsor juried competitions. Its programs were used by nearly three-quarters of the country's architecture students. Headquarters in an art deco style were designed in 1927 by Frederick C. Hirons and built at 304 East 44th Street (now a city landmark). With the rise of modernism the institute lost much of its influence and was reorganized as the National Institute for Architectural Education.

Carol Willis

Becker–Rosenthal case. Case involving the shooting of Herman Rosenthal on 16 July 1912 in New York City. It generated much interest because it involved public figures and had political and anti-Semitic overtones. Rosenthal operated a gambling house on the Lower East Side and was reputedly a minor figure in organized crime. Police lieutenant Charles Becker (1869–1915), who led a "strong arm squad" to eradicate gambling, was charged with his murder; Rosenthal had accused Becker of graft in a long article in the *New York World* published two days before Rosenthal's death. Leading citizens dedicated to rooting out police corruption supported the investigation of the murder. Mayor William J. Gaynor briefly defended Becker in public before Jewish leaders criticized the mayor for his attack on "lawless foreigners" (a group in which he included Rosenthal). The district attorney who successfully prosecuted the case,

Charles Whitman, embarked on a career in politics: as governor of New York he approved Becker's execution, which took place at Sing Sing Prison on 7 July 1915. Herbert Bayard Swope, an enterprising reporter for the *World*, became the best-known journalist of his day for his coverage of the case.

Norris Randolph

Beckman, John (*b* New York City, 22 Oct 1895; *d* Miami, 22 June 1968). Professional basketball player. Known as the "Babe Ruth of basketball," he was only 5 ft. 10 in. (1.8 meters) tall and never played ball in college, but in his 28 years in the game he was a top attraction. Beckman played with the New York City–based Original Celtics, was their top scorer, and led the team to the 1922 Eastern League title. He played for teams in eight different leagues between 1911 and 1930, winning championships on four of those teams. He was inducted into the Basketball Hall of Fame in 1973.

Frank Dyer

Bedford Corners. Early name for a part of Brooklyn now lying within Bedford–Stuyvesant.

Bedford Park. Neighborhood in the northwestern Bronx, bounded to the northeast by Mosholu Parkway, to the east by the New York Botanical Garden, to the south by 198th Street, and to the west by the Jerome Park Reservoir. Lehman College abuts the reservoir in the neighborhood's southwestern corner. It was planned in the 1880s and named after the town of Bedford, England, which also inspired its design as a suburban park and the Queen Anne architecture of its original houses. With the opening of the Jerome Avenue subway line in 1917 and the Third Avenue elevated line in 1920, the area became more accessible and more heavily built up. In spite of the Depression a large number of buildings were erected in the 1930s, including many apartment buildings in the art deco style. Among those who resided in the neighborhood was William Fox, a founder of the film company that later became 20th Century Fox. After World War II the neighborhood remained middle class, with a large population of Irish and Jews and later of Latin Americans, blacks, and Koreans. In the first decade of the twenty-first century the area contained many ethnic groups, including Dominicans, Jamaicans, Guyanese, Cambodians, Koreans, Mexicans, Bangladeshis, and Vietnamese.

Bedford Park's Art Deco Treasures (New York: Bronx County Historical Society, 1981)

Gary D. Hermalyn

Bedford–Stuyvesant. Neighborhood in north central Brooklyn (2000 pop. about 150,000), bounded to the north by Flushing Avenue, to the east by Broadway and Saratoga Avenue, to the south by Atlantic Avenue, and to the west by Classon Avenue. Before 1977 it extended as far south as Eastern Parkway. Its name is derived from those of two middle-class communities in nineteenth-century Brooklyn—Bedford (to the west) and Stuyvesant Heights (to the east)—and is often abbreviated as Bed–Stuy. Bedford–Stuyvesant has one of the largest African American communities in the United States.

In the 1630s and 1640s the Dutch West India Company purchased from the Canarsee Indians the woodlands that became Bedford, a community recognized by the English governor Richard Nicolls in 1667. Its central location between the towns of Bushwick, Jamaica, and Flatbush influenced the farmer Thomas Lambertse to build a public inn in 1668. Seventeenth-century Bedford was a farming hamlet inhabited by Dutch families and African slaves. Farmers carted surplus goods, to be sold in neighboring communities, to the Breuklen Ferry down the main road, which was close to Fulton Street, and to Hunterfly Road. After the Battle of Long Island (1776), the area was invaded by English troops. Later, the farmland was divided into housing lots and sold to new arrivals. As early as 1790, more than one-quarter of the residents were blacks (mostly slaves). Eventually, the Lefferts family bought land from the Lambertses, who were prominent developers in the area. Leffert Lefferts became a judge and town clerk in Bedford after he graduated from King's College, and his family was among the first to sell land to blacks. In 1835 John Lefferts sold the land that became known as Weeksville to Henry C. Thompson, a free black; Carrsville was built on the land bought in 1832 by another free black, William Thomas. These transactions and others affected the ethnic composition of Bedford, which by 1834 was also referred to as Bedford Corners.

The neighborhood was the site of a station of the Brooklyn and Jamaica Railroad (forerunner of the Long Island Rail Road), which was constructed in 1836 and traversed Atlantic Street (now Atlantic Avenue). Its population reached 14,000 in 1873 and included Irish, Germans, Jews, Scots, Dutch, and blacks. The ethnic diversity of the neighborhood was reflected in the names of its institutions: the Jewish Hospital, the Colored Orphan Asylum, St. John's Episcopal Church, and St. Mary's Hospital. The opening of the elevated railway (about 1885) and the Brooklyn Bridge (1883) linked the area more closely with Manhattan and spurred the construction of brownstones and the growth of new neighborhoods called East Brooklyn, New Brooklyn, and St. Marks (all in what is now Bedford–Stuyvesant). At the turn of the century, Bedford Corners and particularly Stuyvesant Avenue attracted residents from the middle and upper classes, including the retailing entrepreneurs F. W. Woolworth and Abraham Abraham. More than 45,000 persons lived in the neighborhood in 1920.

As the population continued to grow, brownstones that had formerly housed one family were subdivided into several units. The opening of a subway in 1936 gave the community a new link to Manhattan. The neighborhood attracted large numbers of eastern European Jews, Italians, and later blacks from the South and the Caribbean, many of whom settled in the western section. As the population rose, the communities of Bedford and Stuyvesant Heights became one large area of black settlement, and the neighborhood

Bedford–Stuyvesant, 2009

acquired its current name. By 1940 it had more than 65,000 black residents, and members of other ethnic groups began to leave.

Organizations were established to give financial and social assistance to blacks, among them the Paragon Progressive Federal Credit Union, formed by F. Levi and other West Indians in 1937. Black churches moved to Stuyvesant Avenue and other parts of the neighborhood and worked with the National Urban League, the National Association for the Advancement of Colored People, and other institutions to fight racial discrimination, segregation, and poverty, but inadequate housing and unemployment persisted and impoverished the neighborhood. At the same time residents began to exert a stronger political influence, and in 1968 they elected Shirley Chisholm to the U.S. Congress, where she was the first black woman to serve.

Senator Robert F. Kennedy's visit to the neighborhood in the late 1960s inspired his support for the Bedford Stuyvesant Restoration Corporation. The Society for the Preservation of Weeksville and Bedford–Stuyvesant History was formed in 1971 to commemorate the role that blacks played in developing the neighborhood, and the Bedford–Stuyvesant Restoration Plaza, which includes the Billie Holiday Theatre, was completed in 1976. The 1980s saw large-scale settlement of black immigrants from the Caribbean, primarily Guyana, Jamaica, and Barbados, and to a lesser extent Trinidad and Tobago, Haiti, and St. Vincent and the Grenadines.

By the late twentieth century Bedford–Stuyvesant was the largest black neighborhood in New York City. Immigrants came from the Caribbean, but also from the French Antilles, Latin America, and Africa. At the same time, in the 1990s second- and third-generation black southerners and Caribbeans with higher levels of education and middle- and upper-class incomes began to relocate or return to the community. The district became economically sounder.

Early in the twenty-first century, most of the neighborhood consists of well-maintained brownstone and brick-front housing that was built before World War I. Among the historic features of Bedford–Stuyvesant are the Weeksville Historic District, the Stuyvesant Heights Historic District, and the Brooklyn Children's Museum (built in 1899). Boys High School (1891) is an enormous, striking terra-cotta building in a Romanesque Revival style; among those who attended the school were Isaac Asimov and Norman Mailer.

Mario A. Charles

Bedford Stuyvesant Restoration Corporation. The first nonprofit community development corporation in the United States, formed in 1967. It was founded through the bipartisan efforts of Senators Robert F. Kennedy and Jacob K. Javits, who worked with residents of Bedford–Stuyvesant to improve the quality of life and economy of the neighborhood. Among the buildings that it helped to construct with private and public capital were a commercial center of 300,000 square feet (28,000 square meters) known as Restoration Plaza, a major health care facility (55,000 patients' visits annually), and 2225 residential housing units. The corporation also created a joint venture with Pathmark Stores to develop a supermarket of 30,000 square feet (2800 square meters), found employment for 25,000 persons, and provided loans to 134 local businesses. Cultural facilities sponsored by the corporation included the Billie Holiday Theatre (seating 214), the Skylight Gallery at the Center for Art and Culture, and the Restoration Dance Theatre. The corporation is governed by a board of 26 community members, assisted by a business advisory board of nine members from the greater metropolitan area. The success of the Bedford Stuyvesant Restoration Corporation prompts a large number of national and international visitors, academic institutions, and foundations to study its methods of community development.

Charles Palms

Bee, Clair (*b* Grafton, W.Va., 2 March 1900; *d* Cleveland, 20 May 1983). Basketball coach. As the coach of the men's basketball team at Long Island University he won 410 games and lost only 86 between 1931 and 1952. The team was undefeated in two seasons (1935–36 and 1938–39) and won the National Invitation Tournament in 1939 and 1941; it also won 43 consecutive games from February 1935 to December 1936 as well as 139 consecutive home games at the gymnasium of the Brooklyn College of Pharmacy and at Madison Square Garden, where some of its more important games were played. After Long Island University eliminated its basketball program in 1952 in response to the gambling scandal of the preceding year, Bee coached professional basketball for a few years, taught at the New York Military Academy, operated basketball camps, wrote fiction, and maintained a farm in upstate New York.

Albert Figone

Beecher, Henry Ward (*b* Litchfield, Conn., 24 June 1813; *d* Brooklyn, 8 March 1887). Prominent Protestant minister of nineteenth-century America and brother of Catharine Beecher and Harriet Beecher Stowe. He studied in Massachusetts and Ohio and for eight years was a pastor in Indianapolis. On 10 October 1847 he took charge of the prosperous Plymouth Congregational Church at 75 Hicks Street in Brooklyn Heights, where he gave sermons that attracted large crowds every Sunday. By the time of the Civil War he was the most famous minister in the United States, and even Abraham Lincoln visited Beecher's church just before he became president of the United States. He lived at 124 Hicks Street from the 1860s. Beecher exerted tremendous influence over public morality in New York City as a lecturer and as the editor of the weekly publications the *Independent* (1861–64) and the *Christian Union* (1870–81). Some of his most enthusiastic supporters were middle-class women who inspired him to endorse the woman suffrage movement. His career suffered after Theodore Tilton, editor of the *Independent* (1864–70), accused him of committing adultery with his wife and filed suit for damages in 1874. The trial lasted six months; it ended with Beecher's acquittal, and although he continued to lead the Plymouth until the end of his life his public influence was reduced.

Beechhurst. Neighborhood in northeastern Queens, lying within Whitestone. It began as a tract of 135 acres (55 hectares) bounded to the north by the East River, to the east by 162nd Street, to the south by Cryder's Lane, and to the west by 154th Street and laid out as a residential park in 1906 by the Shore

Acres Realty Company. Some lots measured only 20 by 100 feet (6 by 30 meters), but more than half were a quarter acre, designed to encourage the construction of larger houses, especially along the shore and to the east. In the 1920s Beechhurst attracted many people active in the theater, including the producer Arthur Hammerstein, whose house was later made a landmark. The Whitestone branch of the Long Island Rail Road offered convenient commuter service until the Depression. In the 1960s large apartment buildings were erected east of 162nd Street and on the shore of the East River, on land by then considered part of the neighborhood. Early in the twenty-first century, Beechhurst became a seaside community for the upper middle class.

Vincent Seyfried

Beekman, Gerard G. (*b* New York City, 29 July 1719; *d* Flushing, Queens, 1797). Political and mercantile leader, grandson of Gerardus Beekman. He was active in international trade and engaged in marine insurance underwriting and other legitimate ventures as well as in smuggling. A Loyalist, he chose to remain in New York during its occupation by the British. He moved to Flushing (now in the borough of Queens) in about 1780 and remained there until his death.

Philip L. White, ed., *The Beekman Mercantile Papers, 1746–1799* (New York: New-York Historical Society, 1956); Philip L. White, *The Beekmans of New York in Politics and Commerce, 1647–1877* (New York: New-York Historical Society, 1956)

Jacob Judd

Beekman, Gerardus (baptized New Amsterdam, 17 Aug 1653; *d* New York City, 10 Oct 1723). Political and mercantile leader. He was the son of William (Wilhelmus) Beekman (1623–1707), a merchant who after emigrating to New Amsterdam in 1647 with Peter Stuyvesant was active in municipal and provincial politics and acquired extensive properties on Manhattan Island and in the Hudson River valley. After studying medicine he began a practice in Midwout (Flatbush) about 1677. An adherent of Jacob Leisler (see Leisler's Rebellion), he was arrested by Governor Henry Sloughter, convicted of treason, and sentenced to death in 1691, but his life was spared and he continued to take part in politics. He later acquired additional property in Kings County and lower Manhattan and opened the Beekman Slip on the East River in 1722. The holdings of his family came to encompass three large farms: one between what are now Beekman and William streets; a second bounded by what are now Pearl, Gold, Ann, and Fulton streets; and a third along the East River bounded by what are now 49th Street, Second Avenue, and 61st Street; some of this land remains in the family's possession. His brother Henry Beekman (1652–1716) was a provincial legislator who fought for a general assembly strong enough to withstand the powers of the Crown and its appointed governor. His later descendants included Gerard Beekman (1842–1918), a great-great-great-grandson, who donated to the New-York Historical Society the family's coach, acquired in 1771; the blue room from its mansion, where the British had their headquarters during the American Revolution; and the bedroom of the mansion, used by Major John André; and the physician Fenwick Beekman (1882–1962), a great-great-great-great-grandson, who was a major donor to the New-York Historical Society and its president from 1947 to 1956. Beekman, Ann, and William streets are all named for family members, as are the New York Infirmary Beekman Downtown Hospital at 170 William Street and the R. Livingston Beekman House at 854 Fifth Avenue (1903–5), now the Serbian Mission to the United Nations.

For bibliography, see Beekman, Gerard G.

Jacob Judd

Beekman Place. Neighborhood on the Upper East Side of Manhattan, bounded to the north by 51st Street, to the east by the East River, to the south by 49th Street, and to the west by First Avenue. It is a small residential enclave named after the Beekman family, whose mansion stood there from 1765 to 1874. The building was used briefly during the American Revolution as a British headquarters and was the site of the trial and execution of Nathan Hale. The mansion was demolished as the city grew northward, and the property was subdivided and developed. The neighborhood was at first favored by the working class, but soon after the successful redevelopment of Sutton Place (1920) its character changed: writers and actors moved into the neighborhood and formed the Beekman Hill Association to oversee its transformation into a quiet and secluded domain of the elite. The first of several luxury apartment buildings along Beekman Place was developed by Joseph G. Thomas and his wife, the muralist Clara Fargo Thomas. The couple was responsible for the construction of Beekman Terrace (1924), the Beekman Mansion (1926), and the Campanile Apartments (1926–30). In addition to a number of lavishly appointed town houses there are other luxury apartment buildings in the area, including 1 Beekman Place (1930), 2 Beekman Place (1931), and the Beekman Tower (1928), originally a residential hotel for sorority women known as the Panhellenic Tower. It is famous for its rooftop ballroom and cocktail lounge. In the first decade of the twenty-first century many of the houses were owned by foreign governments as missions or consulates.

Owen D. Gutfreund

Beene, Geoffrey (*b* Haynesville, La., 30 Aug 1927, *d* New York City, 28 Sept 2004). Fashion designer. He moved to New York in 1947 to study at the Traphagen School of Fashion. After designing clothing for several firms on Seventh Avenue, including Harmay and Teal Traina, he formed his own business in 1963. His distinctive juxtaposition of modern fabrics and old-fashioned craftsmanship and techniques made him one of the most highly acclaimed designers in the United States. Beene, who resided on Manhattan's Upper East Side, often used embroidery, top-stitching, and appliqué in his work.

Caroline Rennolds Milbank

beer halls. Beer halls were a prominent feature of Kleindeutschland and other German

Interior of the German Winter Garden and Theatre, a popular beer hall, at 45 Bowery

neighborhoods in New York City, which from 1855 to 1880 had the largest German-speaking community in the Americas. A variety of *lokale,* the general term for German neighborhood eating and drinking establishments, lined Avenue A and the Bowery and provided relief from crowded tenements. Basement bars catered to the rough and loose, while other bars, meeting rooms, ballrooms, and even bowling alleys served as social niches for neighbors, colleagues, congregations, political groups, and newly arrived immigrants. Among the well-known halls were Hillenbrands on Hester Street, the Concordia on Avenue A, and Germania on the Bowery. There were also opulent halls where families gathered to drink, eat, sing, dance, and—especially on Sundays—to be entertained by music and drama; the best known were the Deutsches Volksgarten, the Atlantic Gardens, Niblo's Saloon, and Magar's Concert Hall. During the summer, beer halls of all kinds moved outdoors into the lots behind their buildings to form beer gardens. After 1880 the city's German population began moving to Yorkville on the Upper East Side, where beer halls survived until the mid-twentieth century.

Beiderbecke, Bix [Leon Bismarck] (*b* Davenport, Iowa, 10 March 1903; *d* New York City, 6 Aug 1931). Jazz musician. Born into a middle-class German family, he dropped out of school at age 18 and moved to New York City in 1924. He began touring with his band, the Wolverine Orchestra, and continued performing with a number of other jazz groups, most notably saxophonist Frankie Trumbauer's ensemble (1925–26) and Paul Whiteman's Orchestra (1927–29). Most famous for his cornet and piano abilities, he joined Whiteman's as one of the most popular and highly paid acts as a soloist in the 1920s. Beiderbecke died at the age of 28 from alcoholism.

Jessica Montesano

Belafonte, Harry [Harold George Belafonete, Jr.] (*b* New York City, 1 March 1927). Singer, actor, and human rights activist. British West Indian Belafonte attended George Washington High School. He joined the navy during World War II and in 1945 returned to New York, where he studied drama at Erwin Piscator's Dramatic Workshop while performing with the American Negro Theater. In the early 1950s, Belafonte made his debut at the Village Vanguard. He recorded music from 1949 to 2003 and was best known for his album *Calypso* (1956), the first album to sell over one million copies, earning him the title the "King of Calypso." He appeared on television and in films such as *Carmen Jones* (1954), *Uptown Saturday Night* (1974), and *Swing Vote* (1999). He was a supporter and confidant of Martin Luther King, Jr., and helped raise money to release civil rights protesters from jail, finance Freedom Rides, support voter-registration drives, and organize the March on Washington in 1963. In the early 1960s Belafonte was appointed a cultural adviser to the Peace Corps. In 1985 Belafonte produced the song "We Are the World," which raised funds for Africa. In 1987 he was appointed as a goodwill ambassador for the United Nations Children's Fund. After being diagnosed with cancer in 1996, he became an activist for prostate cancer survivorship. Belafonte retired from performances in 2003 but remains involved in social and political activism.

Stephanie Miller

Belarusians. The first Belarusian settlers moved to New York City in the 1890s and quickly became incorporated into the city's life. When the Slavic and Baltic division of the New York Public Library opened its doors on 24 May 1911, the first reader was from Belarus. The number of Belarusian immigrants peaked between 1910 and 1913; many were from Minsk, Vilna, Hrodna, Vicebsk, Homiel, Mahiloŭ, Smalensk, Brest, and Pinsk. The U.S. Immigration Service counted them as Russians if they were Eastern Orthodox and as Poles if they were Roman Catholic. The first Belarusian organization in New York City was the White Russian National Committee (1921). One of the members of this organization was Alex Wojciechowicz, an American of Belarusian descent who was the center on Fordham University's famous "seven blocks of granite" offensive line in the 1930s and a member of both the college and professional football halls of fame. More Belarusians moved to the city from 1948 to the early 1950s. During this period several Belarusian churches were formed (most under the jurisdiction of the Belarusian Autocephalous Orthodox Church), as were such organizations as the United Belarusian–American Relief Committee (1948), the Belarusian–American Association (1949), the Belarusian Institute of Arts and Sciences (1951), the Belarusian–American Relief (1957), the philanthropic organization the Krečeŭski Foundation (1958), and the Belarusian–American Union (1965). The Belarusian Institute of Arts and Sciences (1951) became one of the most productive publishers of Belarusian scholarship. The institute was also the founder and publisher of the scholarly annual *Zapisy* (Transactions) (since 1952). The monthly newspaper *Bielarus* (1950) and the annual collection of poetry and fiction by Belarusian émigré writers under the same title (2007) are published by the Belarusian–American Association, which in the early twenty-first century sponsored youth programs and a supplementary school. It is the largest Belarusian organization in the United States.

Of the half-million Belarusians who settled in the United States between 1909 and the early 1990s, between 50,000 and 75,000 remained in the New York City metropolitan area. After Alaksandr Łukašenka became president of Belarus (1994), the number of refugees increased to 5369 (1999–2005). Of these, political asylum recipients were common (913 from 1999–2005). The new generation formed the Belarusian–American Youth Association (2006). The center of Belarusian life in New York City is at St. Cyril of Turaŭ Cathedral (401 Atlantic Avenue in Brooklyn), a former Episcopalian church built in 1850. The parish holds an annual Belarusian Festival, which is part of the annual Atlantic Antic street festival.

Liavon Yurevich

Belasco, David (*b* San Francisco, Calif., 24 July 1853; *d* New York City, 14 May 1931). Producer and playwright. He began working as a stage manager in New York City in 1882 and achieved some renown for the way he adeptly devised and managed stage effects. As a producer he was responsible for 121 productions in New York City (including revivals). He also wrote some 70 plays, many in collaboration with others. In 1902 he broke with the Theatrical Syndicate, after which he became known for the extreme realism of his stage productions. Many of these were mounted at the innovative structure he built in 1907, named the Belasco Theatre and still standing at 111 West 44th Street. He lived from about 1926 at the Hotel Gladstone, 114 East 52nd Street, and retired in 1930. Belasco's most important plays include *The Heart of Maryland* (1895), *Madame Butterfly* (with John Luther Long, 1900), and *The Girl of the Golden West* (1905).

Don B. Wilmeth

Bel Canto Opera Company. Opera company formed in 1969 by Theodore Sieh to present bel canto works and infrequently performed operas of many periods and styles. It produced more than 120 works during its first 20 seasons in New York City, including Daniel Auber's *Manon Lescaut,* Johann Christian Bach's *Temistocle,* Gaetano Donizetti's *Ca-*

terina Cornaro, Ferencz Erkel's *Bank Ban,* William Henry Fry's *Leonora,* Stanisław Moniuszko's *The Haunted Manor,* and Nikolai Rimsky Korsakov's *The Snow Maiden.* Several singers who performed with the company became well known, including Claudia Catania, Elizabeth Hynes, and Samuel Ramey. The unusual repertory of the company has attracted such renowned conductors and directors as Cynthia Auerbach, Victoria Bond, Janet Bookspan, Igor Chichagov, Frank Corsaro, Thomas Martin, Frederick Roffman, and Johannes Somary.

Thomas E. Bird

Bellaire. Neighborhood in east central Queens, centered on Jamaica Avenue and 211th Street between Hollis and Queens Village. Originally a tract of farmland of 42 acres (17 hectares) owned by the Haubitzer family, it was bought in June 1899 by J. A. H. Drissel, the secretary and treasurer of the National Pigeon Shooters Association, who built a grandstand and casino on the site and named it Interstate Park. Many shooting events were held there from 1900, including the Grand American Handicap in 1901 and 1902. The park was declared bankrupt after the shooting of birds was prohibited in November 1902. In 1907 a realty company demolished the grandstand and developed the land as a suburb named Bellaire Park; Bellaire Gardens was promoted as a development in 1921. Later the area was usually considered part of Queens Village.

Vincent Seyfried

Belle Harbor. Neighborhood in southwestern Queens, lying within Rockaway Beach and bounded to the north by Jamaica Bay, to the east by 129th Street, to the south by the Atlantic Ocean, and to the west by Beach 141st Street. The first sections were developed in 1907 by Frederick J. Lancaster, president of the West Rockaway Land Company; the waterfront between Beach 125th and Beach 128th streets was later added for the Belle Harbor Yacht Club. The company installed sewers, wide streets, sidewalks, and utilities and sold lots measuring 20 by 100 feet (6 by 30 meters) for year-round homes. In 1915 the area was remapped to provide for 234 beachfront and bay-front lots; trolley service was begun in 1917. In the early twenty-first century Belle Harbor was a well-kept, upper-middle-class suburban neighborhood and overwhelmingly Caucasian. On 17 November 2001 a large airliner taking off from John F. Kennedy Airport crashed into the neighborhood, killing five people on the ground. There is a memorial to this event in Rockaway Park.

Vincent Seyfried

Bellerose. Neighborhood straddling the border between Nassau County and Queens. Its original expanse (now entirely in Nassau), bounded to the north by Jericho Turnpike, to the east by Remsen Lane, to the south by the Long Island Rail Road, and to the west by Colonial Road, was laid out by Helen M. Marsh, a real estate agent from Lynn, Massachusetts, who around 1897 bought five parcels of land and in 1906 formed the United Holding Company, which supervised development until 1927. Streets were configured in a semicircular pattern with the railroad station at its center; some were given the names of states and of the Great Lakes. A large adjoining area across the city line in Queens was opened to residential development in 1910 and was also named Bellerose. Bounded to the north by Grand Central Parkway, to the east by Little Neck Parkway, to the south by Jericho Turnpike, and to the west by the Cross Island Parkway, this section became a densely built-up neighborhood of one-family houses shaded by trees. In 2008 the portion of Bellerose lying in Queens was a comfortable neighborhood, largely white and middle class to upper middle class. Many residents consider it more like Nassau County than Queens. The neighborhood is the site of the Queens County Farm Museum, which has a working chicken coop and an array of other barnyard animals. Around the turn of the twenty-first century Bellerose developed a strong Indian community.

Vincent Seyfried

Bellevue Hospital. Municipal hospital opened in 1736 as a six-bed infirmary by the Public Work House and Home of Correction at lower Broadway (now City Hall). In 1794 the city purchased a building on 5 acres (2 hectares) at 26th Street and First Avenue to house victims of epidemics, and in 1811 it purchased a site for an almshouse occupying 150 acres (60 hectares) bounded by 28th Street, the East River, 23rd Street, and Second Avenue. The almshouse, completed in 1816, became known as the Bellevue Establishment. The hospital at 26th and First took its current name in 1825 and was used mainly for the victims of epidemics. Filth, neglect, and high mortality rates were rampant until mid-century, when the hospital was separated from the almshouse and reorganized by a medical board. The hospital averaged between 550 and 850 beds by the 1850s. It was the first hospital in the United States to use hypodermic syringes (1856) and to develop a hospital-based ambulance service (1869). Its services were expanded to include an outpatient dispensary (1867), a reception hospital on Canal Street (1869), and an auxiliary hospital on 95th Street and 10th Avenue for accident cases (1871). Wards for alcoholics and a pavilion for the insane were added in the late 1870s, as well as new pavilions for emergencies (1876) and women and children (1882). At the pavilion for gynecology and obstetrics (1887), in 1887 doctors performed the first cesarean section in an American hospital. As the hospital gave greater attention to services for outpatients, it opened a tuberculosis clinic (1904), a social services department (1906), a psychopathic clinic (1908), a dental clinic (1908), and the nation's first ambulatory cardiac clinic (1911). Several schools were founded at the hospital: the Bellevue Hospital Medical College (1861), nursing schools for women (the first Nightingale School of Nursing in the United States, 1873) and men (1888), and a school of midwifery (1911). Bellevue treated American soldiers during the Civil and Spanish–American wars and organized base hospital units to serve overseas in the world wars. Bellevue was overseen by various charities and correction boards until it came under the jurisdiction of municipal hospital boards in the twentieth century. In 1970 control of Bellevue was transferred to the New York

Bellevue Hospital, ca *1905. The balconies provided fresh air, which was thought to speed patients' recovery.*

City Health and Hospitals Corporation, with Bellevue serving as the flagship facility. Until the late twentieth century, Bellevue dwarfed all other hospitals in New York City: it had about 1150 beds by 1920 and about 2700 by the 1950s. Expansion continued, with a new outpatient facility (1973), an inpatient facility (1975), and a psychiatric hospital (1985). By 2006 Bellevue had decreased its bed capacity to 768 and had six intensive care units, 1200 house staff, and 500 residents and interns. Bellevue, known as a center for trauma, limb reimplantation, head and spinal cord injury, and cardiac care, has also been rated number one in the United States for psychiatry and emergency medicine. The New York University–Bellevue Medical Center was formed in 1947. Bellevue has been affiliated with the New York University School of Medicine since 1968 and serves as a teaching hospital.

Jane E. Mottus

Bellows, George (Wesley) (*b* Columbus, Ohio, 12 Aug 1882; *d* New York City, 8 Jan 1925). Painter and printmaker. The son of an architect, he studied under Robert Henri at the New York School of Art and developed a bold, naturalistic style. In 1909 he became the youngest artist elected to the National Academy of Design. His scenes of everyday city life allied him with the Ashcan School; he also depicted boxing matches, seascapes, and portraits. After rooming with friends at 352 West 58th Street he moved in 1906 to the Lincoln Arcade Building on Broadway. In 1910 he moved to a house at 146 East 19th Street and renovated the third floor for a studio. Many of Bellows's paintings are at the Brooklyn Museum.

Bellows, Henry Whitney (*b* Boston, 11 June 1814; *d* New York City, 30 Jan 1882). Clergyman. After receiving his education at Harvard College and the Harvard Divinity School he became the pastor of the First Congregational Church in New York City (later renamed the Church of All Souls). Known as an orator, he led the U.S. Sanitary Commission during the Civil War and oversaw its efforts to improve sanitation in army camps and to provide ambulances, doctors, and nurses on the battlefield. In an address to the alumni of the Harvard Divinity School in 1859 he deplored the lack of faith in the institution of the church and called for a universal church based on freedom in religious matters and a statement of purpose. In April 1865 he played an important role in forming the National Conference of Unitarian Churches. Bellows presided over All Souls until the end of his life.

Bell Telephone Laboratories. Research and engineering firm. It was an outgrowth of the engineering department of Western Electric, a manufacturing division of American Telephone and Telegraph (AT&T) that began operations at 463 West Street, just south of the meatpacking district, in 1907. The main purpose of Bell Laboratories was to develop practical improvements in telephony, but its activities expanded to such an extent that by the time AT&T underwent reorganization in 1913 the laboratories were among the most advanced in the world for research in the electrical sciences. In 1925 the firm was incorporated as a subsidiary owned equally by AT&T and Western Electric. It remained independent of the daily operations of its parent firms, which provided it with a sustained competitive advantage in telephony through such innovations as coaxial cable, microwave radio, and direct long-distance dialing. It also made innovations in fields less directly related to telephony: the first synchronous-sound motion picture system, the negative-feedback amplifier, the electrical-relay digital computer, advances in information theory, and the transistor (1947, for which John Bardeen, William Shockley, and Walter H. Brattain were awarded the Nobel Prize in physics in 1956). In 1947 Bell Laboratories moved to suburban New Jersey.

Belmont. Neighborhood in the west central Bronx, bounded to the north by Fordham University, to the east by the Bronx Zoo, to the south by Tremont, and to the west by the Grand Concourse. It was originally the easternmost part of the manor of Fordham, which was eventually donated to the Dutch Reformed Church in New York City as a source of income to pay its ministers. The church leased the land to farmers before selling it in 1755. The area remained farmland into the early nineteenth century, when a privately owned Episcopal boys' boarding school operated by William Powell opened on part of the property. Later most of the farms were included in Jacob Lorillard's estate, called Belmont. After the Civil War the Lorillards bequeathed their mansion to the Home for Incurables (now St. Barnabas Hospital). From the 1880s the City of New York cut streets through the farms and real estate developers built housing on the land. The great spur to development in the 1890s was the extension to Fordham Road of the elevated line along Third Avenue at the western edge of the neighborhood. During that same time the New York Zoological Society was developing the Bronx Zoo in Bronx Park to the east, a project that required many workers to landscape the grounds and construct the buildings that would house the animals. This type of work had already drawn millions of Italian immigrants to the United States; further, real estate interests openly appealed to Italians to settle in Belmont. By the beginning of the twentieth century the neighborhood had become densely populated. It eventually became known as the Little Italy of the Bronx, and its ethnic character is still reflected in the presence of the Enrico Fermi Cultural Center and by a large market and many Italian food shops along Arthur Avenue. Until 1940 there were also pushcarts, but Mayor Fiorello H. La Guardia had these removed to the New York Retail Market Building on the avenue. In the 1980s a large number of Catholic Albanian immigrants also settled in the neighborhood. Puerto Ricans, Mexicans, and other Latinos, as well as American blacks, have moved in at the edges of the area, but its heart remains Italian. The housing stock includes one-family frame and brick houses, two-family houses, four-story brick walkup apartment buildings dating from the early twentieth century, five-story apartment buildings from the 1920s, and a few tall apartment towers from the mid-1970s. In 1986 Fordham Plaza was built at the northwest corner of the neighborhood, the first new office building in the Bronx in decades. Most of the northern section of Belmont along Fordham Road consists of automobile showrooms. At the turn of the twenty-first century Belmont remains among New York's most culturally distinctive areas, and Arthur Avenue continues to attract thousands of shoppers every day.

Lloyd Ultan

Belmont [Vanderbilt; née Smith], **Alva (Ertskin)** (*b* Mobile, Ala., 17 Jan 1853; *d* Paris, 26 Jan 1933). Suffragist and society figure. Educated in France, she moved to New York City in the early 1870s, married William K. Vanderbilt in 1875, and persuaded her husband to commission the architect Richard Morris

Hunt to build a château at Fifth Avenue and 52nd Street costing $3 million; this was the site in 1883 of a famous and extravagant costume ball. After her scandalous divorce from Vanderbilt in 1895 and her remarriage to Oliver Belmont she devoted her time and considerable resources to woman suffrage: she formed and presided over the New York Political Equality League, in 1909 rented an entire floor of a building on Fifth Avenue for the National American Woman Suffrage Association, and in 1921 was elected president of the National Woman's Party. Belmont later moved to France, where she spent the rest of her life.

Thea Arnold, James E. Mooney

Belmont, August (*b* Alzey, Germany, 8 Dec 1816; *d* New York City, 24 Nov 1890). Banker, diplomat, and horse-racing enthusiast. Of German Jewish background, he was the American agent for the Rothschilds of Frankfurt am Main. He settled in New York City in 1837 and formed his own firm on Wall Street, which engaged in arbitrage, commodity speculation, private lending, foreign exchange, and corporate, real estate, and railroad investment. The rapid success of the firm made him a prominent figure in society, well known for his lavish parties. In 1849 he married Caroline Perry, a daughter of Commodore Matthew C. Perry, at the Church of the Ascension; their children were brought up as Episcopalians. An active Democrat, he was rewarded in 1853 for supporting Franklin Pierce's presidential campaign with a diplomatic post in the Netherlands, to which he was later appointed minister (1855–57); he was also chairman of the Democratic National Committee (1860–72) and a founder of the Manhattan Club (1865). Belmont owned one of the finest stables of thoroughbred horses in the country: he was a founder in 1866 of the American Jockey Club, and in 1867 he inaugurated the now-famous Belmont Stakes, first held at Jerome Park in the Bronx.

Belmont Island [U Thant Island]. Artificial island in the East River off East 42nd Street in Manhattan, less than half an acre (0.2 hectare) in size. Originally built over a small, dangerous granite outcropping known as Man-o'-War Reef, it was enlarged during the 1890s with rocks and soil excavated by workers digging a trolley tunnel under the river between Queens and Manhattan. This ill-fated tunnel project was planned by piano manufacturer William Steinway, who died before it could be completed. The tunnel excavation was finished in 1907 by financier August Belmont, Jr., and the island then became known as Belmont Island. The tunnels themselves, known as the "Steinway Tunnels," went on to serve the No. 7 Flushing line subway from Manhattan, which has tracks running directly beneath the island. In 1977 the island was adopted by a group of United Nations (UN) employees, followers of Buddhist chaplain Sri Chimnoy. They leased the island from New York State, landscaped it, and began referring to it as U Thant Island for the UN's third secretary general, who was from Burma. A 30-foot (9-meter) "Oneness Arch" containing personal memorabilia of U Thant was then erected and dominates the islet that popularly, but unofficially, still bears his name.

Gerard R. Wolfe

Belmont Stakes. Thoroughbred horse race for three-year-olds, first run in 1867 and now one of the oldest races in the United States. Held each June, it is the third event in the Triple Crown, after the Kentucky Derby and the Preakness. The race was first run at Jerome Park in the Bronx before being moved east of the Bronx River in 1890 to the Morris Park Racecourse, where it remained until 1905, when it was moved to Belmont Park in Elmont, Long Island, just outside New York City. The length of the race, one and a half miles (2.4 kilometers), is the same as that of the Epsom Derby in Britain and the longest of any major horse race in the United States. Perhaps the most memorable running of the Belmont Stakes was in 1973, when Secretariat won the race by 31 lengths and set a track record for the distance, becoming the first horse in 25 years to win the Triple Crown. As of 2008 only 11 horses had won the Triple Crown, the last being Affirmed, in 1978.

Ashbel Green

Belnord Apartments. Residential building occupying the entire block between Broadway and Amsterdam avenues and between 86th and 87th streets. Designed in an eclectic Renaissance style by the architectural firm of Hiss and Weeks and opened in 1908, it is a 12-story palazzo with an interior court entered by carriage vaults on 86th Street; a delivery entry on 87th Street leads underground, thus insulating the building's residents from tradesmen. Reportedly the largest apartment building in the world for several years, the Belnord has 175 apartments arranged in suites of eight to 14 rooms; at one time it had full concierge services and pneumatic mail delivery. It maintains a standard of luxury beyond that of the smaller Ansonia and Apthorp apartment buildings.

Joel Schwartz

Belter, John Henry [Heinrich, Johann] (*b* Ulm, Württemberg, 1804; *d* New York City, 23 Sept 1863). Cabinetmaker and furniture manufacturer. He was first listed as a cabinetmaker at 40½ Chatham Street in directories in New York City in 1844. Within two years he moved to more fashionable quarters on Broadway. In 1853 he exhibited an ebony and ivory center-table at the New York Crystal Palace (now part of the Manney Collection). John H. Belter and Company opened a factory on Third Avenue at 76th Street in 1854 and showrooms at 552 Broadway in 1856, moving them to 772 Broadway in 1861. In mid-1847 Belter secured his first patent, which covered machinery for sawing "Arabesque" chairs; he later received others for an improved bedstead (1856), a technique for laminating and molding gilded layers of veneer into a cylinder from which multiple chair backs were cut (1858), and improvements to a bureau drawer and its locking device (1860). In his work he used from five to 16 layers of veneer and carved decorations ranging from scrolls to complex patterns of flowers, fruit, and animals. His partners continued the business until they were forced to declare bankruptcy in 1867. In later years Belter's name became a generic term for ornate Rococo Revival furniture of laminated construction.

Deborah Dependahl Waters

Benchley, Robert (Charles) (*b* Worcester, Mass., 15 Sept 1889; *d* New York City, 21 Nov 1945). Essayist, humorist, and actor. After graduating from Harvard University in 1912 he moved to New York City to write. Initially he had little success, publishing his work only occasionally. His first humorous piece

appeared in *Vanity Fair* in October 1914, and in 1916 he was engaged by Franklin P. Adams as an associate editor of the Sunday magazine of the *New York Tribune.* As the managing editor of *Vanity Fair* he met Dorothy Parker and Robert E. Sherwood. A member of the Algonquin Round Table, he was well known for such quips as "I'd like to get out of this wet suit and into a dry martini." He lived at the Algonquin Hotel in 1919 and later moved to the Royalton Hotel at 44 West 44th Street, where he kept a suite for 24 years. In 1920 he resigned in protest when Parker was fired for criticizing actress Billie Burke. After leaving *Vanity Fair* he took an office with Parker and turned to freelance writing, producing the column "Books and Other Things" for the *New York World* and working as a drama critic for *Life* and the *New Yorker.* At the same time he became a popular comedian, best known for the monologue "The Treasurer's Report," which he performed in many stage revues and in a film made at the Fox studios in Astoria in 1928; he later made more than 40 other films. Often self-deprecating in his humor, Benchley wrote of his own career: "It took me fifteen years to discover I had no talent, but I couldn't give it all up because by that time I was too famous."

Walter Friedman

Benedict [née Fulton], **Ruth** (*b* New York City, 5 June 1887; *d* New York City, 17 Sept 1948). Anthropologist, feminist, and poet. After graduating from Vassar College in 1909 she married and settled near New York City in 1914, and in 1919 she became a student of the anthropologists Alexander Goldenweiser and Elsie Clews Parsons at the New School for Social Research. She transferred to Columbia University in 1921 to study with Franz Boas and earned her PhD there in 1923. She was also influenced by the linguist Edward Sapir and by Margaret Mead, a former pupil who became her friend and lover. During the 1920s she wrote poetry under the name Anne Singleton. At Columbia she worked closely with Boas and rose from the rank of lecturer (1923) to full professor (1948). Instrumental in popularizing the field of anthropology, she was credited with making New York City a center for its study in the 1930s and 1940s. Benedict carried out fieldwork among several American Indian peoples, notably the Zuni of the southwestern United States, focusing on the relationship between individual personality and culture. She wrote two popular and influential works: *Patterns of Culture* (1934) and *The Chrysanthemum and the Sword: Patterns of Japanese Culture* (1946). After World War II she directed the project known as Research in Contemporary Cultures at Columbia.

Ira Jacknis

Benét, Stephen Vincent (*b* Bethlehem, Pa., 22 July 1898; *d* New York City, 13 March 1943). Writer, brother of William Rose Benét. He was educated at Yale University (BA 1919, MA 1920), where he was a writer and editor for the *Yale Literary Magazine* and the *Yale Record.* New York City figured prominently in his work. *Heavens and Earth* (1920) included a section of poems entitled "The Tall Town" that depicted everyday experiences there. Of two minds about the city's literary life, he spent much of his time in Paris. In 1929 he won a Pulitzer Prize for *John Brown's Body* (1928), an epic poem depicting the Civil War through sketches of historical and fictional characters set in rhymed verse. In the same year he was elected to the National Institute of Arts and Letters, later becoming its vice president. He lived at 326 East 57th Street during the late 1920s and at 220 East 69th Street during the 1930s before moving in 1939 to 215 East 68th Street, where he remained for the rest of his life. Inspired by the collapse of the American economy, the rise of fascism in Europe, and his own financial and physical difficulties, he turned to apocalyptic themes in such works as "Metropolitan Nightmare," a poem published in *Burning City* (1936) about tropical heat and a fictional steel-eating termite in New York City. Benét lectured widely, wrote book reviews for the *New York Herald Tribune* and the *Saturday Review of Literature,* and was elected to the American Academy of Arts and Letters (1938). His written works include operettas, short stories such as "The Devil and Daniel Webster" (1936), and *Western Star* (1943, Pulitzer Prize 1944), the first volume in what was to have been a series about a pioneer's experiences.

Naomi Wax

Benét, William Rose (*b* Brooklyn, 2 Feb 1886; *d* New York City, 4 May 1950). Writer, brother of Stephen Vincent Benét. He attended the U.S. Military Academy before graduating from Yale University in 1907. In a collection of colorful, romantic poems entitled *The Falconer of God and Other Poems* (1914) he juxtaposed images of the streets of New York City with others of visionary dreamlands. After working as an assistant editor at *Century Magazine* he joined with Henry Seidel Canby, Amy Loveman, and Christopher Morley to launch the *Literary Review* of the *New York Evening Post* in 1920, where he was chief contributor, and the *Saturday Review of Literature* in 1924, where he was the poetry critic, author of the column "The Phoenix Nest" (1924–50), and an editor until the end of his life. For a time he lived in a studio at 37 West 10th Street before moving with his wife, the poet Elinor Wylie, to 142 East 18th Street (1923–26). Benét also worked as a translator and children's storyteller. His published writings include verse and prose for children, short stories, textbooks, the verse novel *Rip Tide* (1932), and *The Dust Which Is God,* a fictionalized autobiographical narrative in verse that won a Pulitzer Prize in 1942.

Benjamin, Park (*b* British Guiana [now Guyana], 14 Aug 1809; *d* New York City, 12 Sept 1864). Writer and editor. Born to slaveowners, he settled in New England as a young man and joined a literary circle that included Oliver Wendell Holmes and Henry Wadsworth Longfellow. After moving to New York City he became the literary editor of the *New Yorker* under Horace Greeley. In 1839 he began publishing the *New World,* a weekly literary journal that soon had a national circulation and was dedicated to promoting distinguished American and European literature. As the editor of the daily newspaper the *Evening Signal* he engaged in frenzied controversies of public life. Benjamin spent his last years as one of the most popular lecturers on the American Lyceum circuit, where he presented satirical and humorous verse and often appeared with Greeley and Henry Ward Beecher.

Andrew Wiese

Bennett, D(eRobigne) M(ortimer) (*b* Springfield, N.Y., 23 Dec 1818; *d* New York City, 6 Dec 1882). Freethinker, publisher of *The Truth Seeker* journal, and opponent of New York City's leading censor, Anthony Comstock. Raised in rural New York, Bennett left home as a teenager and joined a Shaker community in New Lebanon, New York. After defying the celibate community by marrying a fellow Shaker, Mary Wicks, Bennett moved around the Midwest, working at farming, pharmacy, and patent medicine sales; he also took up journalism because the local papers in Paris, Illinois, would not print his letters. By this time, he had become a freethinker, or "infidel" from Christianity. In 1873 he and Mary moved *The Truth Seeker* to Manhattan, where it was published from offices at 335 Broadway. Reflecting the intellectual and spiritual tumult of the times, *The Truth Seeker* had 50,000 readers, among them

Mark Twain, Clarence Darrow, and Robert Ingersoll, "the Great Agnostic." Its pages challenged the arrests of individuals and seizures of literature undertaken by Comstock and his New York Society for the Suppression of Vice; in return, Comstock had Bennett arrested twice for distributing the free-love advocate Ezra Heywood's pamphlet, *Cupid's Yokes.* (There was nothing sexually explicit in the pamphlet, but it did attack Comstock.) The second arrest, in 1879, was followed by conviction and 11 months in Albany Penitentiary. The 1879 U.S. Court of Appeals decision *United States v. Bennett,* which affirmed Bennett's conviction, set the precedent for American censorship law for the next three-quarters of a century. After his release from prison, Bennett was honored by a standing-room-only crowd at Chickering Hall, at 437 Fifth Avenue in Manhattan. He traveled around the world for the next year and died a few months after returning home to New York City. He is buried in Brooklyn's Green-Wood Cemetery.

Roderick Bradford, *D. M. Bennett: The Truth Seeker* (Amherst, N.Y.: Prometheus Books, 2006)

Marjorie Heins

Bennett, James Gordon, Jr. (*b* New York City, 10 May 1841; *d* Beaulieu, France, 14 May 1918). Newspaper publisher. He took control of the *New York Herald* when his father, the publisher, retired in 1867, and he continued the newspaper's tradition of sparing no expense to collect news. In 1869 he sent the reporter Henry Morton Stanley to Africa to find the missionary David Livingstone. An eccentric society figure and commodore of the New York Yacht Club, Bennett lived off the newspaper's profits while supervising operations from his home in Paris. In 1887 he launched the Paris edition of the *Herald,* which later became the *International Herald Tribune*. Perhaps better known as a sportsman than as a journalist, Bennett sponsored many regattas and horse, automobile, and airplane races.

Steven H. Jaffe

Bennett, James Gordon, Sr. (*b* Keith, Scotland, 1 Sept 1795; *d* New York City, 1 June 1872). Newspaper publisher and editor. In 1829 he became the associate editor of the *Courier and Enquirer,* and in May 1835 he launched the *New York Herald* from a basement on Wall Street with $500; its financial reportage, coverage of crime and scandal, and enterprise in collecting national and international news soon made it one of the most successful "penny papers" in the United States. Bennett's editorial attacks on his competitors and iconoclastic contempt for religious norms made him arguably the most controversial American newspaperman of his day. Outraged subjects of his articles physically assaulted him at least six times, and he was excluded from polite society in New York City. The *Herald* had the highest circulation of any American daily newspaper. Although it initially disavowed party politics, Bennett editorialized regularly against abolition and for U.S. territorial expansion, and after 1840 he tended to support Democratic presidents. Although initially critical of Abraham Lincoln, the *Herald* became supportive of him after 1864, presumably because Lincoln offered Bennett the mission to France (which he declined). Bennett is considered one of the inventors of American popular journalism.

Steven H. Jaffe

Bennett [DiFighlia], **Michael** (*b* Buffalo, N.Y., 8 April 1943; *d* Tucson, Ariz., 2 July 1987). Choreographer and director. He made his debut on Broadway as a dancer in *Subways Are for Sleeping* (1961) and as a choreographer in *A Joyful Noise* (1966). He provided choreography for television variety programs taped in New York City, including *Hullabaloo* and *The Ed Sullivan Show* in the late 1960s. His first major success was the musical *Promises, Promises* (1968), and he won his first Tony Award for the musical *Follies* (1971). His most widely known musical, *A Chorus Line* (1975), was born of a series of taped sessions with veteran dancers and Bennett's desire to honor a dancer's life. Under Bennett's direction and with choreography of Bob Avian, the show opened on 15 April 1975 at the Joseph Papp Public Theater. After 101 performances the show moved to the Shubert Theatre for a 15-year, 6137-show run, during which it broke box office records and won nine Tony Awards. In 1977 Bennett bought an eight-story building located at 890 Broadway between 19th and 20th Streets. He turned it into his personal office as well as some of the most sought-after rehearsal space in New York City. In October 1986 he sold the building to several of the companies that made their home there. After Bennett's death in 1987 a memorial service was held in the Shubert Theatre and the lights on Broadway were dimmed.

Benny, Jack [Kubelsky, Benjamin] (*b* Chicago, 14 Feb 1894; *d* Beverly Hills, Calif., 27 Dec 1974). Comedian. He played the violin in vaudeville theater and in 1927 lived for a few years at the Hotel Edison (228 West 47th Street). Benny made his radio debut on Ed Sullivan's program in 1931 and within a year had his own show in New York City. In 1935 he relocated the program to California and led the national ratings, eventually expanding to television.

James E. Mooney

Benson, Egbert (*b* New York City, 21 June 1746; *d* Jamaica [now in Queens], 24 Aug 1833). Statesman. He graduated from King's College in 1765 and during the American Revolution became a patriot; he was later active in state government and in the provincial congress, was a delegate to the Congress of the Confederation and the Annapolis Convention of 1786, and served two consecutive terms in the U.S. Congress. Benson was appointed to the state supreme court in 1794 and to the chief judgeship of the U.S. Circuit Court, a position he left to return to Congress. He was also a trustee of Columbia College and helped to form the New-York Historical Society.

James E. Mooney

Bensonhurst. Neighborhood in southwestern Brooklyn, adjoining Bay Ridge, Borough Park, and Coney Island and bounded to the north by 61st Street, to the east by McDonald Avenue, to the south by Gravesend Bay, and to the west by 14th Avenue. Once a small section of New Utrecht, it was covered by farms and had fewer than 4000 inhabitants before the construction of steam railroads in the 1870s. In the late 1880s the developer James Lynch bought large parcels of land from several members of the Benson family and built the suburb of Bensonhurst-by-the-Sea on a plot of 350 acres (142 hectares) bounded to the north by 78th Street, to the east by 23rd Avenue, to the south by Gravesend Bay, and to the west by 20th Avenue. He planted 5000 shade trees and designed villas for 1000 families. The area was 6 miles (10 kilometers) from City Hall in Brooklyn, and middle-class families were attracted by its rural character and proximity to Manhattan; 22nd Avenue became Bay Parkway, built by the City of Brooklyn as part of a tree-lined route from Prospect Park to the sea. Along Gravesend Bay the Bensonhurst Yacht Club, the Atlantic Yacht Club, and the Crescent Athletic Club catered to an affluent sporting population. When the town was annexed to Brooklyn in 1894, the population was less than 10,000.

The area became heavily populated soon after being linked to Manhattan in 1915 by the Fourth Avenue subway along a route formerly used by the Sea Beach and West End steam railways. Brick houses for two to three

Loading hay in Bensonhurst, 1900

Backyards in Bensonhurst, 1977

families and apartment buildings of four to six stories built in the 1920s were occupied mostly by Italians and Jews from the Lower East Side. The population increased dramatically during the first quarter of the twentieth century, to nearly 150,000 by 1930. An increasing number of Jews turned to local institutions for education and recreation, including the Jewish Community House, which opened in 1927 at Bay Parkway and 78th Street.

Residential growth continued after World War II. In 1949 the Shore Haven Apartments complex was built by Fred Trump at 21st Avenue off the Belt Parkway; with 5000 apartments this was then the largest private housing development in Brooklyn. The 1950s saw an influx of immigrants from southern Italy (primarily Sicily and Naples). Several local residents became well known, among them the opera singer Robert Merrill, the actor Elliott Gould, the comedian Buddy Hackett, and the baseball pitcher Sandy Koufax. The neighborhood also became famous through the popular television series *The Honeymooners* as the home of Ralph Kramden, a boisterous bus driver portrayed by Jackie Gleason. For many years the neighborhood was one of the most homogeneous in the city. In 1980 the population was 93 percent white and about 80 percent Italian; more than 70 percent of the residents occupied one- and two-family houses. In the 1980s immigrants from Asia and the Soviet Union moved into the neighborhood; Chinese immigrants settled mostly in one- to three-family houses between Bay 25th and Bay 50th streets, Russians in the many apartment buildings lining Bay Parkway. Other ethnic groups that moved into the neighborhood late in the twentieth century included Greeks, Koreans, Israelis, Poles, and Arabs, especially from Egypt, Lebanon, Syria, and Jordan. Tensions between whites and blacks in the neighborhood erupted in August 1989 when a black teenager was murdered by a gang of whites.

In the early twenty-first century the population of Bensonhurst remains largely Italian, Chinese, and Russian and mostly lower middle class. Family and church are central in many residents' lives, and several generations of a family are likely to live on the same block. The Regina Pacis Roman Catholic Church stands on 65th Street. Blacks live mostly in the Marlboro public housing project, which lies at the eastern edge of the neighborhood. The Jewish Community House offers social service programs for senior citizens and Russian immigrants. Most Italians live along 18th Avenue between 63rd and 86th Streets and along 86th Street between 14th Avenue and Bay Parkway. In September a feast is held for Santa Rosalia, the patron saint of Sicily.

Stephen Weinstein

Benton, Thomas Hart (*b* Neosho, Mo., 15 April 1889; *d* Kansas City, 19 Jan 1975). Painter and muralist. A grand-nephew of the senator of the same name from Missouri, he studied in Paris (1908–11), where he befriended Morgan Russell and Stanton Macdonald-Wright, and worked in New York City from 1912. There he experimented with synchromist color abstraction and took part in exhibitions of the Peoples Art Guild and the Forum Exhibition (1916). After 1918 he developed a monumental figurative style that celebrated the folk culture of the United States. His first mural commission was a nine-part cycle for the New School for Social Research called *America Today* (1931, now at the Equitable Life Assurance Society of the United States), which depicts industry and city life before the Depression. Later murals, such as those for the Whitney Museum of American Art (1932), focused on native, rural, and folk themes

central to the Regionalist movement. Benton left New York City in 1935. He wrote *An American in Art: A Professional and Technical Autobiography* (1969).

Judith Zilczer

Benton and Bowles. Advertising agency and market research firm formed several months before the stock market crash of 1929 by William Benton and Chester Bowles, who met while working at the George Batten Company, an advertising firm in New York City. Benton was president of the new firm and Bowles took charge of the creative side. The firm began with capital of $1800 and occupied an office in the Chanin Building at 122 East 42nd Street before moving in 1930 to 5 East 45th Street. To research the public's opinion of a gelatin product made by the General Foods Corporation, their first important account, Benton and Bowles surveyed housewives door to door. The success of the ensuing advertising campaign led General Foods to place more business with the firm, enabling it to survive the Depression and to emerge as a leading advertising agency. Other major accounts included Procter and Gamble, and Bristol–Myers. In 1932 the agency moved to 444 Madison Avenue. It was one of the first agencies to use radio for advertising purposes and also produced the radio programs *Beauty Box* (for Palmolive), *Showboat* (for Maxwell House), Fred Allen's *Town Hall Tonight,* and *Gang Busters.* Benton became chairman of the board in 1935 but resigned the following year, and Bowles left the firm in 1941; each later served in several high-ranking government positions. The firm moved to 666 Fifth Avenue in 1957 and to 909 Third Avenue in 1969. In 1986 Benton and Bowles merged with the midwestern advertising firm D'Arcy MacManus Masius to form D'Arcy Masius Benton and Bowles, with headquarters in New York City.

Bergdorf Goodman. Firm of clothing retailers. Formed in 1894 as Bergdorf and Voight by Herman Bergdorf and Herman Voight, it first operated a small tailoring and fur shop at 125 Fifth Avenue, later moving to Ladies' Mile. A tailor in the shop, Edwin Goodman (1878–1953), bought a share of the business, and a few years later Bergdorf retired to France. The firm specialized in high fashion and catered to an elite clientele. Its success made necessary a move to new quarters on the site of the former Vanderbilt Mansion at 58th Street and Fifth Avenue. A small store was built there in 1928 and was eventually expanded to 57th Street. In 1987 the store was acquired by the Neiman-Marcus Group, and in 1990 the men's department was moved across the street to 745 Fifth Avenue. In 1997 the ninth floor, formerly the Goodman family's private penthouse apartment, was converted into an upscale salon and day spa.

Leslie Gourse

Bergen Beach. Neighborhood in southeastern Brooklyn, bounded to the north by Paerdegat Basin and Canarsie, to the east by Jamaica Bay, to the south by Mill Basin, and to the west by Flatlands. A family descended from Hans Hansen Bergen, a Dutch settler of the seventeenth century, owned the land and eventually sold it to Percy Williams, an entrepreneur who developed it as a summer resort. His enterprise thrived in the 1890s and the early twentieth century but became unable to compete with Coney Island and Rockaway Beach; by 1926 the last section had been sold for a development of one-family houses. Several houses were built and onetime picnic groves were run through with streets, but most of the area remained undeveloped into the 1980s. In the early twenty-first century this largely Italian neighborhood contained single-family homes with small lawns and almost no commercial activity.

Ellen Marie Snyder-Grenier

Berger, [Mike] **Meyer** (*b* Brooklyn, 1 Sept 1898; *d* New York City, 8 Feb 1959). Reporter for the *New York Times*. Berger focused on ordinary New Yorkers and received a Pulitzer Prize in 1950. His column "About New York" appeared in the *Times* from 1939 to 1940 and from 1953 until his death in 1959. He wrote *The Story of the New York Times,* and a collection of his columns was titled *The Eight Million.* Berger is considered a reporter's reporter. The Meyer Berger Award is presented each year by Columbia University's School of Journalism for outstanding reporting on the lives of ordinary people.

Frank Dyer

Bergman, Bernard (*b* Hungary, 1911; *d* Manhattan, 16 June 1984) Rabbi. He immigrated to the United States in the 1920s and lived in Brooklyn. In the 1940s he was a rabbi at a Jewish nursing home on the Lower East Side, served as editor and publisher of the Yiddish-language daily the *Jewish Morning Journal,* and was the head of the Zionist organization Hapoel Hamizrachi. In 1955 he established the Towers Nursing Home on Central Park West and 106th Street in the building that formerly was the New York Cancer Hospital as well as the Park Crescent home on Riverside Drive and 87th Street. At the height of his career he was a leader of New York's Orthodox Jewish community and had a $24 million real estate and nursing-home empire. In the 1970s the Towers home was charged with Medicare fraud, and residents testified that they had endured physical abuse, pest infestations, and inadequate heat. The site was closed in 1974. In 1976 Bergman was sentenced to four months in federal prison after he was convicted on Medicare and tax fraud charges; he also served eight months for convictions on state offenses.

Jessica Montesano

Berkman, Alexander (*b* Vilnius [now in Lithuania], 21 Nov 1870; *d* Nice, France, 28 June 1936). Anarchist. He moved in 1888 to the Lower East Side where he joined the Pioneers of Liberty. During a steelworkers' strike in 1892 in Homestead, Pennsylvania, he tried to assassinate Henry Clay Frick and was subsequently imprisoned for 14 years; he remained one of the best-known anarchists in the United States from 1906 to 1919. In New York City he edited *Mother Earth* (a publication launched by Emma Goldman), organized opposition to World War I, and helped to form the Ferrer School, which was devoted to libertarian causes and the working class. Exiled in 1919, Berkman moved to Paris where he wrote for the Jewish Anarchist Federation of New York.

David A. Balcom

Berle, A(dolf) A(ugustus), Jr. (*b* Boston, 29 Jan 1895; *d* New York City, 17 Feb 1971). Scholar and public official. He earned a degree from Harvard Law School at age 21 and worked for the firm of Louis D. Brandeis before volunteering for the army in 1917; he later moved to New York City, where he taught law at Columbia University, provided financial advice to Mayor Fiorello H. La Guardia, and directed the Planning Commission and the Housing Authority while also serving as chamberlain of New York City between 1934 and 1938. As an adviser to President Franklin D. Roosevelt he promoted central planning, and he worked as a Latin American expert and diplomat for him and for presidents Harry S. Truman and John F. Kennedy. He also helped to organize the Liberal Party and wrote a number of books on law and politics, including *The Modern Corporation and Private Property* (1932).

Jordan A. Schwarz, *Liberal: Adolf A. Berle and the Vision of an American Era* (New York: Free Press, 1987)

James E. Mooney

Berle [Berlinger], **Milton** (*b* New York City, 12 July 1908; *d* Los Angeles, 27 March 2002). Actor. After years in vaudeville he made his debut on Broadway in Earl Carroll's *Vanities* (1932) and the *Ziegfeld Follies* (1936, 1943). Never wholly successful in film or on radio, he became well known in *Texaco Star Theater* (1948–56), a television program produced in New York City by the Columbia Broadcasting System. His broad humor and antics came across well on television and were important in spurring sales of television sets. Known often as "Uncle Miltie" or "Mr. Television," Berle was one of the best-known television actors of his time.

David J. Weiner

Berlin. Former name of a section of northwestern Queens at the eastern edge of Laurel Hill, bounded to the north by the Long Island Expressway, to the east by 50th Street, to the south by Newtown Creek, and to the west by 48th Street. It was promoted as Berlinville in 1871 and developed to draw German immigrants; all the streets were named after German cities. By the early twenty-first century the area had been given over almost entirely to industry.

Vincent Seyfried

Berlin, Irving [Baline, Israel] (*b* Tyumen, Russia, 11 May 1888; *d* New York City, 22 Sept 1989). Composer, songwriter, and producer. The son of a cantor, he moved to New York City from Russia in 1893 and without formal musical instruction began his career on the Lower East Side as a street singer and singing waiter, and in Tin Pan Alley as a song plugger. He performed in vaudeville and Broadway revues and achieved his first great success with the song "Alexander's Ragtime Band" (1911). In 1919 he formed Irving Berlin Music and with Sam Harris in 1921 he opened the Music Box Theatre, at 239 West 45th Street, where he introduced his newest songs. He lived for most of his life on the Upper East Side of Manhattan and spent his last years as a recluse in a mansion on Beekman Place.

Berlin usually wrote the lyrics to his own songs. Because he was a self-taught pianist able to play in only one key, he was able to write songs in other keys only by having his piano equipped with a unique keyboard-shifting device. His songs are remarkable for their unforced melodies and rhythms and their forthright sentiments; they captured the public fancy and were eagerly sought after by musicians in Tin Pan Alley and elsewhere. The best-known include "God Bless America" (1918), "White Christmas" (1942), and many songs inspired by New York City, among them "Where Is My Little Old New York" (1924), "Puttin' on the Ritz" (1929), "Manhattan Madness" (1932), "Harlem on My Mind" (1933), "Easter Parade" (1933), "Slumming on Park Avenue" (1937), and "Washington Square Dance" (1950). Berlin's successful Broadway shows *Annie Get Your Gun* (1946) and *Call Me Madam* (1950) both featured Ethel Merman; his last Broadway production was *Mr. President* (1962).

Nicholas E. Tawa

Bernstein [née Frankau], **Aline** (*b* New York City, 22 Dec 1882; *d* New York City, 7 Sept 1955). Theatrical designer. The daughter of Rebecca and Joseph Frankau, an actor, she was born on West 34th Street and grew up in a theatrical boarding house on West 44th Street. She attended the New York School for Applied Design and Hunter College before studying painting at the New York School of Art under Robert Henri. In 1902 she married Theodore Bernstein, a Wall Street stockbroker, but in 1925–30 had a tumultuous affair with writer Thomas Wolfe. Bernstein began her career by working with Irene and Alice Lewisohn in the Henry Street Settlement as a costume designer and became the primary stage and costume designer when they established the Neighborhood Playhouse in 1915 and remained until it closed in 1927. Her productions at the Playhouse for *The Little Clay Cart* (1924) and *The Dybbuk* (1925) and several of the *Grand Street Follies* helped build her early reputation. Later she designed for the Civic Repertory Company and for the Theatre Guild, including *Ned McCobb's Daughter* (1926) and *Reunion in Vienna* (1931). Among her late works was *Regina* (1949), which won the Tony Award for best costume design. After a two-year battle, Bernstein in 1926 became the first woman admitted to Local 827 of the United Scenic Artists Union. In 1937 she cofounded the Museum of Costume Art, which was later incorporated into the Metropolitan Museum of Art. Bernstein also wrote three novels, an autobiography titled *An Actor's Daughter* (1941), and the posthumously published *Masterpieces of Women's Costume of the 18th and 19th Centuries* (1959). Bernstein died in her apartment at 875 Park Avenue.

Dianna Ng

Bernstein, Leonard [Louis] (*b* Lawrence, Mass., 25 Aug 1918; *d* New York City, 13 Oct 1990). Conductor, composer, and educator. In 1943 he was named assistant conductor of the New York Philharmonic and soon after gave a dramatic performance leading the orchestra as a substitute for Bruno Walter, who had become ill. He conducted the New York City Symphony from 1945 to 1948 and in 1957 returned to the New York Philharmonic as its co-conductor (with Dimitri Mitropoulos). In the following year he became the first music director of the orchestra both born and trained in the United States, and he remained in this position until he was named its laureate conductor in 1969. A committed and enthusiastic advocate of modern works, he projected an image strikingly different from that of the stern, foreign-born conductor to which American audiences were accustomed. He performed more concerts with the orchestra than any other conductor in its history, giving 36 world premieres and 14 American premieres. He was the first

Leonard Bernstein

conductor to understand and master television as a medium for music education: after making several programs in 1954 for the television series *Omnibus,* he began two series with the New York Philharmonic in 1958: Young People's Concerts, which continued for 15 years, and a series geared toward adults that continued until 1962.

In addition to being the focus of much of Bernstein's career as a conductor, New York City provided the inspiration for many of his compositions. His first ballet, *Fancy Free* (1944, choreography by Jerome Robbins), was so well received at its premiere by the Ballet Theatre at the Metropolitan Opera House that it was soon transformed into the full-length Broadway musical *On the Town* (1944). His other works for the stage include *Wonderful Town* (1953), *Candide* (1956), *West Side Story* (1957), and *Mass* (1971), and two operas, *Trouble in Tahiti* (1952) and *A Quiet Place* (1984). He also wrote three symphonies (*Jeremiah,* 1942; *The Age of Anxiety,* 1949; and *Kaddish,* 1963), the orchestral works *Facsimile* (1946) and *Serenade* (1954), and chamber and vocal music. Bernstein wrote *West Side Story* while living at the Osborne on West 57th Street; for many years until the end of his life he lived in the Dakota on West 72nd Street.

John Briggs, *Leonard Bernstein: The Man, His Work and His World* (New York: World, 1961); Humphrey Burton, *Leonard Bernstein* (New York: Doubleday, 1994)

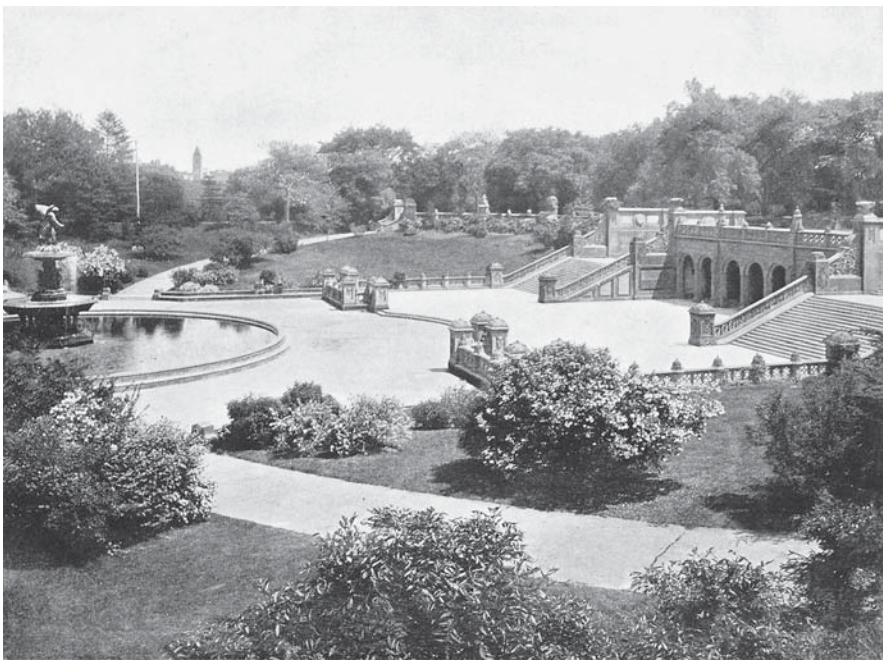
Barbara Haws

Berra, Yogi [Lawrence Peter] (*b* St. Louis, 12 May 1925). Baseball player. Born to parents from Italy, he spent his entire playing career as a catcher and outfielder for teams in New York City. From 1946 to 1963 he was a central figure with the Yankees as the team won 10 World Series. Berra set many World Series records, including those for most series played (14), most series games played (75), most hits (71), and most times at bat (259). In 1956 he caught pitcher Don Larsen's perfect game, the only one in World Series history. Berra was named Most Valuable Player in the American League in 1951, 1954, and 1955. He also played briefly for the Mets in 1965. After his playing days, he was a manager of the Yankees in 1964 (they won the American League pennant that year), 1984, and the first 16 games of the season in 1985. He also managed the New York Mets from 1972 to 1975, winning the National League pennant in 1973. After Yankees owner George Steinbrenner fired Berra as manager in 1985, Yogi vowed never to return to Yankee Stadium while Steinbrenner owned the team. Berra remained estranged from the Yankees franchise until 1999, when he reconciled his differences with Steinbrenner. On 18 July 1999 he finally returned to Yankee Stadium on "Yogi Berra Day." Berra is perhaps the most-often-quoted figure in baseball. His aphoristic, colorful malapropisms, known as "Yogiisms," have entered the American vernacular; an extensive selection is included in the first chapter of his autobiography, *Yogi: It Ain't Over* (1989). He was inducted into the Baseball Hall of Fame in 1972.

Joseph S. Lieber

Best & Co. Firm of women's and girls' clothing retailers. Formed in 1879 by Albert Best and James A. Smith, its first establishment was a children's store at 315 Sixth Avenue. The firm moved its retail operations to a 12-story building at Fifth Avenue and 51st Street in 1947 and later opened several branches. At its peak it operated 14 stores, of which three alone reportedly had $10 million worth of inventory. The firm ceased operations in 1970; its main store was replaced by Olympic Tower, an office and residential building.

Leslie Gourse



Bethany Baptist Church. Church at 460 Sumner Avenue in Brooklyn, founded in 1883. It is notable for having been the first black congregation to move into the heart of Bedford–Stuyvesant. It moved to its present site in 1924 during the height of white resistance to black migration.

Kenneth T. Jackson

Bethel Tabernacle African Methodist Episcopal Church, Brooklyn. Church in Weeksville, Brooklyn. Founded in 1847, it continued to thrive past the 1870s, when the predominantly black community of Weeksville was slowly overwhelmed by the larger white community around it. In 1978 the church moved to 1630 Dean Street, directly across the street from its original home. The new building had earlier been Public School 83, an all-white school that had been integrated in 1864 by students from Colored School no. 2, which had itself been founded a few years earlier by some of the leading citizens of Weeksville.

Kenneth T. Jackson

Bethesda Fountain. Fountain in Central Park; it was the only sculpture commissioned as part of Frederick Law Olmsted and Calvert Vaux's original park design. Emma Stebbins, the first woman to receive a major art commission in New York City, sculpted the angel that is the fountain's centerpiece. Vaux designed the base, which features detailing by Jacob Wrey Mould. Inspired by a passage in the Gospel of John about the healing waters of Jerusalem's Bethesda Pool, Stebbins designed the sculpture in tribute to the 1842 Croton Aqueduct system, which provided clean water to the city. The angel holds a lily symbolizing purity in one hand and with the other blesses the fountain's water, which flows over four cherubs that represent temperance, purity, health, and peace. The fountain, which cost $63,000 and was designed in Rome and cast in Munich, was unveiled in 1873 to mixed reviews. In the 1960s it became a gathering place for hippies, young African Americans and Puerto Ricans, and political radicals. The fountain subsequently deteriorated until the

Bethesda terrace

Bethesda Fountain

Central Park Conservancy was founded in 1980. It was restored in 1980–81 as one of the conservancy's first projects to rehabilitate the park. Also known as the "Angel of the Waters," the fountain has been featured in many films and plays, including Tony Kushner's *Angels in America* (2003).

Kate Lauber

Beth Israel Medical Center. General-care hospital in Stuyvesant Square, opened in May 1891 as a facility for Orthodox Jews by the Beth Israel Hospital Association, which in 1889 had opened a dispensary at 97 Henry Street. It began with 20 beds at 196 East Broadway and later occupied quarters at 206 East Broadway and 195 Division Street. The hospital served kosher food and had a Yiddish-speaking staff. It relied heavily on donations from wealthy Jews and from 1894 also received support from the Saturday and Sunday Association; as late as 1915 about 93 percent of the patients received medical treatment free of charge. In 1917 the hospital became a member of the Federation of Jewish Philanthropic Societies. In 1929 the hospital moved to a facility at Jefferson and Cherry streets and opened the Beth Israel Training School for Nurses (now the Phillips Beth Israel School of Nursing); by this time it had acquired a prestigious reputation and no longer served only the poor. In 1945 it became a teaching hospital of the New York University School of Medicine. Beth Israel purchased Manhattan General Hospital in 1964. During the next two years it opened the Linsky Pavilion, the Bernstein Institute, Fierman Hall, and Gilman Hall, and formed an affiliation with the New York Eye and Ear Infirmary. It set up the nation's largest methadone program in 1977, was named a center for AIDS care by New York State in 1987, and in 1988 acquired a nursing home with 230 beds in suburban White Plains, New York, and an inpatient unit with 12 beds for AIDS patients. In the beginning of the twenty-first century the medical center had 1368 beds.

Bettmann Archive. Photographic archive. It was formed in 1935 in New York City by Otto L. Bettmann, a refugee from the Nazis who began the business with a few prints and negatives that he had taken with him from Germany. The archive began at just the time when large picture magazines such as *Life* and *Look* were beginning publication, and these magazines became its first important customers. The archive moved in 1961 from two crowded basement rooms at 215 East 57th Street to a suite at 136 East 57th Street. In 1984 the archive took over the photographic library of United Press International, thus increasing the number of its images from about 3 million to more than 16 million, and in the following year it became the photographic library for Reuters. These two transactions changed the business from an almost exclusively historical archive into a news archive as well, known as the Bettmann Archive/Bettmann Newsphotos. By 1990 it contained 17 million images and was the world's largest commercial repository of prints and photographs. Bettmann sold the business to the Kraus–Thompson organization in 1981. In 1989 the family of H. P. Kraus became the sole owners. In 1995 the Bettmann Archive/Bettmann Newsphotos was bought by the Corbis Corporation, a company founded in 1989 and wholly owned by William H. Gates, chairman of the Microsoft Corporation, who planned to digitize the entire collection and amass a vast archive of digital images. In 2002 the prints and negatives from the Bettmann Archive were transferred from Manhattan to the Iron Mountain/National Underground Storage Facility, a former limestone mine in western Pennsylvania where, 220 feet (67 meters) underground, their preservation would be easier to secure.

Betts, Samuel Rossiter (*b* Richmond, Mass., 8 June 1786; *d* New Haven, Conn., 3 Nov 1868). Judge. He attended Lenox Academy and Williams College (graduated 1806), studied law in Hudson, New York, and began a practice in Monticello, New York. A major in the army during the War of 1812 defending New York Harbor, he then represented Orange and Sullivan counties in Congress (1816–18), moved to Newburgh, New York, and became district attorney of Orange County. Appointed circuit judge of the New York State Supreme Court in 1823, he was appointed to the U.S. District Court for the Southern District of New York in 1827 by President John Quincy Adams. He heard mostly maritime cases; during the Civil War his cases concerned the blockade, the rights of neutral ships, and prize law. He lived at 16 St. Mark's Place. He retired in 1867 and moved to New Haven; he is buried in Woodlawn Cemetery. Betts wrote *Admiralty Practice* (1838) and is credited with having established an American practice distinct from English precedents.

Jeffrey A. Kroessler

Biaggi, Mario (*b* New York City, 26 Oct 1917). Congressman. After becoming the most decorated police officer in New York history he won election to the House of Representatives in 1968 as a Democrat from the tenth district (Astoria and parts of the Bronx). He remained in office for 10 years, eventually representing the nineteenth district (part of the Bronx and Yonkers). An important member of the Democratic machine in the Bronx and a champion of Irish and Jewish causes, he sought the mayoralty in 1973, ultimately withdrawing when it was revealed that he had invoked the Fifth Amendment before a federal grand jury. In 1987 he was convicted of having accepted bribes from Coastal Dry Dock, a firm that received nearly $500 million in U.S. Navy ship rebuilding contracts during the 1980s and gave nearly $2 million a year in insurance business to a company owned by Meade Esposito, leader of the Democratic machine in Brooklyn; the bribes came in the form of free vacations that Biaggi took with his mistress while his wife was fatally ill. In 1988 he was defeated for reelection by Eliot Engel in a primary and later was convicted of

illegally helping Wedtech, a defense contractor based in the Bronx, to obtain city-owned property. After spending 21 months in federal prison in Fort Worth, Texas, he was released in early 1991 for reasons of health. In 1992 Biaggi ran for his old seat in Congress, losing again to Engel.

Jesse Drucker

Bialystoker Synagogue. Synagogue in lower Manhattan. A group of Jews from Bialystok, Poland, founded Congregation Beth Haknesseth Anshe Bialystok in 1878, meeting in a rented space on the Lower East Side. In 1905 the congregation purchased the Willett Street Methodist Episcopal Church, now 7–13 Bialystoker Place, and converted it into an Orthodox synagogue. Erected in 1826, the fieldstone building is one of four houses of worship surviving from the late Federal period in lower Manhattan and is the oldest building used as a synagogue in New York City. The sanctuary, decorated with Depression-era wall and ceiling paintings, was restored in 1988, and work on the stained-glass windows was completed in 1999. By the early twenty-first century the synagogue's membership exceeded 300 families; three prayer services were conducted daily, 365 days a year.

Bible Teachers Training School
[Biblical Seminary in New York]. Institution that later became the New York Theological Seminary (II).

bicycle messengers. New York bicyclists paid to rapidly deliver packages and letters. A large number of bicycle-messenger services were formed in the 1970s and 1980s as entrepreneurs recognized that heavy vehicular traffic was making it difficult for businesses in Manhattan to deliver and receive packages and documents. Because the messengers were generally paid in proportion to the number of packages they delivered, they had an incentive to ride quickly and sometimes recklessly, and near misses and even collisions with automobiles and pedestrians were common. Some companies dispatching the messengers disclaimed responsibility for any injuries and damages resulting from these accidents on the grounds that the messengers were not their employees but rather were independent contractors. By 1990 the number of messenger services had been reduced by the growth of facsimile transmission and overnight package services. That number would decline again over the next decade as broadband Internet service altered the nature of business transactions. Nonetheless, in the early twenty-first century many messengers are still employed for same-day package delivery in Manhattan.

Though most messengers did not participate in officially sanctioned bicycle races, Nelson Vails gained prominence in competitive cycling and won a silver medal in the match sprints at the 1984 Olympic Games. Messenger culture was imitated and adopted by portions of New York City's burgeoning cycling community around the turn of the twenty-first century as many commuters and recreational riders opted to ride the single-speed, fixed-gear bicycles favored by messengers. This trend exploded with the custom paint jobs and rebuilding of vintage bicycles in many of the city's more hip neighborhoods.

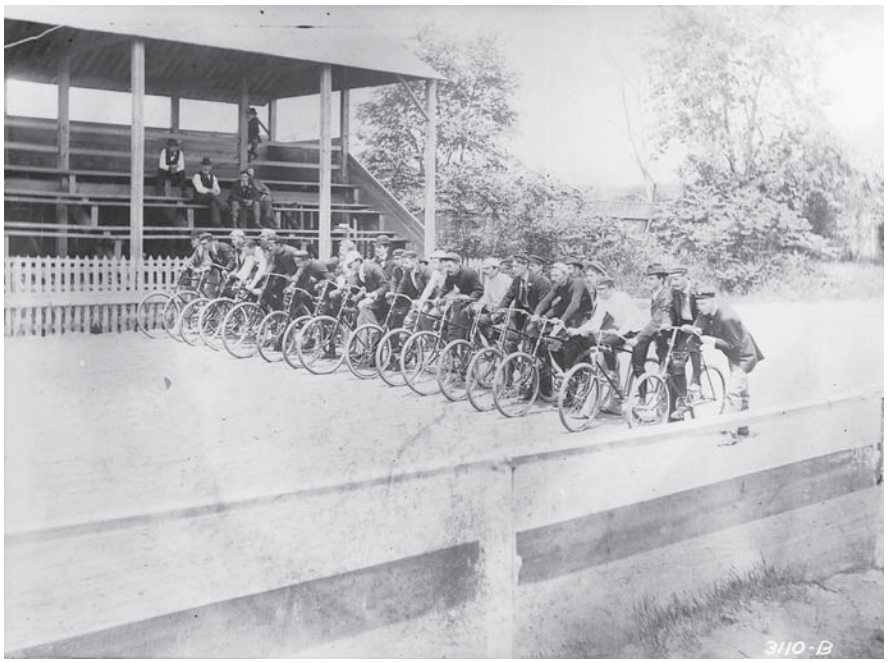
Bialystoker Synagogue, 2009



bicycle racing. The first of many venues that carried the name Madison Square Garden was designed for bicycle racing. These races took place on an oval wooden track and were well attended in the late nineteenth century. The garden even gave its name to a popular type of team race still run in venues around the world: the madison. In recent decades bicycle racing in New York City has focused on public roads rather than on a track. The racing scene is dominated by several clubs, most of which field amateur squads of varying abilities. Among them is the Century Road Club Association, founded in 1898, which is the largest club dedicated to racing in the United States. Several professional riders began racing in New York City before reaching international prominence, among them George Hincapie, a native of Queens who won the U.S. National Road Race Championships in 1998 and 2006. Though bicycle racing has traditionally been a European interest, the increasingly global nature of the sport has caused its popularity in the city to skyrocket. Races occur weekly in-season on the park drives of Central Park and Prospect Park and on the inactive airstrips of Floyd Bennett Field. Annual events hosted at other venues include the Grant's Tomb Criterium in Morningside Heights and the Harlem Skyscraper Criterium around Marcus Garvey Park. The BMC Software New York City Cycling Championship was held in the financial district in 2002, 2003, and 2004. The Kissena Velodrome in Queens, one of only 22 bicycle tracks remaining in the United States, stages multiple races each week. In 2007 the Department of Parks and Recreation opened an expansive network of mountain biking trails in Highbridge Park in Washington Heights, which was used as a race venue on its opening day, bringing mountain bike racing to Manhattan for the first time.

Michael C. Repka

bicycling. Mode of transportation and recreation heavily used in New York City. An early bicycle with a large front wheel called the velocipede was introduced at the New York Athletic Games in November 1868. Like much of the United States, the city experienced a bicycle craze during the 1890s. Riding schools proliferated, and some recruited fashionably dressed women known as "bicyclettes" to ride around the city promoting bicycling and bicycling instruction. By 1894 bicycle exhibitions were being held annually at Madison Square Garden. An especially notable one in 1896 attracted some 120,000 people, including a number of the city's most socially prominent residents. By 1899 there were 53 bicycle clubs in New York City.

The Depression in the 1930s brought about a renewed interest in bicycling, and bicycles

Mercury Wheel Club, Flushing race track, June 1894

Bike memorial for cyclists and pedestrians killed, 2009

appeared on Fifth Avenue for the first time since the 1890s. Organizations such as the Century Road Club Association, founded in 1898, and the New York Cycle Club, founded in 1937, became major proponents of racing and riding bicycles in the city. One of the first American bicycle touring companies, Country Cycling Tours, was formed in New York City in the 1970s to offer bicycle tours ranging from one day in the metropolitan region to two weeks overseas. About this time recreational cycling became more popular, especially in Central Park and Prospect Park, where the city provided paved bicycle paths. Despite tension and occasional skirmishes among cyclists and runners, joggers, and pedestrians, these groups coexist relatively peacefully in the city's parks. The Five-Boro Bicycle Tour, held each May and covering about 40 miles (64 kilometers), was inaugurated by American Youth Hostels in the late 1970s; later renamed Bike New York, it annually draws 30,000 registrants and has inspired similar tours in San Francisco and other cities.

Bicycle commuting became popular for a number of reasons: a growing concern for fitness and the environment, a sharp increase in gasoline prices in the 1970s, heavy traffic, shortcomings in public transit and public transit strikes, and the development in the 1980s of heavier mountain bikes and city bikes better suited to the uneven surfaces of city streets than lightweight, narrow-tire racing bikes. In response to the demands of the growing number of bicycle commuters, the city designated bicycle lanes on Broadway and across the Brooklyn Bridge and laid down concrete dividers along Sixth Avenue in 1980—though these were quickly removed after they were deemed ineffective. In 2007, however, a fully separated bike lane was installed on a several-block stretch of Ninth Avenue below 23rd Street as a trial for further expansion. Among problems plaguing commuting cyclists is theft; one well-known manufacturer of bicycle locks specifically exempted New York City from the guarantee offered with its products. Nonetheless, in 1999 a spokesperson for Transportation Alternatives estimated that the number of bicycling commuters had surpassed 100,000, and studies by the Department of Transportation indicated a 77 percent increase in the number of riders between 2001 and 2008.

In a 1993 announcement the Department of City Planning embarked on an ambitious project to create a 350-mile-long comprehensive network of bicycle trails fully separated from roadways. These "Greenways" run through the city's expansive park system and complement the proposed 550 miles of on-street bicycle paths, part of the master plan announced by the Department of City Planning, Department of Transportation, and the City of New York in 1997. In 2007 the Department of Parks and Recreation opened a large network of mountain biking trails and a BMX (bicycle motocross) park in Highbridge Park, a densely forested area adjacent to Washington Heights in upper Manhattan. In 2009 the administration of Mayor Michael Bloomberg continued to increase the number of bicycle lanes in the city.

Big Allis. Nickname for the largest of three generating units (also known as Ravenswood 3) at Ravenswood Generating Station in Long Island City. Consolidated Edison announced the decision to build a 1000-megawatt fossil fuel–burning plant in 1961, thus more than doubling the size of its largest existing generating plant; it would be the largest generating unit in the world. Ravenswood eventually was chosen as the site, which also was to be home to a proposed nuclear power plant. Allis–

Chalmers Manufacturing Company was given the contract to build the giant turbine, hence the nickname. Because other utilities were concerned over its effect on the electric grid, the unit was put on line at just over a third of its capacity in June 1965. Five months later the great Northeastern blackout of November 1965 caused the generator to grind to a halt, resulting in serious damage. From the 1965 blackout to the end of 1972 Big Allis experienced frequent reliability problems, with outages occurring for 630 days during that period. The loss of capacity led to annoying "brownouts." Once, after six months of work, Big Allis ran for 87 minutes before conking out for another four months. Since that time outages have been routine or normal for a generator of its type. In 1999 Consolidated Edison sold the Ravenswood station to KeySpan Energy, which was acquired by the British electric utility National Grid in 2007. As part of the regulatory approval process, the state Public Service Commission required National Grid to sell its Ravenswood generating unit. In March 2008 an agreement to sell the unit to the Canadian firm TransCanada Corporation for $2.8 billion was announced. The Ravenswood station provided about 25 percent of New York City's power requirements in 2008.

William J. Hausman

Big Apple. Nickname for New York City. John J. Fitz Gerald, a reporter for the *Morning Telegraph,* originally used the term in the 1920s to refer to the city's racetracks; he had heard it used by black stablehands in New Orleans in 1921. Black jazz musicians in the 1930s used the name to refer to the city (and especially Harlem) as the jazz capital of the world. The nickname was largely unknown by the 1950s. In 1971 Charles Gillett, president of the New York Convention and Visitors Bureau, revived the nickname as part of a publicity campaign to attract tourists to the city.

Gerald Leonard Cohen, *Origin of New York City's Nickname "The Big Apple"* (Frankfurt am Main: Peter Lang, 1991)

Gerald Leonard Cohen

Bigelow, John (*b* Bristol [now Malden-on-Hudson], N.Y., 25 Nov 1817; *d* New York City, 19 Dec 1911). Editor and diplomat. He attended Union College in Schenectady, New York, moved to New York City at 17, and at 20 was admitted to the bar. In 1848 with William Cullen Bryant he became an owner and editor of the *New York Post.* As American consul general in Paris during the Civil War he helped to persuade Napoleon III not to grant diplomatic recognition to the Confederacy. While in Paris he unearthed Benjamin Franklin's manuscript autobiography, which he edited and published. After the death of his close friend Samuel J. Tilden he helped to unite Tilden's trust with the Astor and Lenox libraries to form the New York Public Library. Bigelow was a longtime resident at 21 Gramercy Park in Manhattan.

Ormonde de Kay

Big Manuel (*b* Africa; *d* New Amsterdam, *ca* 1680). Seventeenth-century African American landowner. He was one of the first Africans in New Amsterdam and may have been one of the 11 Angolan men brought to the colony by the Dutch West India Company in 1626. Soon after this group became part of the colony one of the Africans was murdered; when questioned the rest confessed in solidarity, and Big Manuel was chosen by the company to be hanged. He was spared when the noose snapped and the hangman, Black Peter, complied with the spectators' demand that he not be hanged again. In 1644, after nearly 20 years of service, he and 10 other Africans petitioned successfully for their freedom. They were given title to land north of the city, where many already tilled plots. Big Manuel received swampy land just north of Minetta Brook that later became Washington Square.

Sule Greg C. Wilson

bilingual education. The most multilingual city in the nation has taught its school population wholly or partly in languages other than English since 1968, when Spanish was introduced into the public school curriculum. At Public School 25 in the southeastern Bronx, 900 pupils took part in a voluntary, experimental bilingual program funded by the school district; half of the students spoke mostly English, and the other half spoke mostly Spanish (of these, 86 percent were Puerto Rican and most of the rest were black). At Public School 155, a bilingual program prepared students for full English instruction by the third grade. Both programs received the support of local, state, and national community organizations, policy groups, and legislators. In 1970, 32 schools serving 2332 students from Spanish-speaking backgrounds received federal funding. The city's Office of Bilingual Education was formed in 1972. A lawsuit filed by various Puerto Rican community organizations led by ASPIRA resulted in a consent decree in 1974 that established standards for entitlement programs; these standards dealt with instructional, organizational, personnel, and other matters. The number of students in the city who are English Language Learners (ELLs) leveled to approximately 140,000 annually in the early twenty-first century, and the languages of instruction expanded to include Spanish, Chinese, Haitian Creole, Korean, Polish, Arabic, Russian, and Yiddish. In 2006–7, approximately 31 percent of the ELLs were served by Transitional Bilingual Education (TBE) or Dual Language Education (DLE) programs. Ninety percent of the ELLs using the native language for instruction were in TBE programs that aim to transfer the ELLs as quickly as possible to English-only classrooms. The DLE programs expand services to native English speakers and aim to develop full bilingualism and biliteracy, high academic achievement, and cross-cultural communication among both ELLs and native English speakers.

Maria Torres-Guzmán

Billboard. Weekly trade magazine. It was originally a journal for the billposting and advertising business when it began publication in 1894; eventually it became best known for its "charts," which measure the sales of recorded music and are highly influential in the popular-music business. *Billboard* is headquartered in New York City with offices in London, Los Angeles, and Miami. From its inception the magazine was owned by founder William H. Donaldson; it later was taken over by the Littleford family, Donaldson's grandsons, who sold it to private investors in 1985 for an estimated $40 million. The magazine was sold again in 1987 for about $100 million to Affiliated Publications. In 1994 the Dutch media company VNU acquired it. In 2005 *Billboard* began to cover other forms of digital and mobile entertainment as well as music. It continues to be published weekly, and Billboard.com, launched in 1995 as *Billboard* online, attracts four million visitors a month as one of the top music Web sites.

Owen D. Gutfreund

billboards. See Outdoor advertising.

billiards. Various forms of billiards and pocket billiards became popular pastimes for New Yorkers in the 1730s. Billiard tables were found chiefly in hotels and coffeehouses until billiards gained favor with the general public about 1840. By the time Tobias O'Connor and Hugh W. Collender manufactured the first billiard tables in the city in 1850, about 60 billiard saloons thrived in lower Manhattan, and the game was strongly associated with gambling, drinking, and Irish immigrants. The person who did the most to popularize billiards in New York City was Michael Phelan (*b ca* 1814; *d* 1871), a player, manufacturer, and owner of billiard parlors who wrote *Billiards without a Master* (1850)

and *The Game of Billiards* (1857) and published *The Billiard Cue,* the nation's first periodical devoted exclusively to the game. He was an aggressive promoter who helped make New York City the billiards capital of the United States. With Collender he operated a table factory and showroom at the corner of Crosby and Spring streets from 1854. Phelan's most lasting contribution to billiards was his invention of a sharp-edged cushion made of India rubber, perfected in 1854 and still in use. Phelan's chief competitors, Dudley Kavanagh and Levi Decker, introduced a catgut cushion in the following year that did not prove popular with the city's billiards enthusiasts. By 1858 four firms in the city turned out billiard tables in a business characterized by bitter rivalries. Manufacturers published magazines in which they disparaged their competition, and after Phelan formed the American Billiard Players Association in September 1865 he was accused of engaging in monopolistic practices by Kavanagh, who in 1866 formed the National American Billiards Association and began manufacturing his own tables with Decker at a five-story factory on the corner of Centre and Canal streets.

Billiards benefited from an explosion of popularity in the city during the last three decades of the nineteenth century, and by 1900 New Yorkers supported at least 130 "public rooms" and 13 manufacturers of billiard tables. Billiard parlors, or pool halls, increased in number during the following decades, although they continued to be associated in the public mind with drinking, prostitution, and gambling (they were the first places where off-track wagering on horse races was conducted systematically). By the 1920s the 4000 pool halls in the city attracted a steady business. Billiards declined in popularity after World War II. Only 257 pool halls were left in the city in 1961. In the early twenty-first century billiard tables were still found in many bars, and a few fashionable pool halls catered to young professionals.

Willie Hoppe, *Thirty Years of Billiards* (New York: G. P. Putnam's Sons, 1925; repr. Dover, 1975)

Marc Ferris

Billopp's Point. Southeastern portion of the former Billopp estate at the southern tip of Staten Island, facing Perth Amboy, New Jersey, bounded to the north and east by Tottenville, to the south by Raritan Bay, and to the west by the Arthur Kill. The area is named for the Billopp family, who lived on the land for four generations. Christopher Billopp (*d* 1724) was an English naval officer and a favorite of the Crown. In 1675 he laid claim to 932 acres (377 hectares) here and erected near the shore an imposing two-story stone house, now known as the Conference House. In 1687 he was given a royal charter for 1600 acres (647 hectares) (including the original 932 acres) and was made Lord of the Manor of Bentley. Christopher Billopp (1737–1827), great-grandson of the first Christopher Billopp, was a leading citizen of Staten Island and a Loyalist. In 1783 he sold the manor and left for St. John, New Brunswick, Canada. During the nineteenth century the area was called Ward's Point after the Ward family, who had purchased the area from Billopp. In 2010 it was part of Conference House Park.

Barnett Shepherd

Biltmore Hotel. A 26-story hotel between 43rd and 44th streets and Madison and Vanderbilt avenues. Designed by the firm of Warren and Wetmore as part of a grand plan for Terminal City (a proposed complex of seven hotels), it was built in 1913 by the New York Central Railroad and opened with a gala dinner on New Year's Eve. The cornice of the building was uniform with that of Grand Central Terminal, and its lower floors were in the neo-palazzo style. Above the cornice the facade was of brick and terra-cotta in a modernized Italian Renaissance style. A floor plan in the shape of the letter "H" allowed for 1000 outside rooms, of which 900 had private baths; the stairs and elevators of the building were linked to the pedestrian passageways of the terminal. The hotel was the national campaign headquarters for the Democratic Party from 1936 to 1952, and in the 1940s it became famous for offering reduced rates to college students to attract weekend business; the hotel is referred to in J. D. Salinger's *Catcher in the Rye.* The hotel closed in 1981, and there were plans to strip the building down to its steel frame and rebuild it as the Bank of America. Preservationists sought to protect at least the Palm Court, but developers moved in a wrecking crew on a Friday night. A large clock from the Biltmore was installed in the atrium of the building occupying the site of the hotel.

John Tauranac

Biltmore Program. Declaration issued by members of the Zionist movement during a conference at the Biltmore Hotel in New York City between 6 and 11 May 1942, urging the transformation of Palestine into a Jewish commonwealth and the replacement of the British mandate there by the Jewish Agency.

Michael N. Dobkowski

Bing, Alexander Max (*b* New York City, 1879; *d* New York City, 29 Nov 1959). Community planner. With his brother Leo Bing he built a number of successful luxury apartment buildings in Manhattan in the early twentieth century. While working for the U.S. Housing Corporation he became interested in affordable housing for low-income communities. In the early 1920s he formed the City Housing Corporation of New York (CHC) to build a development in Queens called Sunnyside Gardens, based on the English garden city concept of Ebenezer Howard. For this he engaged the architects Clarence Stein and Henry Wright and sought help from such reformers as Eleanor Roosevelt, Richard Ely, Lewis Mumford, and Catherine Bauer. The success of the project enabled him to buy a large parcel of land in Fair Lawn, New Jersey, through the CHC; there he built Radburn in 1928, a "town for the motor age" within commuting distance of New York City. Construction ceased during the Depression, and the CHC encountered serious problems with its cash flow, eventually declaring bankruptcy. In the early twenty-first century Radburn remained one of the country's best-known experiments in community planning by a private developer.

Daniel Schaffer, *Garden Cities for America: The Radburn Experience* (Philadelphia: Temple University Press, 1982)

Marc A. Weiss

Bing, Sir **Rudolf** (*b* Vienna, 9 Jan 1902, *d* Yonkers, N.Y., 2 Sept 1997). Opera manager. He worked in Germany before emigrating to England due to the rise of the Nazi party. During the war he managed the Glyndebourne Opera in London and was later a founder and manager of the Edinburgh Festival (1947–49). He moved to New York City in 1949 to become general manager of the Metropolitan Opera, a position he would hold until 1972. Bing undertook important revivals of Verdi and Mozart, for which he engaged stage directors from the legitimate theater (among them Margaret Webster, Alfred Lunt, and Tyrone Guthrie), and oversaw the company's move into its new theater at Lincoln Center in 1966. Brusque and intransigent, Bing sometimes clashed with singers, notably Maria Callas, but he maintained high production standards. In 1972 he unwillingly left the Metropolitan after a tenure second in length only to that of Giulio Gatti-Casazza. He became a consultant in the following year to Columbia Artists Management and lectured at Brooklyn College. Bing wrote a memoir, *A Knight at the Opera* (1981).

John W. Freeman

Binkerd, Robert S(tudebaker) (*b* Dayton, Ohio, 7 Nov 1882; *d* New York City, 28 Oct 1969). Reformer. Concerned about municipal corruption, he became the secretary of Citizens Union (1908–9), which owing to his efforts was transformed into a civic organization immune from political control. He was the secretary of the Fusion Committee of 1909 during its unsuccessful campaign to defeat Tammany Hall in the mayoral election, and

as secretary of the City Club of New York (1909–13) he was the city's unofficial representative in Albany, New York. In 1911 he helped to defeat a proposal backed by Tammany Hall to revise the city charter. He wrote *Home Rule for Cities* (1912).

Bernard Hirschhorn

Biograph Company. Film studio formed early in 1896 as the American Mutoscope Company, with offices at 841 Broadway in Manhattan. It soon produced short comedies with somewhat risqué scenes on the roof of the building, which by early March 1897 was covered with an elaborate open-air stage that could be turned to catch the rays of the sun. After its name was changed to the American Mutoscope and Biograph Company in 1899, the firm opened a new, indoor studio at 11 East 14th Street in May 1903: this was the first motion picture studio in the world to rely exclusively on electric lights for illumination of the stage. Many films were directed there by Wallace McCutcheon (*A Search for Evidence*, 1903) and D. W. Griffith (*The Lonely Villa*, 1909). The company was renamed the Biograph Company in 1908, and in early 1913 it completed construction on a third and much larger studio at 175th Street and Prospect Avenue in the Bronx, which Griffith did not have a chance to use before he joined a rival organization. Biograph made films at the facility to the end of 1916, when it ceased production. The space became a rental studio in 1917 and was used by most of the major production companies during the silent period, including Metro Film Corporation, Fox Film Corporation, Warner Brothers, Selznick Pictures, and First National. It was leased by the U.S. Signal Corps during World War I, closed in 1927, and in 1933 was converted to sound and rented by various independent producers. After being used by the Army Signal Corps during World War II the building fell into disrepair. It was revamped in the 1950s, when as Gold Medal Studios it was employed for such films as Elia Kazan's *A Face in the Crowd* (1957), Sidney Lumet's *The Fugitive Kind* (1959), Daniel Mann's *Butterfield 8* (1960), and Peter Yates's *John and Mary* (1969), as well as for television series such as *Car 54 Where Are You?* and *Naked City*. By the mid-1970s it had been abandoned to vandals.

Charles Musser, *The Emergence of Cinema: The American Screen to 1907* (New York: Charles Scribner's Sons, 1990)

Charles Musser

biology. The first graduate program in biology in New York City was set up at Columbia University in the early 1890s by Henry Fairfield Osborn. In its early years the program emphasized evolutionary biology and became affiliated with the American Museum of Natural History, where Osborn laid the foundation for a research program in vertebrate paleontology. He and his students used the large collection of specimens at the museum to help answer a wide range of questions about morphology and evolution. Edmund Beecher Wilson helped to make the university a center of research in cellular biology and embryology, and made careful microscopical studies that he summed up in his classic text *The Cell in Development and Heredity* (1896). Important research in genetics was conducted at Columbia during the first two decades of the twentieth century by Wilson and Nettie M. Stevens, who in 1905 discovered the chromosomal pairings that determine sex. Beginning in 1910 Thomas Hunt Morgan conducted important experiments with fruit flies, which provided additional evidence that genes on chromosomes influence the inheritance of particular traits and formed the basis for classical transmission genetics. Theodosius Dobzhansky and L. C. Dunn, who joined Columbia respectively in 1927 and 1928, made additional contributions to the field. Dobzhansky documented the role of genetic mutations in evolution, and his work, along with studies done by Ernst Mayr and George Gaylord Simpson of the American Museum of Natural History, helped lead the way to the evolutionary synthesis of the 1940s.

The Rockefeller Institute for Medical Research also made important advances in the field of biology. In 1910 Jacques Loeb, a biochemist at the institute who was well known for his work on artificial parthenogenesis, began a research project with his assistant John Howard Northrop on nucleoproteins. Another biologist at the institute, Alexis Carrel, improved techniques for cultivating tissues outside the body. In 1935 Wendell M. Stanley confirmed the crystalline structure of the tobacco mosaic virus, a discovery that won him the Nobel Prize in chemistry in 1946. Experiments by Oswald T. Avery, Colin MacLeod, and Maclyn McCarty in 1944 suggesting the role played by DNA (deoxyribonucleic acid) in transforming benign bacteria into virulent strains promoted the development of molecular biology, particularly molecular genetics.

In the twenty-first century New York City has continued to be home to centers and research institutions focusing on the biological sciences. In December 2002 the New York Structural Biology Center was opened by a group of 10 research centers, located next to the campus of the City University of New York at Convent Avenue and 133rd Street. It is governed by a board representing institutional members in the city, including Albert Einstein College of Medicine of Yeshiva University, City University of New York, Columbia University, Memorial Sloan–Kettering Cancer Center, Mount Sinai School of Medicine, and New York University. That same year, the Joan and Joel Smilow Research Center of New York University opened, including investigators in the fields of cancer, cardiovascular biology, neuroscience, and other areas.

Birdland. Jazz club. It opened on 15 December 1949 in a basement at 1678 Broadway, just north of 52nd Street. Named by its owners Morris and Irving Levy for the alto saxophonist Charlie Parker (known as "Bird"), who performed there, it seated 400 and was the site of performances by such leading musicians as Dizzy Gillespie, Bud Powell, and Count Basie. The impresario Symphony Sid broadcast some of his radio programs from the club. In 1965 the club closed because of increased rents; it reopened for one night in 1979. Birdland inspired George Shearing's song "Lullaby of Birdland" (1952). An unrelated club with the same name was opened in 1986, at 2745 Broadway, near 106th Street; in 1996 this club moved to 315 West 44th Street, between Eighth and Ninth avenues.

Peter Eisenstadt, Marc Ferris

birds. Proximity to the Hudson–Raritan estuary makes New York City along the Atlantic flyway a potentially ideal habitat for birds: 10 percent of the species identified in the continental United States have been observed in and around Jamaica Bay. Birds remain an important means of monitoring the city's environmental quality. However, pollution from pesticides and the loss of habitat to development during the twentieth and twenty-first centuries have driven several species of birds to extinction in New York City. Others have been threatened, especially harriers such as the Osprey and the Peregrine Falcon, which absorbed large quantities of pesticide in the fish they ate and produced thin-shelled eggs that usually broke before reaching maturity. Their numbers and those of Grasshopper Sparrows, Piping Plovers, and Roseate Terns increased after endangered species laws were passed, pesticides were banned, and nesting poles were erected in the early twenty-first century. To compensate for the loss of farmlands in the metropolitan area, more than 18 nesting boxes for Barn Owls were installed in the Jamaica Bay Wildlife Refuge during the summer of 1992 where the first recorded nest of a Peregrine Falcon was discovered in

1993. At Floyd Bennett Field in Brooklyn one Barn Owl box began producing four to six young a year during the early 1980s.

One of the best locations for observing land birds in New York City is Central Park, where 15 species are common. Mourning Doves, Downy Woodpeckers, Blue Jays, American Crows, Black-capped Chickadees, Northern Mockingbirds, Cardinals, and House Finches are seen year round. American Robins, Common Yellowthroats, Red-winged Blackbirds, Common Grackles, American Goldfinches, and Rufous-sided Towhees are often seen during warmer months; Dark-eyed Juncos are seen in winter. More than 100 species may be observed during the spring migration in April and May, and more than 320 species have been observed breeding, migrating, or roosting in the Jamaica Bay Wildlife Refuge. This major bird migratory area provides a year-round opportunity to see a diversity of species. Five species of water birds can be seen in the bay, ponds, and marshes at the refuge: the Double-crested Cormorant, the Glossy Ibis, the Canada Goose, the Mallard, and the Herring Gull. During spring, summer, and autumn Egrets are easily identified by their white plumage, Glossy Ibises by their long, decurved bills. Each September and October the autumn migration of Marsh Hawks, Sharp-shinned Hawks, Kestrels, and Red-tailed Hawks is a spectacular event over Jamaica Bay and Breezy Point. More than 1500 hawks were once counted in a single season at Fort Tilden, an abandoned Nike missile defense base that is now part of the Gateway National Recreation Area.

Bishop McDonnell Memorial High School. Catholic high school for girls, opened in 1926 at 260 Eastern Parkway in Brooklyn. At its height it had more than 2000 students drawn from the entire diocese of Brooklyn, which until 1957 included all of Long Island. In later years enrollment was limited to girls from Brooklyn and Queens. The school closed in 1973; its building was taken over by the St. Francis de Sales School for the Deaf.

Gilbert Tauber

Bitter, Karl (Theodore Francis) (*b* near Vienna, 6 Dec 1867; *d* New York City, 9 April 1915). Sculptor. After studying architectural sculpture in Vienna he emigrated to the United States in 1889 and settled in New York City, later establishing a home and studio in suburban Weehawken, New Jersey. Through the patronage of the prominent architect Richard Morris Hunt he quickly gained recognition in the fields of public and architectural sculpture, and he executed several fine works of sculpture at the appellate court, the customs house, and the Metropolitan Museum of Art. A founding member of the National Sculpture Society in 1893, he was its president in 1906–7 and again in 1914. He was also the director of sculpture for the world's fairs of 1901 (Buffalo), 1904 (St. Louis), and 1915 (San Francisco). The collaborative planning of the fairs instilled in him a vision of urban improvement and provided the early inspiration of the "city beautiful" movement. At a time of increasing hostility toward Germans and Austrians before World War I he executed a large monument of the German-American statesman and reformer Carl Schurz at Morningside Drive and 116th Street (1909–13). Appointed to the New York City Art Commission in 1912, he oversaw the development of Grand Army Plaza on Fifth Avenue, to which he contributed the Pulitzer Fountain. Bitter died after being struck by an automobile while crossing the plaza.

B. Kreischer and Sons. Firm of firebrick makers. Formed in 1845 as Kreischer and Mumpeton by Balthazar Kreischer (*b* 13 March 1813; *d* 25 Aug 1886), an immigrant from Bavaria, it became one of the leading manufacturers in the metropolitan area of firebricks, gas retorts, and molded decorative clay building materials (briefly including terra-cotta). It operated the New York Fire-Brick Manufactory at Delancey and Goerck streets in Manhattan from 1845 to 1876 and from 1854 to 1927 managed clay mines and an extensive factory complex in Staten Island called Kreischerville (now known as Charleston) that resembled a company village. Its administrative headquarters were at Goerck and Mangin streets in Manhattan. The company bought additional clay mines in New Jersey and Pennsylvania, and during the 1860s and 1870s also had a factory in Philadelphia. During the 1890s the plant in Staten Island employed more than 300 persons. The factory closed just before the Great Depression and was destroyed by fire in 1936. Several prominent architects based in New York City used the firm's products: terra-cotta by Kreischer decorates Barnard College, St. Luke's Hospital, and other buildings. Remains of the enterprise at Charleston include the Charles Kreischer Mansion and a row of workers' housing (both designated landmarks by the city), and the Clay Pit Ponds State Park Preserve. Product samples and documents are preserved at the Staten Island Historical Society, the Staten Island Institute of Arts and Sciences, and the New-York Historical Society.

Black, Starr and Frost. The oldest firm of jewelers in the United States. Formed in 1801 in Savannah, Georgia, as Marquand and Paulding, it was moved in 1810 to New York City by Isaac Marquand, who in 1813 bought out the jewelry shop of James H. Hyde at 166 Broadway. In 1819 he merged his business with that of Erastus Barton, whom he bought out in 1823; his son Frederick then took over the business and changed the name first to F. Marquand and in 1833 to Marquand and Company. Henry Ball and William Black entered the firm and opened a new shop at 181 Broadway. When the Marquands withdrew from the business in 1839, Erastus O. Thompkins became a partner and the firm was renamed Ball, Thompkins and Black, in new quarters at 247 Broadway; on the death of Thompkins in 1852 it became Ball, Black and Company. The firm offered household and gift items such as porcelain, silver, paintings, and bronze statuary as well as gemstone jewelry and precious objects. It was one of few American retailers to display its wares in London at the Crystal Palace in 1851. Shops were opened at Broadway and Prince Street in 1860 and at several locations along Fifth Avenue: at 28th Street in 1876, when Cortlandt Starr and Aaron V. Frost became partners and the name became Black, Starr and Frost; at 39th Street in 1898; and at 48th Street in 1912. The company was immortalized in the original lyrics to the song "Diamonds Are a Girl's Best Friend" sung by Marilyn Monroe in the film *Gentlemen Prefer Blondes.* After the company changed hands several times in the late twentieth century, Black, Starr and Frost moved its headquarters to California.

Janet Zapata

Black Ball Line. First regularly scheduled cargo ship service in the world. It was founded in 1817 by a group of New York City merchants led by Jeremiah Thompson who believed that greater profits could be made by offering scheduled sailing ship departures on the service between New York City and Liverpool, England. Previously, ships had sailed when fully loaded with cargo, a process that took weeks during which shippers had little idea when their goods would be leaving port

and passengers had to seek nearby accommodations to be ready to leave on short notice. To offer scheduled departures the company had to have a large enough fleet so that one vessel would be available on the designated day each week at both ends of the service. Thompson and his associates believed people would be willing to pay higher rates for this service, more than compensating for any unused cargo space. Their gamble paid off and was soon copied by other shipowners in the city and other major East Coast ports. The vessels became known as packet ships, a name taken from earlier fast sailing vessels used to carry mail and consular dispatches. The new packet ships were also built for speed, reducing the average crossing time by weeks. To compete for high-paying passengers, they also provided fine dining and accommodations. For these reasons many people continued to cross the Atlantic in packet ships long after the first regular steamship services were established in 1838. The Black Ball Line survived until 1878. The last packet ship line, Grinnell, Minturn and Company of New York, lasted until 1881, carrying only cargo in its final years. Throughout the Black Ball Line's history its vessels were immediately identifiable at sea by a large black ball in the center of the fore topsail.

Norman J. Brouwer

blacklisting. In October 1947, during hearings before the House Un-American Activities Committee, a group of screenwriters and directors refused to reveal whether they had ever belonged to the Communist Party. When it became clear that the "Hollywood 10" would be held in contempt of Congress, the heads of the major movie studios met in New York City at the Waldorf-Astoria and decided to fire them. In the Waldorf Statement, issued on 3 December 1947, the Association of Motion Picture Producers declared that its members would not knowingly employ "a Communist or a member of any party or group which advocates the overthrow of the Government of the United States by force or by illegal or unconstitutional methods." On 22 June 1950 the blacklist expanded when three former agents of the Federal Bureau of Investigation published *Red Channels,* a listing of the "subversive" associations of 151 writers, directors, and performers, including Leonard Bernstein, Lee J. Cobb, Aaron Copland, Lena Horne, Langston Hughes, Gypsy Rose Lee, Arthur Miller, Zero Mostel, Edward G. Robinson, Pete Seeger, Artie Shaw, William L. Shirer, and Orson Welles. Advertising agencies on Madison Avenue enforced the blacklist by requiring radio and television producers to submit the names of the people they wanted to use as writers, directors, and actors. The lists were then vetted to ensure that no one with communist connections was hired. The producer David Susskind would later testify that in seeking to fill positions for one show over a one-year period he submitted 5000 names to the advertising agency Young and Rubicam. The blacklist began to weaken in 1956, when the radio entertainer John Henry Faulk filed a libel suit against AWARE, Inc., an anticommunist group that had accused him of having communist ties. Faulk charged that AWARE had attacked him in an effort to silence his criticism of the blacklist. The case came to trial in New York City in 1962 and resulted in a record judgment of $3.5 million against AWARE and two other defendants. Although many blacklisted entertainers began to work again in the late 1950s and early 1960s, Faulk's career never recovered.

Black Muslims. See Nation of Islam.

blackouts. Complete loss of utility-supplied electricity. Electric power blackouts have been common in New York City since the Brush arc lighting system failed on 10 June 1881. The blizzard of 1888 toppled overhead power lines and shut off lights for three hours. These early blackouts produced no reports of people trapped because elevators and subways were not yet heavily used.

A 1936 explosion and fire at the Hell Gate generating station on 133rd Street knocked out power in the Bronx and in Manhattan north of 59th Street; Hell Gate again shut down when it was flooded by a hurricane on 21 September 1938. Burned cables caused a blackout in 1948 that lasted two hours between Walker and 74th streets on the East Side of Manhattan, and one in 1959 that lasted eight to 14 hours in 5 square miles (13 square kilometers) of upper Manhattan. Hundreds of thousands were affected by a rush hour blackout 13 June 1961 between 42nd and 80th streets.

Widespread extended blackouts occurred on 9 November 1965, 13 July 1977, and 14 August 2003. Both the 1965 and 2003 blackouts involved massive cascading transmission system failures that affected multiple states and parts of Canada. Both blackouts induced little civil disorder in New York. The urban legend that good cheer New Yorkers experienced during the 1965 blackout led to a spike in births nine months later has now been refuted. By contrast, the 1977 blackout, which affected only the New York City region, resulted in widespread civil disorder. More than 3000 people were arrested for looting, rioting, and arson. Damage in downtown Brooklyn, East Harlem, and the Upper West Side exceeded $300 million. In 2003 there was virtually no looting or disorder, and the city remained calm.

Localized blackouts mostly have been caused by fires (often underground electrical fires) or weather problems, including snow, rainstorms, and high temperatures. Notable examples occurred on 9 September 1981 in lower Manhattan; 13 August 1983 in the garment district, affecting both Macy's and Gimbels on 34th Street; 15 August 1985 in lower Manhattan; 5 August 1988 in Harlem and Morningside; 13 August 1990 in lower Manhattan, shutting down Wall Street for six hours; 9 July 1993 in south central Brooklyn; 21 May 1996 in Queens; 6 July 1999 in northern Manhattan; 7 July 1999 on the Lower East Side; 20 July 2002 in lower Manhattan, shutting down several subway lines across the city during morning rush hour; 8 June 2005 in Staten Island; and 17 July 2006 in Queens, leaving some residents in the sweltering heat for five days.

Stanley Altman, *Electric Utilities, What Can Be Expected?: A Study of the 1977 New York City Blackout* (Case Studies in Technology and Public Policy) (New York: New York University Press, 1982)

John L. Neufeld

Black Panther Party. African American radical organization. It was founded in 1966 by Huey Newton and Bobby Seale for the purpose of black empowerment. In 1968 party members established branches in Harlem and Brooklyn. In April of the following year, after repeated confrontations with the police, 21 members of the New York City chapter were arrested on numerous conspiracy charges. Civil rights attorney William Kunstler provided legal defense for the group, and in May 1971 the members were acquitted of all charges.

Emilyn L. Brown

Black Star Line. Shipping line established by Marcus Garvey as an economic outlet for his organization, the United Negro Improvement Association (UNIA). Founded in 1919, the shipping line derived its name from the British shipping company the White Star Line. In response to reports of discrimination by passengers, seamen, and African traders who suffered from the privilege given to European merchants, Garvey created the line with the central aim of stimulating trade between Africa, the United States, the West Indies, and Central America; this business worked toward his belief in the need for an independent black economy. Another goal was to transport people traveling on business or for pleasure without inferior accommodation. The line also provided work for underemployed, skilled black laborers. Initially meant to be the property of a small group of UNIA members, ownership was opened to

the masses in an effort to gain necessary capital. Stock was sold at $5 a share, and nearly $800,000 was reportedly raised. The first ship purchased was the SS *Yarmouth,* renamed the *Frederick Douglass,* which made trips to the West Indies and Central America. A riverboat was also acquired for excursion trips on the Hudson River. An investigation soon began, however, and Garvey was accused of mail fraud surrounding the purchase of a ship, the SS *Phyllis Wheatley.* Garvey was sentenced to five years in prison in 1923, but President Calvin Coolidge commuted the sentence. Though it closed in 1922 after losses of over a half-million dollars, the Black Star Line helped internationalize Garveyism and widen the UNIA base by appealing outside the usual black elites for financial support.

Garrett A. Felber

black theater. African American actors, playwrights, and producers have taken part in the rich theatrical history of New York City, and themes drawn from African American life have been the subject of numerous productions. Black theater in the city probably began in 1821 when William A. Brown opened the African Theatre off lower Broadway. The company produced Shakespeare, musical comedies, pantomimes, and Brown's own play *The Drama of King Shotoway* (1823), the first play by a black American. Although city authorities closed the African Theatre in 1823, from its ranks emerged the celebrated actor Ira Aldridge (1807–67), a native of the city who left the United States in 1825 and earned international recognition as a tragedian.

The most popular black performers of the antebellum period were not "black" at all but were white minstrels in blackface. The first performance occurred in 1843 at the Bowery Amphitheatre by four white entertainers calling themselves the Virginia Minstrels, whose comic song-and-dance routines were intended to depict life on southern plantations. Minstrel shows dominated the musical stage for decades and fixed Negro stereotypes that inhibited the acceptance of African American actors on the legitimate stage. After the Civil War minstrel shows more often included African American performers; some who excelled in the genre included Ernest Hogan, Sam Lucas, and James Bland, composer of the song "Carry Me Back to Ol' Virginny."

A break in the minstrel tradition occurred in 1898 when the vaudeville performers Bob Cole and Billy Johnson produced the first African American musical comedy, *A Trip to Coontown,* in which Cole performed out of blackface. Cole then joined J. Rosamond Johnson to write and produce two other shows. Another pair of vaudevillians, Bert Williams and George Walker, joined with the writer Jesse Shipp and the composer Will Marion Cook to produce elaborate musicals. They achieved great success with *In Dahomey* (1903): the show was staged in London, where a royal command performance was given. On the dramatic stage openings for African American actors came first with black companies in plays written by whites. In 1884 J. A. Arneaux organized the Astor Place Company of Colored Tragedians in New York City, which produced *Othello, Richard III,* and John Banim's *Damon and Pythias* (1821). From 1915 black companies appeared regularly at the Lafayette Theatre in Harlem (for illustration see Lafayette Theatre). Although still absent from Broadway, African Americans also worked downtown, in productions of Ridgely Torrence's *Three Plays for a Negro Theatre* (1917) and of Eugene O'Neill's *The Emperor Jones* (1920), in which Charles Gilpin played the leading role. Paul Robeson began his career on Broadway in 1925 in a revival of *The Emperor Jones;* he later appeared in *Stevedore* (1935), by Paul Peters and George Sklar. After a somewhat fallow period, the 1920s saw several new black musicals, including *Shuffle Along* (1921), by Eubie Blake and Noble Sissle, which had a run of 504 performances. Other important musicals of the decade included *Runnin' Wild* (1926), by James P. Johnson and Cecil Mack after a book by Flourney Miller and Aubrey Lyles, and *Hot Chocolates* (1929), by Fats Waller and Andy Razaf. For several decades after 1930, African Americans wrote relatively few Broadway musicals. After the call for a new Negro theater "about, by, for, and near" blacks by W. E. B. Du Bois, editor of the *Crisis,* repeated attempts were made to establish a viable African American theater that would present plays in Harlem by blacks. The Krigwa Players (1926), the New Negro Art Theatre (1927), and the Harlem Experimental Theatre (1928) were organized, none lasting more than a few years. The late 1920s and 1930s saw the production of a number of plays on aspects of African American life, many of them by white authors. Perhaps the trend can be dated to *Show Boat* (1927), by Jerome Kern and Oscar Hammerstein II, and its memorable songs on black themes such as "Ol' Man River"; Robeson appeared in a revival of the work in 1932. Marc Connelly's *The Green Pastures* (1930), an evocation of black conceptions of Heaven, led to a vogue for Broadway shows with white authors and all-black casts. Two memorable American operas of the 1930s were staged with African American casts: *Four Saints in Three Acts* (1933), by Virgil Thomson and Gertrude Stein, and *Porgy and Bess* (1936), by George Gershwin. In 1935 Langston Hughes's melodrama *Mulatto,* dealing with racial tensions in a household in Georgia, opened at the Vanderbilt Theater and won praise for the actress Rose McClendon. Hughes also wrote *Don't You Want to Be Free?* (1937), a music drama about working-class solidarity that played in his Harlem Suitcase Theatre (1937) and ran for 135 weekend performances. His collaboration with Zora Neale Hurston, *Mulebone,* had its belated premiere in New York City in 1991.

As the Federal Theatre of the Works Progress Administration closed in Harlem, new groups surfaced to take its place. The Rose McClendon Players (1938), organized by Dick Campbell, mounted six productions including Abram Hill's *On Striver's Row* (1939), a satiric comedy of social climbing in Harlem. The Negro Playwrights Company managed only one production before closing, Theodore Ward's *Big White Fog* (1940). The American Negro Theatre, formed in 1940 by a group including Frederick O'Neal (later the president of the Actors' Equity Association), successfully produced Philip Yordan's *Anna Lucasta* in 1944 and transferred it to Broadway in the same year, thus losing valued members to the commercial theater and helping to bring about its own demise. About this time two African American actors gained recognition for their work on Broadway: Canada Lee for his performance as Bigger Thomas in the stage adaptation of Richard Wright's novel *Native Son* (1941), and Robeson for his portrayal of Othello for 296 performances in a production sponsored by the Theatre Guild in 1943. African Americans continued to appear in works of musical theater written and produced by whites, such as *Carmen Jones* (1944), produced by Billy Rose with a libretto by Hammerstein, and Harold Arlen's *St. Louis Woman* (1946).

The 1950s introduced two black female playwrights. Alice Childress, in *Trouble in Mind* (1955), warned against stereotyping in racially mixed plays, while Lorraine Hansberry in *A Raisin in the Sun* (1959) showed a family in turmoil as it sought to escape the slums of Chicago. Other plays of the decade with a strong social content included *In Splendid Error* (1954), by William Branch, about the role of Frederick Douglass in John Brown's raid, and Loften Mitchell's *A Land beyond the River* (1957), on the fight for equal rights in the education of black children.

The production in 1961 of Jean Genet's revolutionary play *The Blacks,* with a cast of prominent actors, signaled a new direction for African American theater. As the civil rights movement gained force, black playwrights were called to arms by LeRoi Jones (Amiri Baraka) in such plays as *Dutchman* and *The Slave* (both 1964). Less militant playwrights who sought their own response to the stresses of the period included Ed Bullins, whose lyrical prose plays depicted characters yearning hopelessly for a better life. Charles Gordone won a Pulitzer Prize for *No Place to Be Somebody* (1969), a play dealing with irredeemable barroom types. With *Cities in Bezique* (1965) and *For Colored Girls Who Have Considered Suicide When the Rainbow Is Enuf* (1976), Adrienne Kennedy and Ntozake Shange respectively found new symbolic

and narrative forms for their plays, seeking liberation for black women. The most critically acclaimed production on Broadway of the time was Howard Sackler's *The Great White Hope* (1968), with James Earl Jones in an impressive performance as the heavyweight boxing champion Jack Johnson.

The demands of the Negro Ensemble Company (1967) and the New Federal Theatre (1970) for plays brought the work of Caribbean and African writers to the stage. Chief among these were the Caribbean authors Lennox Brown and Derek Walcott, Wole Soyinka of Nigeria (the last two being winners of the Nobel Prize for literature), and Athol Fugard, a white South African. During this period of theatrical ferment Broadway contributed several black musicals. From Vinnette Carroll's Urban Black Corps came the hit production *Don't Bother Me, I Can't Cope* (1972), with book and music by Micki Grant, which ran for more than 1000 performances. Carroll achieved further success in 1976 with *Your Arms Too Short to Box with God,* a gospel version of the Book of Matthew. There were also black versions of earlier musical successes, such as *The Wiz* (1975), adapted from *The Wizard of Oz,* and tributes to black musicians, such as *Ain't Misbehavin'* (1978), which celebrated the work of Fats Waller. This trend continued into the 1980s with *Sophisticated Ladies* (1981), featuring the music of Duke Ellington, and *Dreamgirls* (1981), based on the career of the singing group the Supremes. The most encouraging sign for serious playwrights was the emergence of the playwright August Wilson, who worked closely with the director Lloyd Richards on a series of plays about African American life in different decades, including *Ma Rainey's Black Bottom* (1984) and *The Piano Lesson* (1990); his work was well received by audiences and critics and earned him a Pulitzer Prize for *Fences* (1987).

The 2008 revival of Tennessee Williams's *Cat on a Hot Tin Roof,* which premiered on Broadway in 1955, marked the first time the play was performed by an all-black cast. Terrence Howard, in his Broadway debut; James Earl Jones; and Phylicia Rashad were part of the original cast. The show ran for 125 performances. Many African American theater companies and groups that formed across the city have continued to thrive. The Negro Ensemble Company has provided more than 200 new plays and produced many well-known actors, including Denzel Washington, Samuel L. Jackson, and Angela Bassett. The Billie Holiday Theatre has also become a recognized playhouse and source of reputable productions and acting for more than 30 years. The Apollo Theater, which celebrated its 75th anniversary in 2009, has been a beacon for African American performers and known for discovering new talent and launching careers for black actors, singers, comedians, and dancers.

Black Tom explosion. A New Jersey explosion that killed seven people on 30 July 1916 at the Lehigh Valley Railroad terminal on Black Tom Island, just west of Ellis Island. Barges and railroad cars loaded with dynamite and munitions destined for World War I battlefields in France exploded, breaking windows along the waterfront of Brooklyn and as far north as Times Square. In 1939 a claims commission ruled that the explosion was an act of sabotage by agents of the imperial German government.

Jules Witcover, *Sabotage at Black Tom: Imperial Germany's Secret War in America, 1914–1917* (Chapel Hill, N.C.: Algonquin, 1989)

Elliott B. Nixon

Blackwell, Elizabeth (*b* Bristol, England, 3 Feb 1821; *d* Hastings, England, 31 May 1910). Physician, sister of Emily Blackwell. She moved to New York City with her family in 1832 and remained there for about six years before moving to Ohio. In 1849 she became the first woman to earn a doctorate of medicine in the United States. She practiced medicine in Manhattan, where she opened a dispensary that later became the New York Infirmary and College for Women, a hospital run entirely by women; during the Civil War she organized a nursing unit. Blackwell lived at 126 Second Avenue from 1860 until 1869, when she returned to England.

Jordan Brown, *Elizabeth Blackwell* (New York: Chelsea House, 1989)

James E. Mooney

Blackwell, Emily (*b* Bristol, England, 8 Oct 1826; *d* York Cliffs, Maine, 7 Sept 1910). Physician, sister of Elizabeth Blackwell. With her sister in 1856 she formed the New York Infirmary for Women and Children, a health care center operated by women that trained female physicians and provided gynecological care. In 1858 she secured state funding, and in 1860 the infirmary moved to larger quarters at Second Avenue and Eighth Street. The infirmary offered "tenement house service" (instruction in hygiene for the poor) and in 1868 expanded into a full-fledged medical school for women. After twice moving to larger facilities, the infirmary merged with the New York University Medical Center in 1996. The infirmary treated more than one million patients.

Thea Arnold

Blackwell Hospital. Name commonly used to refer to two hospitals on Blackwell's Island (now Roosevelt Island). The Lunatic Asylum opened in 1839 at the northern end of the island. It accepted patients transferred from Bellevue Hospital and later added buildings for acute care (1881) and chronic care (1892). When the state took charge of caring for the insane in 1894, patients from Blackwell were transferred to other state facilities. Meanwhile, the Island Hospital opened at mid-century on the island's southern end for patients suffering from alcoholism and venereal diseases, or both. The hospital was reorganized in 1866 as Charity Hospital and renamed City Hospital in 1892.

Jane E. Mottus

Blackwell's Island. Name applied until 1921 to Roosevelt Island.

Blake, Eubie [James Hubert] (*b* Baltimore, 7 Feb 1887; *d* New York City, 12 Feb 1983). Pianist and songwriter. He first worked in cabarets in New York City as a ragtime pianist about 1905. He traveled along vaudeville

Eubie Blake and his orchestra, 1921

circuits with various singers, notably Noble Sissle, and shortly before 1920 settled in New York City, where he lived in Harlem (eventually on Strivers' Row); about 1946 he moved to Bedford–Stuyvesant. In 1921 he composed music for the successful black Broadway musical *Shuffle Along*. He retired in 1946 and studied music at New York University, but a renewed interest in ragtime in the 1950s led him to resume his career as a performer and to accept speaking engagements. He gained a large following during the revival of the music of Scott Joplin in the 1970s and performed almost to the end of his life. Sissle and Andy Razaf were the two principal writers of lyrics to Blake's songs, the best known of which include *I'm Just Wild about Harry* (1921) and *Memories of You* (1930).

Robert Kimball and William Bolcom, *Reminiscing with Sissle and Blake* (New York: Viking, 1973); Al Rose, *Eubie Blake* (New York: Schirmer, 1979)

Edward A. Berlin

Blake, Lillie Devereux [née Devereux, Elizabeth Johnson] (*b* Raleigh, N.C., 12 Aug 1833; *d* Englewood, N.J., 30 Dec 1913). Writer and suffragist. Born into a wealthy family, she moved to New York City in 1857 and published her first short story; from 1859 she supported herself by writing short stories and novels. She became active in the women's movement in 1869. Blake played a leading role in suffragist efforts to attract support from socially prominent women, and became president of the New York State Woman Suffrage Association in 1879 and of the New York City Woman Suffrage League in 1886. Unlike Susan B. Anthony and others she refused to focus on suffrage exclusively, and as a result she left the suffrage movement to found the National Legislative League in 1900, which promoted a variety of women's causes.

Eileen K. Cheng

Blakelock, Ralph A(lbert) (*b* New York City, 15 Oct 1847; *d* Elizabethtown, N.Y., 9 Aug 1919). Artist. The son of a physician, he studied painting briefly at the Free Academy of New York City, the predecessor of City College, intending to follow in his father's profession. After three terms, however, Blakelock dropped out and began taking classes at Cooper Union and became known for his large landscapes in the style of the Hudson River School. He married in 1877 and raised nine children in New York City. In 1899 he was awarded the Hallgarten Prize by the Manhattan-based National Academy of Design, which inducted him as an associate member in 1913 and a full member in 1916. Blakelock's painting career was largely ended after he suffered a mental breakdown, and he spent many years in an institution. Among his works are *Pipe Dance* and *Indian Encampment,* which are held by the Metropolitan Museum of Art.

James E. Mooney

Blass, Bill [William Ralph] (*b* Fort Wayne, Ind., 22 June 1922; *d* New Preston, Conn., 12 June 2002). Fashion designer. He worked for several firms on Seventh Avenue before designing clothes from 1959 for Maurice Rentner, a firm that he purchased in 1970 and renamed Bill Blass Limited. Using fabrics and workmanship of high quality, he distinguished himself as a designer of crisp, sporty clothing. His signature items include a tennis sweater made with red, white, and blue sequins, and a cashmere sweater set that can be converted into a ballroom gown with full satin skirts. In 1994 the public catalog room at the New York Public Library was renamed in his honor for his substantial contributions to the institution.

Caroline Rennolds Milbank

Blatch [née Stanton], **Harriot (Eaton)** (*b* Seneca Falls, N.Y., 20 Jan 1856; *d* Greenwich, Conn., 20 Nov 1940). Suffragist. The daughter of Elizabeth Cady Stanton, she formed the Equality League of Self-Supporting Women and with Carrie Chapman Catt led the woman suffrage movement in New York City. She helped to modernize suffragism by recruiting wage-earning women, introducing militant tactics, and pursuing a political strategy. Between 1910 and 1913 she organized mass demonstrations in New York City and pressed the state legislature to authorize a referendum on giving women the right to vote. After women were enfranchised she was the socialist candidate for city comptroller and worked for economic equality for women. Her book *Challenging Years: The Memoirs* was published in 1940.

Ellen Carol DuBois

Blatchford, Samuel (*b* New York City, 9 March 1820; *d* Newport, R.I., 7 July 1893). Supreme Court justice. He graduated from Columbia College and studied law before becoming private secretary to Governor William Seward. Admitted to the bar in 1842, he practiced in his father's office for three years, and then worked as a partner in Seward's law practice in Auburn, New York, for nine years. He established the firm of Blatchford, Seward, and Griswold in New York City with Seward's nephew. A specialist in admiralty and maritime law, he collected and published 24 volumes of federal court decisions in that field that had been decided in New York's Second Circuit. He was appointed as district judge for the Southern District of New York in 1867 and as judge for the Second Circuit in 1878. In 1882 President Chester A. Arthur appointed Blatchford to the U.S. Supreme Court. He wrote 430 majority opinions and only two dissents during his 11 years on the Court.

Frank Scaturro

Blazing Star. Village on the western shore of the Arthur Kill on Staten Island, named after a local tavern of the late seventeenth century, renamed Rossville in 1836. In 1778 British forces held a ball in Blazing Star where Captain Christopher Billopp was captured by the Americans. The town became noted for the Winant House (1690; demolished 1932) and a luxury hotel (1829).

James Bradley

Bleibtrey, Ethelda (*b* Waterford, N.Y., 27 Feb 1902; *d* West Palm Beach, Fla., 6 May 1978). Olympic swimmer. She began swimming to recover from the polio she had suffered as a child. In 1918 she joined the Women's Swimming Association (WSA) in New York at 145 West 55th Street. By 1919 she was the top American swimmer. In 1920 she won all three women's Olympic swimming gold medals available at the 1920 Antwerp Olympics (the first American to win a gold medal in swimming). She set numerous world records throughout her career in freestyle and backstroke and was the national champion in distances ranging from 50 yards (45.7 meters) to the mile (1.6 kilometers). She was arrested for public nudity in 1919 for swimming without stockings at Manhattan Beach; her arrest helped to repeal the law requiring women to wear stockings while swimming. In 1928 she was arrested a second time for swimming in the Central Park Reservoir, after the *New York Daily News* had paid her to do so. Mayor James Walker released her, and Central Park soon opened its first large swimming pool. She resigned from the WSA in 1921. Bleibtrey turned professional in 1922 and later became a well-known coach in New York and Atlantic City.

Henry Cooper

blindness. The earliest recorded instance of municipal assistance to the blind in New York City dates to 1718, when the city allocated funds to help a blind artisan buy tools to support his family. In the 1850s the New York Eye and Ear Infirmary (founded in 1820 as the New York Eye Infirmary) served several thousand patients a year across the state, receiving grants from the state and the city to cover its free services to the poor. Further medical services became available when the New York Ophthalmic Hospital opened at 6 Stuyvesant Street in 1852, serving the poor and offering training to physicians in exchange for their free services. The New York Institute for the Blind (1832) was the first school in the country to offer formal education to blind children. In 1866 its director, William Wait, developed a method of reading called the

New York point system; this gained currency nationwide but was ultimately supplanted by the Braille system, which proved better adapted to machine embossing. The financial needs of the blind became clear in the 1860s and city funds were allocated from 1866, when a grant of $35 a year was made to each needy person. The private Society for the Relief of the Destitute Blind (1869) opened a residence at 219 West 14th Street for impoverished blind men and women. Soon after, the city government designated four wards of the municipal almshouse on Blackwell's Island as the Asylum for the Indigent Blind.

As orphanages and other institutions became crowded during the 1880s, contagious eye diseases spread, infecting one-quarter of children in city institutions. A subsequent state law requiring more rigorous medical examinations of institutionalized children and isolation of those infected helped reduce the rate of blindness among children. The depression of 1893 and the arrival of thousands of immigrants to the city made it increasingly difficult for the blind to obtain employment. In response, the Industrial Home for the Blind began a small workshop in Brooklyn in 1893 and added a home for blind mechanics. St. Joseph's Asylum for Blind Girls in Pleasant Plains opened in 1897. When a survey showed that nearly one-fifth of the city's schoolchildren had eye diseases, the health department in 1902 opened an eye hospital and clinic at Gouverneur Hospital.

Private agencies for blind children were formed in the early twentieth century, including the Sunshine Home, Nursery, Hospital, and Kindergarten for Blind Babies (1904) in Dyker Heights. Organizations that served adults as well as children began operations during these years, notably the libraries for the blind of the New York Public Library (1905) and the New York Association for the Blind (1905; now Lighthouse International). Initially children with communicable eye diseases were denied entrance to public schools, but in 1912 the Board of Education opened its first "vision" school for these children. The state began to provide services and advocacy for blind city residents through the New York State Commission for the Blind (1913). During the Depression the federal government began to play a larger role, taking full responsibility for the needy blind in 1974 with the establishment of Supplementary Security Income; further legislation increased federal support to public and private programs in the city. The Andrew Heiskell Braille and Talking Book Library, part of the New York Public Library, opened at 40 West 20th Street in 2001; in the early twenty-first century the city's public university system provided undergraduate and graduate degree programs for the blind. In March 2008 David Paterson, a legally blind former state senator from Harlem, became governor of New York, bringing to the city a new awareness of the blind community. In the early twenty-first century more than 110,000 people with severe visual impairment lived in New York City, including more than 20,000 who were legally blind.

Sandra Opdycke

Bliss, Henry H. (*b* New York City, 13 June 1830; *d* New York City, 14 Sept 1899). First person killed in the United States in a motor vehicle accident. In 1899 he was hit by a taxi as he got off a trolley at Central Park West and West 74th Street, a place on the Eighth Avenue rail line referred to as "Dangerous Stretch." Bliss, a real estate man, died the next day. A plaque was erected there in 1999 to mark the centennial of the first American traffic fatality.

Bliss, Lillie P(lummer) (*b* Boston, 11 April 1864; *d* New York City, 12 March 1931). Music and arts patron. She was one of the three founders of the Museum of Modern Art and as a vice president of the museum helped to establish its international reputation. In 1934 she gave to the museum 122 works by European and American artists, including Arthur B. Davies, Walt Kuhn, Jean Renoir, Edgar Degas, Paul Gauguin, Georges Seurat, Henri Toulouse-Lautrec, Henri Matisse, Paul Cézanne, Amedeo Modigliani, and Pablo Picasso. Bliss also founded the Kneisel Quartet.

Linda Elsroad

Bliss, Neziah (Hezekian) (*b* Hebron, Conn., 1790; *fl* 1810–1850) Entrepreneur and developer. In 1810 he moved to New York City, where he learned about steam engines from Robert Fulton. The following year he built a steamboat with Daniel French. He then moved to Cincinnati, where he continued his research on steam engines with backing from William Henry Harrison. In 1827 he returned to the city and founded Novelty Iron Works on East 12th Street in Manhattan. In 1832 he bought 30 acres (12.1 hectares) in Greenpoint, Brooklyn, which became home to his company. He eventually purchased most of Greenpoint and then bought land across the Newtown Creek, designating the site Blissville, which is now part of Long Island City. He had the land surveyed, laid out streets, and in 1838 built bridges across the Bushwick Creek and the Newtown Creek (this bridge is now known as the Greenpoint Avenue Bridge). In 1850 he started a ferry service between Greenpoint and lower Manhattan. He also supported construction of a highway and railroad in and out of Greenpoint. In 1861 Bliss's Novelty Iron Works built the rotating turret for the USS *Monitor,* the United States' first ironclad warship.

Henry Cooper

Blissville. Neighborhood in northwestern Queens, lying within Long Island City just north of Newtown Creek between Dutch Kills Creek and Greenpoint Avenue. It was named after Neziah Bliss, who with Eliphalet Nott in 1837 bought the Hunter farm, which included all of Hunter's Point. Monument works, hotels, and saloons opened after Calvary Cemetery was laid out in 1848 on the eastern edge. Borden Avenue was extended through Blissville in 1870 and a horsecar line began operations in 1874. Distilleries and oil refineries were built along Newtown Creek; many who worked in industry and in the cemetery lived in plain frame houses along Bradley, Starr, and Review avenues. In the early twenty-first century the neighborhood remained heavily industrial.

Vincent Seyfried

Blitzstein, Marc (*b* Philadelphia, 2 March 1905; *d* Fort-de-France, Martinique, 22 Jan 1964). American composer. An early piano prodigy, he studied music at the Curtis Institute of Music in Philadelphia. He became an advocate of the socially conscious popular theater created by Bertolt Brecht and Hanns Eisler and moved between Philadelphia and New York City for much of his professional life, producing most of his works on Broadway. His most famous creation is *The Cradle Will Rock*, a pro-union opera whose premiere was directed by Orson Welles in 1937. He developed a close friendship with Leonard Bernstein, who produced the play at Harvard University in 1939. Blitzstein's other major works include the opera *Regina*, an adaptation of Lillian Hellman's *The Little Foxes;* the Broadway musical *Juno,* based on Season O'Caset's *Juno and the Paycock;* and his Off-Broadway translation and adaptation of Bertolt Brecht and Kurt Weill's *Threepenny Opera*. At the time of his death Blitzstein was working on a series of one-act operas based on various stories by Bernard Malamud.

Benjamin Yakas

blizzard of 1888. Major snowstorm that began just after midnight on Monday, 12 March 1888, and lasted until just before midnight on Tuesday, 13 March. It was caused by the collision of a cold-weather front from Canada and an unusually warm front from the South, by way of New Jersey. When the fronts collided over New York City, the dry and intensely cold air chilled the moisture of the warm front and caused a blinding snowfall; by 7:00 a.m. on Monday all the roads

Woodbine between Broadway and Bushwick Avenue in Bushwick two days after the blizzard of 1888

and highways of the city were blocked. The snowfall was made worse by powerful northern gales of up to 60 miles (69 kilometers) per hour, which in some places blew the streets clear and in others piled up drifts to the second story of buildings. Hopes of clearing the streets quickly were ruined when the temperature sank to 5°F (–15°C). The blizzard was the worst in New York City since 1857: the total accumulation of snow was 21 inches (53 centimeters), property damage was estimated at $20 million to $25 million, and the city did not fully recover for 10 to 14 days. One consequence of the blizzard was a directive by Mayor Hugh J. Grant in January 1889 that all overhead wires be placed underground.

Mary Cable, *The Blizzard of '88* (New York: Atheneum, 1988)

Vincent Seyfried

Block, Adriaen (*b* Amsterdam, *ca* 1567; *d* Amsterdam, 27 April 1627). Dutch trader, explorer, and cartographer and one of the first white residents of what is now New York City. On his three or four voyages to the New York City region between 1611 and 1614, he established a fur trade with Native Americans and charted much of the coast between New Jersey and Massachusetts as well as sections of the Hudson and Connecticut rivers. He is credited with determining Long Island and Manhattan to be islands, coining the term *New Netherland* on his 1614 map, and being the first European to sail into the Long Island Sound. During his last voyage, Block's ship, *Tyger*, was destroyed by fire off Manhattan, forcing the crew to set up a winter camp—reputedly the first European settlement on Manhattan. With the help of Native Americans they built the first Dutch sailing vessel made of North American timber, *Onrust* (Restless), in which Block sailed up the East River. He was the first known European to navigate the straits off Wards Island and is responsible for naming the passage *Hellegat* (Hell Gate). The information he presented to the Dutch Republic upon returning from his exploratory voyages secured three years of exclusive fur-trading rights for the New Netherland Company, the predecessor of the Dutch West India Company, which Block established with a group of merchants, including fellow explorer Hendrick Christiaensen. Block Island at the mouth of the Long Island Sound and the Independent School 25 Adrien Block School in Flushing, Queens, are named in his honor.

Holly Cronin, Matthew Kachur

bloodsports. In colonial New York City bloodsports included such traditional English recreations as cockfighting, dogfighting, bear and bull baiting, and ratting (contests pitting men or dogs against rats), as well as gander pulling, in which a greased gander was hung by the neck between horizontal sticks and men rode by and tried to pull the gander from its head. Bloodsports were popular among all classes before the nineteenth century, but with increased social stratification they became restricted largely to working-class males in antebellum New York City in the rough camaraderie of saloons, pool halls, volunteer firehouses, and gambling parlors. The height of popularity for bloodsports was reached during the 1860s and 1870s when contests took place in saloons like Kit Burns's Sportsman's Hall (273 Water Street) and Harry Hill's (22–34 East Houston Street). Although bloodsports were illegal, they remained popular to the end of the century. Cockfighting enjoyed widespread support, especially among immigrants from the Mediterranean and the Caribbean. Breeders in the rural South supplied many of the birds used in the city. The rise of such spectator sports as baseball and football after the turn of the twentieth century caused the popularity of bloodsports to decline, and cockfighting was made a felony. Some Latin American immigrants continued to engage in the sport in the late twentieth century: in 1988 77 spectators at a cockfighting festival in Bushwick in Brooklyn were arrested, and in 1989 an illegal Cuban social club in Morrisania in the Bronx where cockfights were staged was raided. Though not extensive, illegal dogfighting still existed in New York City in the early twenty-first century as gamblers, breeders, and fight organizers tried to keep their profitable activities hidden from public view. One local newspaper alleged that the city was the "capital of illegal dogfighting." In July 2008 the New York state legislature combated the problem by making it illegal to attend a dogfight even if there was no evidence of gambling or paid admission.

Elliott J. Gorn

Bloomberg, Michael Rubens (*b* Boston, 14 Feb 1942). The 108th mayor of New York City; he assumed office 1 January 2002. Born to a family of Russian and Polish immigrants, he attended Johns Hopkins University (BS 1964) and Harvard Business School (MBA 1966). He founded Bloomberg L.P. in 1981, a financial services software company of which he owns 88 percent. In 2009 Bloomberg was probably the richest person in New York City. In 2001 the lifelong Democrat ran for mayor as a member of the Republican Party, campaigning that in the wake of the terrorist attacks of 11 September 2001, the city's economy needed a mayor with business experience. His election to office was the first time in city history that two different Republicans held office consecutively. Bloomberg was reelected as a member of the Republican Party in 2005, but he switched party allegiances in

2007 when he declared himself an independent. After the two-term limit of the City Charter was extended in 2008, Bloomberg ran in 2009 for a third term on the Republican and Independence Party lines, citing that the city required a leader with experience in finance and business because of the financial crisis and recession of 2008–9; he won the election on 3 November 2009. He is considered by colleagues to be socially liberal, supporting abortion rights, gay marriage, and immigration reform. On foreign and fiscal policy, however, he is widely considered to be conservative. During his first two mayoral terms, his accomplishments included placing the Board of Education under the control of City Hall, further reducing crime; creating 3-1-1, an all-purpose city helpline; expanding small business loans; and extending smoking bans in workplaces and other venues.

Kenneth T. Jackson, Meghan LaLonde

Bloomberg L.P. Information, news, media, and financial services company. It was founded in 1981 by Michael Bloomberg; in 1990 it launched Bloomberg News and two years later purchased the radio station WBBR, which airs daily financial news. In 1994 Bloomberg Television was launched. In 2008 the firm was valued at $22.5 billion and had its headquarters in the Bloomberg Tower at 731 Lexington Avenue.

Jessica Montesano

Bloomfield. Neighborhood in northwestern Staten Island. It lies southwest of Old Place and is bisected by the West Shore Expressway. Known during the seventeenth century as Daniell's Neck, it was later called Merrell Town (after a local farmer) and Watchogue. Merrill Avenue, which ran straight for 1 mile (1.6 kilometers), was once called "the long, long lane that has no turning." The western section was sometimes called "Beulah Land." For many years the area was sandy and rural. In 1973 a tank of liquefied natural gas owned by the firm of Texas Eastern exploded as it was being repaired, killing 40 workers. Many houses were built during a flurry of development in the 1970s and 1980s. To the north lies Gulfport, the shipping complex of the Gulf Oil Corporation. The neighborhood is largely residential.

Martha S. Bendix

Bloomingdale. Name used until the mid-nineteenth century for the Upper West Side of Manhattan; it is a corruption of the Dutch name Bloemendael, or Bloomendal (vale of flowers). The area was named for a town near Haarlem in the Netherlands and was largely rural, with a few farmhouses and villages. The Bloomingdale Road, opened in 1703, ran between what are now 23rd and 147th streets and followed roughly the same route of the present Broadway. The name Bloomingdale became obsolete as farms and country estates gave way to urban development, but in the early twenty-first century it was still used by the Bloomingdale House of Music and as a name for a local branch of the New York Public Library.

Michele Herman

Bloomingdale Insane Asylum. The first mental hospital in New York State, it opened in 1821 in Morningside Heights at the behest of Thomas Eddy as a branch of New York Hospital (1791). It combined traditional medical interventions with a form of reeducation known as "moral treatment." During its first two decades the asylum received a subsidy from the state and cared for a heterogeneous population that included members of the lower classes. The number of poor patients declined after the opening of a municipal institution in 1839 and a state hospital in 1843, and the subsequent elimination of state support. The asylum grew more slowly than public mental hospitals: between 1830 and 1875 the average number of patients increased only from 136 to 182. The resident physicians who directed the institution included James Macdonald (1825–37), Pliny Earle (1844–49), Charles F. Nichols (1849–52, 1877–89), and D. Tilden Brown (1852–77). By the 1880s real estate promoters seeking to develop the Upper West Side put increasing pressure on the governors of New York Hospital to move the asylum, and in 1891 the governors approved plans to move it to a site in White Plains, New York, acquired in 1868. The move was completed by the end of 1894, and the site of the asylum became part of the Morningside Heights campus of Columbia University.

William Logie Russell, *The New York Hospital: A History of the Psychiatric Service, 1771–1936* (New York: Columbia University Press, 1945)

Gerald N. Grob

Bloomingdale Road. Early road, the precursor of Broadway. Opened in 1703, it ran from what is now 23rd Street to the northern end of Bloomingdale Village, today's 114th Street. In 1795 the road was extended north to 147th Street and linked to the old Kingsbridge Road. In 1869 the Western Boulevard was built over Bloomingdale Road north of 59th Street. Known popularly as The Boulevard, in 1899 "Broadway" was formally applied to the entire route from South Ferry through Manhattan's northern tip and to the boundary between The Bronx and Yonkers. Broadway between 59th and 168th streets retains its 150-foot (46-meter) width and wide median as legacies from The Boulevard. In the vicinity of 125th Street east of Broadway, a short street (Old Broadway) today follows the original Bloomingdale Road.

Andrew Sparberg

Bloomingdale's. Department store. It opened as a dry-goods store in 1872 founded by Lyman Bloomingdale and his brother Joseph Bloomingdale and was known as the "great East Side bazaar." Located at 938 Third Avenue near 56th Street (well north of the fashionable shopping district), it had a large

Bloomingdale Insane Asylum, ca *1890*

Bloomingdale's

beehive decoration on the roof. The store attracted customers from miles away after the Third Avenue elevated line was built in 1879, leading the store to adopt the slogan "all cars transfer to Bloomingdale's." In 1886 it moved to larger quarters at Third Avenue and 49th Street. By 1927 it occupied the entire block bounded by 60th Street, Third Avenue, 59th Street, and Lexington Avenue, where a building was completed in 1931 at a cost of $3 million. The store catered to the middle class, offering "the best possible value for the least possible price." In 1930 it became part of Federated Department Stores and had annual sales of $25 million. In the late 1940s the store began selling higher quality merchandise and adopted new advertising strategies to appeal to chic customers worldwide. After the Third Avenue line was razed in 1954, the surrounding neighborhood was revitalized. As part of a reorganization the firm opened a series of boutiques within its stores during the 1970s and 1980s. In 2003 Federated changed the names of all its properties to Macy's, with the exception of Bloomingdale's, which kept its brand. In the early twenty-first century Bloomingdale's maintained 36 stores nationwide; its two locations in New York City were at 504 Broadway in SoHo and 59th Street and Lexington Avenue, its flagship store.

Maxine Brady, *Bloomingdale's* (New York: Harcourt Brace Jovanovich, 1980); Marvin Traub and Tom Teicholz, *Like No Other Store . . . : The Bloomingdale's Legend and the Revolution in American Marketing* (New York: Times Books/Random House, 1993)

Allen J. Share

Bloomingdale Square. One of the five open spaces provided for on the 1811 Commissioners' Plan, New York City's master plan. The privately owned 20-acre (8-hectare) site extended from 53rd to 57th streets between Eighth and Ninth avenues. It was eliminated in 1857 after the establishment of Central Park in order to extend 54th, 55th, and 56th streets.

Lisa Keller

Bloomingview. Former name of Huguenot.

Blue Cross Blue Shield. See Empire Blue Cross and Blue Shield.

Blue Note Records. Jazz recording label. Blue Note Records was founded in New York City in 1939 by Alfred Lion, a young German immigrant who was joined at the label two years later by his childhood friend Francis Wolff. Together, the two of them built Blue Note into a successful record label that was to become synonymous with innovation in jazz. Although Blue Note's first hit was clarinetist Sidney Bechet's version of *Summertime,* the label became renowned for its association with more modern jazz artists like Thelonious Monk, John Coltrane, Horace Silver, Miles Davis, Art Blakey, Jimmy Smith, and Ornette Coleman. Saxophonist Ike Quebec's work for Blue Note in the Artists and Repertoire division throughout the 1950s and early 1960s helped to build the label's roster into a who's who of jazz. Blue Note was unique in that it paid musicians for rehearsal time prior to recording sessions. Along with Lion's reputation as a producer who was willing to listen to musicians, the practice of paid rehearsal made the label popular among recording artists and earned their loyalty. Blue Note gave artists the freedom to experiment and the time to pull it off. This company policy and reputation epitomizes Lion's hands-off but perfectionist production style and, along with the work of engineer Rudy Van Gelder, gives Blue Note releases their distinctive sound. They are also well known for their cover art, designed by Reid Miles and often featuring Wolff's photographs of recording sessions. After more than 25 years in the business, Lion and Wolff sold the Blue Note name and catalogue to the record company EMI in 1965. EMI has contributed to a resurgence of the Blue Note name in recent years through an extensive reissue campaign, releases from new artists like Norah Jones, Madlib, and Ravi Coltrane, and a partnership with Starbucks Coffee.

Rowan Moore Gerety

Blunt, Edmund March (*b* Portsmouth, N.H., 20 June 1770; *d* New York City, 1860). Mariner, author, publisher, and ship chandler. He published *The American Coast Pilot*, along with many charts of harbors, thereby easing the danger of coastal navigation, which was unreliable before the federal government began providing charts in the 1830s. The first collection of sailing directions in the United State, the *Coast Pilot*, was published by Blunt in Newburyport, Massachu-

setts, in 1796, and he soon was the country's premier publisher of maritime books. The *Coast Pilot* contained detailed directions for avoiding shoals, as well as articles by the pioneering meteorologist William Redfield, who developed the method of tracking storms by tracking wind direction and barometer readings. In 1811 Blunt moved to New York City and established a ship's chandlery and publishing house at 202 Water Street. Blunt and his sons, George W. and Edmund, published the *Coast Pilot* in 21 editions until the government's Coast Survey acquired the rights in 1867. Blunt also published one of the first general guides to the city, its laws, and its institutions, *Blunt's Stranger's Guide to the City of New-York* (1817).

Robert Greenhalgh Albion, *The Rise of New York Port, 1815–1860* (New York: Scribner's, 1939); John Rousmaniere, *After the Storm: True Stories of Disaster and Recovery at Sea* (New York: McGraw–Hill/International Marine, 2002)

Bly, Nellie [Seaman (née Cochran), Elizabeth] (*b* Cochran's Mills, near Ford City, Pa., 5 May 1867; *d* New York City, 27 Jan 1922). Journalist. She began her career at the *Dispatch* in Pittsburgh. As a "stunt" journalist for the *New York World* in New York City in the late 1880s she became well known for making an undersea descent in a diving bell and an ascent in a hot-air balloon, for exposing the horrors of an asylum by feigning insanity, and for circling the globe in 72 days. After marrying the industrialist Robert Seaman in 1895, she interrupted her career. On his death in 1915 Bly joined the *New York Journal,* where she worked for the rest of her life. She wrote *Nellie Bly's Book: Around the World in Seventy-two Days* (1890).

B'nai B'rith International. Secular Jewish fraternal order formed in 1843 by a group of German-speaking immigrants who met at Sinsheimer's saloon on Essex Street in Manhattan. Initially a mutual aid society, the order devoted itself to philanthropy as its members achieved a measure of financial security. The order sponsored orphanages, hospitals, and old-age homes during its early years and by 1882 had chapters in 30 countries. The influx of eastern European Jews to the United States during the late nineteenth century prompted the organization to establish employment bureaus; one of these, the Industrial Removal Office, sought to secure employment for recent immigrants outside New York City. B'nai B'rith also sponsored "Americanization" programs. A women's auxiliary became the independent B'nai B'rith Women's Organization in the early twentieth century, and the Anti-Defamation League was formed as an affiliate in 1913 to combat negative portrayals of Jews in books, periodicals, and advertising. The 1920s saw the emergence of youth groups and of Hillel, a service agency for Jewish college students. During World War II B'nai B'rith helped European Jews to obtain visas and provided religious and recreational programs for a government refugee encampment in Oswego, New York. Like many other American Jewish agencies it did not fight immigration quotas during the Holocaust. The organization moved its headquarters to Washington in 1957. Each year, the organization gives out several awards including a Presidential Gold Medal awarded to honor the recipient's commitment to the Jewish people and for the support of Israel.

B'nai Jeshurun. Conservative synagogue formed in 1825 by a faction that seceded from Shearith Israel after a dispute regarding the distribution of communal honors; it was the second synagogue in New York City. Initially it occupied a former church on Elm Street and had a largely English congregation. During the 1870s it sought to replace segregated seating with family pews, a plan that met with opposition and led to a heated civil trial. The congregation moved northward and during the 1920s built a lavish temple in a Moorish style on West 88th Street. B'nai Jeshurun is the city's oldest Ashkenazic congregation and the oldest Conservative synagogue in continuous operation.

Jenna Weissman Joselit

Board of Education. The chief governing body of the public school system in New York City from 1842 to 2002. The Board of Education was formed in 1842 to resolve religious and political controversies over the role of the Public School Society, which had managed the city's schools until then. At the time it was recognized that the schools in the city could not be effectively governed like those in most school districts in New York State, where the popular election of school boards and the financing and management of schools all occurred at the district level. In New York City a single board chosen at large would have been unrepresentative, and dividing the city into districts would have been inequitable. The system of governance that was chosen as a compromise provided for the election of school commissioners, trustees, and inspectors in each ward and for the representation of each ward committee on a central board of education. After 1871 these ward trustees were appointed, but they continued to provide an important element of local influence to the system. Having the responsibility to appoint teachers and contract for school repairs, trustees helped to bridge the gap between city leadership and neighborhood interests.

Ward trustees continued to function until 1896 when reformers effectively pointed out the failure of the localized system to satisfy the educational needs generated by immigration and economic development. A movement to entrust the management of the schools to educational experts resulted in the elimination of ward trustees in Manhattan and the Bronx; a somewhat parallel "local committee" system in Brooklyn was continued under a borough school board initially created upon city consolidation. The reformers' model was

Changes in the Board of Education

1842: First Board of Education for New York City: 34 commissioners popularly elected, two from each of 17 wards (later increased to two from each of 22 wards). Board of five trustees popularly elected in each ward; it appoints teachers and manages most affairs of the schools; two inspectors elected in each ward to inspect schools and to certify teachers' qualifications.

1853: Board of Education acquires schools of the Public School Society. Board has 59 members: 44 commissioners popularly elected (two from each of 22 wards) and 15 members transferred from the former board of the Public School Society for a transition period until 1855.

1855: Board has 44 members: two commissioners from each ward. Ward trustees and inspectors as in 1842.

1864: Board has 21 members: three commissioners elected from each of seven school districts. Districts contain between two and seven wards, thus producing a roughly equal number of pupils in each district. Board of five trustees elected in each ward. Trustees retain major role in appointing teachers and in managing schools. Each school district has three inspectors appointed by the mayor with responsibilities for inspecting schools and for certifying teachers' qualifications.

1869: Board has 12 members, appointed by the mayor to serve until the end of 1871. Local elections continue to determine ward trustees and inspectors.

1871: Board of Education replaced by a municipal Department of Public Instruction under direct authority of the mayor, who appoints its 12 members. Mayor also appoints ward trustees and inspectors.

1873: Board of Education reestablished with 21 members appointed by the mayor, three from each of seven school districts; five ward trustees in each ward, appointed by the Board of Education; three inspectors in each school district, appointed by the mayor.

1896: Ward trustees abolished. Most direct powers of appointment and management of schools transferred to a board of superintendents composed of professional educational managers. Board of Education has 21 members appointed by the mayor; five inspectors in each of 15 inspection districts also appointed by the mayor.

1898: Consolidation of Greater New York and confederation of school boards. Borough school boards retain powers of appointment and of school management. New York City Board of Education (21 members) is retained and becomes School Board for the Boroughs of Manhattan and the Bronx; future appointments to be made by the mayor. Brooklyn Board of Education (45 members) is retained and becomes School Board for the Borough of Brooklyn; future appointments to be made by the mayor. School Board of the Borough of Queens (nine members) and School Board of the Borough of Richmond (nine members) also appointed by the mayor. Board of Education of the City of New York ("Central Board") composed of 19 representatives chosen by the borough boards (11 from Manhattan and the Bronx, six from Brooklyn, one each from Queens and Richmond).

1901: Full powers transferred to citywide Board of Education and superintendent of schools. Borough boards abolished. Board has 46 members appointed by the mayor (22 from Manhattan, 14 from Brooklyn, four from the Bronx, four from Queens, two from Richmond); executive committee has 15 members; each of 46 local school boards (largely advisory) has seven members (five appointed by the borough president, one each by the Board of Education and by the district superintendent).

1917: Smaller Board of Education reflects a larger trend toward streamlining urban school systems. Board has seven members appointed by the mayor (two from Manhattan and from Brooklyn, one from each of the other boroughs).

1948: Board enlarged to reflect shifts in population: nine members appointed by the mayor (two each from Manhattan, the Bronx, Brooklyn, and Queens; one from Richmond).

1961: Former board removed during scandal; nine members now appointed by the mayor from names submitted by a screening panel.

1968: Decentralization: board expands to 13 members appointed by the mayor and acquires authority to delegate powers to local boards; board appoints 25 local school boards composed of nine members each.

1969: Further decentralization: community school boards acquire powers of appointment and of management in elementary and junior high schools. Interim Board of Education has five members, one appointed by each borough president; 32 school districts each have one community school board with nine members, to be popularly elected in special school elections from 1970.

(*continued*)

fully implemented in 1902, with the city's schools centralized under a single board and management of the schools delegated to the superintendent of schools and associate superintendents.

The centralized board retained primary authority over the school system until the 1960s when it was challenged by advocates of more effective education for black and Spanish-speaking children and other children in poor neighborhoods. Experiments with various forms of shared power included "community control" in three demonstration districts and the decentralization of authority under the community school board system adopted in 1970. Under this system the central board (consisting of seven members, two appointed by the mayor and one appointed by each of the five borough presidents) appointed the chancellor and administered the high schools centrally. Elected community school boards (the first democratically elected school officials since 1871) could select their own community superintendents to manage elementary and junior high schools and could, in theory, select principals and teachers on the basis of local needs. However, districts relied for funding on centrally generated city and state appropriations and centrally defined allocation formulas. Since the overall financ-

Changes in the Board of Education (*Continued*)

1973: Expansion of central board to seven members (two appointed by the mayor, one by each borough president) and formation of 32 community school boards whose members are popularly elected.
2002: Mayor Michael Bloomberg receives authorization from New York state legislature to reform and reorganize school system. He eliminates community school boards and changes Board of Education's name to the Department of Education. Headquarters moved from Livingston Street in Brooklyn to Tweed Courthouse in Manhattan.
2009: In June New York State Senate declines to renew Mayor Bloomberg's authority over school system; authority reverts to Department of Education. In August mayoral control restored and set to expire in 2015.

CITY OF BROOKLYN

1835: Separate school districts with citywide control: three trustees in each district appointed by the Brooklyn Common Council, three citywide inspectors, and three citywide commissioners also appointed by the Common Council.
1843: First Brooklyn Board of Education: two members from each school district (initially numbering 14), appointed by the Common Council.
1850: Central Board of Education with substantial powers of appointment and school management delegated to local committees. Board has 33 members, at least one from each school district appointed by the Common Council. Committees of the board with extensive powers of oversight formed for each school.
1854: Expansion reflects incorporation of Williamsburgh and Bushwick. Board has 45 members, 13 from the new Eastern District, appointed by the Common Council.
1862: Mayor given power to appoint members, though Common Council must approve choices.
1882: Mayoral appointments no longer subject to approval by Common Council.
1898: Consolidation of Greater New York. Brooklyn Board of Education becomes School Board of the Borough of Brooklyn.

ing levels were generally insufficient, the districts found they had very little flexibility in practice.

Tension over the selection, operation, and relative powers of the central board, the community boards, and other officials continued during the 1970s and 1980s. Problems in school governance increased during the 1990s. Members of the central board increasingly divided into factions that faced off on several major controversies over curriculum reform. Mayor Rudolph Giuliani, ending the tradition of partial autonomy for the Board of Education, intervened directly to force the resignations of two chancellors in succession.

In 2002, arguing that the governance structure had contributed to a general failure to meet the educational needs of the city's youth, Mayor Michael Bloomberg succeeded in persuading the state legislature and governor to abolish the Board of Education, to abolish the elected community school boards, and to give full control of the school system to the mayor. Henceforth, the mayor would appoint the chancellor, who would administer the entire system, and, in Bloomberg's words, the citizens of New York could "hold their Mayor accountable for the success or failure of their schools."

David Ment

Board of Elections. Political body that administers elections in New York City. Its creation in 1901 was a major political reform intended to eliminate corruption of the city's elections. It replaced the Bureau of Elections, which worked under the police department but had more sweeping powers, including the preparation of ballots for primary, special, and general elections; the enforcement of election laws; and the counting of votes. The board's first commissioner was John Voorhis, a Tammany Democrat who served until 1931. The mayor decided appointments to the board until 1911, when Tammany Hall, facing an unfriendly mayor, gave this power to the Board of Aldermen. In the mayoral election of 1925 the board introduced mechanical voting machines to replace the paper ballots previously used. Originally the board consisted of four commissioners of elections, two Democrats and two Republicans from Brooklyn and Manhattan, selected by the party leaders and confirmed by the City Council. By the early 1970s this arrangement was under attack from reformers, who believed that it was unrepresentative and encouraged political cronyism. These criticisms intensified after a court in 1972 reversed the victory in a primary election of Representative John J. Rooney over Allard K. Lowenstein because of vote fraud. In the following year the board was reconfigured to consist of one Democrat and one Republican from each borough, with terms fixed at four years. At the time the president of the Board of Elections was David N. Dinkins, the future mayor, who resigned in 1973 because of the board's failure to enact voter registration reforms. Throughout the 1980s the board struggled with modernizing its voting and registration systems. Early in the twenty-first century the commissioners are appointed from each borough upon the recommendation of both the Republican and Democratic parties and then sent to the City Council for a confirmation vote. The commissioners hire a bipartisan staff to handle the day-to-day operations of the board.

James Bradley, Nathan Morgante

Board of Estimate. A major institution of New York City government between 1902 and 1990. It commonly rivaled the mayoralty in power from the time of Mayor William J. Gaynor (1910–13) through the first two administrations of Mayor Robert F. Wagner (1953–61). The board exercised authority over the city's budget, land-use zoning, the use of city-owned property, and the issuance of franchises to private companies performing public services. It considered proposals prepared by subordinate agencies such as the Bureau of Engineering and the Bureau of Franchises, which recommended the companies that should receive permits for building and operating subways, street railways, buses, and utility lines. For example, the Board of Estimate authorized the Interborough Rapid Transit Company and the Brooklyn–Manhattan Transit Corporation to build and operate the city's first subway lines. An important source of the Board of Estimate's preeminence was its exercise of the municipal government's "residual powers."

The board was composed of the mayor, the president of the City Council, the comptroller, and the presidents of the five boroughs. It often was dominated by a coalition of the comptroller and the borough presidents. Each citywide official had four votes and each borough president two, and for many years voting was conducted privately with the understanding that there would be public unanimity on resolutions. The five borough presidents and comptroller commonly were allied with the city's regular Democratic Party organizations. Mayors elected with the support of these same organizations generally had little of an independent political base that might press the mayor to oppose the board's majority coalition and provide them with the political support they would need to prevail in such a conflict. "Fusion" or "reform" mayors (for example, Fiorello H. La Guardia, John Lindsay, and Edward Koch) were more likely to resist that coalition, thereby pitting the mayoralty against the Board of Estimate.

The Board of Estimate was abolished by a charter reform commission established in 1986 after the U.S. Court of Appeals ruled unconstitutional its system of giving equal representation to boroughs as disparate in size and racial composition as Staten Island (small

and predominantly white) and Brooklyn (large and heavily nonwhite). The city charter provisions abolishing the Board of Estimate took effect in 1990 and transferred to the City Council the board's powers over the municipal budget and zoning. Most of the other powers of the old Board of Estimate were reassigned to the mayor.

Wallace S. Sayre and Herbert Kaufman, *Governing New York City: Politics in the Metropolis* (New York: Russell Sage Foundation, 1960); Charles Brecher and Raymond D. Horton, with Robert A. Croft and Dean Michael Mead, *Power Failure: New York City Politics and Policy since 1960* (New York: Oxford University Press, 1993)

Martin Shefter

Board of Estimate v. Morris. Case decided in 1989 (489 U.S. 688) by the U.S. Supreme Court that invalidated the voting structure of the Board of Estimate. The board at the time consisted of the three citywide elected officials (the mayor, the president of the City Council, and the comptroller), who each cast two votes, and the five borough presidents, who each cast one vote. Because of the wide disparity of population among the five boroughs, the Supreme Court unanimously held that giving equal voting power to each borough violated the constitutional requirement of "one person, one vote." The decision led to a revision of the city charter that abolished the Board of Estimate and redistributed its powers.

Richard Briffault

Board of Examiners. An agency responsible for creating and administering licensing examinations for employees of the Board of Education. Created in 1898, under the charter that took effect upon consolidation, it initially comprised the superintendent of schools together with four examiners appointed by the Board of Education. Its formation was one of several steps taken by the public schools to phase in the "merit," or civil service, system, under which the school authorities were required to hire from among the top three people on an eligible list. Although the board's licensing system largely eliminated patronage, its examinations were often criticized for favoring members of ethnic groups already working in the schools. In 1969 much of the board's power was undermined by a decentralization law permitting the 45 percent of schools scoring lowest in reading to appoint teachers on the basis of the National Teachers Examination. The board was further weakened in 1971 when a federal district court ruled that the examination for the position of principal was unconstitutional because it lacked proven validity and produced eligible lists containing disproportionately few black candidates; the ruling authorized community school boards to appoint acting principals without regard to the eligible lists. The Board of Examiners remained a target of reformers until it was eliminated in 1990 by legislation proposed by Chancellor Joseph A. Fernandez; thereafter, the school system could select applicants from among the pool of educators holding state certification.

David Ment

Board of Standards and Appeals. Municipal agency formed in 1916 in conjunction with the zoning regulations of the same year. It is empowered to modify zoning and construction laws for builders and developers. The board is composed of five commissioners, appointed by the mayor to six-year terms. One must be a registered architect, one a professional planner, and one a professional engineer, and each of these three must have at least 10 years of experience. No more than two members of the board may be residents of any one borough. Because of its broad powers to exempt developers from the city's zoning laws, the board has frequently been an object of controversy. Mayor James J. Walker was charged with receiving payoffs in return for zoning variances. During the administration of Mayor Edward I. Koch the board came under repeated criticism, sometimes from the mayor himself, for permitting the conversion of lofts in manufacturing areas to residential use and for contributing to overdevelopment and a glut of office space by being too eager to award variances to developers. It is empowered by the City Charter to interpret the Zoning Resolution, Building and Fire Codes, Multiple Dwelling Law, and Labor Law. As of 2010 its offices were at 40 Rector Street.

James Bradley

Boas, Franz (*b* Minden [now in Germany], 9 July 1858; *d* New York City, 21 Dec 1942). Anthropologist. After obtaining a doctorate in physics from the University of Kiel in 1881, he turned first to geography, then to anthropology, undertaking fieldwork among the Baffinland Inuit from 1883 to 1884. He spent three months with the Indians of the Northwest Coast before settling in January 1887 in New York City, where he became the geography editor for the magazine *Science* (1887–88) and married his Austrian American fiancée, Marie Krackowizer. In 1896 he was appointed assistant curator of ethnology at the American Museum of Natural History; in the same year he became a lecturer in anthropology at Columbia University, and from 1897 to 1902 he led Morris K. Jesup's expedition to the northern Pacific coast. A full professor at Columbia from 1899, he resigned his position at the museum in June 1905 to devote himself to teaching full-time. After his retirement from Columbia in 1936, he continued to teach and often spoke out against racism. Boas is credited with making New York City the center of American ANTHROPOLOGY during the first half of the twentieth century. His research challenged the existing emphasis in anthropological theory on biological heredity, replacing it with a culturally based environmentalism that had a profound influence on the field.

George W. Stocking, Jr., *The Shaping of American Anthropology, 1883–1911: A Franz Boas Reader* (New York: Basic Books, 1974); Douglas Cole, *Franz Boas: The Early Years, 1859–1906* (Vancouver: Douglas and McIntyre; Seattle: University of Washington Press, 1999)

boat basins. Although New York City has 578 miles (930 kilometers) of shoreline, it has few boat basins for pleasure craft. Staten Is-

79th Street Boat Basin, 2009

land has several such dockages, and the World's Fair Marina in Flushing, Queens, in operation since 1964, offers about 300 slips along a 1.4-mile (2.2-kilometer) promenade that encircles Flushing Bay. Sheepshead Bay in Brooklyn provides 10 fixed piers for commercial charter vessels. The best known of New York City's boat basins is located at the intersection of West 79th Street and the Hudson River. Created in 1937, and supposedly the home of as many as 100 boat owners who live year-round alongside the 110 slips, 60 moorings, and five main docks, the area is popular because of its bucolic setting and gorgeous views.

Kenneth T. Jackson

bocce. Game of Italian origin in which players take turns trying to throw a larger *bocce* ball closest to a smaller *pallino* ball. Closely related to the Dutch pastime of LAWN BOWLING, which was introduced to New York City in the seventeenth century, bocce is played on a narrow and rectangular dirt court that is enclosed by wooden backboards. Italian immigrants popularized the game during the late nineteenth century in San Francisco and New York City. In 1935 the New York City Parks Department maintained six bocce courts, four in Brooklyn and two in Staten Island. By 2008 there were more than 40 public courts in the city, with the majority in Queens, Brooklyn, and the Bronx, and an annual citywide tournament begun in 1995 drew roughly 80 teams, which were made up predominantly of players in their fifties or older. There is also a well-known indoor court on East 62nd Street in Manhattan in the dining room of Il Vagabondo, a once popular local bar and playing spot during the 1960s that was expanded and converted into a restaurant.

David White

bodegas. Small neighborhood convenience stores that sell a wide variety of food and nonfood items. The word reflects their ethnic connection to Latino areas in New York City, where they are often the only food supply source because of the lack of local supermarkets. They sell goods that reflect a direct connection to the specific homelands of Latino immigrants.

Bodega, 2009

Smith Street in Boerum Hill, 2009

Boerum Hill. Neighborhood in northwestern Brooklyn, covering 36 blocks and bounded to the north by State Street, to the east by Fourth Avenue, to the south by Warren Street, and to the west by Court Street. It is named for the colonial farm of the Boerum family that once stood in the area. Most of the housing consists of three-story row houses built between 1840 and 1870. In 1973 an area of six blocks around Dean Street was designated a historic district by the Landmarks Preservation Commission. As of the early twenty-first century the population was mostly upper middle class. There is a commercial district with shops and restaurants on Atlantic Avenue and Fulton, Smith, and Court streets.

John J. Gallagher

Bogardus, James (*b* Catskill, N.Y., 14 March 1800; *d* New York City, 13 April 1874). Inventor. After fulfilling an apprenticeship to a watchmaker he moved to New York City, where in 1820 he was awarded the Gold Medal of the American Institute for a clock design; he later patented a complex clock mechanism and invented machinery for cotton spinning, sugar grinding, and metal engraving. He is best known for developing construction methods that allowed entire buildings to be made of cast iron (see CAST-IRON ARCHITECTURE); he first used these methods in constructing a facade at 183 Broadway (1848) and a row of five stores at the corner of Murray and Washington streets (1849). A few of his buildings remain at an intersection named for him in SoHo.

James E. Mooney

Bogart, Humphrey (DeForest) (*b* New York City, 25 Dec 1899; *d* Beverly Hills, Calif., 14 Jan 1957). Actor. He was born in a four-story row house at 245 West 103rd Street in Manhattan and attended Trinity School from 1913 to 1917. Bogart became a road manager and assistant stage manager for the theatrical producer William S. Brady and also worked at Brady's film studio in the city. In 1920 he took a two-line walk-on part in a play he was managing, and other roles followed. He moved to 43 East 25th Street and in 1930 secured a role in a 10-minute short film titled *Broadway's Like That*. His stage role as the gangster Duke Mantee in *The Petrified Forest* (1935) helped him to become well known, and the 1936 film version made him a star. He moved to Hollywood, where he frequently played big-city hoodlums in such films as *The Racket Busters* (1938), in which he played a gang leader trying to muscle his way into the trucking business in Manhattan. He is best known for his role as Rick Blaine, the witty, jaded café owner in *Casablanca* (1942). In that film, when he mentions that he was born in New York City and is asked by Major Heinrich Strasser whether he can imagine the Germans in his home town, he replies, "Well, there are certain sections of New York, Major, that I wouldn't advise you to try to invade." In 1945 he married the actress Lauren Bacall. Bogart appeared in more than 75 films, including John Huston's *The African Queen* (1951).

Alan G. Barbour, *Humphrey Bogart* (New York: Galahad, 1973); Robert Sklar, *City Boys: Cagney, Bogart, Garfield* (Princeton, N.J.: Princeton University Press, 1992)

Allen J. Share

Bohemian Hall and Beer Garden. Beer garden, auditorium, and recreation center in Astoria, Queens. The Bohemian Citizens' Benevolent Society constructed the main building in 1910 and added the beer garden

in the 1930s. The hall was built to function as a neighborhood gathering place for Czechs. It has a Czech bar and restaurant and a Czech language school, and often features performances of Sokol, or Czech gymnastics. The outside beer garden is a large area of picnic tables with a performance space that accommodates up to 1000 people for food and drinks. It is the last of the large beer gardens left in New York City. Czechs and people of other nationalities from all over the city come to the hall and garden for festivals, performances, and socializing.

Maurita Baldock

Boissevain, Inez Milholland (*b* Brooklyn, 6 Aug 1886; *d* Los Angeles, 25 Nov 1916). Suffragist. As an undergraduate at Vassar College (graduated 1909) she was active in advocating socialism and female suffrage. She earned a law degree at New York University, married the merchant Eugen Boissevain, and became prominent in the women's rights and radical labor movements by writing for *McClure's Magazine* and taking part in the "shirtwaist strike" of 1909, the Women's Trade Union League, the Women's Political Union, and the National Woman's Party. Her death from pernicious anemia followed an exhausting national tour in which she campaigned for woman suffrage.

Jan Seidler Ramirez

Bonanno, [Giuseppe] **Joe** (*b* Castellammare del Golfo, Sicily, 18 Jan 1905; *d* Tucson, Ariz., 12 May 2002). Mafia chieftain. Bonanno is said to be one of the models for the character Vito Corleone in Mario Puzo's novel *The Godfather.* He was the boss of one of New York City's five original Mafia families; and despite gangland wars, being kidnapped during a power struggle, and decades of prosecution by local and federal officials, he survived to die of natural causes at the age of 97 in 2002. Because he was the reputed leader of a powerful criminal enterprise, investigators in earlier years trailed him 24 hours a day, searched his home, and went through his trash, but he was never convicted of anything more serious that obstructing justice. He disappeared from public view for more than a year during the mid-1960s, an apparent kidnapping, during a power struggle within the Bonanno family, which the media called the Bananas War. He was often referred to as Joe Bananas, a nickname he despised. He wrote an autobiography, *A Man of Honor,* and was the subject of a cable television movie, *Bonanno: A Godfather's Story.*

Frank Dyer

Boni and Liveright. Firm of book publishers founded by Horace Liveright and Albert Boni in 1917. The two met in an advertising agency, where Liveright pooled his father-in-law's fortune (amassed as vice president of International Paper Company) with Boni's joint publishing experience with his brother, Charles. The new venture attracted many eager young and radical writers (e.g., Rudyard Kipling, Robert Louis Stevenson, H. G. Wells, and Friedrich Nietzsche) who could not persuade larger and more conservative firms to publish their works. Their objective was to publish modern classics under the banner of the Modern Library. The partners split up in 1918, when they could not agree on the direction of the firm, and Liveright took control after betting the firm on a coin toss. Boni left for the USSR, where he was imprisoned as a spy, and returned in 1920 to resume publishing with his brother. Liveright started to sell increasingly edgier material and came under fire from conservatives like the Society for the Suppression of Vice. In 1924 Liveright began using profits from the firm to fund theatrical productions, many of which failed, forcing him to sell the Modern Library to the vice president, Bennett Cerf, who changed the name of the firm to Random House. Meanwhile, Horace Liveright became perhaps the only book publisher whose life became the subject of a Hollywood film, *The Scoundrel,* starring Noel Coward.

Gilmer Walker, *Horace Liveright: Publisher of the Twenties* (New York: D. Lewis, 1970)

James E. Mooney

Bonwit Teller. High-end women's apparel store founded in 1897 by Paul J. Bonwit and Edmund B. Teller. Initially located at Sixth Avenue and 23rd Street, the flagship store moved first to Fifth Avenue and 38th Street in 1911 and finally to Fifth Avenue and 56th Street in 1930. The store became an internationally renowned chain with locations in Paris, Philadelphia, and London, selling everything from custom-made clothing to high-end American designs including those by New York designer Nettie Rosenstein. In 1934 the company was sold to the Atlas Corporation in what was to be the first of several transitions in ownership. In 1946 the Hoving Corporation bought the store, followed by Genesco in 1956, Allied Stores Corporation in 1979, and L. J. Hooker in 1979. Bonwit Teller closed permanently in May 1990 to make way for Trump Tower.

Sarah Brafman

book publishing. New York City has the largest concentration of publishers and book-related enterprises in the United States. Books were first produced in the city by William Bradford, a printer trained in London. After 1752 Hugh Gaine printed almanacs, books for children, and classics in addition to a newspaper. James Rivington published poetry and sermons from 1773, imported music and law books, and was one of the earliest publishers to "pirate" British editions of popular works (international copyright law did not exist until 1891). Thomas Swords and James Swords (1785) produced literary works, college and religious texts, and children's books. During the early nineteenth century New York City surpassed Boston and Philadelphia as the country's most important publishing center. John Wiley (1807, later John Wiley and Sons) initially issued literary works and later became a major publisher of technical, scientific, college, professional, and medical books. Harper and Brothers (1817) bought stereotype plate-making machinery, roller presses for high-speed mass production, and a steam press; it was among the first to use electrotyping in producing illustrations. The American Bible Society (1816) aimed to circulate the Bible without doctrinal note or commentary: it eventually published or sold most English-language editions of the Bible and distributed editions in many languages worldwide.

Initially most publishers offered broad lists. The firm of D. Appleton, formed in 1831 by Daniel Appleton, published religious books, children's books, travel books, science books such as Darwin's *The Origin of Species*, and Spanish-language materials. Dodd, Mead (1839) was known for serious religious and general books but also the *Elsie Dinsmore* series for girls and the Red Badge detective mystery series. George Palmer Putnam, a former partner of Wiley, in 1848 launched the firm that later became G. P. Putnam's Sons; he opposed piracy and sought to extend international copyright laws. Charles Scribner opened a firm in 1846 that published religious books, secondary school textbooks, and imported books; it was renamed Charles Scribner's Sons in 1871. The city's first important specialized publisher was David Van Nostrand, who from 1848 published and imported works of military history, science, and technology. Picture books and storybooks for children were offered at low prices from the late 1840s, notably by the firm of John McLoughlin, Jr., from 1858 McLoughlin Brothers. In 1866 Frederick W. Leypoldt and Henry Holt opened a firm specializing in foreign-language books and translations, including German pocket-sized paperbacks known as Tauchnitz Editions. After the partnership dissolved in 1872, Leypoldt and Richard Rogers Bowker launched *Publishers Weekly;* their firm took the name R. R. Bowker and became known for directories, bibliographies, and reference works. E. P. Dutton (1858) moved to New York City in 1869 and specialized in religious books. The British firm of Macmillan, eager to exploit new markets and combat piracy, opened a branch in the city under George Edward Brett that became an important general publisher in its own right. Leypoldt's and Holt's firm evolved into Henry Holt and Company in 1873.

The first two university presses in the city were established at the turn of the century:

Columbia University Press (1893) and the American branch of Oxford University Press (1896). Grosset and Dunlap was formed in 1898 by Alexander Grosset and George Dunlap and became the leading publisher of inexpensive hardcover reprints and popular children's books. During the same year the *New York Times Book Review* was launched as the first publication of its kind in the city. In 1897 Doubleday was formed, originally as a partnership between Frank Nelson Doubleday and the magazine publisher J. S. McClure, as the Doubleday and McClure Company; in 1900 Walter Hines Page replaced McClure, and the firm became Doubleday, Page and Company. George H. Doran began his distinguished literary imprint in 1908, and in the same year Yale University Press (now of New Haven, Connecticut) opened at an office in Manhattan; New York University Press followed in 1916. The demand for technical books increased: McGraw–Hill (1917) became one of the largest publishers of college textbooks, business magazines, and economics, engineering, and professional books; and Prentice Hall, formed in 1913 by R. P. Ettinger and Charles Gerstenfeld, published business books, financial information services, and some trade titles. By 1915 Alfred A. Knopf left Doubleday to form a company with his wife, Blanche, which in the following decades stressed quality in its offerings. The firm introduced foreign writers to the United States and set new standards in typography and book design. Among the scores of writers whom it attracted were Dashiell Hammett, H. L. Mencken, John Hersey, Thomas Mann, and John Updike.

After World War I Horace Liveright and Albert Boni in 1917 founded Boni and Liveright and began publishing the Modern Library of reprinted classics, providing funds for more controversial new literature. In 1918 Liveright bought out Boni's share of the company. The firm remained known as Boni and Liveright until 1928, afterward continuing as Horace Liveright and Company, and it became a groundbreaking publisher in the literary renaissance of the 1920s. Alfred Harcourt and Donald Brace, both previously with Holt, established Harcourt, Brace in 1919. In 1921 George Delacorte founded the Delacorte Press. At this firm, and at its descendant Dell Books, Helen Meyer exerted a strong influence on the trade from the 1920s to the 1950s. In the nonfiction and college fields the firm of W. W. Norton (1923) announced as its motto "Books That Live." It maintained an unusually large, selective backlist, later including many trade paperbacks. Book reviewing was increasingly important: in 1924, competing with the *New York Times Book Review, New York Herald Tribune Books* began publication, as did the *Saturday Review of Literature,* an outgrowth of a weekly review section in the *New York Post.* During the same year Simon and Schuster was formed by Richard L. Simon and M. Lincoln Schuster, who enlivened book publishing and advertising. The firm was scorned by its more traditional competitors but consistently had best sellers; some of its most successful ideas were provided by Leon Shimkin, the financial adviser and later owner. In 1925 Bennett A. Cerf, an editor for Liveright, and Donald S. Klopfer took over the Modern Library. They adopted the corporate name Random House in 1927 and earned early fame for issuing James Joyce's *Ulysses.* Another former editor at Liveright, Saxe Commins, brought luster to the firm as the editor of Eugene O'Neill and William Faulkner.

A number of publishing ventures begun in the mid-1920s became successful. William Morrow began operations in 1926, following Viking Press, which had formed the previous year under Harold K. Guinzburg and George S. Oppenheim. Viking soon acquired the firm of Ben W. Huebsch, an editor with a distinguished list of American and foreign writers, and became known for literary excellence, distinctive design, and children's books. The firm of John Day was formed by Richard Walsh and later specialized in books about Asia under the direction of Pearl S. Buck. Vanguard Press, led by James Henle, issued politically progressive, well-designed books at low cost (it ceased operations in the 1960s). The year 1926 also saw the acquisition of the Literary Guild from Guinzburg by Doubleday, Page and the launching of the Book-of-the-Month Club by Harry Scherman.

Doubleday merged with Doran in 1927 to form Doubleday, Doran, known after 1946 as Doubleday and Company. About this time a number of publishers began producing fine books for collectors. The longest-lived effort was that of George Macy, whose Limited Editions Club (1929) attracted some of the leading designers and illustrators. Many publishers flourished during the 1930s despite the Depression. Farrar and Rinehart, founded in 1929 by the editors John Farrar, Stanley Rinehart, and Frederick Rinehart, became highly successful. Under Cass Canfield from 1931 Harper and Brothers published such well-known writers as J. B. Priestley, J. B. S. Haldane, Robert E. Sherwood, and Jacques Cousteau. The city's first specialized publisher of art books was Studio Books, which moved from London in 1932 and set high standards in art printing (it later became known as Viking Studio). Crown Publishers (1936) grew out of Outlet Books, a remainder bookselling company bought by Nat Wartels and Robert Simon in 1934. New Directions Press, formed in 1936 by James Loughlin to publish avant-garde works, became known for its list of modern prose and poetry, including William Carlos Williams, Ezra Pound, and E. E. Cummings. In 1932 paperback production in pocket-sized (later "rack-size") format began with the release of the first 10 Pocket Book titles by Robert De Graff. The nonprofit Armed Services Editions, given to thousands of enlisted personnel during World War II, helped to create a prospective audience for cheap paperbacks. Mass circulation of inexpensive books became possible by linking the popular paperbacks with the nation's wholesale magazine distributors. Early competitors included Avon Books (1941), of the Hearst Corporation; George Delacorte's Dell Books (1942); and Popular Library (1942). Dover Publications, formed by Hayward Cirker in 1941, issued facsimiles and reprints of out-of-print titles in a variety of sizes and sold them cheaply in stores and through the mail. Ian Ballantine left Penguin to help form Bantam Books in 1945. Competition intensified among paperback publishers, who vied for display space, aided by eye-catching cover designs.

Publishers explored new avenues during the 1940s and 1950s. In 1942 Simon and Schuster introduced a line of children's storybooks called Golden Books, produced by leading writers and artists under the direction of Albert Rice Leventhal and sold for 25 cents each. German wartime and postwar émigré publishers appeared in New York City: Helen and Kurt Wolff founded Pantheon Books in 1942; Salman Schocken established Schocken Books in 1946, issuing books of Jewish and general interest. Farrar left Farrar and Rinehart in 1944 and in 1946 joined Roger Straus to form Farrar, Straus (later Farrar, Straus and Giroux), which became well regarded for the works of T. S. Eliot and Edmund Wilson; Rinehart later was absorbed by Holt. In 1947 Victor Weybright and Kurt Enoch, editors at Penguin, launched the New American Library, applying mass-market manufacturing techniques to serious nonfiction, sold largely through college and major general bookstores. Cambridge University Press opened an office in the city in 1949. Advances in color lithography and offset printing in the 1950s changed the appearance of books. New technology in color separation and multicolored printing, which allowed for spectacular fine arts reproductions, were exploited by Harry N. Abrams, who established a firm under his own name in 1950 (and later the Abbeville Press, 1977). Art publishers and such specialized photography publishers as Aperture (1952) applied refined techniques of reproducing black-and-white photographs. A bold direction in literature was taken by Barnet Rosset, who in 1951 acquired Grove Press and published work by unknown writers (much of it in translation) and writers associated with the beat movement; he also successfully defended himself against censorship in publishing D. H. Lawrence's *Lady Chatterley's Lover* and Henry Miller's *Tropic of Cancer.* In 1952 Macmillan of London set up a branch known as St. Martin's Press, and Ian Ballantine formed Ballantine Books,

publishing original and reprint paperbacks and some titles in simultaneous hardcover and paperback editions.

In the early 1950s Jason Epstein developed the idea of high-quality paperback editions of literary and scholarly works to be sold in general and college bookstores. At Doubleday he successfully initiated the first titles in the Anchor Books line in 1953. "Quality paperbacks" (later known as trade paperbacks) were soon produced by other publishers such as Knopf, which added the paperback division Vintage Books in 1954 and later engaged Epstein to expand it. In 1955 William Jovanovich gained control of Harcourt, Brace. In 1957 Alfred A. (Pat) Knopf, Jr., left his father's firm, joining Simon Michael Bessie, who left Harper, and Hiram Haydn, who left Random House, to form Atheneum Publishers. It built a respected list and in 1961 added a children's book department. Knopf assumed control after Bessie and Haydn left in 1963. Harper and Brothers introduced Harper Torchbooks and took the name Harper and Row after buying the textbook publisher Row, Peterson. The publishers of *Time* set up Time–Life Books in 1959: its heavily illustrated series on world cultural history and the sciences sold in large quantities, primarily through the mail. Doubleday developed a line of religious books, and Yeshiva University Press was begun in 1960 to publish books of religious scholarship.

The 1960s saw a rash of mergers, takeovers, and reorganizations among many of the city's publishers. In 1960 Harcourt, Brace bought the World Book Company and became Harcourt, Brace and World (in 1970 the name changed to Harcourt Brace Jovanovich). The Columbia Broadcasting System (CBS) bought Holt, Rinehart and Winston, and Knopf became an autonomous division of Random House, retaining its identity during later acquisitions. The encyclopedia publisher Crowell–Collier took control of the Macmillan Company from George P. Brett and other stockholders in 1961. Time–Life Books bought the Book-of-the-Month Club in 1966 and the firm of Little, Brown (Boston) in 1968. In the same year R. R. Bowker sold itself to the Xerox Corporation. Holt sold its educational line to Harcourt Brace Jovanovich and its trade list to the German firm Verlagsgruppe Georg van Holtzbrinck, which retained the name Henry Holt. D. Van Nostrand, bought by Litton Industries during the same year, became Van Nostrand Reinhold after another acquisition and was later bought by International Thomson Publishing. McGraw–Hill was strengthened during the 1960s and 1970s by Curtis Benjamin, who found markets for exports, and by Harold W. McGraw, Jr., who worked to improve relations with the retail book trade.

Mergers continued to reshape publishing in the 1970s and 1980s. Warner Publishing (1972), which merged the film and communications divisions of Warner, became a force in the mass-market book trade. Led by Thomas J. MacCormick from 1972, St. Martin's Press expanded its programs in publishing original and imported titles. After buying Jove Publications (from Harcourt Brace Jovanovich), the Berkley Publishing Corporation, and Coward McCann, G. P. Putnam's Sons was itself bought in 1975 by MCA, an entertainment and media conglomerate, to form the Putnam Berkley Group, later led by Phyllis Grann. It acquired Grosset and Dunlap in 1982. The highly regarded Simon and Schuster, led by Richard Snyder, was bought in 1975 by Gulf and Western Industries (later Paramount Communications). In the same year Viking Press merged with the American subsidiary of Penguin to form Viking Penguin. Doubleday acquired the Dell Publishing Company in 1976. In 1977 the German publishing conglomerate Bertelsmann bought Bantam. Harper and Row acquired Thomas Y. Crowell (1977) and J. B. Lippincott of Philadelphia (1978), and Atheneum became a subsidiary of Scribner's (1979). After William Morrow's death his firm continued under Thayer Hobson, sustaining its reputation as a publisher of children's books and good commercial fiction. It was bought in 1981 by the Hearst Corporation (which already owned Avon Books) but continued to operate independently. The merger by Werner Mark Linz in 1980 of several firms including Crossroads, Herder and Herder, and Frederick Ungar resulted in the Crossroad/Continuum Publishing Group, publishers of scholarly and general religious works.

By the 1990s scores of publishers were owned by about 12 conglomerates. In 1980 Advance Publications, owned by S. I. Newhouse and Donald Newhouse, took over Random House, including Knopf, Pantheon, and the trade paperback line Vintage. The Newhouses also acquired Times Books (1984), Schocken Books (1988), and Crown Publishers (1988) with its affiliates, notably Clarkson N. Potter. Prentice Hall in 1984 became a division of Simon and Schuster (under Paramount) and was reorganized into departments devoted to trade, educational, professional, and electronic publishing. The British firm of Reed Holdings bought R. R. Bowker from Xerox in 1985, later placing the Bowker magazines under its subsidiary Cahners, in New York City; Bowker became a division of Reed Reference (New Providence, New Jersey). In 1986 Bertelsmann bought Doubleday (which had previously acquired Dell) and formed the Bantam Doubleday Dell Publishing Group in 1988. In the same year Viking Penguin bought E. P. Dutton and New American Library, which became operations of the parent company, Penguin USA. Warner Communications and Time Inc. merged in 1990 to form Time Warner, and the newspaper magnate Rupert Murdoch bought Harper and Row and merged it with William Collins to form HarperCollins. Harcourt Brace Jovanovich, after several acquisitions, was known in 2010 as Houghton Mifflin Harcourt. The firm of Crowell Collier Macmillan was taken over in 1988 by the British entrepreneur Robert Maxwell and became part of a conglomerate that in 1992 owned the Macmillan Publishing Company, Charles Scribner's Sons, Atheneum Publishers, Audel Technical Books, and Schirmer music books. In the breakup of Maxwell's properties that followed his death, Macmillan school books went to McGraw–Hill in 1993, and in 1994 Paramount Communications bought the rest of Macmillan. Also in 1994 Paramount was bought by Viacom, a multimedia conglomerate. As publishing mergers continued into the twenty-first century, the largest English language publishers, Simon and Schuster, Random House, Penguin Group, and HarperCollins, maintained headquarters in New York.

Chandler B. Grannis, Martha W. Grannis

Book Row. Area of secondhand bookstores concentrated from the late nineteenth century in seven blocks along Fourth Avenue between Union Square and Astor Place. It contained about a dozen stores during the 1920s and 1930s and about 25 in the years after World War II, among them the Arcadia Bookshop, Biblo and Tannen, the Fourth Avenue Bookstore, the Green Bookshop, the Pageant Bookshop, the Raven Bookshop, Stammer's Bookstore, the Strand Book Store, and the Samuel Weiser Bookstore. As rents increased and buildings were demolished during the mid-1950s, a number of the shops moved nearby to Broadway. The secondhand book business declined, and early in the twenty-first century only a few bookshops remained in the area.

Marvin Mondlin and Roy Meador, *Book Row America: An Anecdotal and Pictorial History of the Fourth Avenue Antiquarian Book Trade* (New York: Carroll and Graf, 2004)

Allen J. Share

booksellers. The city's colonial bookstores functioned as post offices and listening posts; many booksellers engaged in printing as well. The first bookshop in New York City was opened in 1693 by William Bradford, the colony's official printer. Catherine Zenger opened the second bookshop in 1742, specializing in pamphlets and stationery. Her husband, John Peter Zenger, had been one of Bradford's apprentices in 1694; apprenticeships continued to lead to new establishments throughout the colonial period. The growth of the fiction market after the American Revolution led to a growth in the number of bookshops. By 1802 booksellers and publishers held their first literary fair; half a million books were sold in five days. The first secondhand bookshop in the city was that of Samuel Wood on Pearl Street in 1804. Charles Wiley

opened a shop in 1807 at 6 Reade Street and moved in the 1820s to 3 Wall Street, a newly developing booksellers' neighborhood; his back room became known as the Den, a meeting place for such intellectuals as William Cullen Bryant, James Fenimore Cooper, Fitz-Greene Halleck, and Samuel F. B. Morse (see John Wiley and Sons). George Palmer Putnam worked for Wiley and later founded his own bookshop and publishing house. Daniel Appleton began selling books in his shop on Exchange Place in 1825 and became a publisher in 1831: his shop was the most popular in New York City until it closed in 1881. Isaac Baker and Charles Scribner opened a bookshop in 1846 on Nassau Street and a publishing firm during the 1850s. After the Astor Library opened on Lafayette Street, fashionable bookstores moved during the 1850s to Astor Place and secondhand dealers moved from Nassau Street to Fourth Avenue, which between Astor Place and 14th Street became known as "booksellers' row."

August Brentano, an Austrian immigrant, had a newsstand on lower Broadway specializing in foreign and hard-to-find materials in 1853. During the 1870s Brentano's Literary Emporium on Union Square was a meeting place for Henry Ward Beecher, Edwin Booth, and Artemus Ward. Booksellers became more specialized during the 1880s as department stores began to sell discounted books as "loss leaders." By the turn of the twentieth century several fashionable booksellers had moved near Madison Square, including those of Brentano, Putnam, Scribner, and E. P. Dutton.

Shops established in the early twentieth century included Womrath's (1902), the first in a network of bookshops that operated rental libraries; Doubleday and Page (Pennsylvania Station, 1910); and Barnes and Noble (105 Fifth Avenue, 1917). Smaller shops specialized in books on women (Woman's Book-Shop, Lexington Avenue and 52nd Street, 1916), modern literature (Gotham Book Mart, 128 West 45th Street, 1920), the theater (Drama Bookstore, 723 Seventh Avenue, 1923), used and rare books (Argosy Book Store, 116 East 59th Street, 1924; the Strand, 828 Broadway, 1928), the occult (Samuel Weiser, 132 East 24th Street, 1926), black and African subjects (Lewis H. Michaux's National Memorial African Bookstore, 125th Street, 1930–74; University Place Bookshop, 821 Broadway, 1932), and beat poetry (Elias Wilentz's Eighth Street Bookstore, 1947–79).

Chains like Barnes and Noble, Doubleday, B. Dalton, and Waldenbooks proliferated during the late twentieth century. By the 1990s few booksellers remained on Fourth Avenue; Barnes and Noble acquired Doubleday and B. Dalton and opened megastores across the city. Small bookshops were rare by the early twenty-first century, with venerable stores like Gotham Book Mart and Coliseum Books closing in 2007. Some independent booksellers managed to survive, including the Strand, 192 Books (192 10th Avenue, 2003), and Shakespeare and Company, with locations in Manhattan and Brooklyn. Used and new books were also increasingly sold by sidewalk vendors in Harlem, Morningside Heights, and Greenwich Village.

Booth, Edwin (Thomas) (*b* Bel Air, Md., 13 Nov 1833; *d* New York City, 7 June 1893). Actor. The son of the actor Junius Brutus Booth (1796–1852), he spent much of his career in New York City. His first major appearance in the city was at Burton's Theatre in May 1857. During 1864–65 he set a record by giving 100 performances as Hamlet, arguably his greatest role. On 25 November 1864 he appeared in *Julius Caesar* at the Winter Garden in his only performance with his brothers John Wilkes Booth (1839–65), better known as the assassin of Abraham Lincoln, and Junius Brutus Booth, Jr. (1821–83). He also excelled as Sir Giles Overreach in Philip Massinger's *A New Way to Pay Old Debts* (1625), and as Betruccio in Tom Taylor's *The Fool's Revenge* (1859). He managed, successively, the Winter Garden (1864–67) and Booth's Theatre (1869–74), at the southeast corner of Sixth Avenue and 23rd Street. In 1888 he donated his home at 16 Gramercy Park South to the Players Club, then newly established, while retaining an apartment where he remained until the end of his life. He gave his last performance, as Hamlet, at the Brooklyn Academy of Music in 1891. A statue of Booth erected in 1918 in Gramercy Park stands opposite the Players.

Don B. Wilmeth

Booth Memorial Hospital and Medical Center. Nonprofit general-care hospital in Flushing, Queens, opened in 1957 by the Salvation Army. It began as a rescue home for women, opened in 1892 by the Salvation Army, which offered shelter and medical care to all comers, especially mothers and women addicted to alcohol and drugs. After moving to several sites on the East Side it was given more permanent quarters on East 15th Street, and in 1914 the name was changed to Booth Memorial Hospital. In 1918 the facility was licensed as a general hospital. In 1957 the hospital moved to Flushing, where it had 210 beds and provided general and maternity care. It eventually expanded to 487 beds, treated more than 150,000 patients annually, and became an important teaching hospital affiliated with the New York University School of Medicine. In 1992 it changed its name to New York Hospital Queens.

Borden. Firm of food processors, the descendant of a dairy business formed in 1856 by Gail Borden, who operated a milk depot on Canal Street and a factory in Wollcottsville, Connecticut. The business sold sanitary, condensed milk produced with a patented vacuum evaporation method. It failed twice, owing to a wariness on the part of New Yorkers toward milk that was not fresh from the dairy, bad economic times, and a lack of financial backing. In 1858 Borden met Jeremiah Milbank, a wholesale grocer on Front Street who provided adequate capital. Renamed the New York Condensed Milk Company, the business was helped by *Frank Leslie's Illustrated Newspaper*, which exposed the filthy conditions at other dairies in New York City and suggested that they were responsible for the city's high infant mortality rate. Demand soared after Borden took out an advertisement in Leslie's newspaper in May 1858 vaunting his product's "purity, durability, and economy." Delivery routes were established between lower Manhattan and 51st Street, with additional offices at 53 South Street and in Brooklyn at Fulton and Front streets. With the onset of the Civil War, Borden supplied canned milk to soldiers, who were often too far from a dairy to get fresh milk. Soldiers who returned home told of the miraculous product from New York City, pushing production yet higher. In 1861 the factory moved from Connecticut to Wassaic, New York, 55 miles (90 kilometers) north of Manhattan, to which the milk was transported by train. Borden bought from local farmers virtually all the milk they could provide, freeing them from the task of finding retail customers and from the risk of losing excess supplies to spoilage. In return the firm required that farmers follow strict sanitary guidelines.

The firm continued to expand after the Civil War, and its success helped to create the modern dairy industry. Incorporated in 1899 as the Borden Condensed Milk Company, it remained in the dairy business almost exclusively during the first quarter of the twentieth century, buying other dairies and ice cream companies. In 1928 massive diversification began, with entities purchased in Europe and Canada, and in 1932 the firm introduced Elmer's Glue-All, which eventually became the largest-selling household glue in the United States. During World War II the firm supplied dairy products to America's armed forces and also manufactured synthetic adhesives for military purposes. It expanded into plastics and chemicals in the 1950s and into rubber in the 1960s, when sales reached $1 billion. In the 1980s Borden further expanded its food business. By 1994, when the firm was bought out by Kohlberg, Kravis, Roberts and Company

(a food conglomerate with holdings that included RJR Nabisco), it had moved its corporate headquarters to Columbus, Ohio, and shut down its factories in New York City.

Thomas M. Hilbink

Boricua College. A private, nonprofit college opened in 1974. The main campus is at 3755 Broadway at Audubon Terrace in Manhattan (the former site of the American Geographical Society), and there are also campuses at 186 North Sixth Street and 9 Graham Avenue in Brooklyn. The students live off campus and the curriculum is oriented toward the interests of Puerto Ricans and other Latin Americans. The college was the first in the United States to offer bilingual education in Spanish and English. Although all courses are taught in English, the faculty are required to be bilingual in English and Spanish to help the students. Fully accredited in 1980, Boricua offers associate and bachelor's degrees in liberal arts, elementary education, business administration, human services, and inter-American studies. In the early twenty-first century enrollment was about 1200 students.

Marc Ferris, Rachel Shor

Borough of Manhattan Community College. College of the City University of New York, opened in 1964. It began as a small business-oriented community college with an additional liberal arts focus, allowing students to transfer to four-year colleges. Since 1983 it has been located at 199 Chambers Street and occupies four blocks between Chambers and North Moore streets. Students can also take classes uptown at Inwood/Washington Heights and in Harlem. The school offers associate degrees in more than 20 fields and in the early twenty-first century had an enrollment of 17,000 students, making it the largest of the City University of New York colleges and the only community college in Manhattan.

Stephanie Miller

Borough Park. Neighborhood in southwestern Brooklyn (2009 est. pop. 110,000), lying within New Utrecht southeast of Green-Wood Cemetery and covering 200 blocks bounded to the north by 37th Street, to the east by McDonald Avenue, to the south by 64th Street, and to the west by Eighth Avenue. Often called Boro Park, the area was the site of commercial nurseries in the early nineteenth century and was developed in the 1880s as Blythebourne by Electus B. Litchfield. Initially the residents were comfortably middle class. Jews from Williamsburg arrived by the 1920s and Italians from the Lower East Side of Manhattan in the 1930s. During the 1960s many Reformed Jewish residents moved to the suburbs; they were replaced by Orthodox Jews from Williamsburg and Crown Heights. The population continued to grow as Hasidic Jews moved to the neighborhood from other parts of Brooklyn, Israel, central Europe, and Russia and as the birth rate rose (bringing the average number of children in a family to seven). Among the organizations that were formed were the Council of Jewish Organizations, a consortium of 170 educational, religious, and service institutions; and the Jewish Youth Library, offering education in the Orthodox tradition. By 2009 Orthodox or Hasidic Jews accounted for about 80 percent of the population; there were about 200 temples, 50 yeshivas (including those in the Bais Yakov school system, which enrolled more than 20,000 students), and more than 20 Hasidic sects, including the Belz(er), the Bobov, the Ger, the Satmar, and the Spinka. Many residents work in Manhattan or in northern Brooklyn, often riding to work on the buses of locally organized lines. An important local event is the celebration of Purim every spring, which draws crowds from throughout the metropolitan area. Borough Park has many immigrants from Israel and the Soviet Union, and to a lesser extent from India, Romania, Poland, Guyana, and Italy. The neighborhood is densely populated and mostly residential; the housing consists mostly of one- and two-family houses. There are few parks. In the early twenty-first century it was considered the "baby boom capital" of New York City because of its high birth rate.

John J. Gallagher

borough presidents. The offices of borough president were established by charter in 1898 to preserve "local pride and affection for the old municipalities" after consolidation. When the charter was revised in 1901 the five borough presidents became members of the Board of Estimate and gained administrative power over the physical development of the city. Their influence on the board was enhanced by an agreement to vote as a bloc on certain local issues, and they often helped to resolve conflicts between neighborhoods and City Hall. Charters written after 1901 tended to centralize financial functions (such as assessment) and services (such as building inspection), thus reducing the borough presidents' authority. This movement culminated in the outright elimination of the Board of Estimate in 1990. Although the borough presidents lost many powers they gained new ones, including the authority to appoint the members of community boards, the Board of Education, and the City Planning Commission. The borough presidents serve four-year terms that are coterminous with those of the mayor. Although the borough presidency does not usually lead to higher office, Robert F. Wagner (ii) and David N. Dinkins did proceed from the office of borough president of Manhattan to that of mayor.

boroughs. The five administrative divisions of New York City, created by consolidation in 1898. Each borough elects a borough president and is coextensive with one county: Manhattan with New York County, the Bronx with Bronx County, Brooklyn with Kings County, Queens with Queens County, and Staten Island with Richmond County.

Boston Post Road. One of the earliest major thoroughfares in New York City, also known as the King's Highway and the Great Road. The road followed the course of an American Indian trail that existed before the time of European settlement. During the colonial period it was the main overland link between Boston and New York City, and at the behest of King Charles II in 1673 it became the first official post road in North America. The road originated near the Battery at the southern tip of Manhattan, headed north along what is now the Bowery to Union Square, then roughly followed the present Park Avenue. It continued north through Harlem, crossed over to the mainland at Kingsbridge (near the present Broadway and 228th Street), and cut diagonally from southwest to northeast through the Bronx. Regularly improved to facilitate efficient travel and postal service, it promoted the growth of several roadside towns in New York, Connecticut, and Massachusetts. As postmaster general of the colonies, Benjamin Franklin installed milestones along the road, some of which still exist in the twenty-first century. During the American Revolution the road was used by retreating American soldiers after their defeat in the various battles around New York City. In 1789 the road was chosen for President George Washington's inaugural tour of New England. It continued to carry post riders until the advent of the railroad in the 1840s. Although the Boston Post Road eventually became engulfed by the growing metropolis, vestiges remain in the form of the Bowery in Manhattan, Boston Road in the Bronx, and U.S. Highway 1 in New England.

Robert Sanger Steel

botanical gardens. The Elgin Botanic Garden in New York City was established in 1801 by David Hosack, a professor of botany and materia medica at Columbia College, to provide plant materials for study by medical students. The first public botanical garden in the United States, it covered 20 acres (8 hectares) of land then considered remote from the center of the city and later occupied by Rockefeller Center. Hosack's own finances were insufficient to continue maintaining the garden, and in 1810 he sold it at a loss to the state; the land was granted in 1814 to Columbia College and was held by Columbia University until 1985. John Torrey (1796–1873), a pupil of Hosack, in 1817 published a catalogue of plants growing within 30 miles (48 kilometers) of the city; his work established the approach to fieldwork that distinguished botanists in New York City during the nineteenth century. In 1856 Torrey became a trustee of Columbia, where he was given a house in exchange for opening his library and herbarium to the university. By 1867 he had formed the Torrey Botanical Club, which in 1870 began publishing the first American periodical on botany, the *Bulletin of the Torrey Botanical Club.*

Members of the club, notably Nathaniel Lord Britton (1859–1934), a professor of botany at Columbia, and his wife, Elizabeth Knight Britton (1858–1934), an expert on lichens, campaigned for the establishment of a major American botanical garden, and on 28 April 1891 the New York Botanical Garden was created by an act of the state legislature. The site chosen was at the northern end of Bronx Park along East Fordham Road, and it was designed by a committee that included Calvert Vaux and Calvert Parsons, Jr. Some earlier structures from the Lorillard estate were retained, including a stone snuff mill, built on the present site in 1840. The city would not aid the establishment of the garden before sufficient funds were raised from private sources: this was accomplished through the philanthropy of such businessmen as Cornelius Vanderbilt, Andrew Carnegie, and J. P. Morgan, all of whom later served on the board of managers. In 1896 Nathaniel Britton became the first director of the garden; he began a program of scientific publication and initiated a research program in plant exploration and field collection that emphasized systematic botany and taxonomy. He consolidated the libraries and herbaria of Hosack and Torrey to form the research collections of the New York Botanical Garden, and in 1900 he organized public lectures, the beginning of an education program that came to include botanical and horticultural education at all levels, from children's gardening classes to advanced degree programs. Tropical and economic plants were first housed indoors at the garden in 1902 in a conservatory modeled after the Palm House at the Royal Botanic Gardens in Kew, England, and built of glass and iron by Lord and Burnham. A rose garden designed by the noted landscape gardener Beatrix Farrand was begun in 1916 and became an important specialty garden. T. H. Everett by 1932 established a formal program for the training of gardeners, which was continued by the School of Horticulture. The rock garden was initially designed in 1934 by Everett. The Institute for Economic Botany was set up in 1981 to apply botanical science to ecological problems, as was the Institute for Ecosystems Studies (now a separate institution based in Millbrook, New York). In May 2006 the Pfizer Plant Research Laboratory opened: a $23 million, 28,000-square-foot (2601-square-meter) facility designed by Polshek Partnership Architects. The garden's one million curated plants grow on 250 acres (101 hectares).

The Brooklyn Botanic Garden, originally part of the Brooklyn Institute of Arts and Sciences, was built in 1910 next to the Brooklyn Museum along Washington and Flatbush avenues, on rough meadowland previously used by the parks department as an ash dump. Under its first director, C. Stuart Gager (1872–1943), the garden became known for its emphasis on plant physiology and genetics and for its efforts in public education: the world's first children's gardening program was established there in 1914. Gager oversaw the making of a Japanese hill-and-pond garden that incorporated four styles (designed by Takeo Shiota in 1915), the Cranford Memorial Rose Garden (opened in June 1927), and the grove collection of flowering Japanese cherry trees. A popular series of handbooks began publication in 1945. The Steinhardt Conservatory (completed in 1988) was designed by Davis, Brooks and Associates to house the Trail of Evolution and several habitat groups, as well as the bonsai collections begun in 1925. The garden spans 52 acres (21 hectares) and receives 700,000 visitors annually. In 2003 the garden partnered with the Prospect Park

Alliance and the city to open the Brooklyn Academy of Science and the Environment, a public high school adjacent to the garden and park.

The Queens Botanical Garden was initially a horticultural display called Gardens on Parade, built on 5 acres (2 hectares) on a reclaimed ash dump for the World's Fair of 1939–40. It was enlarged in 1941 to 26 acres (11 hectares) and managed by the Queens Botanical Garden Society as a public garden. When this land was needed for the World's Fair of 1964–65, the garden was moved to a site adjoining Flushing Meadow Park. Its specialty gardens include a rose garden, a bird garden, and a Victorian wedding garden. In 2001 the garden launched the Sustainable Landscapes and Buildings Project, a $24 million capital plan, and in 2007 it opened the visitor and administration center, an award-winning green building designed by Joan Krevlin of BKSK Architects.

The Staten Island Arboretum (now the Staten Island Botanical Garden) was founded in 1960 and moved to Snug Harbor Cultural Center in 1977. Designed to match its setting, a community established in 1831 along Richmond Terrace for retired sailors, it lies on 80 acres (32 hectares) and includes Victorian plantings, a perennial border, a butterfly garden, and special collections of Siberian iris, orchids, and rhododendrons. It boasts the first Chinese Scholar's Garden in the country, which opened in 1999 and was designed and built by the Landscape Architecture Corporation of China in Suzhou.

See also Horticulture.

Bernadette G. Callery

Boucicault, Dion (*b* Dublin, 26 Dec 1820; *d* New York City, 18 Sept 1890). Actor and playwright. After achieving success in London he arrived in New York City in 1853 and found work writing and acting for Lester Wallack and Laura Keene, each of whom owned theaters bearing their name. He made his local acting debut on 10 November 1854, and on 8 December 1857, at the Wallack Theatre, he produced his first play, *The Poor of New York,* which was immediately successful. Known for melodrama, comedy, and sensational special effects, his later works were also popular, among them *The Octoroon* (1857) and *The Colleen Bawn* (1860), which was enthusiastically received by Irish audiences in the city. *The Shaughraun* (1874) ran four months at Wallack's theater. Boucicault produced 33 plays in New York City. He is buried in Mount Hope Cemetery in the Bronx.

Marion R. Casey

Boudin, Leonard (B.) (*b* Brooklyn, 20 July 1912; *d* New York City, 24 Nov 1989). Lawyer. He graduated from St. John's Law School in 1936 and practiced labor law before forming a partnership in the late 1940s with Victor Rabinowitz. In 1958 he won the case of *Kent v. Dulles*, in which the U.S. Supreme Court ruled that the U.S. Department of State could not refuse to issue passports for political reasons. During the 1960s he represented several clients in cases related to the Vietnam War, among them Julian Bond, a young state legislator from Georgia denied his seat for opposing the war, Benjamin Spock, who with others was charged with conspiracy to violate the Selective Service Act, and Daniel Ellsberg, charged with disclosing the Pentagon Papers, a classified account of the war.

Jonathan D. Bloom

Bourne, Randolph (Silliman) (*b* Bloomfield, N.J., 30 May 1886; *d* New York City, 23 Dec 1918). Critic. At Columbia University (graduated 1913) he came under the influence of John Dewey, Franz Boas, and Charles Beard. Deformed by spinal tuberculosis, he wrote anonymously of his disability in the *Atlantic* and was a regular contributor to the *New Republic*. In his writings Bourne drew a distinction between a "beloved community" arrived at through democratic association and the coercive cohesion of the nation-state. Bourne died in the influenza epidemic of 1918 in his apartment at 18 West Eighth Street.

Alexander Bloom

Bowery. A street in lower Manhattan that stretches for about 1 mile (1.6 kilometers) from Chatham Square to Cooper Square. Following the route of an American Indian path from the southern tip of the island to Harlem, it derives its name from *bowerij,* the Dutch word for farm, because in the seventeenth century it was a farming area north of the city. Governor Peter Stuyvesant bought much of the land there in 1651. The Bowery remained on the outer fringe of the city until about 1800, and it was most important as part of the main route to Boston. As the city's exploding population moved northward, the Bowery became broad and elegant, the home of such diverse personages as the philanthropist Peter Cooper and the songwriter Stephen Foster. It was especially important for entertainment, and its sidewalks were lined with taverns, oyster bars, and minstrel theaters. The largest auditorium on the continent, the Great Bowery Theater, was dedicated on 23 October 1826. Damaged and rebuilt on several occasions as a result of disastrous fires, it was one of several theaters in the area that dominated the theatrical life of the city between 1850 and 1875. After the Civil War the Bowery ceased to compete with Broadway as a commercial thoroughfare and with Fifth Avenue as an elegant residential address. Its specialty became nickel museums featuring mermaids, snakes, sword swallowers, lions, dwarfs, and women in various states of undress. At the same time that the Bowery became more closely associated with cheap entertainment, it was dealt a blow by the transportation system, from which it never recovered, when the Third Avenue elevated line was placed over it. After 26 August 1878 little steam engines showered pedestrians below with oil drippings and hot coals. Middle-class men and women could easily avoid such nuisances by walking along other streets, such as Broadway, that were not degraded by the ugly elevated lines. Meanwhile, the Bowery became synonymous with homeless derelicts and tramps. It was the site of cheap lodging houses, missions, and late-night saloons, and its brothels were so numerous that it became a veritable magnet for visiting sailors. In 1892 the Bowery was the butt of a popular song by Charles M. Hoyt:

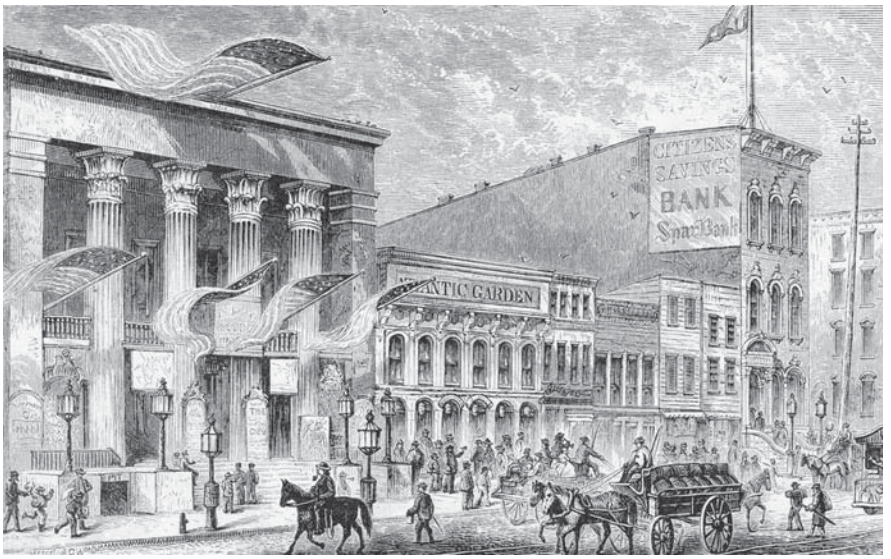
> The Bowery, the Bowery!
> They say such things and they do such things
> On the Bowery, the Bowery!
> I'll never go there any more!

Early in the twentieth century the Bowery was even more infamous as a place of squalor, alcoholism, and wretchedness. Even prostitutes gravitated to other neighborhoods. In 1907 the street had 115 clothing stores for men and none for women. In the same year the nightly population of the "flop houses," missions, and hotels on the Bowery was estimated at 25,000. No other skid row in the United States attracted so many vagrants or so much notoriety. At the same time many stores along the street developed successful specialties in lighting fixtures and secondhand restaurant equipment.

After 1970 the homeless population of the Bowery sharply declined, as New York City dispersed its indigent to other neighborhoods. Efforts at gentrification also had powerful effects, and in the twenty-first century there was scarcely a vagrant in sight. Luxury apartment buildings and new restaurants began to appear, and with a few exceptions the Bowery no longer remained a sanctuary for the forgotten in American society.

Kenneth T. Jackson

Bowery Bay Beach. Original name of North Beach.



Bowery Mission. Christian mission founded in 1879 by Rev. A. G. Ruliffson. It is the third-oldest mission in the United States. In 1895 the Bowery Mission was purchased by the *Christian Herald,* a magazine and organization that today comprises the Bowery Mission and Kids with a Promise. The mission provides shelter, meals, medical services, and clothing for the homeless. It also runs a summer camp for impoverished children, after-school programs, and substance rehabilitation programs. It was founded at 14 Bowery and has moved several times since, always remaining in the same area. In the early twenty-first century it was located at 227 Bowery.

Max Seppo

Bowery Savings Bank. Savings bank formed on 2 June 1834 by a group of local business leaders who included Hamilton Fish, Peter C. Stuyvesant, and Anson G. Phelps. It initially occupied rent-free quarters in the Butchers' and Drovers' Bank (later a rival) on Bowery Street. Within two years the bank bought a building on 130 Bowery Street; this was redesigned in 1894 by the firm of McKim, Mead and White and declared a city landmark in 1966. The bank expanded and became one of the city's leading banks by 1860, when it had almost 42,000 depositors. The bank granted home loans and loans for large-scale construction projects. It built executive offices on 42nd Street near Park Avenue (a branch was moved into the building at 130 Bowery Street) in 1921. The bank funded such projects as Fordham Plaza, the Albee Square Shopping Mall, and the renovation of Times Square. The bank was acquired by the Greenpoint Savings Bank in 1995, which was sold to North Fork Bank in 2004 and to Capital One Bank in 2007.

Oscar Schisgall, *The Bowery Savings Bank of New York: A Social and Financial History of the Bowery Savings Bank* (New York: American Management Association, 1984)

James Bradley

The Old Bowery Theatre

Bowery Theatre. Opened in 1826 at the corner of Canal Street and the Bowery, the Bowery Theatre was in competition with the Park Theatre on Park Row and offered a similar repertory. By the 1830s, however, it specialized in the melodrama and spectacle that appealed to residents of its immigrant neighborhood; foreign-language productions were mounted beginning in 1879. The theater burned in 1828, 1830, 1836, 1838, and 1845 and was rebuilt each time. It burned for the last time in 1929.

Don B. Wilmeth

Bowes, Edward (*b* San Francisco, 14 June 1874; *d* Rumson, N.J., 13 June 1946). Radio entertainer and real estate entrepreneur. Brought up in San Francisco, he did well in real estate, and the earthquake of 1906 proved only a temporary setback. After moving to New York City in 1918, he bought and built several theaters, including the Capitol, which he promoted on the radio. By 1935 he was the host of *Major Bowes' Amateur Hour,* broadcast first by the National Broadcasting Company (NBC) and then by the Columbia Broadcasting System (CBS) (his military title was from a reserve commission given to him as an entertainment specialist during World War I). The program's popularity led to road shows, a magazine, a staff of 65, and great wealth.

James E. Mooney

Bowling Green. Oldest existing park in New York City. Situated in lower Manhattan opposite the original fort at the foot of an

Bowling Green at Broadway, ca *1925–30, flanked by the Standard Office Building (right) and the Cunard Building (left)*

American Indian path (later Broadway), it was a parade ground and cattle market during the seventeenth and early eighteenth centuries. It became public property with the Dongan Charter of 1686. The Common Council leased it to three residents in 1733 at one peppercorn a year to use as a bowling green, "for the Beauty & Ornament of the Said Street" and "the Recreation & Delight of the Inhabitants of this City." In 1770 the British erected a gilded, equestrian statue of George III, which was toppled by irate citizens in 1776 and supposedly melted into ammunition. After the Revolution, elegant townhouses were built around the park, and during the early nineteenth century the small, ellipsoidal green was largely the private domain of their occupants. The public did not gain full access until about 1850 when the northward movement of residential Manhattan had led to the conversion of the townhouses to shipping offices. Eventually such nonresidential structures as the Produce Exchange and the U.S. Custom House replaced the townhouses. The city has modernized and restored the park numerous times: after the construction of the Interborough Rapid Transit Company subway station in 1905, just before the 1939 World's Fair, during the U.S. Bicentennial, and again in 1990 and 2004. Arturo Di Modica's bronze *Charging Bull* (1989) sits at the park's north end.

Margaret Latimer

Bowne, John (*b* Matlock, England, 1628; *d* ?Flushing, 1695). Religious dissenter. Dissatisfied with the Congregational town church in Boston, he moved from New England to Flushing, where in 1657 he converted to Quakerism. In 1662 he was arrested, imprisoned, and fined for holding Quaker meetings in his home. He sought an appeal from the directors of the Dutch West India Company, who instructed Governor Peter Stuyvesant not to persecute dissenters as long as they were not socially disruptive. His house at Bowne Street and 37th Avenue in Flushing still stands (see Bowne House).

Arthur J. Worrall

Bowne and Company. Firm of stationers and printers. Formed in 1775 at what is now 149 Pearl Street in Manhattan by Robert Bowne, it is one of the oldest continuously operating businesses in the United States. Initially it sold various goods that included stationery, cloth, cutlery, and furs. John Jacob Astor was an employee before he began his own fur-trading business. By the late 1820s the firm had narrowed its focus to stationery and commercial printing; later it became a leading financial printer. Bowne and Company became publicly owned in 1968 and is traded on the New York Stock Exchange. In the early twenty-first century its principal location was 55 Water Street, and there was also a retail branch at the South Street Seaport.

Bowne and Co., 1775–1952 (New York: Bowne and Company, 1952); *Nineteenth-Century Job Printing Display: The Poster* (New York: Bowne and Company, 1991)

Owen D. Gutfreund

Bowne House. Historic house. Built in Queens in 1661 by John Bowne and standing at Bowne Street and 37th Avenue in Flushing, it is a wood-frame English colonial saltbox, notable for its steeply pitched roof with three dormers. It was altered and expanded several times during the late seventeenth and early eighteenth centuries. Nine generations of Bowne's descendants lived in the structure until 1945, when the Bowne Historical Society assumed control of it. The house has original architectural details as well as seventeenth- and eighteenth-century documents, furniture, and artifacts that belonged to the family.

Jonathan Kuhn

boxing. One of the first noted American fighters was a former slave from Staten Island, Bill Richmond (1763–1829), who had a distinguished career in England. The first recognized boxing match in the United States was between Jacob Hyer and Tom Bealey in New York City in 1816. The city was the national center of boxing when the sport became popular in the 1840s, when it was illegal. Fighters were mainly Irish and English professionals or tough Americans associated with rival ethnic and political gangs. The first national championship was won by Tom Hyer of New York City (son of Jacob Hyer) over Yankee Sullivan in 1849. Sullivan claimed the title after Hyer's retirement but lost it to John Morrissey of New York City in 1853. The sport declined during the 1860s and had little following. Matches were either impromptu or arranged in sporting taverns like Harry Hill's Dance Hall. World heavyweight champion John L. Sullivan defended his title in the city in 1883, but because of interference by the police there were no important matches from 1885 until the early 1890s, when boxing was revived at Coney Island under the protection of political bosses. In 1896 the state legislature liberalized the restrictions on boxing by passing the Horton Act, and New York City again became the national boxing capital. Notable bouts included Jim Jeffries' defeat of James J. Corbett for the world heavyweight championship on 11 May 1900. The Horton Act was repealed in the same year, and from that time bouts were held in secret on barges, in the backrooms of saloons, or at ostensibly private clubs where restrictions on boxing went unenforced. In 1911 the state legislature, controlled by the Democrats, passed the Frawley Act, which permitted 10-round "no decision" bouts under the supervision of an athletic commission. Venues ranged from small neighborhood firetraps like the Sharkey Athletic Club to Madison Square Garden and Ebbets Field. In 1913 alone there were 49 licensed clubs in the city. The Frawley Act was repealed in 1917 by Republican reformers.

A supervisory athletic commission reestablished boxing in 1920 with the Walker Act. Madison Square Garden became the leading venue for boxing in the nation. Control of the ring passed from politicians to members of organized crime, like Waxey Gordon, Dutch Schultz, and Owney Madden. Poor neighborhoods continued to produce the majority of fighters, including the Irish heavyweight champions Gene Tunney (1926–29) and Jimmy Braddock (1935–37). Among the many famous bouts of the interwar years were several for the heavyweight championship, including victories by Jack Dempsey over Luis Firpo on 14 September 1923 (drawing 82,000 spectators at the Polo Grounds), by Joe Louis over Max Schmeling on 19 June 1936, in 2:04 of the first round (drawing 75,000 at Yankee Stadium), and by Louis over Billy Conn on 18 June 1941 (drawing 54,487 at the Polo Grounds). Louis was associated with the nation's dominant promoter, Mike Jacobs, who staged three-eighths of all championships in the United States between 1937 and 1949. After Jacobs retired, the main promoter was the International Boxing Club; run by James Norris and closely tied to the organized-crime figure Frankie Carbo, it arranged 80 percent of all championship fights from 1949 to 1953. Prominent local fighters during these years included the middleweight champions Rocky Graziano (1947–48) and Jake La Motta (1949–51). Boxing's popularity declined in the late 1950s from overexposure on television (audience shares fell from 31 percent to 10.6 percent); investigations of its corruption; the level of its violence, which could lead to the death of fighters (such as that of Benny Paret, who died on 24 March 1962, several days after a televised fight with Emile Griffith for the welterweight championship); and competition from other sports. In 1956 Floyd Patterson, a native of New York City, won the world heavyweight championship at the age of 21; he held it for three years until being knocked out in an upset by Ingemar Johansson at Yankee Stadium. Only 18,215 attended the fight, and net receipts were only $407,000, but media income, which included closed-circuit television, exceeded $900,000. In 1960 Patterson became the first heavyweight to regain the title, which he lost again in 1962 to Sonny Liston. On 8 March 1971 the city was the site of a historic fight between Joe Frazier and Muhammad Ali at Madison Square Garden before 29,445 spectators and a closed-circuit audience of 1.3 million. The fight was nicknamed the Fight of the Century and advertised as the only one ever held between two undefeated heavyweights, each of whom had a legitimate claim to the world championship.

Frazier won by a unanimous decision. In 1987 Mike Tyson, originally from Brooklyn, became the first world heavyweight champion from the city in a quarter-century; in 1990 he lost the title, which in the following years was held by two more fighters from Brooklyn, Riddick Bowe (1992–93) and Michael Moorer (1994).

While the emergence of cable and pay-per-view television lessened the importance of gate receipts for promoters and many of the most glamorous fights were held by gambling casinos in Las Vegas and Atlantic City, New Jersey, Madison Square Garden continued to host memorable fights in the 1990s and early twenty-first century. The 11 July 1996 heavyweight bout between Riddick Bowe and Andrew Golota ended in chaos that spread from the ring into the audience after Golota was disqualified for punching below the belt; more than a dozen spectators and a number of police officers had to be taken to the hospital, and 16 people were arrested. Evander Holyfield and Lennox Lewis fought for the heavyweight title on 13 March 1999; Holyfield was awarded the victory, but the crowd and most experts believed that Lewis had clearly been the superior fighter and that the bout may have been fixed. Several important fights were held at the Garden in the early twenty-first century, including the middleweight championship won by Bernard Hopkins over Felix Trinidad on 29 September 2001. In 2007 the 82-year-old boxing ring that had been transported from the two previous Madison Square Gardens was replaced and sent to the International Boxing Hall of Fame after a final welterweight fight in which Miguel Cotto defeated Zab Judah of Brooklyn. The new Garden ring soon began to develop a legacy of its own as it hosted a January 2008 fight in which Roy Jones, Jr., defeated Trinidad in a contest that was publicized as a clash between the two best fighters of their generation.

Boys and Girls Clubs of America. National nonprofit organization formed to provide youths with a positive alternative to roaming the streets. Established in 1906 as the Boys' Club Federation of America by the incorporation of 53 local clubs, in 1930 it moved to New York City where it occupied offices near Grand Central Terminal. Herbert Hoover was its chairman from 1936 until his death in 1964. In 1960 the organization dedicated a national headquarters at 771 First Avenue, across the street from the United Nations building, where it was based until moving to Atlanta in 1994. In the early twenty-first century more than a dozen local clubs throughout New York City were active in fulfilling the organization's mission to build character and leadership skills in young people through educational programs, the arts, athletics, and community outreach.

James Bradley

Boys and Girls High School. Secondary school opened in 1878 as the Central Grammar School at Court and Livingston streets in Brooklyn. It is the oldest public high school in New York City. The girls' division moved in 1886 to a new building designed by James W. Naughton at Nostrand Avenue, and in 1891 the names of the schools were changed to reflect their status as two separate institutions: Boys High School and Girls High School. Boys High School moved to a building designed by Naughton in the Romanesque Revival style on Madison Street. Girls High School closed in 1964. In 1976 Boys High School moved to 1700 Fulton Street, began admitting girls, and was again named Boys and Girls High School; its former building was designated a city landmark in 1975 and now houses the Street Academy, an alternative high school. In 2010 Boys and Girls High School enrolled about 4300 students. Well-known alumni include Aaron Copland, Isaac Asimov, Norman Mailer, Lena Horne, and Shirley Chisholm.

Erica Judge

Boys' Club of New York. Organization founded in 1876 by Edward H. Harriman, a Wall Street tycoon and railroad magnate who gave the organization about $500,000 over the next 33 years. It began operations in the basement of the Wilson Mission School at Avenue A and Eighth Street near Tompkins Square in lower Manhattan. From the beginning the club welcomed any boy between the ages of six and 17 and sought especially to serve the needs of the immigrant poor. In 1901 it moved to a new six-story brick and sandstone building at Avenue A and 10th Street. A seven-story addition, replete with an indoor pool, a gymnasium, and a library, opened in 1917. In 1927 the club added a branch at 321 East 111th Street in Jefferson Park, a heavily Italian section of East Harlem. E. Roland Harriman, son of the founder, became president in 1934 at the age of 38. He served the club for 57 years, successively as a trustee, president, and chairman. The building at Tompkins Square was renamed the Harriman clubhouse in 1988. In the early twenty-first century the organization had tens of thousands of alumni throughout the United States.

Kenneth T. Jackson

Boys' High School. Original name of DeWitt Clinton High School.

BQE. See Brooklyn–Queens Expressway.

Brace, Charles Loring (*b* Litchfield, Conn., 19 June 1826; *d* Switzerland, 11 Aug 1890). Minister and social worker. He graduated from Yale University in 1846 and later studied at the Union Theological Seminary in Manhattan. In the early 1850s he began working with homeless, unschooled, immigrant boys in New York City. With the assistance of several prominent New Yorkers he formed the Children's Aid Society in 1853, of which he was the executive officer for the next 37 years. A staunch believer in self-help, he opposed charitable aid that might encourage dependence. He acquired an international reputation as a practitioner of the "new philanthropy" by explaining the basic principles of assistance to the poor in books and articles such as *The Dangerous Classes of New York and Twenty Years' Work among Them* (1872). At his death his son Charles Loring Brace, Jr. (1855–1938) succeeded him as executive secretary of the society. His memoir *The Life of Charles Loring Brace, Chiefly Told in His Own Letters, Edited by His Daughter* was published in 1894.

Jane Allen

Bradford, William (*b* Leicestershire, England, 1663; *d* New York City, 1752). Printer. Generally considered to be the first printer in colonial New York City, he was apprenticed to the English Quaker printer Andrew Sowle, whose daughter he married in 1685, shortly before immigrating to Pennsylvania. He ran into a series of problems with Quaker authorities in that city and in 1692 was jailed for printing pamphlets by the contentious heretic George Keith. Governor Benjamin Fletcher brought him to New York City some months later, where he became the official—and only—printer in the colony until 1726, when his onetime apprentice John Peter Zenger set up a rival press.

Bradford printed official documents, including the first edition of the *Laws of New York* in 1710, as well as private publications. The first book printed in the colony, appearing in May 1693, shortly after Bradford's move to the city, was Keith's *New-England's Spirit of Persecution Transmitted to Pennsilvania*. Among the other "firsts" that came from Bradford's establishment on Hanover Square were the first play published in the colony, the first printed map of New York (the Bradford–Lyne map of 1731), and the first newspaper (the *New-York Gazette* in 1725).

Jean Ashton

Brady, Diamond Jim [James Buchanan] (*b* New York City, 12 Aug 1856; *d* Atlantic City, N.J., 13 April 1917). Businessman. The son of a saloon keeper on the West Side, he was born at 90 West Street and lived there until the age of 11. After working as a bellboy

and messenger and for the New York Central Railroad he began selling portable rail-cutting saws in 1879, beginning a successful career as a salesman of railroad equipment, during which he earned as much as $1 million a year. He frequented well-known restaurants, nightclubs, and theaters and became known for his voracious appetite, lavish attire (he owned 30 complete sets of jewelry with a total value of more than $1 million), sweet and sympathetic nature, willingness to spend money on himself and others, and partiality toward attractive women. His friendship with Lillian Russell was the subject of much speculation. From about 1900 Brady's home was at 7 West 86th Street.

George A. Thompson, Jr.

Brady, Mathew B. (*b* Warren County, N.Y., *ca* 1823; *d* New York City, 15 Jan 1896). Early photographer. He mastered the daguerreotype process from the photographic pioneer Samuel F. B. Morse and foresaw a role for photography in preserving the historical record. In 1844 he opened the Daguerrian Miniature Gallery, a studio and portrait gallery on Broadway at Fulton Street. This proved successful both artistically and commercially, and from 1845 to 1850 he photographed the most important figures of his time. *A Gallery of Illustrious Americans* (1850), published with the lithographer Francis D'Avignon, includes portraits from Brady's daguerreotypes of Andrew Jackson, Daniel Webster, and John J. Audubon. In 1853 Brady built a larger and more lavish studio at 359 Broadway, near Franklin Street. A third studio stood at 643 Broadway, and his last and most lavish studio opened in the summer of 1860 at 785 Broadway, at 10th Street. His profits rose as thousands of customers returned to be photographed with the new collodian wet-plate process, which allowed multiple prints from a single negative. Brady seldom operated the camera himself and instead employed "operators," many of whom later established their own careers as photographers, including Timothy O'Sullivan (*b ca* 1840; *d* 1882) and Alexander Gardner (1821–82). One of Brady's most well-known pictures was of Abraham Lincoln taken the day Lincoln spoke at Cooper Union on 27 February 1860. He was forced to declare bankruptcy in 1871 after incurring debts from his best-known and most ambitious project, the documentation of the Civil War. He never regained the popularity he had enjoyed earlier but remained one of the most influential American photographers of the nineteenth century. His last residence was at 127 East 10th Street.

Dale L. Neighbors

Brady, William V(ermilye) (*b* New York City, 1811; *d* New York City, 31 March 1870). Mayor. A fiscally conservative Whig, he served as mayor of New York City from 1847 to 1848. During his tenure his proposal to eliminate the newly created police department was rejected by the Common Council. He later served as the city's postmaster.

Howard Kaplan

Brando, Marlon (*b* Omaha, Neb., 3 April 1924; *d* Los Angeles 1 July 2004). Actor. He moved to New York City as a 19-year-old ditch digger who had been expelled from his military high school. He enrolled in the Dramatic Workshop of the New School for Social Research, under Stella Adler, where he quickly impressed his peers with his mastery of the Method style of acting. In 1947, after acting in a number of smaller productions, Brando landed the role of Stanley Kowalski in the Broadway opening of Tennessee Williams's *A Streetcar Named Desire.* The show went up at the Ethel Barrymore Theater on 3 December 1947 under the direction of Elia Kazan. Brando's performance electrified audiences and critics alike, and many say it revolutionized acting technique in the United States. He went on to play the same role in the play's film adaptation. Brando is perhaps most famous for his film portrayals of two fictional but quintessentially New York characters: Terry Malloy, a longshoreman on the Red Hook piers in Elia Kazan's *On the Waterfront* (1954); and Don Vito Corleone, an Italian immigrant and Mafia patriarch, in Francis Ford Coppola's *The Godfather* (1972). He spent most of his life in Hollywood and Tahiti.

Rowan Moore Gerety

Bratton, William J. (*b* Boston, 6 Oct 1947). Former New York City police commissioner. After serving for several years in Boston's police department, in 1990 he was appointed chief to New York City's transit police. In 1994 he was appointed the 38th commissioner of the New York Police Department by Mayor Rudolph Giuliani. Bratton introduced the CompStat system of tracking crimes, a real-time police intelligence computer system, which the police department continued to use into the twenty-first century. Bratton left his position in 1996 after alleged personal conflicts with Giuliani and afterward directed police operations in Los Angeles (where he resigned in 2009).

Brearley School. Private girls' secondary school opened in 1884 in Manhattan by Samuel Brearley, Jr., who had intended to teach at a boys' school but was persuaded by Mrs. Joseph H. Choate to remedy the shortage of good schools for young women. To fund its operations he borrowed several thousand dollars from a classmate at Harvard, Charles Bonaparte (a great-nephew of Napoleon). The school was so successful that by the second year it had to turn away students. After occupying many locations Brearley moved to 610 East 83rd Street in 1930. In the early twenty-first century it had an enrollment of about 670 students.

Richard Schwartz

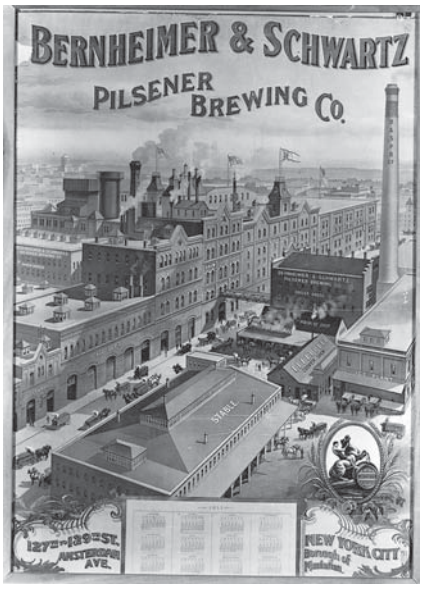
Breezy Point. Neighborhood in southwestern Queens at the western tip of the Rockaway Peninsula; it includes the communities of Breezy Point, Rockaway Point, and Roxbury. The area remained undeveloped until the early twentieth century, when the Rockaway Point Company rented tent sites for about $20 a summer to visitors, most of whom were Irish. By the 1920s a colony of residents owned bungalows on rented land. In 1961 the firm of Northern Properties paid $17.5 million for all the land west of Jacob Riis Park (except Fort Tilden) to erect a high-rise development to house 220,000. To protect their cottages, residents formed the Breezy Point Cooperative and paid $11.5 million for the land. Construction began on two 14-story apartment buildings but ceased when the city announced plans to acquire the peninsula for parkland in 1963; the unfinished apartments were demolished in 1978. The city intended to condemn the three communities, but residents forced a compromise that permitted all to remain; city-owned land became part of the Gateway National Recreation Area, while property of the Breezy Point Cooperative was excluded. After this, more residents winterized their property. In the early twenty-first century the private, gated communities had 2836 houses, about three-quarters inhabited year-round, the rest seasonal cottages; no buildable lots remain. Full-time residents number about 5000, but the population swells by thousands more in summer. In 2009 Breezy Point was nearly 99 percent white, the majority Irish American. The communities have three of the last volunteer fire companies in the city: Rockaway Point, Point Breeze, and Roxbury.

Jeffrey A. Kroessler

Breslin, Jimmy [James] (*b* Jamaica, Queens, 17 Oct 1930). Journalist and novelist. With his Irish Catholic working-class roots, he brought an outer borough perspective to the New York City media. Along with writers like Tom Wolfe, Breslin embodied the style of New Journalism, often becoming a participant in his own stories. After attending Long Island University (1948–50), Breslin worked as a

sportswriter for a number of city newspapers and magazines, including the *New York Journal-American*. He was later a columnist for the *New York Herald-Tribune* and the *New York Post;* in the early 1960s he and Wolfe became staff writers for the *Herald-Tribune*'s Sunday supplement, which in 1968 became *New York* magazine. In 1969 Breslin blurred the line between journalism and politics and ran for president of the City Council under mayoral candidate Norman Mailer, with a platform that sought to make New York City the 51st state of the United States. Breslin maintained an extensive network of contacts with city officials, police officers, politicians, and mobsters. He endured a violent beating by the Lucchese mob family in 1970 after writing an article about a family member; the same year, he published his first novel, *The Gang That Couldn't Shoot Straight,* a Brooklyn Mafia comedy. Since 1982 Breslin has been married to former New York City Council member Ronnie Eldridge; his first wife died in 1981. Through the twentieth century Breslin continued to write novels about working-class cops, mobsters, immigrants, and race and religion in New York City; he won the Pulitzer Prize in 1986 for his newspaper columns. In 2008 Breslin, who lived on Central Park West, published *The Good Rat,* a collection of stories about the Mafia.

Kate Lauber



Bretons. Bretons began immigrating to the United States from Brittany in the early twentieth century. They were distinguished from other French citizens by their Celtic origin, and about 40 percent of those who immigrated spoke a Celtic language closely related to Welsh. Although at first most entered the United States through the Port of New York and settled in central New Jersey, during the late 1940s New York City became the center of Breton American life. Soon after their arrival, Bretons were widely distributed in the workforce and were well known for the crepe restaurants they owned and managed. Additionally, Bretons formed the Stade Breton, a sporting association in New York City, and the Breton Association of the United States, a sponsor of cultural and social events. At the end of the twentieth century, an estimated 90,000 Breton immigrants and their descendants lived in New York City.

Paul Robert Magocsi

Brevoort, James Renwick (*b* Yonkers, N.Y., 20 July 1832; *d* Yonkers, 15 Dec 1918). Landscape painter. He grew up in Williamsbridge and Fordham, in what is now the Bronx, and in 1850 began to study architecture, working as an assistant to his cousin James Renwick, Jr., whom he helped to prepare designs for St. Patrick's Cathedral. In 1854 he earned a certificate in architecture from the School of Design at New York University, and he soon enrolled at the National Academy of Design, where he mounted exhibitions from 1856 to 1901. His work was also shown at the Brooklyn Art Association between 1861 and 1881. He lived on 10th Street from 1858 to 1861 and at 212 Fifth Avenue from 1863 to 1872. During the 1870s and 1880s he often traveled and worked in Europe, primarily in England, Italy, and the Netherlands; he returned to Yonkers in 1890, built a house at 390 North Broadway, and between 1898 and 1906 also maintained a residence at 52 East 23rd Street. Brevoort's paintings are leading examples of a phase in American landscape painting known as Native Impressionism and American Luminism.

Allen J. Share

brewing and distilling. Brewing was a small-scale industry in New York City during the seventeenth century. English techniques and a top-floating yeast were used to produce beer, ale, and porter, which did not require cooling. Sold in local markets, they were consumed warm. The first brewery was established by the Dutch governor Peter Minuit in 1633 in a log cabin in Marckvelt (Market Field), which would today lie in the financial district. Distilling was a separate undertaking confined mostly to the production of rum, using sugar cane transported from the West Indies by colonial merchants. By 1770 there were four distilleries in Manhattan and 12 others nearby that produced rum for sale locally and abroad. When whiskey displaced rum as the most popular liquor during the early nineteenth century, the distilling industry gradually moved west. Both industries were transformed by new technology. Spirits were bought by wholesale firms in the city that colored, flavored, and bottled them and sent them to retailers, often saloons. German brewers who settled in the city during the 1840s introduced yeasts that required cool temperatures and produced "lager," or stored beer, which became especially popular in the summer heat. Brewing flourished for a time after water of good quality became widely available. The Hell Gate Brewery, opened by the German immigrant George Ehret in 1866, was the country's largest in 1877, and that of Jacob Ruppert was the eighth largest. In 1879 the number of breweries reached 78 in Manhattan and 43 in Brooklyn; those numbers declined after 1880, when cheap rail transportation and mechanical refrigeration allowed entrepreneurs in Milwaukee, St. Louis, and Cincinnati to make inroads into local markets. As successful breweries made larger investments in production and distribution facilities, small firms disappeared. In 1895 the Hell Gate Brewery was the country's fourth largest, Ruppert the 12th largest. By 1910 there were only 39 breweries in the city; they usually sold their beverages in kegs through saloons under their control. Formed by western suppliers in 1899, the Distilling Company of America made its headquarters in New York City and sought unsuccessfully to dominate the spirits trade. It was reorganized as National Distillers Products in 1932.

Advertisement of Bernheimer and Schwartz, Pilsner Brewing Company, 1911

Under the 18th Amendment the manufacture, transportation, and sale of alcoholic beverages became forbidden in 1920. Some breweries declared bankruptcy, while others reorganized to make such products as soft drinks and ice cream. Many New Yorkers defied Prohibition, and illegal factories opened locally to supply their needs. Such efforts became known nationally through news media based in the city and led much of the country to conclude that Prohibition had failed to reduce liquor consumption effectively. After the repeal of the 18th Amendment in 1933, 23 of the city's brewers resumed business, most aiming their products only at the large local market. Stores displaced saloons as the most important retail outlets, and brewers expanded their sales of bottled beer. Canned beer was introduced that same decade. Only the firm of F and M Schaefer Brewing sought to compete in national markets. After 1937 the firm of Seagram's had its headquarters in the city and was the world's largest distiller. National Distillers Products became National Distillers and Chemical after 1948 and was one of four large companies that dominated the American distilling industry to the end of the 1960s. Between the late 1940s and the mid-1970s brewing in the city declined, as small firms were forced out of business by large companies with national distribution. The country's four largest firms

(none in the city) increased their share of the national market from 21 percent to 59 percent. By 1950 only five local firms brewed beer, and brewers blamed the city's high electricity and water rates for their inability to compete. The country's second-largest brewer, Joseph Schlitz, bought the Hell Gate Brewery in 1949 and maintained operations there until 1973, when it withdrew to escape the city's high labor costs and invest in newer facilities. The city's last brewery closed in 1976. During the 1980s expensive beers were produced in small quantities for exclusive markets by newly opened microbreweries. In 1987 National Distillers and Chemical sold its liquor division to American Brands. The Brooklyn Brewery opened in 1987 and produces most of its beer upstate in Utica. In 1996 the Harlem Brewing company started its Sugar Hill brand, which is brewed in Saratoga Springs (the name was inspired by the Sugar Hill neighborhood in Harlem). Two well-known microbreweries are the Times Square Brewery, at 210 West 42nd Street, and the Chelsea Brewing Company, on Pier 59.

K. Austin Kerr

Briarwood. Neighborhood in east central Queens, bounded to the north by Union Turnpike, to the east by Parsons Boulevard, to the south by Hillside Avenue, and to the west by the Van Wyck Expressway. The area was first developed about 1905 by Herbert A. O'Brien; the name was suggested by his wife, Adeline, for the thick woods and briars covering the land. The Briarwood Land Company later declared bankruptcy and the area remained largely undeveloped until the mid-1920s, when it was divided into lots that were sold at auction. Together with the New York Life Insurance Company the United Nations built Parkway Village in 1947 to provide housing for its staff members. The development became a cooperative in 1983 and housed residents of many nationalities, although by that time few worked for the United Nations. Several apartment buildings rise above the surrounding one- and two-family houses. Briarwood has been traditionally, and remained in the twenty-first century, a diverse community with a population nearly equally divided among many ethnic groups. Well-known residents have included the diplomat Ralph Bunche, the feminist and social activist Betty Friedan, and the civil rights leader Roy Wilkins.

Plan for New York City, 1969: A Proposal, vol. 5 (Cambridge, Mass.: MIT Press, 1969)

Patricia A. Doyal

Brice, Fanny [Borach, Fannie] (*b* New York City, 29 Oct 1891; *d* Los Angeles, 29 May 1951). Comedian. She became known for performing songs and parodies of the arts and society in such revues on Broadway as Florenz Ziegfeld's *Follies* between 1910 and 1920. She lived from 1914 to 1918 at 8 West 58th Street and from 1918 to 1921 at 230 Central Park West. In the early 1920s she bought a house at 306 West 76th Street, where she lived with Nicky Arnstein until their divorce in 1927. She then had an apartment at 15 East 69th Street (now the Westbury Hotel) and lived there with Billy Rose after they were married in February 1929. She became well known in Rose's musical revues *Sweet and Low* (1930) and *Crazy Quilt* (1931). During the 1930s and 1940s she performed as "Baby Snooks" on the radio. Brice was portrayed by Brooklyn-born Barbra Streisand in the musical *Funny Girl* (1964, film version 1968) and the motion picture *Funny Lady* (1975). Brice was the first female Jewish comedian to work successfully in musical comedy and radio in the commercial mainstream.

Barbara Wallace Grossman, *Funny Woman: The Life and Times of Fanny Brice* (Bloomington: Indiana University Press, 1991)

Barbara Cohen–Stratyner

Brick Presbyterian Church. Church founded in 1767 by the Reverend John Rodgers. The church was first located on Beekman Street, but moved to Fifth Avenue and 37th Street in 1858 as many of its members moved uptown to that area. It moved again in 1940 to Park Avenue and 91st Street, where it remains today. The church has been in continuous operation since its founding, save for a brief closure during the Revolutionary War, and currently has more than 1200 members. Noted members of the congregation have included New York governor Edmund Morgan, U.S. Secretary of State John Foster Dulles, and IBM founder Thomas J. Watson. Charles Dickinson, the church organist and choirmaster from 1909 to 1965, founded the School of Sacred Music at Union Theological Seminary and the American Guild of Organists.

Sarah Brafman

bricks. From Dutch times, brick has been the most popular construction material used in New York City buildings. It is fireproof and, since the soft clay of the nearby lower Hudson Valley was ideal for making bricks, both readily available and inexpensive. The demand for bricks went through four stages before 1900. In colonial times it was the common material for almost all buildings, residential and commercial, and there were kilns throughout the city (one in the 1740s was located on the site of City Hall Park). From 1800 to 1840 brick was identified with fashionable construction in Federal-style houses, often with a brownstone facade produced by applying a layer of soft New Jersey sandstone. At mid-century there appeared a new, ornamental style of brick residential construction in the Greek Revival style, which had originated in Philadelphia and used fine-grained, smooth-faced "pressed brick" of a uniform red. After the Civil War the upper classes favored stone houses, and brick houses tended to be occupied by workers. ("Brick is getting too common for first-class fashionable houses," sniffed a newspaper in the 1860s.)

Bricks were made in many sizes, shapes, and colors. "No regulation appears to exist in the United States beyond the custom of the place and the caprice of the maker," one observer of American construction observed in 1839. Brick size was finally standardized in 1899 at 8¼ by 2½ by 4 inches. During a boom in building brick apartment houses in the 1940s and 1950s, a new "jumbo" size brick was developed, and later bricks the size of tiles were used in city buildings.

Brickworkers and bricklayers were united in craft unions from the early 1800s, maintaining prices by collectively shutting down works and pressing employers for shorter working days. The 10-hour work day, which arrived in New York in the 1830s, was largely brought about by brickworkers. Their efforts in favor of the eight-hour day failed in a wave of unsuccessful strikes in 1868. Long independent of the other building trades, bricklayers finally united with plasterers and masons to form a union with 130,000 workers in 1928 and 149,000 in 1973.

Bridewell. A name once used to refer to certain prisons in Manhattan. The first Bridewell in the city was built in 1734, the second in 1775 at City Hall, near where the Sons of Liberty fought to maintain the liberty pole. The site became a rallying point for protests against the British, and the jail was first used to imprison and punish patriots and revolutionary soldiers. After the Revolutionary War it was used as a city jail.

Joseph P. Viteritti

bridge. Card game. It was introduced to New York City in 1893 by Henry I. Barbey, a banker

and yachtsman who lived in Europe for many years and wrote the first book of rules for the game. Initially called auction bridge, it became popular in clubs, schools, and hotels but was supplanted in the mid-1920s by a new version known as contract bridge, for which rules were set and published by the Whist Club of New York. The Cavendish Club was formed in 1925 by Wilbur F. Whitehead and for the next eight years met at the Mayfair Hotel, which became the most important gathering place for bridge players and sponsored the Cavendish Trophy from 1928. The club itself met in a succession of hotels that included the Ritz Tower and Carlton House, and in 1941 it became a nonprofit membership corporation. The city was made the site of the Eastern States Regionals, first held in 1929. Local newspapers published bridge columns edited by such experts as Albert H. Morehead, who worked for the *New York Times* from 1935 until 1963, when he was succeeded by Alan F. Truscott. New York City lies in the 24th district of the American Contract Bridge League and is the site of the Fun City Regionals, launched in 1970.

James E. Mooney

Bridge Apartments. Four high-rise buildings above the Manhattan approach to the George Washington Bridge between Audubon and Wadsworth avenues and West 178th and 179th streets. In 1960 Kratter Corporation made the innovative purchase of the air rights above the public highway; Brown and Guenther designed the 32-story towers, which were New York City's first housing with aluminum curtain walls. The 960 Mitchell–Lama subsidized apartments filled quickly in 1964, but tenants complained of traffic noise and fumes. Later the U.S. Environmental Protection Agency demonstrated that the buildings acted like chimneys, drawing fumes up from the roadway, which should have been covered over and mechanically ventilated. Rents increased and services declined; a rent strike in 1972 changed little. In the early twenty-first century, the buildings, though still occupied, were in deteriorated condition.

Cathy Alexander

Bridge Café. Historic restaurant located at 279 Water Street in Manhattan. In 1794 Newell Narme opened a "grocery and wine and porter bottler" in the then-two-and-a-half-story wooden building with a peaked roof. Since that time the building has been the site of a series of food and drinking enterprises, eventually becoming the oldest continuous business establishment in New York City. In 1888 the exterior of the building was altered to its present form. During much of the nineteenth century, the building was described in city directories variously as a grocery, a porterhouse, or simply a liquor establishment. (The New York City Board of Excise issued tavern licenses to groceries throughout much of the nineteenth century, allowing alcoholic beverages to be consumed on the premises.) One notable tenant was Henry Williams, who operated a porterhouse and brothel there from 1847 to 1860. The prostitutes were actually listed in the 1855 New York census. Then in 1859 Thomas Norton became a lessee and porterhouse keeper and remained until 1881. The current owners bought the building in 1979 and named it the Bridge Café. They upgraded the restaurant and bar but kept the charming 1920s interior. While in office, Mayor Edward I. Koch regularly had dinner there and declared it to be his favorite restaurant.

Richard McDermott

Bridgemarket. High-end commercial complex. The $24 million, 98,000-square-foot (9104-square-meter) space opened in 1999 under the Queensboro Bridge. In the early twenty-first century the complex includes a flagship Food Emporium, Guastavino's restaurant, the Terence Conran shop, and a public plaza designed by Lynden Miller. Before its conception the Bridgemarket space was run down and inhabited by vagrants. The design process of the space began as early as 1977. The building combines a modern glass and steel pavilion with historic preservation of tile vaults and terra-cotta details under the bridge's vaults.

Jessica Montesano

bridges. There are 2027 bridges serving New York City, of which 76 are over water, 329 are used by railroads, 1011 are over land, and the rest are in parks, serve subways, or are private pedestrian bridges. Because the city is virtually an archipelago (only the Bronx is connected to the mainland), bridges are necessary for motor vehicles, trains, subways, and to a lesser extent pedestrians. The first bridge in the city was the King's Bridge (1693; demolished and buried in 1917), a small structure of stone and timber that spanned Spuyten Duyvil Creek between Manhattan and what is now the Bronx. It was built by the Philipse family and a toll was required to cross it until 1759, when the Farmer's Free Bridge (demolished 1911) opened over the Harlem River and forced the King's Bridge to become free as well. Other bridges over the Harlem River included Dyckman's Bridge (1756); Coles Bridge (1795, also known as the Harlem Bridge), a toll timber drawbridge at East 129th Street with a span of 300 feet (91.5 meters) and a width of 24 feet (7.3 meters); and Macombs Dam Bridge (1813), a low stationary toll bridge at 155th Street, built to furnish power for milling, that allowed the tide to flow in but not out. The dam was destroyed in 1838 in a raid by more than 100 angry citizens who believed that it illegally blocked a navigable stream. An unsuccessful suit by the owners of the bridge against those who had destroyed the dam established the precedent that the right to free passage to "an arm of the sea" can be limited only by the U.S. Congress. The High Bridge was built in 1837–48 to carry the large water pipes of the Croton Aqueduct system over the Harlem River. The early vehicular bridges provided access to the post roads leading to Albany (New York) and Boston but were of lesser use to most New Yorkers, who were concentrated in lower Manhattan and surrounded on two sides by water that could be crossed only by sloop, raft, canoe, or dinghy, and later by steam-powered ferry. In 1869 the parks department of New

York City was given authority over the bridges spanning the Harlem River and their approach streets, thus extending the city's direct jurisdiction beyond its northern border before it annexed what later became the Bronx.

The city's economy depended on a system of waterborne transport that was frequently interrupted by ice and fog, prompting demands for more reliable links, especially between Manhattan and Brooklyn. In the 1850s builders of suspension bridges became confident of their ability to span the East River, and in 1883 John Augustus Roebling and his son Washington completed the Brooklyn Bridge, the first modern vehicular crossing over water in the region. A period of extensive bridge building followed: the Williamsburg Bridge (1903), Manhattan Bridge (1909), and Queensboro Bridge (1909) were constructed over the East River, as were eight over the Harlem River, including the Spuyten Duyvil railroad bridge (in the 1880s), the Washington Bridge (1889), the Third Avenue Bridge (1899, the third structure on the site originally occupied by Coles Bridge), and the Willis Avenue Bridge (1901). A respected bridge engineer of the time was Alfred Pancoast Boller, who designed the Park Avenue Railroad Bridge (1891), the second Macombs Dam Bridge (1895), the 145th Street Bridge (1905), the Broadway Bridge (1908, replacing a bridge dating from 1895 that was floated downstream to become the University Heights Bridge at West Fordham Road), and the second Madison Avenue Bridge (1910). By 1910 bridges also spanned Dutch Kills, Newtown Creek, and the Gowanus Canal. The Hell Gate Bridge (1917), at one time the world's longest steel arch bridge, carried trains of the Pennsylvania Railroad over the Hell Gate Channel into Manhattan. Traversing the formidably wide Hudson River took several attempts. Two train tunnels and two vehicular tunnels were built beneath before the construction of the George Washington Bridge (1931), a graceful structure designed by Othmar H. Ammann. Unlike the Brooklyn Bridge and other suspension bridges before it, the George Washington Bridge was built of bare steel, without granite cladding or architectural ornament. Ammann adhered to the same principle in his later bridges: the Triborough Bridge (1936), the Bronx–Whitestone Bridge (1939), the Throgs Neck Bridge (1961), and the Verrazano–Narrows Bridge (1964). Severe cutbacks in bridge maintenance and repair in the 1970s and 1980s led to structural problems and occasional closings. In the late 1990s and in the twenty-first century the city began spending more than $3 billion on major rehabilitations of many of the city's aging bridges, including the Manhattan, Queensboro, Williamsburg, and Brooklyn bridges. Over the Harlem

Bridge Street African Wesleyan Methodist Episcopal Church. Church formed in Brooklyn in 1766. The first congregation included whites and blacks and was led by a British army officer. After racial discord erupted, black members withdrew and formed the African Wesleyan Methodist Episcopal Church (1818), which became part of the African Methodist Episcopal Church in 1820. Richard H. Cain, the pastor between 1861 and 1863 and later a bishop, was elected to the U.S. House of Representatives from South Carolina in 1873. Susan Smith McKinney-Steward, the first black woman physician in New York State, was the organist during the 1890s. In the early twenty-first century the church still held regular services.

Dennis C. Dickerson

Briggs, Cyril (*b* Nevis, 28 May 1887; *d* ?Los Angeles, 18 Oct 1966). Political activist. He became one of the earliest and most articulate advocates of black nationalism in Harlem as a writer for the *Colored American Review* (1915) and the *Amsterdam News* (1914–19). In 1919 he launched his own journal, the *Crusader*, and founded the African Blood Brotherhood, a paramilitary group intended to further black nationalism in the United States and Africa. He wrote favorably about the Bolshevik Revolution by 1920 and called for alliances between blacks and progressive whites; he probably joined the Communist Party at this time. Over the next two years he sought to join the black nationalist group the Universal Improvement Association but was rebuffed by its leader, Marcus Garvey, because of his socialist connections. Under his leadership the African Blood Brotherhood formed an affiliation with the Communist Party (1925) and thus became the first black communist group in New York City. In the late 1920s and 1930s he edited the communist newspaper the *Harlem Liberator* but clashed frequently with the party's leadership over black nationalism. Briggs was expelled from the party in 1942; he moved to California in 1944.

Brighton Beach. Neighborhood in southwestern Brooklyn (2000 pop. 75,574), lying between Manhattan Beach and Coney Island and bounded to the north by Neptune Avenue, to the east by Corbin Place, to the south by the Atlantic Ocean, and to the west by Ocean Parkway. Initially developed by William A. Engeman in 1868, the area was named for the resort in England in 1878 by Henry C. Murphy and a group of business leaders who bought a large parcel on which to build the elegant Hotel Brighton. North of Brighton Beach Avenue Engeman built the Brighton Beach Racetrack, which made the area an important center of thoroughbred horse racing. In 1907 the Brighton Beach Baths opened on the site of a former amusement park to provide swimming, tennis, and entertainment. (By the twenty-first century the Brighton Beach Baths had been replaced by a huge housing development.) To meet the increased demand for housing in the 1920s developers built more than 30 six-story apartment buildings with elevators south of Brighton Beach Avenue between Coney Island Avenue and Ocean Parkway. The population consisted mostly of Jews from Brownsville, East New York, and the Lower East Side. Convenient transportation to Manhattan was provided by an express subway route with four tracks. On the former site of the racetrack, the wood-frame houses and bungalows had deteriorated severely by 1970. After the Soviet Union relaxed emigration policies during the 1970s, about 30,000 Jews settled in the neighborhood and its environs; many were from Odessa in the Ukraine and were attracted by the proximity of the neighborhood to the ocean. Of the

Boardwalk at Brighton Beach, Coney Island, ca *1905*

immigrants who settled in Brighton Beach during the 1980s, the great majority were from the Soviet Union; many of the rest were from China, India, Pakistan, and Vietnam. In the mid-1990s much of the population was elderly and the housing consisted mostly of dense rows of apartment buildings. In 2009, while condominiums began to replace the older bungalows and apartment buildings, the neighborhood remained home to one of the largest Russian-speaking populations outside Russia. Along Brighton Beach Avenue Russian restaurants, nightclubs, fruit stands, and bookstores owned by immigrants stand in the shadow of the elevated train.

Annelise Orleck, "The Soviet Jews: Life in Brighton Beach, Brooklyn," in *New Immigrants in New York,* ed. Nancy Foner (New York: Columbia University Press, 1987), 273–304

Stephen Weinstein

Brighton Beach Bath and Racquet Club. Private athletic club established as the Brighton Beach Baths in 1907 and occupying 15 acres (6 hectares) on the Atlantic Ocean at 3205 Coney Island Avenue in Brooklyn. Once advertised as the world's largest beach resort, it had more than 13,000 members by the 1960s. The club featured knish-eating contests, ferocious mah-jongg and one-wall handball games, three swimming pools, a miniature-golf course, steam rooms, a solarium, and an area reserved for card playing. On weekends the band shell was the site of performances by entertainers such as Milton Berle, Lionel Hampton, Herman's Hermits, and Tallulah Bankhead. By the early 1990s the neighborhood had been transformed and the club had declined. In 1994 a court gave the owners the right to close the complex, and in 1997 it was sold and its memorabilia put up for auction. In 1999 Muss Development broke ground on the Oceana Condominium and Club, a complex of 850 luxury condominiums with indoor and outdoor pools, a 1-acre (0.4-hectare) park, and a complete health club in the spirit of the original Bath and Racquet Club. In 2003 the $250 million Oceana project was honored by the National Association of Home Builders as one of the "Best For Sale Housing Communities in America."

Kenneth T. Jackson

Brighton Heights. Neighborhood in northeastern Staten Island, lying between Silver Lake Park and Randall Manor and bounded to the north by Castleton Avenue, to the south by Forest Avenue, and to the west by Brighton Avenue. Once part of the Village of New Brighton, it consists primarily of small houses and businesses. The most prominent building is Morris Intermediate School, which stands at the corner of Castleton and Brighton avenues and is named for William Morris, a prominent black businessman who lived in the area in the early twentieth century; some of his descendants still live in Staten Island.

Martha S. Bendix

Brill, A(braham) A(rden) (*b* Kanczuga [now in Poland], 12 Oct 1874; *d* New York City, 2 March 1948). Pioneering psychoanalyst. A native of Galicia, he moved alone to New York City at age 15. After several years of training in Europe, where he became a disciple of Freud, he returned to the city in 1908 and became the first practicing psychoanalyst in the United States. He taught at New York University (1913–20), New York Post-Graduate Medical School (1914–18), and the College of Physicians and Surgeons (1927) and was also affiliated at various times with many other institutions, including Bellevue Hospital, Bronx Hospital and Dispensary, and the Vanderbilt Clinic. Best known as the translator into English of Freud's works, Brill was also the leading spokesman in the United States for the new science of psychoanalysis. His published writings include *Basic Principles of Psychoanalysis* (1949). In 1947 the New York Psychoanalytic Institute and Society dedicated the Abraham A. Brill Library.

Joseph S. Lieber

Brisbane, Arthur (*b* Buffalo, 12 Dec 1864; *d* New York City, 25 Dec 1936). Newspaper executive. The son of the utopian socialist Albert Brisbane, he began his career as the editor of Charles A. Dana's newspaper the *Sun*. In 1896 Joseph Pulitzer named him the editor of the Sunday edition of the *New York World*. He became the circulation director of the *World* during a period of intense competition with William Randolph Hearst's *New York Journal*. As an assistant to Hearst he became well known for his unrestrained editorials and for encouraging the frenzied newspaper war.

Julian S. Rammelkamp

Bristol–Myers Squibb. Firm of pharmaceutical manufacturers, incorporated in New York City as Bristol–Myers in 1900. Its forerunner was the Clinton Pharmaceutical Company, formed in 1887 in Clinton, New York, by William McLaren Bristol and John R. Myers. By 1928 the firm manufactured proprietary drugs at plants in New Jersey and had markets in 26 countries. It was taken over and operated by Drug Inc. from 1928 to 1933 but later grew by acquiring other firms, including Harris Laboratories in 1942 and Cheplin Biological Laboratories in 1943. It merged in 1989 with the Squibb Corporation and took its present name. The new firm was large enough to finance modern pharmaceutical research and development. By 2005, when it had $19.2 billion in global sales, Bristol-Myers Squibb was active in research on AIDS and cancer drugs and had headquarters at 345 Park Avenue.

David J. S. King

Bristow, George F(rederick) (*b* Brooklyn, 19 Dec 1825; *d* 13 Dec 1898). Composer. Born to a respected conductor, pianist, and clarinetist, he was surrounded by music from a

young age. He joined the violin section of the New York Philharmonic at the age of 17, rising to the position of concertmaster seven years later. His opera *Rip van Winkle* is one of the first operas about an American subject as well as the second opera by an American composer to be performed by a professional company. Bristow spent 44 years teaching music in the New York City public school system. Public School 134 in the Bronx is named for him.

Anne Epstein

Broad Channel. Neighborhood in southeastern Queens (2008 pop. 3000) on the only inhabited island in Jamaica Bay, which occupies 150 acres (60 hectares) west of a waterway also called Broad Channel. It consisted at first of a few anglers' shacks and could be reached only by boat. In 1880 it was made the site of one of four fishing platforms built alongside a railroad trestle 5 miles (8 kilometers) long across the bay from southern Queens to the Rockaway Peninsula. A hotel and saloon were opened the following year; visitors rented rowboats and baymen continued to fish and to dig for clams. The Board of Health in 1916 declared Jamaica Bay polluted and prohibited fishing. Cross Bay Boulevard was opened through the center of Broad Channel in 1924, and a large residential community took shape within five years; nine inlets were dredged along the western shore and about 15 short streets were laid out. The city retained title to the land, giving the householders renewable 10-year leases. Because of the marshy ground, many of the houses were built on stilts. Between 1950 and 1955 the city realigned the railroad route and radically changed the shape of the islands in the bay. A subway station opened on 28 June 1956. In 1982 the city permitted local residents to buy their houses, the average value of which rose rapidly from $10,000 to $100,000. For many years most houses used septic tanks and there was no sewage system. Broad Channel is a largely Irish community with many firefighters and police officers and their families and a reputation for being insular and suspicious of city government.

Vincent Seyfried

Broadway. New York City's most famous street begins at the Battery and extends for 21 miles (34 kilometers) through Manhattan and the Bronx, reaching Yonkers at 262nd Street and continuing north to Albany and beyond. It was originally the Weckquasgeek trail, built by Native Americans along a natural ridge in lower Manhattan. Named Heere Straat (High Street) by the Dutch, it led to a fort at the southern tip of the island and became an important trade route linking the harbor with the colony of New Netherlands. Most of the street was exempted from the grid of the 1811 commissioner's street plan and was allowed to maintain a diagonal route across the city. The street was consolidated with the Bloomingdale and Kingsbridge roads in upper Manhattan in 1899, and the entire route was renamed Broadway. Until the early nineteenth century Broadway was largely residential, but it soon became crowded with fashionable department stores, dry-goods merchants, hotels, and, later, skyscrapers. Parks and town squares were created at the intervals where Broadway crossed a north-south avenue, and the intersecting east-west streets were made wider. These intervals, including Columbus Circle and Union, Madison, Herald, and Times squares, became commercial focal points and locations for subway stations after 1904. The city's first theaters opened on lower Broadway in the eighteenth century, and the theater district migrated north along its route throughout the nineteenth century; by the time it reached Times Square in the early twentieth century, Broadway's name had become synonymous with theater and entertainment. In 1918 a study by the deputy commissioner of traffic reported that it was the busiest street in the world. Descriptive names have been applied to various sections of the street, including the Canyon of Heroes, between Battery Park and City Hall, named for the route of ticker-tape parades; Ladies' Mile, between Ninth and 23rd streets, named for a fashionable nineteenth-century shopping district; the Great White Way near 42nd Street, for the proliferation of electric lights in the area; and Silicon Alley between SoHo and 23rd Street, for the numerous Internet and new media companies located there. Broadway remains one of New York City's principal commercial and cultural thoroughfares in the twenty-first century.

Broadway Junction. Neighborhood in northeastern Brooklyn (2000 pop. *ca* 2500), bounded to the north by Broadway, to the east by Van Sinderen Avenue, to the south by Atlantic Avenue, and to the west by Rockaway Avenue. Known as Jamaica Pass during colonial times, it was used during the Battle of Long Island in August 1776 by British troops as a passage to Gowanus, where they trapped and defeated colonial troops. It is residential, has light industry, and is the transfer point for the Fulton Street "A," the Canarsie "L," and the Broadway "J" elevated rapid transit lines. The neighborhoods of East New York and Stuyvesant Heights meet at the intersection of Jamaica Avenue, Broadway, and Fulton Street. Highland Park and the Cemetery of the Evergreens are nearby.

Stephen Weinstein

Broadway Presbyterian Church. Currently located at 601 West 114th Street at Broadway, it was founded in 1825 at 65 Bleecker Street. The present site was purchased in 1910, the cornerstone laid on 16 March 1912, and the first service held on 10 November 1912. The architect who built the English Gothic sanctuary, Louis E. Jallade, modeled it after the Brown Memorial Tower on which he worked at nearby Union Theological Seminary. As of 2008 the church operated a nursery school and a soup kitchen for the poor.

Jessica Montesano

Broadway theaters. The major commercial theaters in New York City are mostly located in the midtown theater district, which takes up the blocks between Sixth and Eighth avenues from West 41st Street to West 54th Street. One of the city's first theaters was the Play-

house on Broadway in the early eighteenth century. Gradually the city's theaters moved northward, primarily along Broadway, until a theater district was established around Times Square. In 2008 there were 39 Broadway theaters. The term refers not to location but to theater size. A playhouse with more than 499 seats is officially a Broadway theater wherever it is located. Only three Broadway theaters are actually located on Broadway: the Marquis, the Palace, and the Broadway. One, the Vivian Beaumont at Lincoln Center, is located outside the theater district. While approximately one-third of the theaters bear traditional, mostly British names (the Lyceum, the Longacre, the St. James), the majority of names recall the history of Broadway itself: its leading artists (Belasco, Barrymore, Booth) and playwrights (Eugene O'Neill, Richard Rodgers, August Wilson, Neil Simon), plus critic Walter Kerr and legendary theater cartoonist Al Hirschfeld. The Shubert Organization, America's oldest professional theater company and the largest owner of Broadway houses, is memorialized not only in the Shubert Theatre, but in the Gerald Schoenfeld and Barry Jacobs theaters, named for the current chairman and a former president of the organization.

Mary C. Henderson, *The City and the Theatre: New York Playhouses from Bowling Green to Times Square* (Clifton, N.J.: James T. White, 1973)

Marvin Carlson

Broadway United Church of Christ. Congregational church organized in 1836 as the Broadway Tabernacle Church with funds from the reformers Lewis and Arthur Tappan, partly in an attempt to attract to New York City the evangelist Charles Grandison, who served as pastor for the first year. The abolitionist preacher Joseph P. Thompson was pastor from 1845 to 1871. Over the years the church underwent several changes of location and name. The congregation worshipped until 1857 in the Broadway Tabernacle (1836) on Broadway between Leonard and Worth streets, from 1859 in a new building at Sixth Avenue and 34th Street, and from 1905 in a new building on Broadway and 56th Street (demolished 1970). The name was changed in the early 1950s to Broadway Congregational Church, and after the merger in 1957 of the Congregational church with the Evangelical and Reformed church to Broadway United Church of Christ. Later the church shared space: from 1970 with the Church of St. Paul the Apostle (Roman Catholic) at 59th Street and Ninth Avenue, from 1980 with Rutgers Presbyterian Church on 73rd Street and Broadway, and from 1985 with St. Michael's Church (Episcopal) on 99th Street between Broadway and Amsterdam Avenue.

History of Broadway Tabernacle Church (New York: S. W. Benedict, 1846)

Kevin Kenny

Brodie, Steve (*b* New York City, 1863; *d* San Antonio, Tex., 1 Jan 1901). Famously jumped off of the Brooklyn Bridge on 23 July 1886. The stunt was probably faked, but he capitalized on his celebrity to star in vaudeville shows and open a popular bar at 347 Bowery. The phrase "taking a Brodie" or to "pull a Brodie" describes a daring or foolish feat.

Caleb Smith

Brodsky, Joseph (*b* Leningrad, 24 May 1940; *d* New York City, 28 Jan 1996). Poet. Forcibly exiled from the Soviet Union in 1972, he moved to the United States and ultimately made his home in New York City. Brodsky authored nine volumes of poetry, as well as translations and several collections of essays. He taught at numerous colleges and universities, including Queens College, City University of New York, New York University, and Columbia University. In 1987 he received the Nobel Prize for literature. In 1991 he was appointed poet laureate of the United States. The literary community valued Brodsky for both the quality of his work and his passionate advocacy for poetry, characterized by Seamus Heaney as a "total conviction about the trustworthiness of poetry as a force for good." Although he was a professor for many years at Mount Holyoke College in Massachusetts, Brodsky always returned to New York City. He died at his home in Brooklyn Heights.

Helen Graves

broken windows policy. Theory of criminality that many credit with the historic drop in crime rates in New York City, then nationally, starting in 1992. The theory was introduced by the criminologists James Q. Wilson and George Kelling in the *Atlantic Monthly* (March 1982) following a 1969 essay on "deindividuation" by Philip Zimbardo, a psychologist at New York University. This two-part theory posits that (1) crime naturally increases in unkempt neighborhoods that fail to quickly repair broken windows and other eyesores; and that (2) government policy can reduce crime by quickly repairing rather than ignoring such blight. Put another way, police who enforce minor violations such as littering and graffiti painting will see a drop in major crimes like robbery and murder. When mayors such as New York City's Rudolph Giuliani first implemented this "quality of life enforcement," or "zero-tolerance policy," crime rates plummeted. Although the verity of the broken windows theory is a topic of academic debate, popular support for this policy remains high in the city and nationally.

Harold Takooshian

Bronck, Jonas (*b* Komstad, Småland, Sweden, 1600; *d* Bronckslandt, north of the Harlem River, Westchester County, 1643). Colonist. He lived on his father's farm in Sweden before moving to Amsterdam, where he taught himself navigation and became a sea captain. With his wife and indentured servants he settled in New Netherland in 1639. His stone house contained the largest library in the colony and was the site of a peace conference with the Weckquasgeek Indians in 1642. The Bronx River and, by extension, the borough of the Bronx are named for him.

Lloyd Ultan, *The Bronx in the Frontier Era: From the Beginning to 1696* (New York: Bronx County Historical Society, 1993)

Lloyd Ultan

Bronx. Northernmost borough of New York City. It encompasses 42 square miles (109 square kilometers) and is the only section of New York City that belongs to the North American mainland. Undulating hills and valleys mark the western half; east of the Bronx River the land slopes gently toward Long Island Sound. The borough has a population of about 1.3 million (federal census of 2000), and by the late 1980s its bridges, highways, and railroads were more heavily traveled than those of any other part of the United States. There are 11 colleges and universities in the borough: Fordham University, the Maritime College of the State University of New York, three branches of the City University of New York (Lehman College, Bronx Community College, and Hostos Community College), the Albert Einstein College of Medicine of Yeshiva University, the College of Mount St. Vincent, Manhattan College, Mercy College, the College of New Rochelle, and Monroe College. About 25 percent of the area is parkland (more than in any other borough); this includes the Bronx Zoo and the New York Botanical Garden, which is the site of the last remnant of a hemlock forest that once covered the city and contains such artifacts as the earliest known petrograph in the area, a turtle drawn by Weckquasgeek Indians, Algonquin speakers who inhabited the land thousands of years before European exploration.

1. From 1609 to the 1890s

Henry Hudson, probably the first European to see the shoreline, in 1609 sought cover from a storm for his vessel the *Halve Maen* in Spuyten Duyvil Creek. The eastern shore was described by Adriaen Block, the first European to navigate the East River (1614). The mainland was settled in 1639 by Jonas Bronck, a Swedish sea captain from the Netherlands who eventually built a farmstead at what became 132nd Street and Lincoln Avenue; a small group of Dutch, German, and Danish servants settled with him. In 1642 a peace treaty ending a war between the Dutch and the Weckquasgeeks was negotiated in Bronck's home. During the same year two settlements were established by colonists from Rhode Island: one by Anne Hutchinson near the river that was later named for her, another by John

Arthur Avenue Indoor Market, 2009

Throckmorton in what is now Throgs Neck; both settlements were destroyed in a war between the Dutch and the Weckquasgeeks. Bronck's servants scattered after his death in 1643. In 1646 a patroonship was formed by Adriaen van der Donck in an area that now includes Riverdale and a part of Westchester County (he was given an enormous land grant in return for attracting 50 families to it), and Thomas Cornell, a colonist from Rhode Island, built a farm in what became Clason Point. In 1655 both settlements were destroyed during another conflict between the Dutch and the Weckquasgeeks. Most of the eastern half of the area was bought in 1654 by Thomas Pell of Connecticut, who invited 16 families to form the village of Westchester near what is now Westchester Square. Between 1683 and 1714 Westchester was the seat of Westchester County (which included the Bronx until the second half of the nineteenth century) and as a chartered borough was the only town in the colony with an elected mayor. It was the first town without a property qualification for suffrage: settlers chose a representative to the provincial assembly and had their own municipal court. Horses, cattle, sheep, and wheat were the main agricultural products, and a cottage industry in cloth making thrived. A semiannual fair was held to promote manufacturing and commerce. St. Peter's Church on Westchester Avenue organized the first parish in 1693. That same year Frederick Philipse, a wealthy merchant of New York City, obtained from Governor Benjamin Fletcher the hereditary right to build and operate a toll bridge (the King's Bridge) across Spuyten Duyvil Creek to Manhattan.

During English rule most inhabitants were English, of English descent, or Dutch. Anglicanism was the religion sanctioned by colonial law, but Presbyterians, Quakers, and members of the Dutch Reformed Church were in the majority. The first blacks, slaves from the West Indies, soon made up 10 to 15 percent of the population; in most households there were one or two who worked as farmhands or housemaids. In 1698 the first free black was recorded. Indians left the area soon after 1700. At this time the Bronx was composed of two towns and all or part of four huge manors (feudal grants allowing the proprietor exclusive rights to build grain mills and establish courts to try tenants): lying entirely within the present Bronx was the town of Westchester; to the north and including part of the present Westchester County was the town of Eastchester; to the northeast and including another part of the present Westchester County was the manor of Pelham, owned by the Pell family; to the southwest was the manor of the Morris family, Morrisania; in most of the western section was the manor of Fordham, settled in 1671 by John Archer (later owned by the Dutch Reformed Church of New York City, then absorbed by Westchester in 1755); and to the northwest and including much of the present Westchester County was the manor of Philipsburgh, owned by the Philipse family. The first Catholics moved to the area in 1744, the first Jewish settlers about ten years later. The King's Bridge fell into disuse, and the toll was eliminated in 1759 after a parallel bridge (the Farmers' Free Bridge) was built by farmers under the leadership of Benjamin Palmer. He planned subsequently to build a city to rival New York City. Hoping to lure the commercial traffic of Long Island Sound he formed a consortium to buy an island in Pelham Manor that he named City Island, but the project failed.

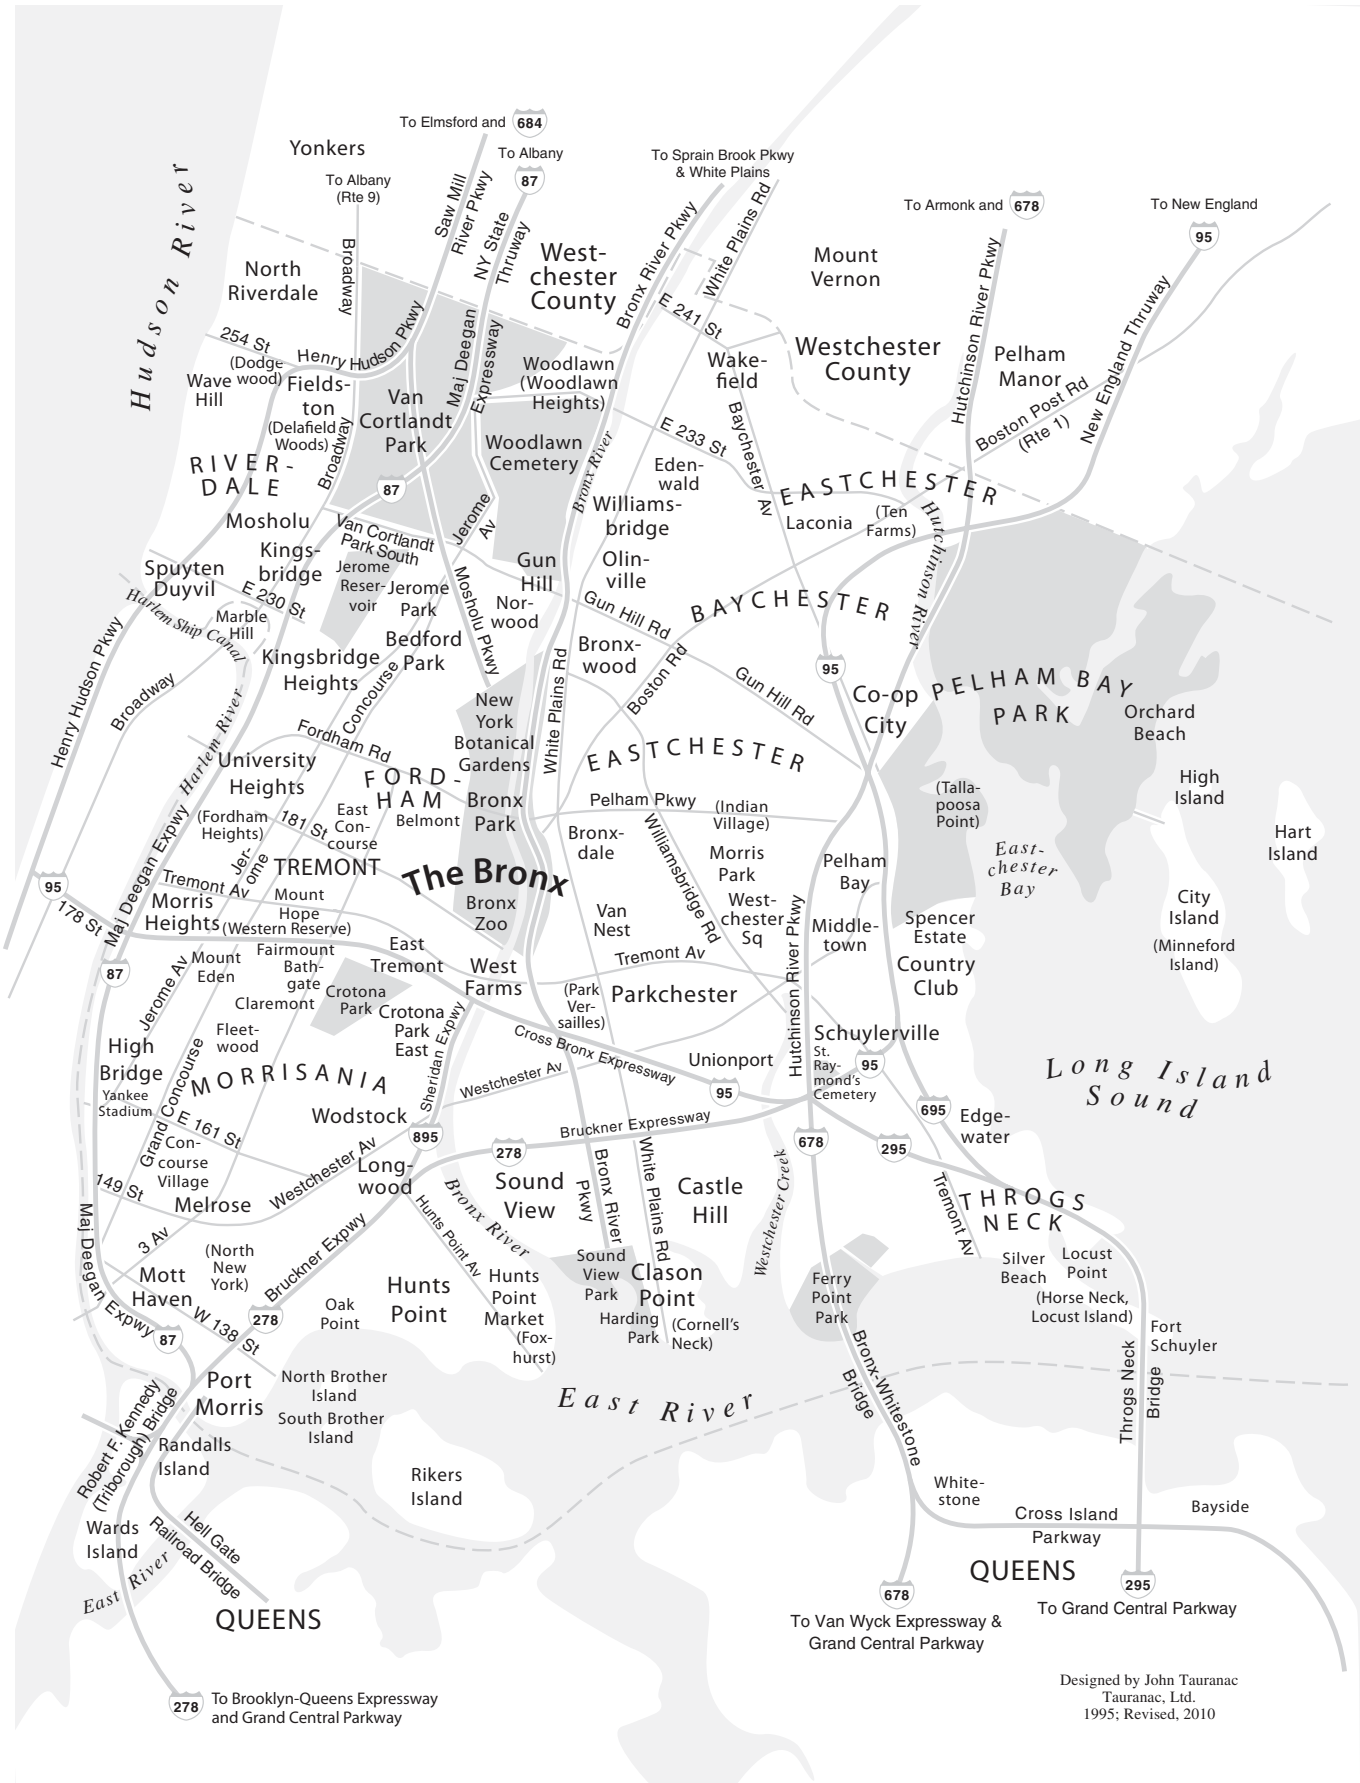
The area experienced constant conflict during the American Revolution. Fortifications erected by General George Washington to protect the Harlem River valley proved ineffective on 12 October 1776, when British troops outflanked the Continental army by landing at Throgs Neck. During the battle of Pell's Point in today's Pelham Bay Park, on 18 October about 750 men led by Colonel John Glover of Marblehead, Massachusetts, stayed the march of 4000 British and Hessians, enabling Washington to evacuate his army to White Plains. For much of the rest of the war the Bronx remained in British hands and was subjected to raids by rebels that caused widespread destruction. In November 1783 Washington and Governor George Clinton began a march from the Van Cortlandt mansion (now in Van Cortlandt Park) to take possession of New York City from the departing British. A recommendation in 1783 by Lewis Morris that Morrisania be the capital of the United States was rejected, but during an epidemic of yellow fever in Philadelphia in October 1797 President John Adams governed from the farmhouse of his daughter and son-in-law in what was then the southern part of Eastchester.

In the early nineteenth century the chief means of livelihood in lower Westchester County were growing wheat and raising livestock; between 1800 and 1830 the population rose from 1755 to 3023. Severe famine in Ireland and the growth of industry and commerce in the city drew thousands of Irish to the Bronx as laborers. There was a brief period of industrial growth during the War of 1812, when paint, glass, pottery, and bleaching factories opened in West Farms. Many Irish immigrants were employed in the construction of the High Bridge over the Harlem River (1837–48), the New York and Harlem Railroad (1841, the first railroad in the area), and the Croton Aqueduct (1842); the Irish also worked in the first iron foundry and industrial village at Mott Haven (1841), developed by Jordan L. Mott. After the building of the Erie Canal, New York City was inundated with wheat from the Midwest, whose fertile lands yielded fruits, vegetables, and dairy products for sale in the city. The first railroad tracks were laid over these lands, and rural stations eventually became the centers of new villages such as Melrose, Morrisania, Tremont, Fordham, Williamsbridge, Wakefield, Highbridge, Morris Heights, Kingsbridge, and Riverdale; the campus of St. John's College (later Fordham University) was built near a station in 1841. Increasing numbers of New Yorkers chose to live in the country and work in the city. Summer homes were

built along waterways in the Bronx by industrialists and financiers, among them Richard M. Hoe, William E. Dodge, and Collis P. Huntington. As the railroad was extended, the center of population shifted west from the area east of the Bronx River, and the towns of West Farms (1846) and Morrisania (1855) were established.

Economic opportunity in the United States and a failed revolution in Germany in 1848 led thousands of Germans to move to the Bronx. Many settled in Melrose and Morrisania and became shopkeepers, brewers, and saloon owners. They also organized choral societies, *Turnvereine* (athletic clubs), and social clubs such as the Tallapoosa Club and the Schnorer Club, which became social centers for business leaders. In 1863 the Janes and Beebe ironworks at 149th Street and Brook Avenue produced the dome for the Capitol in Washington, D.C. The Johnson Iron Foundry on Spuyten Duyvil Creek made munitions during the Civil War and the Spanish–American War. Many Irish immigrants settled near new factories and in areas where construction work could be found. Developments intended largely for wealthy residents of Manhattan and other sections included Woodlawn Cemetery (1863), where they were buried, and the Jerome Park Racetrack (1866), where the Belmont Stakes was first run. By this time it was generally assumed that towns on the mainland would be annexed by New York City as it expanded northward. In 1868 Mott Haven, in Morrisania, numbered its streets to have them conform to those of the city, and the following year the municipal parks department was given control of the bridges over the Harlem River and the streets leading to them. In 1874 the towns of Morrisania, West Farms, and Kingsbridge (all of which lay west of the Bronx River) were annexed to the city; known as the Annexed District, they were placed under the jurisdiction of the parks department and became the city's 23rd and 24th wards. The journalist John Mullaly organized a movement urging the city to buy huge tracts and set them aside for parks while land in the Bronx was still cheap; in 1888 a commission purchased what later became Van Cortlandt, Crotona, Claremont, St. Mary's, Bronx, and Pelham Bay parks and the Mosholu, Pelham, and Crotona parkways. In 1888 the Third Avenue elevated line was extended to 132nd Street, precipitating the most rapid growth that the Bronx had ever seen.

Beginning in 1890 a commissioner of street improvements was elected in response to complaints by inhabitants of the Annexed District that the parks department did not repair or build roads. Under the direction of the commissioner (and later of the borough president) the Grand Concourse was designed and built. Modeled after the Champs-Élysées, this wide avenue was lined with trees and had an innovative design based on the use of underpasses at major street crossings. The Belmont Stakes was moved east of the Bronx River in 1890 to the Morris Park Racecourse, where it remained until moving again to Belmont Park in Nassau County in 1905. In the northern section of Bronx Park, the New York Botanical Garden opened in 1891 and soon became known worldwide; the Bronx Zoo, in the southern section in 1899, displayed and bred many species (the American Bison Society used a herd at the zoo to restock western ranges). During the late nineteenth century New York University opened a campus in University Heights; the principal buildings were designed by Stanford White and included a colonnade that became the Hall of Fame for Great Americans, the first hall of fame in the world.



2. From the 1890s to the 1990s

By the 1890s there was strong support in parts of Eastchester, Pelham, and the village of Wakefield for consolidating with New York City the area east of the Bronx River, along with Brooklyn, Queens, and Staten Island. Most people assumed that high real estate values in Manhattan would cover the public debt already incurred by the towns and pay for further public improvements being planned, such as a sewer system in Wakefield. In a nonbinding referendum in 1894 consolidation was favored by voters in New York City and its outlying areas but was defeated overwhelmingly in the city of Mount Vernon and by one vote in the town of Westchester. The state legislature defeated a bill inspired by the referendum but in 1895 passed another bill annexing to the city the area east of the Bronx River, parts of the towns of Pelham and Eastchester, the village of Wakefield, and the town of Westchester, which because of its central location was included despite its negative vote in 1894. The newly annexed area became part of the 24th ward and was placed under the jurisdiction of the commissioner of street improvements (the office eventually became the model for that of borough president).

After consolidation in 1898 the 23rd and 24th wards became the borough of the Bronx, which with Manhattan remained part of New York County (the other boroughs were already separate counties). But the journey from the Bronx to the courts in southern Manhattan was so long that inhabitants of the Bronx soon petitioned for county designation. Morris High School, the first public high school in the Bronx, opened in 1897. Many of the Italian immigrants who moved to the city at the turn of the twentieth century settled in the Bronx, often near the factories of Melrose, or in Belmont, where they found work in the building trades or in landscaping the nearby New York Botanical Garden and the Bronx Zoo. Others helped build the Jerome Park Reservoir, and some bought farms in the rural northeastern Bronx. In 1904 the first subway connecting the Bronx to Manhattan was built under 149th Street, providing cheap rapid transit that, along with the Third Avenue elevated line, enabled hundreds of thousands of residents during the first third of the twentieth century to leave tenements in Manhattan for spacious new apartments in the Bronx. Yugoslavians, Armenians, and Italians were among those who made the move, but the largest group was Jews from central and eastern Europe. In 1912 the state legislature established the County of Bronx as the 62nd county in the state, effective 1 January 1914.

With the influx of population in the first third of the century the economy of the Bronx grew rapidly. The Third Avenue elevated line was gradually extended northward, and in the process trolley lines were connected to it, forming a rapid transit line that provided access from lower Manhattan to expanses of undeveloped land. Many apartment buildings and commercial buildings were soon erected along the corridor of the elevated line, which reached its northern terminus at Gun Hill Road in 1920. In 1923 Yankee Stadium was opened at 161st Street and River Avenue as the home of the New York Yankees, who became known as the "Bronx Bombers" because of the large number of home runs hit in the following decades by such players as Babe Ruth, Lou Gehrig, Joe DiMaggio, Mickey Mantle, Roger Maris, and Reggie Jackson. Eventually the stadium was also used for football games, championship boxing matches, and religious gatherings. Grocery stores, restaurants, vegetable and fruit markets, tailors, and hardware stores became common in neighborhood shopping districts. Inhabitants throughout the borough shopped in department stores and boutiques at 149th Street and Third Avenue, an area known as the Hub that also had movie palaces and vaudeville theaters. Alexander's opened a department store there in 1928, and a branch on Fordham Road in 1938, which soon had more sales per square foot than any department store in the nation. Eventually a section of Fordham Road eclipsed the Hub as the main shopping district. In 1929 Loew's theater syndicate built the Paradise Theatre for $4 million on the Grand Concourse immediately south of Fordham Road; it had 4000 seats and a Baroque decor that included a ceiling painted dark blue to suggest a nighttime sky, small lightbulbs that resembled stars, and simulated clouds that were projected across the ceiling by machine.

The onset of the Depression ended the period of tremendous growth that had begun in 1888, but privately financed apartment buildings continued to be constructed (most in the predominant style of the time, art deco). This was especially true of the Grand Concourse area, which became a symbol of social and economic success; many apartment buildings there had five or six stories with

wide entrance courtyards bordered by grass and shrubs. About 49 percent of the inhabitants in 1930 were Jews, most of whom worked in Manhattan. By 1934 housing in the Bronx had many more amenities than that of the other boroughs: almost 99 percent of residences had private bathrooms, about 95 percent central heating, more than 97 percent hot water, and more than 48 percent mechanical refrigeration. The largest housing development of the time, Parkchester, was undertaken by the Metropolitan Life Insurance Company. Completed in 1942, it housed 40,000 residents and boasted parks, playgrounds, sculpture, convenience stores, and movie theaters. Edward J. Flynn, the Democratic leader of Bronx County and an early supporter of the New Deal, secured public funds to repair streets and build the county jail and the central post office, as well as neighborhood parks. The borough became known for its colleges and universities and its growing number of public high schools, among them the Bronx High School of Science for gifted students (which by the mid-1990s had the highest number of graduates who had gone on to receive doctorates than any high school in the country). The first important meetings of the United Nations Security Council were held at Hunter College in the Bronx (later renamed Lehman College).

After World War II new housing was built, and the makeup of the population changed. Construction ranged from luxury apartment buildings in Riverdale to public housing in the southern Bronx. Longtime residents and former members of the armed services left older housing in the southern neighborhoods of Hunts Point, Morrisania, and Mott Haven to move to privately built housing in the northern Bronx, to other boroughs, or to the suburbs. About 170,000 persons displaced by slum clearing in Manhattan, mostly black and Puerto Rican, moved to Hunts Point and Morrisania, as well as to Melrose, Tremont, and Highbridge. In 1950 social workers reported enduring poverty in a section of the southern Bronx. Systematic rent control was introduced during World War II to prevent rents from skyrocketing as empty apartments became scarce; it soon prevented conscientious landlords from paying for repairs to their aging buildings. Buildings were often set afire, sometimes by unscrupulous landlords hoping to collect insurance or by unscrupulous tenants taking advantage of the city's policy that burned-out tenants should be given priority for public housing and receive money for new furnishings. A period of rampant arson in the late 1960s and early 1970s ended only after this policy was changed and a limit was imposed on insurance payments for reconstructing burned-out apartment buildings. From that time one-family houses and row houses were built, hundreds of apartment buildings restored, and several apartments converted to cooperatives and condominium units, permitting more residents of the southern Bronx to own their homes.

After Flynn's death in 1953, Charles A. Buckley succeeded him as the Democratic leader of Bronx County and gained federal funds for the construction in the 1950s and 1960s of housing and a network of highways linking the Bronx with the rest of the city, among them the Major Deegan Expressway, the Cross Bronx Expressway, and the Bruckner Expressway. As commuting by automobile became more convenient, high-rise apartment buildings were erected in southern and eastern neighborhoods along the new roads, including Soundview, Castle Hill, Spuyten Duyvil, and Riverdale. Co-op City, a complex of 15,372 units built in the northeastern Bronx between 1968 and 1970, housed 60,000 persons and was one of the largest housing developments in the world. The distribution of products to the metropolitan area and the rest of the East Coast became easier for industries occupying new industrial parks in the Bronx, such as those along Bathgate and Zerega avenues, and for fruit and vegetable dealers in the Hunts Point Food Market (opened 1965). Puerto Ricans accounted for a growing share of the population (20 percent in 1970) and became more active in politics: Herman Badillo was the first Puerto Rican to be elected to the borough presidency (1965) and later to the U.S. Congress; Robert Garcia was elected to Congress in 1978; Fernando Ferrer was elected borough president in 1987; and José Serrano succeeded Garcia in 1990. In 1974 the campus of New York University at University Heights was taken over by Bronx Community College. In the late 1970s condominiums were being built on City Island and elsewhere along Long Island Sound, whereas the southern Bronx had by then become known nationally as a symbol of urban blight. In 1977 the Bronx became a national symbol of urban crisis when President Jimmy Carter walked on the rubble of destroyed apartment houses and the sportscaster Howard Cosell announced that "the Bronx is burning" during a nationally televised World Series game at Yankee Stadium.

During the 1980s and 1990s cooperation between grassroots organizations, neighborhood groups, and local government spurred a massive rebuilding of formerly devastated neighborhoods. Much of the new housing consisted of privately owned one-, two-, and three-family homes. The Fulton Fish Market moved to Hunts Point in 2007. In 2009 the Metro–Hutchinson office complex was completed, making it one of the largest in the city, and a new Yankee Stadium, erected across the street from the original arena, on the north side of 161st Street, opened in 2009.

By the early twenty-first century the population of the Bronx was increasing, the ethnic breakdown being about a third black, a third Latin American, and a third Asian and white. Musicologists maintain that this ongoing cultural diffusion led to the popularity of hip-hop music and break dancing, which originated in the Bronx in the 1970s. By 2000 Puerto Ricans accounted for a quarter of the population, though the number of Koreans, Vietnamese, Indians, Pakistanis, Cubans, Dominicans, Jamaicans, Greeks, and Russians was also growing. Albanians settled in Belmont, Cambodians in Fordham. Co-op City remained a successful development, luxury apartments built in Riverdale in the 1950s became cooperatives, and the housing stock continued to include the world's largest concentration of art deco–style buildings. Entrepreneurs formed new businesses, and the borough's public schools became overcrowded with new immigrant students.

Stephen Jenkins, *The Story of the Bronx* (New York: G. P. Putnam's Sons, 1912)

Gary D. Hermalyn, Lloyd Ultan

Bronx Community College. Junior college of the City University of New York, opened in 1957 at the former site of the Bronx High School of Science on 184th Street and Creston Avenue. In 1973 it moved to a disused campus of New York University at University Avenue and 181st Street. In 2007 it enrolled 4994 full-time and 3723 part-time students. The campus is the site of the Hall of Fame for Great Americans.

Marc Ferris

Bronx County Historical Society. Private, nonprofit cultural and educational institution opened in 1955 to document and interpret the social and economic history of the Bronx from the seventeenth century to the present. It has a research library and more than 18,000 photographs and slides; it also runs Poe Cottage (circa 1812), Edgar Allen Poe's last home and now a historic museum, and the Valentine–Varian House (circa 1758), now the Museum of Bronx History. The society also offers tours of the Bronx. Its offices and collections are at 3309 Bainbridge Avenue.

Gary D. Hermalyn

Bronxdale. Neighborhood in the central Bronx, bounded to the north by Allerton Avenue, to the west by the Bronx River Parkway, to the south by Pelham Parkway, and to the east by Esplanade Avenue. It was settled in the nineteenth century as a village on the eastern bank of the Bronx River. When Bronx Park was laid out in 1888, a cloth-tape and cloth-printing mill and bleachery built in the mid-nineteenth century was forced to move, along with its resident workers. Jews moved to the neighborhood in large numbers after the opening in 1917 of the White Plains Road branch of the Interborough Rapid Transit. A predominantly residential area, Bronxdale has attracted varied ethnic groups over the past century. White Plains Road and Lydig Avenue remain the main commercial streets and the Bronx headquarters of the city parks department is in Bronk Park.

Lloyd Ultan

Bronx Empowerment Zone. Under the administration of Bill Clinton, nine economically underdeveloped areas of the country were designated to receive special incentives and programs to encourage new business growth. In 1996 the Bronx became one of these Empowerment Zones. Under the Empowerment Zone program, small businesses receive tax breaks for moving into the Bronx and hiring neighborhood residents. There are also measures that minimize the financial burden of taking out business loans. The goal is to mobilize entrepreneurs and increase employment in this largely depressed area of the city. The Bronx has seen substantial investment through the Empowerment Zone programs. The *New York Post* and the Fulton Fish Market moved to the Bronx. Borough President Adolfo Carrión drafted the Yankee Stadium Neighborhood Development Plan to build a new high school for sports medicine near the stadium, a new park and hotel, and a Yankee Hall of Fame. The Bronx Empowerment Zone was able to partially finance the Venture Center, a state-of-the-art office complex, to accommodate startup businesses.

Penelope Gelwicks

Bronx High School of Science. One of the most distinguished secondary schools in the United States. It opened in 1938 at 184th Street and Creston Avenue for gifted students interested in science and mathematics. In its first year it admitted 300 boys on the basis of a written examination, and in 1946 it began to admit girls. The school moved in 1958 to a building at 205th Street and Jerome Avenue, north of Lehman College. The curriculum includes advanced college placement courses in science and mathematics, as well as independent research programs. Students at the Bronx High School of Science have won many city, state, and national academic honors, and nearly all go on to attend engineering, technical, or liberal arts colleges. In 2007 the school had an enrollment of nearly 3000 and was one of several selective specialized high schools in the city's public education system. Distinguished alumni of the Bronx High School of Science include seven Nobel laureates in physics: Leon Cooper (1972), Sheldon Glashow (1979), Steven Weinberg (1979), Melvin Schwartz (1988), Russell A. Hulse (1993), H. David Politzer (2004), and Roy J. Glauber (2005). Other notable graduates of the school include the former secretary of defense Harold Brown, the journalists William Safire and Joseph Lelyveld, the writer E. L. Doctorow, the electrical sound engineer Robert Moog, the singer Bobby Darin (Walden Robert Cassotto), the activist Stokely Carmichael, and the astrophysicist Neil deGrasse Tyson.

Gerard Koeppel

Bronx Home News. Newspaper launched by James O'Flaherty (1874–1939), published weekly from 1907 and daily from 1922 from offices at East 148th Street and Third Avenue. It focused on local news and always named as many residents of the Bronx as possible. Perhaps its most famous headline was "Bronx Man Leads Russian Revolution," a reference to Leon Trotsky, who had lived in the Bronx in 1917. In 1939 the newspaper had a circulation of 110,000 (with a heavy reliance on home delivery) and published neighborhood editions in upper Manhattan, but it soon went into decline and was sold to the owners of the *New York Post* on 30 May 1945. The *Bronx Home News* ceased publication on 18 February 1948.

Stephen A. Stertz

Bronx Hospital. Private hospital in the Bronx. It opened in 1911 and served Jewish immigrants. In 1918 the hospital moved to the Eichler estate at 169th and Fulton avenues. A new building was completed in 1932, and the old hospital became a nursing home. The hospital merged in 1962 with Lebanon Hospital to form Bronx–Lebanon Hospital Center.

Andrea Balis

Bronx–Lebanon Hospital Center. Non profit, voluntary hospital in the Bronx, the largest serving the southern part of the borough. Its two major divisions are 1 mile (1.6 kilometers) apart on the Grand Concourse and on Fulton Avenue. Together, they house 858 beds. The hospital was formed in 1962 by the merger of Lebanon Hospital and Bronx Hospital. In 1971 it became a teaching hospital of the Albert Einstein College of Medicine. Bronx–Lebanon has two inpatient facilities, extensive outpatient facilities, and a center for the treatment of AIDS; it also maintains housing, nutrition, and food distribution programs.

Andrea Balis

Bronx Municipal Hospital Center. See Jacobi Medical Center.

Bronx Museum of the Arts. Founded in 1971 to bring visual arts to the Bronx, until 1982 it was housed in the rotunda of the Bronx County Courthouse, located on the Grand Concourse and 161st Street; it then moved to a former synagogue on the Grand Concourse and 165th Street. The museum displays primarily local artists of African American, Asian, and Latin American descent. It also has an educational department, which offers art classes and workshops. In 2007 the architectural firm Arquitectonica completed a new facility that nearly doubled the museum's space.

Max Seppo

Bronx Opera Company. Community opera company. Founded in 1967 by artistic director and principal conductor Michael Spierman, the Bronx Opera Company (BOC) performs in English, with costumes and a full orchestra. BOC presents two operas per year, holding four performances each at the Bronx High School of Science and various high

schools and colleges. The company moved in 1980 to the Lovinger Theatre of Lehman College. Performances in Manhattan were held at the Hunter College Playhouse (later the Sylvia and Danny Kaye Playhouse), John Jay College, City University of New York. In 1995 BOC started an arts education program for Bronx public school students that includes a Job Shadow Program and showing students an abridged performance.

Mark Laiosa

Bronx Park. Public park in north central Bronx, covering 662 acres (268 hectares) and bounded to the north by Gun Hill Road; to the east by Bronx Park East and Unionport Road; to the south by East 180th Street, Boston Road, and Bronx Park South; to the west by Southern Boulevard and Dr. Theodore Kazimiroff Boulevard; and to the northwest by Webster Avenue. It is bisected by Fordham Road, and within its borders the Bronx River Parkway runs roughly parallel to the Bronx River. The park was laid out during the 1880s as part of a plan to reserve parkland in undeveloped areas annexed or soon to be annexed to New York City. During the 1890s it was chosen as the site for the city's zoological and botanical gardens. The area south of Fordham Road was to be used by the New York Zoological Society (now the Wildlife Conservation Society), and what later became known as the Bronx Zoo opened to the public in 1899. Most of the area north of Fordham Road (about 250 acres [100 hectares]) became the site of the New York Botanical Garden (1891), which became one of the finest gardens of its kind in the world and contains virgin hemlock forest, covering 40 acres (16 hectares).

Peter Derrick

Bronx River. A meandering, scenic waterway whose source is in the hills of Westchester County near the Kensico Dam. The river was known as Aquahung to the Native Americans until the surrounding lands were purchased by Jonas Bronck in 1639. The river drains a valley 24 miles (38 kilometers) long and flows south past White Plains, dividing Yonkers from Mount Vernon, passing through the middle of the Bronx into the East River between Hunts Point and Clason Point. It is especially picturesque at the Bronx River Gorge in the New York Botanical Garden, where the historic Lorillard Tobacco Mill is preserved. The river also bisects the Bronx Zoo. The rocky shores and outcroppings show clearly the glacial action of the retreating Wisconsin Ice Sheet. The Bronx River is navigable for only 2.6 miles (4.2 kilometers), to East 172nd Street. In 1913 a dredging project by the U.S. Army Corps of Engineers was begun; it was about 90 percent complete by the early twenty-first century with the depth averaging 10 to 12 feet (3 to 4 meters). At the outbreak of the American Revolution, it was said that the British War Office was so ignorant of the topography of the Bronx that it ordered Admiral Richard Howe to sail his fleet up the river and attack "whatever American ships he found there." The Bronx River has had a long history of severe pollution caused primarily by the dumping of effluents from surrounding towns. By the early twenty-first century most communities had agreed to stop dumping raw sewage, as efforts to stock the river with such fish as the alewife were undertaken to combat eutrophication. In February 2007 biologists reported the sighting of a beaver—the first seen in New York City in more than two centuries.

Gerard R. Wolfe

Image of the Bronx River, 1905

Bronx Symphony Orchestra. Community orchestra formed in 1940. It disbanded after one concert season but was re-formed in 1947 by Irwin Hoffman, conductor, and Edward I. Cohen, orchestra manager, as part of the Walton Community Center. Rehearsals and performances took place at Walton High School in the Bronx. Later conductors included Leon Hyman (1952–59), Paul Wolfe (*ca* 1959–62), Saul Schectman and Moshe Budmore (*ca* 1962–63), Louis F. Simon (*ca* 1964–68), Michael Spierman (1968–81, 1989–91), Joseph Delli Carri (1981–84), Robert Black (1986–89), George Rothman (1991–93), and Gheorghe Costinescu (1993–94). In early 1968 the orchestra moved to the Bronx High School of Science, before moving in 1980 to the Performing Arts Center at Lehman College, City University of New York, giving four to six concerts a year. In 1995 the Bronx Symphony Orchestra became independent of Lehman College, used various conductors, and began touring the Bronx. José Alejandro Guzman became music director and conductor in 1998.

Mark Laiosa

Bronx Terminal Market. Indoor market complex covering 32 acres (13 hectares) along the Harlem River between 149th and 152nd streets in Mott Haven. Construction on a cold-storage warehouse began under Mayor John F. Hylan in 1917 and was completed in the 1920s, when other buildings were added to form an indoor market. The market was not successful until the 1930s, when Mayor Fiorello H. La Guardia expanded it as part of his program to eliminate pushcarts. Ten buildings were added to the south of the original warehouse, and the market became the city's main wholesale distribution center for ethnic foods. In December 1935 Mayor La Guardia prohibited the sale and possession of artichokes there to end the inflation of their price by organized crime; in the following year the price declined and the ban was lifted. The complex was leased to the firm of Arol Development under Mayor John V. Lindsay in 1972. This arrangement came into conflict with the rebuilding of Yankee Stadium during the 1970s, which called for the construction of a parking area on land already leased to Arol. In 1993 about 75 percent of the market lay empty, and Mayor David N. Dinkins condemned the lease with Arol after George Steinbrenner, owner of the New York Yankees, threatened to move the team out of the Bronx. In the late 1990s the city lost a legal battle with the developer, who has the lease until 2052. As of 2010 the site had not been redeveloped.

Melissa M. Merritt

Bronx–Whitestone Bridge. Suspension bridge that spans the East River, connecting the Hutchinson River Parkway and Ferry Point Park in the Bronx to Whitestone in Queens. Designed by the engineer Othmar H. Ammann and the architectural firm Cass Gilbert and Company, it was constructed in 23 months at a cost of $17,785,000 and opened on 30 April 1939; at the time it was the fourth-longest suspension bridge in the world. The bridge reaches a maximum clearance above mean high water of 150 feet (46 meters), and the total length of its main span (excluding approach drives) is 2300 feet (701 meters). It has six traffic lanes, each 30 feet (9 meters) wide. Connected a few years after its completion to the parkways of the Bronx and Queens, it greatly improved access between Long Island and Westchester County and points north and east, and it spurred a housing boom in the adjacent areas of Queens that was interrupted only by World War II. The Bronx–Whitestone Bridge is operated by the Triborough Bridge and Tunnel Authority.

Stephen A. Stertz

Bronx Zoo entrance, 2009

Bronxwood Park. Name formerly applied to a development built in 1880 in the north central Bronx and bounded to the north by North Oak Drive, to the east by Bronxwood Avenue, to the south by South Oak Drive, and to the west by White Plains Road. All the streets were named for trees. The area later became a residential section of Williamsbridge. At the turn of the twenty-first century most of the housing consisted of small one-family houses and apartment buildings.

Gary D. Hermalyn

Bronx Zoo. The largest metropolitan zoo in the United States. After a campaign led by the Boone and Crockett Club, the state of New York in 1895 awarded a charter to the New York Zoological Society that empowered it to build a zoological garden. William Hornaday (1844–1937), a well-known zoologist and one of the founders of the National Zoological Park in Washington, D.C., became the director of the project in 1896 and selected a site for the new zoo in southern Bronx Park. Plans were drawn up by the architects George Lewis Heins and C. Grant Lafarge in 1897, and construction on the zoo's beaux-arts pavilions began the following year. The New York Zoological Park, which became known as the Bronx Zoo, opened in November 1899, housing 843 animals. Its naturalistic, parklike settings were in marked contrast to the small exhibits in the Central Park Zoo. In 1902 the zoo appointed Reid Blair as the first full-time veterinarian at a zoo in the United States. In 1906 Hornaday incited controversy when he exhibited Ota Benga, a Congolese pygmy brought to the United States for the St. Louis World's Fair, in the monkey house. African American clergy immediately protested, and the exhibit was closed.

Hornaday, an authority on the nearly extinct American bison, set aside breeding sanctuaries for the species in the American West. In 1907 the zoo sent 15 bison to the new Wichita National Bison Reserve in Oklahoma, a project that influenced cooperative wildlife conservation efforts among zoos and nature reserves worldwide. In 1916 it opened an animal hospital, the first of its kind in the United States. Early in the tenure of Fairfield Osborn (1887–1969) as president of the New York Zoological Society (1940–68), hidden moats were added to the African Plains exhibit (1941), and a children's zoo (1941) and "farm in the zoo" (1942) were opened. William Conway, who joined the Bronx Zoo in 1956 as an assistant curator of birds, was appointed general director in 1966. Believing that zoos should serve as nature refuges and breeding centers for endangered species of wildlife, he developed exhibits that allowed the animals to live in naturalistic replicas of their habitats rather than cages. To lend emphasis to its role in international conservation, the New York Zoological Society in 1993 changed its name to the Wildlife Conservation Society; the formal name of the zoo became the Bronx Zoo / Wildlife Conservation Park. In the twenty-first century the zoo has used its influence to focus on environmental sustainability not only in New York City but throughout the world. In 2004 eco-friendly composting restrooms were installed in the zoo out of concern for the nearby Bronx River, and in 2008 the 1903 lion house was restored to environmentally green standards. The zoo, one of the largest in the world, is home to over 4000 animals of more than 500 species—many rare and endangered—and draws some two million visitors annually.

William Bridges, *Gathering of Animals: An Unconventional History of the New York Zoological Society* (New York: Harper and Row, 1974)

Steven Johnson, Kate Lauber

Brook. Exclusive social club formed in 1903. It was intended to offer uninterrupted service day and night and was named for Tennyson's poem (the last two lines of which read: "For men may come and men may go, / But I go on forever"). Among the founding members was Stanford White, who designed the first clubhouse (at 6 East 35th Street) and the second (at 7 East 40th Street), a brownstone with an added classical facade to which the club moved after one year. These buildings were furnished with libraries, antique furniture, fine china, and paintings by Benjamin West and Gilbert Stuart. Later the club moved to a building at 111 East 54th Street designed by another member, William Adams Delano.

James E. Mooney

Brookdale Hospital Medical Center. Private nonprofit hospital. It started in 1921 as a single building with 75 beds and gradually added more buildings and departments over the years. By 2008 it had grown to 539 beds and 30 buildings situated on a 14-acre (6-hectare) plot at 1 Brooksville Plaza. The hospital has specialized long-term care at the Schulman and Schachne Institute for Nurs-

ing and Rehabilitation, which relocated to Brookdale in 1973.

Max Seppo

Brookfield Properties. Real estate development firm based in Toronto, Canada, founded as Olympia and York. Under the ownership of Albert, Paul, and Ralph Reichmann it attracted widespread attention for buying eight distressed skyscrapers on prime sites in Manhattan during a real estate slump in 1977. This risky purchase helped to launch a wave of foreign investment in the city's real estate during the 1980s after a boom in financial services led the eight buildings to triple in value. Olympia and York became an important force in the local real estate market; it later built the World Financial Center in Battery Park City, a complex of four towers completed from 1981 to 1988 containing 8 million square feet (743,000 square meters) of office space. The firm went bankrupt in the early 1990s and reorganized as Brookfield Properties, maintaining many of its New York City properties, including the World Financial Center; despite the terrorist attacks of 11 September 2001, the firm has grown to be one of the largest publicly traded property managers and developers in the world.

Marc A. Weiss

Tollgate at Jamaica Avenue and Van Wyck Boulevard in Brooklyn, 1897 (demolished 1897)

Brooklyn. The most populous borough in New York City (2000 pop. 2,465,326), occupying 71 square miles (184 square kilometers) on the southwestern tip of Long Island and situated on New York Harbor across the East River from Manhattan. Once an independent municipality, it was the nation's third-largest city for nearly half a century. Although it became a borough of New York City in 1898, it still retains the qualities of a large urban complex, with an independent central business district and government center; remains of a sizable industrial base; distinguished educational and cultural institutions; many varied and lively neighborhoods; about 65 miles (105 kilometers) of natural shoreline, including some 7 miles (11 kilometers) of sandy beaches; 5959 acres (2413 hectares) of parkland; and about a quarter of the Gateway National Recreation Area.

1. From Settlement to Consolidation

At the time of European settlement, the territory was the home of Munsee-speaking native people known as the Lenapes or Delawares. Some 2000 Lenape Indians inhabited several villages in the southwestern section of Long Island, among them Keschaechquereren, Marechkawieck, and Canarsie. Until the arrival of Europeans the Indians lived harmoniously and subsisted on fish, shellfish, wild animals, and harvested produce. The first European ship to sight what became Brooklyn was probably that of Giovanni da Verrazano in 1524, but the first contact was most likely made by the crew of Henry Hudson's *Halve Maen* in 1609.

Basing its claim on Hudson's voyage, the Dutch West India Company settled what is now Brooklyn as part of the Dutch colony of New Netherland in about 1635, or around a decade after New Amsterdam (Manhattan). The company found the natural harbor, fertile lands, forests, and wetlands an ideal locale. The earliest recorded European land purchases were made in 1636 in what became Flatlands and Flatbush by a director of New Netherland, Wouter van Twiller, and his associates. Over the next several years other purchases were made in the areas of Gowanus and Wallabout bays for which the next director, Willem Kieft, issued patents. Regular ferry service to Manhattan began in the early 1640s, primarily to serve the needs of local farmers.

Antagonism between the Indians and Europeans emerged almost immediately in Brooklyn as well as other parts of New Netherland, owing partly to differing concepts of land ownership and efforts by the director to collect taxes from the Indians. A conflict in the mid-1640s, referred to as Governor Kieft's War, resulted not only in a marked decrease of the Indian population but also in a weakening of the Dutch colony's economy.

For both political and economic reasons the Dutch West India Company encouraged the formation of towns. Within about a decade the company formally and informally chartered the original six towns of what is now Brooklyn. Five of these were Dutch settlements: Breuckelen (Brooklyn) in 1646, directly across the East River from New Amsterdam and apparently named for the community in the Netherlands south of Amsterdam; New Amersfoort (Flatlands) in 1647; Midwout (Flatbush) in 1652; New Utrecht in 1657; and Boswick (Bushwick) in 1661. The sixth was the English town of Gravesend, founded by a group of followers of the Anabaptist Lady Deborah Moody and chartered in 1645.

The original towns tended to be situated on existing Indian paths: Breuckelen was settled along a path leading from Marechkawieck, which became known as the "road from the ferry" and later formally named Fulton Street. Only Gravesend adapted a formal layout. Its four-square plan of 1646, constituting one of the country's first planned communities, survives at an angle to the surrounding grid.

The director of New Netherland appointed magistrates for most of the towns, but they held minimal authority. Except in Gravesend the major town institution was the Dutch Reformed Church. Town settlers maintained their affiliations with the Dutch church in New Amsterdam until 1655, when a church was constructed in Flatbush. Soon the other towns erected their own churches. With the church came schools, and modest town centers began to take shape. The colony exhibited a degree of religious tolerance, and, in addition to the English settlers, early residents included Walloons (generally Huguenots from what are now southeastern Belgium and nearby France), French, and immigrants from elsewhere in Europe.

The six farming towns grew slowly, and the English takeover of the colony in 1664 had little effect. In 1683 Kings County was established as an administrative entity of the province of New York. Over the next several decades, county administration evolved from simple colonial courts and a county clerk to a board of supervisors, with representatives from each town. Elected town officials, usually chosen from among prosperous farmers, were concerned primarily with regulations governing the collection of taxes, the use and subdivision of land, and the laying out of roads. Intertown highways were the responsibility of the Board of Supervisors. Farming remained the chief occupation, with surplus produce brought to market in the town of Brooklyn across the river from Manhattan, or directly to Manhattan by the ferry, which was adjacent to the market.

By the 1680s the remaining Indian population of Brooklyn was virtually annihilated, its ability to subsist eroded by the relinquishing of virtually all Indian land, and its health ravaged by diseases imported from Europe. The European settlers increasingly relied on African slaves to provide an assured labor force, supplemented by indentured servants. At the end of the seventeenth century the county's population was about 2000.

The quiet life of the towns continued for much of the eighteenth century, and the population grew slowly over the next hundred years. Although most residents remained passive in the drive for independence that pervaded the colonies in mid-century, Kings County was the site of the Battle of Long Island (August 1776), the largest contest of the American Revolution and a disaster for the Continental Army, after which the British controlled both Kings County and Manhattan. After seven years of British occupation, marked by the notorious mistreatment of thousands of prisoners in British ships moored in Wallabout Bay, the county resumed its docile, rural existence.

Only one area of Kings County exhibited strong growth. As New York City evolved into the nation's urban center, the town of Brooklyn close to the ferry experienced gradual commercial development. Ropewalks, breweries, distilleries, slaughterhouses, and shops began to appear, and, in a clear sign that the area around the ferry was losing its rural character, the town officials in the late 1780s demarcated it as a separate fire district. In 1799 the county's first newspaper, the *Long Island Courier,* began publication there. The growth of business encouraged a spurt in population; within the next two decades the population of the town of Brooklyn tripled while the other five towns grew by less than a third.

With the introduction of Robert Fulton's steam ferry in 1814, farsighted entrepreneurs began to transform Brooklyn into one of the world's first commuter suburbs. Brooklyn Heights, on the hill above the ferry, was promoted as the ideal residence for affluent businessmen from Manhattan. In 1816 the town's built-up area was incorporated as the Village of Brooklyn, with its own elected trustees. The first urban street improvement project began in the village in 1819 with a survey and mapping of streets, followed by the grading and graveling of major roads and the installation of sidewalks along Fulton Street. In 1834, overcoming the opposition of New York City, the entire town of Brooklyn was chartered as the City of Brooklyn. At the time Brooklyn had fewer than 16,000 residents, and all of Kings County fewer than 25,000, compared with New York City's more than 200,000. Also in response to the city's progress, a second area of growth was emerging farther up the East River. In 1801 the U.S. Navy purchased a small shipyard on Wallabout Bay between the ferry district and the Town of Bushwick, a second ferry to Manhattan began operation just north of the yard, and in 1827 this part of Bushwick was incorporated as the Village of Williamsburgh.

After the establishment of the City of Brooklyn, local officials asked the state legislature to appoint a commission to map streets and public squares. The resulting plan of 1839 consisted of a rectangular grid of streets, overlaid by wider diagonal avenues and interspersed with several small parks. The subsequent development of Brooklyn generally followed this plan. In 1869 the state established the Town Survey Commission to map the towns of Flatbush, Flatlands, New Utrecht, and Gravesend; its plan of 1874 extended the street grid as far as Jamaica Bay. The grid changed angles slightly at town boundaries and shifts in topography. As the steam railway and the elevated railway reached the outlying towns, each town was annexed by Brooklyn.

The remainder of Kings County continued its measured growth, enjoying agricultural prosperity as a result of the development of both Brooklyn and New York City. Even with the adoption of state laws requiring gradual emancipation, slaveholders in Kings County seemed more reluctant than those of the state's other counties to abandon slavery. In 1800 more than a quarter of the county's residents were slaves, and not until mandatory emancipation in New York State in 1827 were they all freed. Many formerly enslaved residents remained in Kings County, securing employment as farmworkers or fishermen. In the 1830s and 1840s they founded several communities in central Brooklyn such as Weeksville and Carrville.

Brooklyn continued to grow as New York City became the country's dominant metropolis. After the opening of the Erie Canal in 1825 new waterfront warehouses, tanneries, and factories manufacturing such commodities as paint, glass, and glue began operations along the East River. These new enterprises generated the need for artisans such as wheelwrights and coopers as well as retail businesses, banks, and insurance companies, along with schools, churches, newspapers, libraries, and benevolent organizations. New ferry routes were initiated in the 1830s, and a steam railroad from the harbor to Jamaica began running in 1836.

City Hall (now Brooklyn Borough Hall), a Greek Revival structure completed in 1849 on Fulton Street uphill from the ferry landing, became the center of the downtown civic, business, shopping, and entertainment district. Municipal services—water supply, fire and police protection, and street lighting—and school systems expanded. Gaslights were introduced in Brooklyn in 1848, and the first horse-drawn street railways began operating in 1854. In the mid-1850s a board of water commissioners was established, and soon water was being pumped through Brooklyn from a new supply system.

Until the mid-nineteenth century, residents of Brooklyn depended largely on Manhattan's theaters and concert halls for cultural enlightenment. The origins of most major cultural institutions in Brooklyn may be traced to the Apprentices Library (1823), which was intended to provide youth with training in industry and intellectual subjects. After two unsettled decades its founders formed a new corporation, the Brooklyn Institute, which included an art gallery, a public hall for lectures and readings, and space for classes and natural history exhibits. By the 1850s the institute had become the center of Brooklyn's cultural life. To encourage an interest in music and literature and lessen reliance on institutions in Manhattan, wealthy citizens organized the Brooklyn Academy of Music in 1859. Its original building was completed in 1861 one block from City Hall, and from time to time it housed programs of the Brooklyn Institute. Other cultural institutions included the Mercantile Library, erected across the street several years later, and the Long Island Historical Society (1863; now the Brooklyn Historical Society).

Brooklyn at mid-century experienced tremendous growth. The Village of Williamsburgh became a city in 1851, and in 1854 Brooklyn annexed both Williamsburgh and the Town of Bushwick. By 1855 nearly half of Brooklyn's 205,000 residents were foreign born; of these more than half were Irish, and slightly less than a quarter each were German and English. The immigrant growth led to a proliferation of churches and ethnic social service organizations, and Brooklyn became known as both the city of homes and the city of churches.

By 1860 Brooklyn had 266,661 inhabitants, a figure exceeded only by New York City and Philadelphia. The remaining towns of Kings County were still largely rural, with a

Compiled by James Bradley

combined population of less than 12,500. Gradually those nearest Brooklyn began to be influenced by its phenomenal growth: a part of Flatbush was chartered as the Town of New Lots; farms gave way to row houses; and ferry lines, street grids, and transportation systems emerged. Meanwhile, the working-class and immigrant residents began settling in neighborhoods different from those inhabited by the middle class. The annexed area of Bushwick (by now called the Eastern District), for example, was heavily German; its many breweries helped give the community a distinctive character.

As the port in Manhattan became overcrowded, more firms moved to Brooklyn. And as the original waterfront district in Brooklyn filled up, shipbuilding and other heavy industries became concentrated along the waterfront of the Eastern District. By 1865 manufacturing employment in Brooklyn reached almost 14,000, with many more thousands working in transportation, warehousing, and related industries. Manufacturers found the waterfront of Brooklyn ideal for the region's heavy and bulky industries, including grain storage, sugar refining, and glass manufacturing. Some 7 miles (11 kilometers) of docks, warehouses, basins, grain elevators, drydocks, and freight terminals lined the shore from Red Hook in South Brooklyn to Newtown Creek in Greenpoint at the city's northern boundary.

As the center of population moved east away from the harbor, cultural institutions followed. The Brooklyn Institute reorganized in 1890 as the Brooklyn Institute of Arts and Sciences. Its directors planned a grand museum on land adjacent to Prospect Park, the great landscaped green space designed by Frederick Law Olmsted and Calvert Vaux and completed in the early 1870s. Although the museum's imposing plans by McKim, Mead and White were never fully realized, the Brooklyn Museum, renowned for an outstanding permanent collection of Egyptian, American, and African materials, became one of the country's major art institutions.

Growth continued unabated during the last years of the nineteenth century, with Brooklyn's population reaching nearly 567,000 by 1880. Steady migration from Europe and rural America transformed the social and political life of the community. A number of major Republican figures came out of the Eastern District, and the Irish of South Brooklyn produced leading Democrats. New industries moved into Williamsburgh (by then spelled Williamsburg) and Greenpoint, including printing firms (D. Appleton and A. S. Barnes both moved their operations from Manhattan), oil refineries (Pratt Astral Oil Works being the largest), and iron foundries (such as the Hecla Architectural Iron Works and the firm of Cheney and Hewlett). By the 1880s Brooklyn was handling more waterborne tonnage than New York City, and it was the nation's fourth-largest industrial city.

Transportation advances also influenced growth. Horsecar lines were supplanted by steam railroads, which were built out to the beach resorts of Coney Island in Gravesend and Canarsie in Flatlands during the 1860s and 1870s. In 1885 the first elevated railroad in Brooklyn was completed, and within a few years more elevated lines began to extend into the county's outlying areas. These lines, along with the simultaneous conversion of the street railways from horse power to electricity, hastened the growth of suburbs and signaled the imminent development of the rural outer regions. Working conditions on the electrified railways, or trolleys, deteriorated as the companies recoiled from the costs of electrification and frequent reorganization, and in 1895 Brooklyn experienced an explosive trolley strike. The completion of the Brooklyn Bridge in 1883, the first physical link between the country's largest and third-largest cities, symbolized both their economic interdependence and their impending political union. Brooklyn was growing not only in population and commerce but also in physical size. In 1886 it annexed the Town of New Lots, and between 1894 and 1896 it annexed the remaining four original towns of Kings County. By the turn of the century the amusement parks and grand hotels of Coney Island, Brighton Beach, and Manhattan Beach provided new entertainment forms for thousands of visitors from Brooklyn and Manhattan.

Having nearly reached its allowable state debt limit and nearly exhausted its ability to issue bonds, the governmental apparatus in Brooklyn could no longer support its impressive development. For some decades the Democratic machine, led by Hugh McLaughlin, controlled the government, with an occasional interruption by Republican reformers such as Seth Low. After years of contention the Democrats, supported by working-class and immigrant residents, lost out to the reformers, who joined their counterparts in New York City and New York State to move toward consolidation. On 1 January 1898 the City of Brooklyn became the Borough of Brooklyn.

2. From Consolidation through the Late Twentieth Century

The loss of political independence did nothing to hinder growth. By 1900 the population of Brooklyn exceeded one million. The expansion of existing transit lines, the arrival of subways, and the extension of public utilities made possible widespread residential and commercial development. During the first decades of the twentieth century, the outlying towns of Flatbush, Gravesend, New Utrecht, and Flatlands began to urbanize. The first subway

into Brooklyn, which opened in 1908, and two additional bridges crossing the East River from Manhattan, completed by 1909, contributed to rapid residential and industrial development. Electrification of the elevated railways and steam railways by 1900 and the takeover of many of the existing lines by the Brooklyn Rapid Transit Company enabled the connection of various routes.

Industry in Brooklyn was still expanding, with more than 100,000 factory workers by 1905 and more than 165,000 by the 1920s. Industrial complexes such as Bush Terminal (1902) that fused docking, factory, warehousing, and transportation functions continued to draw large manufacturers, and industrial and business expansion brought more population. Until the passage of new immigration laws, culminating in 1924, Brooklyn attracted hundreds of thousands of immigrants, many of them from eastern and southern Europe. Rural Americans, including many African Americans from the South, were also arriving. Following the movement of population, the cultural institutions moved from the older downtown area farther into central Brooklyn. Schools and libraries multiplied. And with the arrival of the automobile, suburban developments, attached houses, and apartment buildings began filling in the street grids in outlying areas.

By the 1920s the Brooklyn Dodgers were becoming a symbol of fortitude for masses of local residents. Brooklyn had more than 2.5 million residents by 1930, making it New York City's most populous borough. The new modes of transportation were rendering the old obsolete. In 1924 the Fulton Ferry was discontinued, and the first airport in New York City, Floyd Bennett Field, was dedicated in 1931. The Independent Subway System opened in Brooklyn in 1936, followed by the cessation of elevated service on Fulton Street in 1940.

As outlying residential areas developed, neighborhoods closer to downtown were transformed. Older one-family houses and row houses were converted into rental apartments and rooming houses, and already congested working-class communities became more so. Decline and deterioration, the arrival of the "slum," seemed inevitable. The New Deal brought several public housing projects and other public improvements, such as community swimming pools. And World War II brought new jobs: the Brooklyn Navy Yard alone employed some 70,000 men and women in continuous shifts. The postwar years brought general prosperity to Brooklyn, and its population peaked in 1950 at 2.7 million. In the 1950s a renewal project of the borough's civic center eliminated a substantial amount of older housing and businesses; the resulting housing, parks, and wide thoroughfares left the district devoid of its former cosmopolitan vitality.

Postwar prosperity did not last as the borough fell into a decline, symbolized by the demise in 1955 of its one nationally known daily newspaper, the *Brooklyn Eagle,* and the departure in 1957 of its fabled baseball team, the Dodgers. The same automobile that had stimulated development of the borough's suburban areas now took residents beyond its borders to yet newer suburbs. Spurred by new federal housing mortgage and highway construction programs and the completion of the Verrazano–Narrows Bridge in 1964, hundreds of thousands of white, middle-class residents abandoned Brooklyn for Long Island, Staten Island, and New Jersey, to be replaced largely by working-class and immigrant populations.

Brooklyn experienced a severe loss in jobs at the same time. Total manufacturing employment fell from more than 235,000 in 1954 to less than 200,000 by 1970, as companies looked beyond the borough for vacant land on which to build more efficient facilities, as well as for cheaper labor and utilities and lower taxes. Taking advantage of federal tax credits for new capital investment, whole industries such as shipping and brewing abandoned the borough outright. In 1956 the Port of New York Authority purchased and renovated 2 miles (3 kilometers) of deteriorating waterfront, but in less than two decades, after failing to provide the requisite facilities for containerization, the piers were all but abandoned. In 1966 the federal government shut down the Brooklyn Navy Yard, leaving the waterfront almost inactive. By 1970 entire industrial and residential districts had taken on the appearance of bombed-out communities of wartime.

After 1970 Brooklyn experienced considerable renewal, but even where the city intervened with new subsidized housing, as in Coney Island, the new projects often failed to stimulate community rebirth. In other neighborhoods, efforts by longtime residents and new arrivals were more successful. With a combination of public and private funds, organizations such as the Bedford Stuyvesant Restoration Corporation and the Pratt Center for Community and Environmental Development and businesses such as the Brooklyn Union Gas Company and Consolidated Edison helped to improve housing conditions and create new amenities. Brooklyn was the birthplace of the brownstone revival movement, and the landmarks preservation movement inspired the renaissance of many of the borough's historic neighborhoods. In 1965 Brooklyn Heights became New York City's first Historic District.

Through government and private intervention, Brooklyn strove to revitalize its economic core, although there were some dramatic declines. In the early 1970s the City of New York, in cooperation with local nonprofit groups, began to transform the decommissioned Brooklyn Navy Yard into an industrial park. A number of national companies such as International Business Machines (IBM) collaborated on economic redevelopment with the Bedford Stuyvesant Restoration Corporation.

The downtown business district, which during the 1970s declined from third- to sixth-largest in the United States, still employed some 40,000 workers, although manufacturing employment in Brooklyn fell below 100,000 by the early 1980s. In the mid-1990s MetroTech, a multiblock academic and high-technology office and research complex, began adding thousands of workers and a new vitality to downtown.

3. The Twenty-First Century

The twenty-first century has seen an enormous burst of residential and commercial activity in Brooklyn. Adding a fresh vibrancy to many neighborhoods are new boutiques, eateries, artists' and designers' lofts, "big-box" chain stores, performance spaces, and hotels. In 2001, the minor-league Brooklyn Cyclones began playing out of Coney Island. And in 2006 a cruise-ship terminal opened in Red Hook.

The borough remains widely known for its cultural institutions. The Brooklyn Public Library (formed in 1896, merged in 1903 with the Mercantile Library) occupies a headquarters erected in the 1930s near Prospect Park and also oversees some 58 branches and a business library. The Brooklyn Botanic Garden, opened in 1911 next to Prospect Park, is one of the world's great public horticultural institutions and was the first botanical garden to establish a garden specifically for children. Other notable institutions include the Brooklyn Academy of Music, one of the nation's premier avant-garde performing arts centers; the Brooklyn Museum, a major American art institution; the Brooklyn Children's Museum (1899), the first museum of its kind in the world; the Brooklyn Historical Society, which features an excellent research library; the New York Aquarium, which moved to Brooklyn in 1957; and many educational institutions, including Brooklyn College, Pratt Institute, Long Island University, and Polytechnic University.

Major residential, commercial, cultural, and recreational projects are in planning throughout the borough. A number of them, however, face opposition concerning their possible environmental impact and potential residential displacement.

Both the periods of phenomenal growth and devastating declines have contributed to the richness of Brooklyn. While the growth has allowed the borough to prosper, the declines have resulted inadvertently in the survival of

aspects of local history that might have disappeared had the prosperity been constant—Dutch street names, architecturally distinguished houses, handsome factories, prominent cultural institutions, ethnically diverse neighborhoods, and even remnants of the original town centers. The combination of these vestiges of the past with the energy of the present gives Brooklyn its continued promise for the future.

Brooklyn, Bath and West End Railroad. The successor to the Brooklyn, Bath and Coney Island horsecar line, founded in 1862, which connected 25th Street and Fifth Avenue in Brooklyn and the ferry slip at 39th Street in Brooklyn with the Tivoli Hotel and Amusement Park in Coney Island. The line was completed in 1867, and in 1870 steam power replaced the horses. In 1885 the Atlantic Avenue Railroad acquired the line and renamed it the Brooklyn, Bath and West End. It merged in 1898 with the Nassau Electric Railroad and in the following year became part of the Brooklyn Rapid Transit Company. Electric trolley service began in 1901, and an elevated line was completed in 1917 (it is now part of the "B" line). The trolley service continued on the original grade until 1947.

John Fink

Brooklyn, Canarsie and Rockaway Beach Rail Road. Railroad opened on 21 October 1865 as a subsidiary of the Long Island Rail Road (LIRR). It connected eastern New York City to Canarsie Landing by rail, from where a ferry took passengers to Rockaway Beach. The LIRR added train connections from Valley Stream and Woodhaven Junction to Rockaway Beach in 1870. The line became electric-powered in 1906, when it was leased to the Brooklyn Union Elevated Railroad (a subsidiary of Brooklyn Rapid Transit). During the early years of the twentieth century the line offered the most popular route for New Yorkers seeking to visit the amusement park at Canarsie Beach. Service between Canarsie Landing and Rockaway Avenue was provided from October 1917 by a trolley shuttle and from 1951 by buses. In 1928 the elevated tracks of the railroad were connected to the subway line of Brooklyn Manhattan Transit running to 14th Street in Manhattan.

James C. Greller and Edward C. Watson, *Brooklyn Elevated* (Hicksville, N.Y.: N.J. International, 1987)

John Fink

Brooklyn, Flatbush and Coney Island Railway. Railroad opened on 2 July 1878. It began as a steam railroad connecting the Brighton Hotel near Coney Island with the Long Island Rail Road at Atlantic and Franklin avenues. In 1887 the line merged with the Brooklyn Union Elevated Railroad (a subsidiary of Brooklyn Rapid Transit) and was renamed the Brooklyn and Brighton Beach Railway. An extension was then built between Prospect Park and Fulton Street (now known as the "S" line, or Franklin Avenue Shuttle) to provide direct access between Brighton and downtown Brooklyn. In 1905 electric power replaced steam and the line was rebuilt, with an "open cut" between Prospect Park and Avenue H and an elevated structure south of Avenue H. The company extended the elevated line in 1917 to Stillwell Avenue on Coney Island, thus forming a double-level structure that became commonly associated with Coney Island. Direct service between Brighton Beach and midtown Manhattan was established in 1920 when the subway between Prospect Park and DeKalb Avenue was completed. The railroad was the forerunner of the "D" and "Q" subway lines in Brooklyn.

John Fink

Brooklyn Academy of Music [BAM]. Performing arts center at 30 Lafayette Avenue in the Fort Greene neighborhood of Brooklyn. The present building was erected by the firm of Herts and Tallant in 1908, replacing one at Montague and Clinton streets opened on 15 January 1861 and destroyed by fire on 30 November 1903. Actor Edwin Booth first performed at the academy in 1862, and on 4 April 1891 he gave the last performance of his career at the Montague Street building, drawing thousands to see him in his signature role as Hamlet. The academy is a stately, cream-colored brick building in the neo-Italianate style that includes three major performance spaces: the Howard Gilman Opera House (seating 2109), the Harvey Lichtenstein Theater (seating 874), and BAMcafé, formerly Leperq Space, an old ballroom remodeled in 1997 as a restaurant and live music venue. From 1935 to 1970 BAM was one of several organizations in the borough affiliated with the Brooklyn Institute of Arts and Sciences. At the initiative of Harvey Lichtenstein, president and executive producer, the academy expanded its offerings in 1967 to encompass ethnic music, dance, and theater. The Next Wave Festival, an avant-garde series, was launched in 1981. In the same year the academy formed a local development corporation that purchased and refurbished several performing sites nearby. In 1998 a four-screen movie theater, BAM Rose Cinemas, was added to the performance space. The academy emphasizes new and unusual repertory and

Brooklyn Academy of Music, 2009

draws audiences from throughout the metropolitan area. The Brooklyn Philharmonic is the resident orchestra.

Martha McGowan, *Growing Up in Brooklyn: The Brooklyn Academy of Music: Mirror of a Changing Borough* (New York: Brooklyn Union Gas, 1983)

Bruce C. MacIntyre

Brooklyn Apprentices Library. Forerunner of the Brooklyn Museum.

Brooklyn Army Terminal. Military ocean supply facility situated in Sunset Park along Second Avenue from 58th to 65th streets. It was designed by Cass Gilbert and completed in 1919. The terminal covers 97 acres (39 hectares) and at its peak consisted of 19 structures, including two eight-story warehouses of reinforced concrete, one of which was at the time the largest warehouse in the world. A unique interior well permitted direct loading and unloading to any level of the building, and three enclosed two-story piers permitted the simultaneous loading of 20 oceangoing vessels. During World War II three million troops and 37 million tons of supplies sent overseas by the New York Port of Embarkation passed through the terminal. In 1984 the New York Public Development Corporation bought the facility, which was converted to manufacturing space for many small businesses.

Joseph F. Meany, Jr.

Brooklyn Atlantics. Baseball team. Formed in August 1856 in the village of Bedford in what is now Brooklyn, it was one of the dominant teams of the early years of baseball. The social club that sponsored the team had as members many butchers and others from the food trades and enjoyed close ties with local political factions. The team had a large working-class following and won several unofficial championships during the 1860s. Originally an amateur organization, it fielded a few paid players after the Civil War. Perhaps its greatest achievement was its defeat in 1870 of the first entirely professional baseball team, the Cincinnati Red Stockings, which until then had won 84 consecutive games. Reorganized as an all-professional team, the Atlantics competed in the National Association of Professional Base Ball Players from 1872 to 1875.

George B. Kirsch

Brooklyn–Battery Tunnel. Longest continuous underwater tunnel for motor vehicles in North America, spanning Upper New York Bay between the southern tip of Manhattan (called the battery for an artillery battery that used to stand there) and the Brooklyn–Queens Expressway in Brooklyn. It was designed by Ole Singstad. In order to finance it Mayor Fiorello H. La Guardia ceded control of the New York City Tunnel Authority (which was short on funds and could not get assistance from the Public Works Administration) to Robert Moses's Triborough Bridge Authority, which had enough money to complete the project. Moses tried to change the plan from a tunnel to a bridge but was denied permission by President Franklin D. Roosevelt, who was concerned that a bridge would be vulnerable to attack and would block the Brooklyn Navy Yard's access to the sea. Construction began in 1940 and was suspended during World War II owing to iron and steel shortages; construction resumed in 1945, and the tunnel opened to traffic on 25 May 1950. Two tubes lined in cast iron and measuring 31 feet (9.5 meters) in diameter span 9117 feet (2781 meters). Air is circulated through the tunnel by four ventilating towers, including one situated near Governors Island. Some 60,000 vehicles use the Brooklyn–Battery Tunnel each day.

Rebecca Read Shanor

Brooklyn Borough Hall. Building at 209 Joralemon Street, opened in 1848 as the city hall of Brooklyn. Plans were laid in 1835, a year after Brooklyn was granted its city charter. The winning entry in a design competition was submitted by the architect Calvin Pollard, who proposed a majestic building in a Greek Revival style. Construction began in 1836 but was halted after the foundation was completed owing to the city's precarious financial condition and the panic of 1837. Interest in resuming construction revived in the early 1840s. In 1845 a bond issue of $50,000 was authorized by the state legislature, and Gamaliel King, an architect from Brooklyn, was commissioned to design a building for the existing foundation. His design, a simplified version of Pollard's, called for a structure of Tuckahoe marble with an Ionic portico and a wooden cupola. In 1895 the cupola and sections of the interior were destroyed by fire; in 1898 Vincent Griffith and the firm of Stoughton and Stoughton designed and installed a cupola of cast iron. On the consolidation of Brooklyn and New York City in 1898 the building became the borough hall. The room formerly used by the Common Council was converted into a courtroom in a beaux-arts style by the architect Axel Hedman in 1902. Brooklyn Borough Hall deteriorated steadily until its restoration was completed in 1989 under the direction of the firm of Conklin Rossant.

Brooklyn Brewery. Brooklyn-based brewing company. Started in 1987, it is one of the few breweries in New York City in the early twentieth century. Owned by Steve Hindy, a former reporter, and Tom Potter, a former banker, it produces Brooklyn Lager, a draft

Brooklyn Borough Hall, 2009

beer. It is located at #1 Brewer's Row, 79 North 11th Street, Williamsburg.

Holly Cronin

Brooklyn Bridge. Steel suspension bridge across the East River between Brooklyn and Manhattan, opened on 24 May 1883. Its span of 1595.5 feet (486.3 meters) between towers was for a time the longest in the world. The bridge was the inspiration of the engineer John Augustus Roebling, the inventor of wire cable and an accomplished bridge builder who in 1867 put forth a plan to William C. Kingsley, publisher of the *Brooklyn Eagle*. He envisioned two massive stone towers, a network of steel cables suspended from the towers and embedded in anchorages at either end, vertical wires connecting the roadbed to the cables and reinforced by diagonal stays running down from the towers, and iron trusses underpinning the suspended floor from tower to tower to stiffen the roadbed. The unprecedented use of steel in a suspension bridge was intended to provide unmatched strength and stability. A bill to incorporate the New York Bridge Company, introduced in the state legislature at the behest of Kingsley by Henry Murphy, a state senator and former mayor of Brooklyn, was passed in April 1867 after an unusually cold winter that emphasized the vulnerability of ferry service to the elements. The project suffered a severe setback in June 1869, when just as the necessary approvals had been secured Roebling was fatally injured by a ferry that toppled him from a waterfront piling. His place was taken by his son Washington Roebling, who solved many structural problems in what remained a difficult and dangerous project. So that the towers of the bridge would sit firmly on bedrock, the riverbed was excavated by men working in huge, bottomless wooden boxes called caissons. The risk of fire was ever present, and the men were susceptible to the bends (then called caisson disease and poorly understood). Roebling himself fell victim to the bends while working alongside the men sinking the western caisson in the summer of 1872 and was an invalid to the end of his life. He continued nevertheless to supervise operations through a telescope from his room on Columbia Heights while his wife, Emily Warren Roebling, relayed his instructions to workers and managers. The project continued to be plagued with difficulties: in 1878 Washington Roebling found that defective wire rope had been woven into the bridge cables, the result of graft on the part of the suppliers (he used sound wire to reinforce the cables), and soon afterward the project ran short of money (new appropriations were made in 1879). On its completion the bridge was widely acclaimed as the "new eighth wonder of the world." Its lavish dedication was attended by the mayors of Brooklyn and New York City, Governor Grover Cleveland, and President Chester A. Arthur, but not by Roebling, whose relations with the bridge company for the last four years of the project had been deeply strained. The opening of the bridge to the public a week later was marred by the deaths of 12 pedestrians who were trampled during a panic set off by a shouted warning, anonymous and groundless, that the bridge was in danger of imminent collapse.

The Brooklyn Bridge became a highly recognizable landmark and an important cultural icon, and many artists and writers saw it as a symbol of American urbanization and industrialization. To Walt Whitman it was the work of engineering that completed Columbus's mission and helped to create a more closely linked world; to Hart Crane in the 1920s it was an affirmation of love, beauty, and the divine wholeness and unity of all history. The early twentieth-century painters John Marin and Joseph Stella saw the

Brooklyn Bridge, 2009

bridge and the skyscrapers nearby as the embodiment of the evolving new world. Henry James detested the bridge, which he characterized as a mechanical monster and a soulless loom across which the "electric bobbins" of trains wove together two cities and by extension the world. But the critic Lewis Mumford believed that the Brooklyn Bridge had become "a source of joy and inspiration to the artist, perhaps the most completely satisfying structure of any kind that [has] appeared in America." No other bridge has ever been so richly woven into American culture.

Alan Trachtenberg, *Brooklyn Bridge: Fact and Symbol* (New York: Oxford University Press, 1965); David G. McCullough, *The Great Bridge* (New York: Simon and Schuster, 1972)

Ellen Fletcher

Brooklyn Bridge Park. Park stretching from Atlantic Avenue to Jay Street along the East River in Brooklyn. The park's conception began in 1998 when the Port Authority of New York and New Jersey put the 1.3-acre (0.5-hectare) site, which included six defunct cargo shipping piers, up for sale to a private developer. In 2002 Governor George Pataki and Mayor Michael Bloomberg created the Brooklyn Bridge Park Development Corporation to develop a park instead. The nonprofit Brooklyn Bridge Park Conservancy manages its funding and operations to comply with the requirement that the park be financially self-sufficient. A plan was announced in 2004 to build luxury condominiums within the park's borders; residents of these apartments will pay fees to fund the park's maintenance in lieu of taxes. The unprecedented placement of private homes inside a public park has drawn ire from the plan's opponents. An organization called the Brooklyn Bridge Park Defense Fund filed a lawsuit to stop the plan; the suit was defeated and was being appealed as of 2008. The first phases of the park opened in 2010, and the park will eventually comprise 85 waterfront acres (34.4 hectares).

Kate Lauber

Brooklyn Children's Museum. Museum opened in 1899 in two Victorian mansions at 5 Brooklyn Avenue and St. Mark's Avenue as the first children's museum in the United States. In 1976 a spacious new building was erected on the same site. The museum was the first to use interactive, "hands-on" exhibits to help children understand the physical and cultural world. Most of the museum is underground and not visible from the street.

Laura J. Lewison

Brooklyn College. College of the City University of New York, opened in 1910 as an extension division of City College for Teachers. In 1917 it began offering first-year evening classes to male high school graduates. In 1926 the Board of Higher Education opened the Brooklyn Collegiate Center of City College for men and the Brooklyn Collegiate Center of Hunter College for women in an office building at Willoughby and Bridge streets. The board authorized a new coeducational, four-year college in Brooklyn in 1930. The newly constructed neo-Georgian campus between Flatbush and Ocean avenues opened in 1937. Harry D. Gideonse, the president from 1939 to 1966, presided over the college's growth in the turbulent years surrounding World War II. After an investigation by the New York state legislature's Rapp–Coudert Committee in the early 1940s, the college was reputed to hold leftist sympathies and was sometimes referred to as the "little red schoolhouse" (see Communism). After the war it expanded its programs, increased enrollment, and began to enhance its academic reputation. During the Vietnam War the campus was plagued by student unrest. One demand of the protesters was an open admissions policy. When it was implemented in 1970, enrollment soared from nearly 20,000 to more than 35,000 students, putting an enormous strain on the institution's resources and causing the college to install temporary buildings on campus. Many of the new students were ill prepared, resulting in the need for remedial programs. Critics' assertions that open admissions had lowered academic standards helped scuttle the policy when the fiscal crisis struck in 1975 and free tuition was eliminated. In the 1980s the college adopted a core curriculum that garnered national attention. Newly hired distinguished professors included the poet Allen Ginsberg and the violinist Itzhak Perlman. A new state-of-the-art library opened in 2002.

Selma Berrol, William M. Gargan

Brooklyn Collegiate and Polytechnic Institute. Original name of Polytechnic University.

Brooklyn Cyclones. Baseball team formed in 2001 as a minor league farm team of the New York Mets. Playing in MCU Park in Coney Island, the Cyclones, named after the Coney Island roller coaster, are in the New York Penn League, the lowest level in the minor leagues. The team has drawn large crowds. They were co-champions of the New York Penn League in 2001 and won division titles in 2003, 2004, and 2007. The Cyclones became the first professional team in Brooklyn since the Dodgers left in 1957.

Steven Levine

Brooklyn Daily Times. Name from 1855 to 1932 of the Brooklyn Times–Union.

Brooklyn Dodgers. Baseball team, formed in 1883 when the Interstate Minor League granted a franchise in Brooklyn to Charles Byrne and Joseph Doyle, both businessmen from Manhattan, and Ferdinand Abell, a casino owner from Rhode Island. The team joined the major leagues in 1884 when it moved to the American Association; in 1890 it moved to the National League. The name derived from the reputed skill of residents of Brooklyn at evading the streetcars of the burgeoning trolley system; other names applied to the team in its early years included the Bridegrooms (inspired by a series of marriages by team members in 1889), the Superbas (because the manager at the turn of the century was Ned Hanlon, and a popular theatrical group at the time was called Hanlon's Superbas), and the Robins (after the manager from 1914 to 1931, Wilbert Robinson). The team played at two stadiums in South Brooklyn, each called Washington Park, and at Eastern Park in Brownsville near Broadway

Keyspan Park (now MCU Park), home of the Brooklyn Cyclones, 2009

Junction before moving to Ebbets Field in 1913. The strong pitching of Jeff Pfeffer and Burleigh Grimes and the consistent batting and fielding of the left fielder Zach Wheat helped the team to win the National League pennant in 1916 and 1920, but it lost the World Series to the Boston Red Sox and the Cleveland Indians. In 1920 it played a 26-inning game at Boston that ended with the score tied at one, and it also suffered the embarrassment of hitting into an unassisted triple play at Cleveland in the World Series. From 1909 to 1925 Wheat established team records for games played, hits, doubles, triples, and total bases. The first member of the Dodgers other than a pitcher to be elected to the Baseball Hall of Fame, Wheat was highly popular with fans throughout his career.

From 1925 to 1938 the Dodgers played an inept and unintentionally comic brand of baseball that earned them the nickname the Daffiness Boys. Their fortunes changed after Larry MacPhail became the general manager in 1938: he named Leo Durocher the manager, acquired young players like Pee Wee Reese and Pete Reiser, and engaged as the team's radio broadcaster Red Barber, whose relaxed southern manner and knowledge of the game along with the Dodgers' improved play greatly increased the team's following. The fans in Brooklyn became widely known for their eccentricity. During the 1930s and 1940s Hilda Chester sat in the bleachers in center field bellowing at players and ringing a cowbell, and the Sym-Phony Band paraded through the stands serenading opposing players and umpires. The unofficial symbol of the team was a depiction by the cartoonist Willard Mullin of a Dodger player as an amiable bum. During the war years Branch Rickey assumed control of the team, and in 1945 he signed Jackie Robinson to a contract with the Dodgers' minor league affiliate in Montreal. Robinson joined the team in 1947 as the first black player in the modern major leagues. His strength of character in withstanding severe racial bigotry united the team, and his outstanding play brought it wide acclaim. Between 1947 and 1957 the Dodgers benefited from a powerful offense led by Reese, Robinson, Duke Snider, Gil Hodges, Roy Campanella, and Carl Furillo that enabled them to win six National League pennants. Opposed each time in the World Series by the New York Yankees, they were able to win only in 1955, largely because apart from Don Newcombe and Carl Erskine they were lacking in strong pitchers. After the 1957 season the Dodgers' president Walter O'Malley moved the team to Los Angeles, an act that provoked enduring anger and resentment among residents of Brooklyn.

Stephen Weinstein

Brooklyn Eagle. Daily newspaper. It began in 1841 as an organ of the Democratic Party called the *Brooklyn Eagle and King's County Democrat* and published daily. For two years its chief editor was Walt Whitman, who in 1846 articulated the principle that partisanship should not prevent the newspaper from speaking to all the people of Brooklyn. By the time of the Civil War it was the most widely read afternoon newspaper in the United States, and during the war it was one of several publications that the federal government threatened to suspend. It remained the largest daily and Sunday newspaper in Brooklyn and in 1937 absorbed its last major competitor, the *Brooklyn Times–Union*. Over the years the newspaper won the Pulitzer Prize four times, once for exposing corruption in the police department during the administration of Mayor William O'Dwyer. After a decline in daily circulation to 125,000, a long-running dispute with the New York Newspaper Guild, and a lengthy strike it ceased publication in 1955. For a few months in 1960 it resumed publication as a weekly newspaper, and it was published daily for a year ending in mid-1963. Among those who wrote for the *Brooklyn Eagle* were St. Clair McKelway, Hans von Kaltenborn, Edward Bok, Nunnally Johnson, and Winston Burdett. Until 1955 the offices were on what is now Cadman Park East.

Raymond A. Schroth, *The Eagle and Brooklyn* (Westport, Conn.: Greenwood, 1974)

John J. Gallagher

Brooklyn Female Academy. Original name of Packer Collegiate Institute.

Brooklyn Ferry. Former name of Brooklyn Heights.

Brooklyn Friends School. Coeducational elementary and secondary school founded by the Brooklyn Meeting of the Religious Society of Friends and opened in 1867 in the basement of the Quaker Meeting House on Schermerhorn Street. In 1972 it moved to 375 Pearl Street in Brooklyn Heights (the former site of the Brooklyn Law School). The school adheres to Quaker educational principles and emphasizes academic excellence, tolerance, community service, and pacifism. It was among the earliest schools in New York City to promote ethnic and racial diversity in its student body, which enrolls children ages 20 months through the 12th grade. The school sponsors a chorus consisting of students and the elderly that was the subject of the documentary film *Close Harmony* (1981), which won an Academy Award.

Richard Schwartz

Brooklyn Gas Light Company. Utility chartered in 1825. It failed but was revived in 1847 after receiving a contract to light streets. From 1849 it delivered gas manufactured from coal in a plant beside the Brooklyn Navy Yard. In 1895 it was one of seven firms that merged to form the Brooklyn Union Gas Company.

William J. Hausman

Brooklyn Heights. Neighborhood in northwestern Brooklyn (2009 est. pop. 20,000), bounded to the west and north by Columbia Heights and the Brooklyn–Queens Expressway, to the east by Court Street and Cadman Plaza West, and to the south by Atlantic Avenue. Canarsee Indians lived on the bluffs above the East River and called the place Ihpetonga. By 1642 farms in the area were served by ferries, the most important of which was run by Cornelis Dircksen from the foot of what is now Fulton Street to Peck Slip in Manhattan. The village of Brooklyn thrived around the ferry landing and along Fulton Street, but until the second decade of the nineteenth century the high ground overlooking the river was sparsely settled with a few good-sized farms; there were some factories along the wharves at water level. General Israel Putnam withdrew his troops to the area after the American defeat in the Battle of Long Island, during which George Washington

Brooklyn Heights, ca *1904; foreground shows docks along the shore of Manhattan*

maintained his headquarters in a house at the foot of what is now Montague Street. Washington evacuated the troops across the river under cover of fog on 29–30 August 1776.

Speculative development in the area began soon after Robert Fulton's steam ferry began its dependable schedule of crossings of the East River in 1814. Streets were laid out and graded after Brooklyn was incorporated as a village in 1816, and from 1823 the merchant Hezekiah Pierpont advertised his property as "the nearest country retreat" convenient for people working in lower Manhattan. Soon other landowners including John Hicks, Jacob Middagh Hicks, John Middagh, Henry Remsen, and Teunis Joralemon divided their farms into lots measuring 25 by 100 feet (8 by 30 meters), still the common unit of property in the neighborhood. The building boom of the 1820s began at the northern end of the district, on Hicks Street and the adjacent cross streets. Frame and brick buildings two and a half stories high in a late Federal style with pitched and gambrel roofs were standard; many belonged to tradespeople, sailors, and waterfront workers, and a number still stand. Essentially, Brooklyn Heights became the world's first commuter suburb. By the 1830s and 1840s more substantial houses of brick and brownstone with Greek Revival details were being built farther south. During the following decades the houses grew larger, exhibiting the entire range of revival styles that swept American architecture: Italianate, Second Empire, Victorian Gothic, Romanesque, neo-Greco, and Classical Revival. Some of the houses belonged to merchants whose ships docked at the wharves below. Throughout the nineteenth century the neighborhood had an unmatched elegance. Warehouses along Furman Street below the bluff had trees and grass planted on their roofs: these were the back gardens of the houses of Columbia Heights.

In 1908 Interborough Rapid Transit opened its subway, breaking the seclusion of Brooklyn Heights and making it easier to live there and work in Manhattan. Many of the patricians fled, and their mansions were partitioned into apartments and boarding houses. Artists and writers were attracted by the character of the neighborhood. Several large hotels were built, including the St. George on Clark Street, once the largest in New York City. By the time of the Depression much of the middle class was gone. The boarding houses had deteriorated into low-grade rooming houses, and social planners were describing parts of the neighborhood as slums. A section of the neighborhood was later designated for clearance and redeveloped under the Cadman Plaza project. During the 1940s and 1950s Brooklyn Heights suffered some stunning blows, notably the loss of its entire northwest corner for the construction of the Brooklyn–Queens Expressway in 1953. Brownstone row houses gave way to large apartment buildings and institutional dormitories. An important step in redeveloping the neighborhood was taken when local civic groups such as the Brooklyn Heights Association cooperated with Robert Moses in planning the Esplanade, a park along the East River completed in 1950. In 1958 a group of residents formed the Community Conservation and Improvement Council (later absorbed by the Brooklyn Heights Association), which in 1965 succeeded in having the neighborhood listed on the National Register of Historic Places and designated the first historic district in New York City. In the 1970s and 1980s gentrification transformed boarding houses into middle-class residences and multifamily condominiums. One of the more prominent structures in the neighborhood is the world headquarters of the Jehovah's Witnesses at 124 Columbia Heights. By the early twenty-first century Brooklyn Heights had recovered its reputation as one of New York City's most pleasant and attractive neighborhoods.

Brooklyn Historical Society. Organization formed in 1863 as the Long Island Historical Society. It is one of the oldest historical societies in the country. The association first occupied quarters in the Hamilton Building at Court and Joralemon streets near Borough Hall and later moved to 128 Pierrepont Street in Brooklyn (where it remained into the twenty-first century). Designed by George B. Post and completed in 1880, the new building originally housed an auditorium, offices, a museum on the fourth story, and a research library on the second story with black ash woodwork and stained glass windows. It was the first major structure in greater New York to use extensive terra-cotta ornament and in 1991 was declared a National Historic Landmark; the library is one of few interior landmarks in Brooklyn. In the early twentieth century the society suffered a decline in membership and income, the auditorium was converted into commercial space, and the museum closed. Renewed growth in the early 1980s enabled the society to expand its public programs and mount changing exhibitions; in 1985 it took its current name. A permanent exhibition on the history of Brooklyn opened in the renovated former auditorium in 1989. The society's collection of materials related to Brooklyn, the largest in existence, includes paintings, sculptures, and other works of fine art and decorative art, archaeological artifacts, books, photographs, manuscripts, and ephemera. After complete renovation of the building between 1999 and 2004, the Brooklyn Historical Society attracted an increasingly diverse group of visitors.

Ellen Marie Snyder–Grenier

Brooklyn Howard Orphan Asylum. The first orphanage and philanthropic institution controlled and operated by blacks in greater New York. It was opened in 1866 at the corner of Dean Street and Troy Avenue by Sarah A. Tillman, a black minister's widow who took in 20 children of emancipated slaves when they could not be accommodated at the Colored Orphan Asylum. She was assisted in her efforts by Oliver Otis Howard, later a founder of Howard University. Black control of the asylum was maintained for more than 50 years, much of that time under the leadership of the preacher William F. Johnson. Under increasing financial pressure, the all-female, all-black board of managers was replaced in 1913 by an all-male board with a white majority and a white president. Wartime shortages and the deterioration of its physical plant forced the orphanage to close in 1918. It was then transformed into the Howard Memorial Fund, which provided scholarships for needy children into the 1990s.

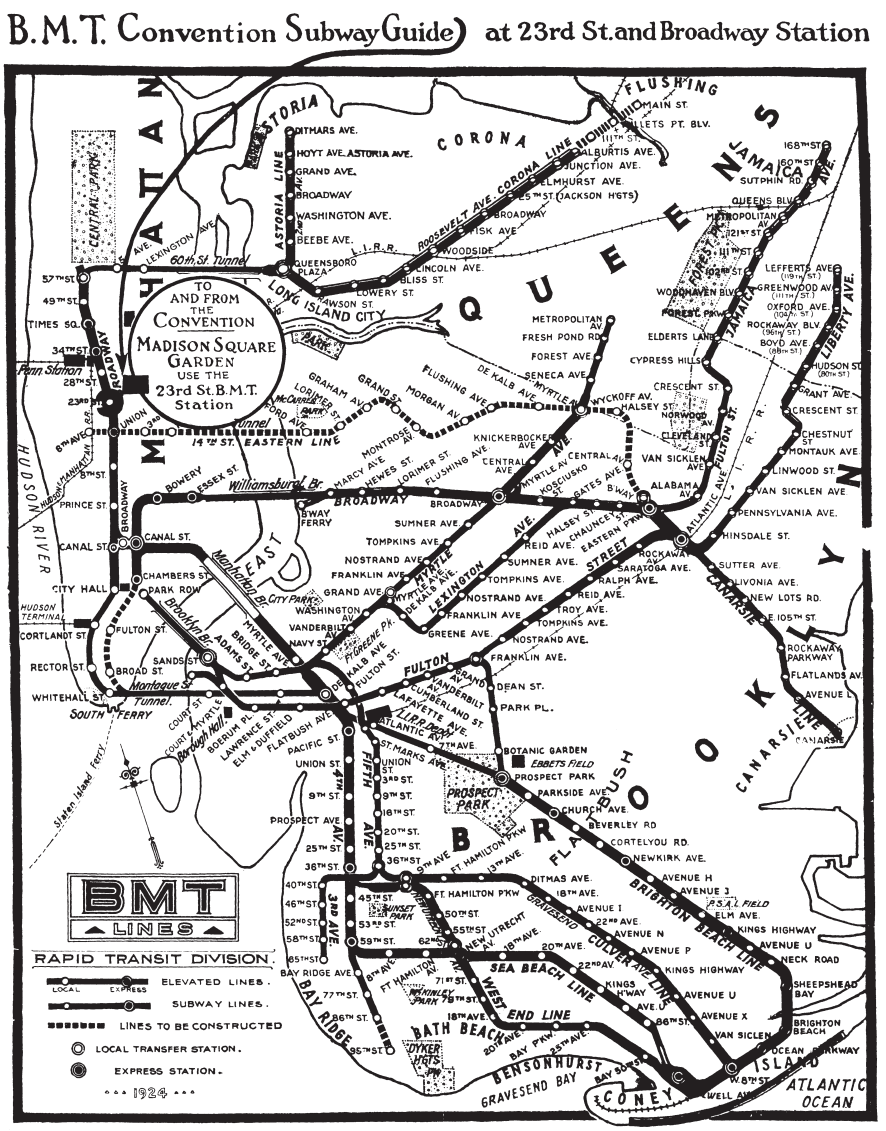
Mike Sappol

Brooklyn Jewish Center. Conservative synagogue on Eastern Parkway, designed in a neoclassical style in 1919 by Louis Abramson. The building had an enormous sanctuary, a gymnasium, a swimming pool, and a kosher restaurant. For over half a century, Israel H. Levinthal presided over the congregation, which by the 1940s included more than 2000 families. The Brooklyn Jewish Center offers a wide range of classes, lectures, and publications and helps to enlarge the role of the American synagogue.

Jenna Weissman Joselit



Brooklyn Law School. Private law school in Brooklyn Heights founded in 1901 by William Payne Richardson, who served as the dean until his death in 1945, and Norman Heffley, who became president of the Board of Trustees. It merged with St. Lawrence University in 1903 but returned to its independent status in 1943. It was accredited by the American Bar Association in 1937 and in the early twentieth century was known for its admission policy, which disregarded race, gender, ethnicity, or socioeconomic status. The law school has occupied a number of buildings, including the Brooklyn Eagle Building (from 1904), a building at 375 Pearl Street (from 1928), and finally a 10-story building at its current location at 250 Joralemon Street (from 1968). In 1973, under Dean Raymond Lisle, the school became a member of the Association of American Law Schools. A year later, the *Brooklyn Journal of International Law* was first published and has since become one of the nation's leading legal journals. In the early twenty-first century Brooklyn Law School offered 180 diverse law courses and had an enrollment of over 1500 full- and part-time students.

Stephanie Miller

Brooklyn–Manhattan Transit Corporation

[BMT]. One of two privately operated subway companies in New York City in the early twentieth century. Formed in 1896 as the Brooklyn Rapid Transit Company (BRT), a securities holding firm, it was greatly enlarged over the next five years through a series of mergers and leases that combined the Brooklyn Union, Kings County, and Seaside and Brooklyn Bridge elevated lines; the Sea Beach, Brighton, and West End steam surface railroads; and a number of electric and horse railways, all previously independent entities. In 1899 the company made an important traffic-sharing deal with the Long Island Rail Road: the railroad was allowed to develop transit lines in Queens, and the BRT took over some of its routes in Brooklyn, such as the Culver and South Brooklyn lines.

The Brooklyn Rapid Transit Company controlled nearly all the street and elevated lines in Brooklyn by 1901, yet its multiple, overlapping routes were not combined into a coherent network. Although the company served many passengers who commuted to the financial district in downtown Manhattan, its elevated lines ended at ferry terminals at the edge of the East River in Brooklyn (except for one short shuttle line across the Brooklyn Bridge). These shortcomings and the extension of service to Brooklyn by Interborough Rapid Transit (IRT) in January 1908 prompted the company to build its own subways. In March 1913 the BRT signed a contract with the New York Public Service Commission

Map of the Brooklyn–Manhattan Transit system issued for the Democratic National Convention at Madison Square Garden, June 1924

known as Contract no. 4, which provided for the construction of 111 miles (179 kilometers) of new rapid transit routes in Brooklyn, Manhattan, and the Bronx. These new lines unified the company's sprawling system and allowed its riders to travel directly from Manhattan to Brooklyn. Contract no. 4 affected the single largest expansion of the subway system in the city's history.

Inflation after World War I affected the Brooklyn Rapid Transit Company severely. The price of materials like coal and iron escalated, but Contract no. 4 limited the fare that the company could charge to five cents. On 1 November 1918 a train derailed at Malbone Street in Brooklyn, killing 102 passengers. This accident and continuing financial problems forced the company to declare bankruptcy on 31 December 1918. When it emerged from bankruptcy on 15 March 1923 the company changed its name, largely in an attempt to erase the stigma of the crash. The Depression ruined the BMT: its ridership declined 12 percent from 1928 to 1937. On 1 June 1940 the City of New York under Mayor Fiorello H. La Guardia acquired the assets of the Brooklyn–Manhattan Transit Corporation, and its rapid transit lines became a division of the city's transit system.

Clifton Hood

Brooklyn Manor. Section of Woodhaven in southwestern Queens, lying on both sides of the abandoned Rockaway branch of the Long Island Rail Road. It was once the Vanderveer farm between Woodhaven Boulevard and 96th

Street, from which 603 building lots were made in 1892 north of Jamaica Avenue. Brooklyn Hills was developed in 1905 from the former estate of the Napier family and extended from Forest Park to Atlantic Avenue between 100th and 104th streets.

Vincent Seyfried

Brooklyn Museum. Museum at 200 Eastern Parkway. Its forerunner was the Brooklyn Apprentices Library, formed in 1823 by the local merchant William Wood for the moral education of apprentices. Modeled after the Apprentice's Library opened by Benjamin Franklin in Philadelphia, it occupied a number of sites successively before being moved into the Brooklyn Lyceum on Washington Street, which housed a small natural history collection and offered public lectures and classes. Under the auspices of the manufacturer Augustus Graham, the lyceum and the library merged in 1843 to form the Brooklyn Institute, which soon offered small exhibitions and more extensive educational programs; Graham endowed a library and a fine arts gallery. In 1890 the Citizens' Committee on Museums of Art and Science publicly advocated continued support of the institute to accommodate the growing population of Brooklyn. In the same year it became the parent organization of the Brooklyn Academy of Music, the Brooklyn Botanic Garden, the Brooklyn Museum of Art, and the Brooklyn Children's Museum. During the following decade the institute was renamed the Brooklyn Institute of Arts and Sciences. Loosely modeled on the Metropolitan Museum of Art and the Museum of Natural History, it sought to attract a wider audience and house larger collections. The first director, Franklin W. Hooper, reorganized the existing collections and amassed new ones. He also oversaw the construction of a new building designed in 1893 by the architecture firm of McKim, Mead and White to be the largest of its kind in the world. Based on a design by the French theorist J. N. L. Durand, the plans called for a series of beaux-arts quadrant pavilions (square buildings with a glass-enclosed central court), linked together to represent an encyclopedia of human culture; only one quadrant was completed (1927).

The collections expanded and the museum reorganized again during the second and third decades of the twentieth century under William Henry Fox, and under Philip Youtz, the director from 1933. The natural history and science collections were given to other institutions, and the art collections were made available for study by designers. Controversy erupted in 1934 when Youtz had the grand staircase at the entrance removed to make the building symbolically more accessible and less imposing. In later years the collections were refined as the museum attracted a larger group of patrons, including the Havemeyers, the Friedsams, the Kevorkians, and the Cantors. The collections of Egyptian and African art at the Brooklyn Museum are among the finest in the United States. Following a well-publicized competition for a "master plan," the museum unveiled its newly organized Egyptian galleries, designed by Arata Isozaki and James Stewart Polshek, in 1993; a new entrance pavilion with dramatic Baroque fountains was completed in 2004. Under director Arnold Lehman, a controversial administrative reorganization in 2006 diminished curatorial authority. The Elizabeth A. Sackler Center for Feminist Art opened in 2007.

Peter L. Donhauser

Brooklyn Museum, 2009

Brooklyn Navy Yard. Popular name of a shipyard on the East River at Wallabout Bay, officially known as the New York Naval Shipyard. The purchase of land was authorized in 1800 by Secretary of the Navy Benjamin Stoddart; the commandant's house, designed by Charles Bulfinch and completed in 1806, is on the National Register of Historic Places. In its early years the shipyard fitted out ships for ventures against Caribbean and Barbary pirates and during the War of 1812 readied more than 100 vessels for raids on British merchant shipping. In the first half of the nineteenth century it benefited from the growth of the Port of New York and from developments in steam propulsion at private shipyards on the East River. Among the ships launched were the *Fulton,* the first oceangoing steamship in the U.S. Navy, and the steam frigate *Niagara,* which helped lay the first transatlantic cable. The United States Naval Lyceum was formed at the shipyard in 1833; a professional and cultural organization, it included among its members James Fenimore Cooper and Matthew C. Perry. During the Civil War more than 6000 workers built 16 vessels, converted more than 400 merchant and private ships to naval service, and fitted out the ironclad *Monitor.* The shipyard was the central base for ship repair and for distributing supplies to the Union fleet. During a worldwide race toward larger warships, the battleship *Maine* (6682 tons) was launched in 1895, and the shipyard became the navy's principal supply depot during the Spanish–American War. The USS *Arizona* and six other battleships were built between 1906 and 1926, and in 1918 employment at the shipyard reached 18,000.

During World War II the Brooklyn Navy Yard was the largest naval construction facility in the United States. Among the vessels completed there were the *Missouri* (45,000 tons), on the decks of which World War II officially ended on 2 September 1945. More than 71,000 men and women worked in shifts around the clock by 1944; in addition to battleships they built aircraft carriers and auxiliary vessels, repaired more than 5000 ships, and converted another 250. The shipyard by then included six huge drydocks, two building ways, eight piers, 270 buildings, 19 miles (30 kilometers) of streets, and 30 miles (48 kilometers) of railroad track. It was the largest industrial center in the navy, as well as the largest employer in New York State. Naval construction declined in the late 1940s but revived during the cold war. In December 1960, 50 people were killed when the aircraft

Launching of the USS Bon Homme Richard *at the Brooklyn Navy Yard, 29 April 1944*

Brooklyn Navy Yard, 2009

carrier *Constellation* was ravaged by fire. From that time only six ships were built, as shipbuilding operations shifted to such southern ports as Newport News (Virginia) and Pascagoula (Mississippi).

By 1965 fewer then 7000 men and women worked at the shipyard. In 1966 Secretary of Defense Robert McNamara closed the facility as part of a nationwide base closing initiative. In the following year, at a cost of $24 million, New York City purchased 260 acres (105 hectares) at the site, which was reopened as an industrial park in 1971. Managed by the not-for-profit Brooklyn Navy Yard Development Corporation since 1981, the yard expanded to house more than 240 businesses by the early twenty-first century, employing more than 5000 workers in a variety of firms, including film and television studios, trucking companies, ship repair facilities, design companies, and wholesale fish distributors. Plans for a history center to retain the yard's connection to its past as well as to refurbish landmarks within the yard are under way.

Arnold Markoe

Brooklyn Philharmonic. Orchestra in Brooklyn founded in 1954 by conductor Siegfried Landau. His successors include Lukas Foss, Dennis Russell Davies, and Robert Spano. The orchestra is known for its premieres of new works, including those of John Adams, Steve Reich, Philip Glass, and Bright Sheng. Since 1991 it has been the resident orchestra of the Brooklyn Academy of Music. In the early twenty-first century it was under the direction of Michael Christie.

Steven Levine

Brooklyn Public Library. Library system founded in Brooklyn in 1892 and opened in 1897. Director Mary E. Craigee oversaw the library's development from its inception until 1898. The first branch, opened at Brooklyn Public School 3 in Bedford, had separate reading rooms for men and women and was one of the first libraries that allowed readers to browse. Between 1901 and 1923 the library received $1.6 million from philanthropist Andrew Carnegie and built 21 branch libraries. A children's branch opened in Brownsville in 1914; the first public library solely for children, it was equipped with child-sized furniture and fancifully decorated with scenes and figures from well-known stories (it is now the Stone Avenue Branch). By 1905 a triangular site fronting Grand Army Plaza and flanked by Flatbush Avenue and Eastern Parkway was chosen for the main library. Architect Raymond Almirall designed a grand beaux-arts building and construction began in 1912, but by 1930 little more than one wing was completed. Library director Milton J. Ferguson began anew with architects Githens and Keally, who during the 1930s demolished most of Almirall's wing and constructed an art moderne building shaped like an open book, with the spine facing Grand Army Plaza and the covers stretching along Flatbush Avenue and Eastern Parkway. The building's front entrance featured limestone pylons and huge bronze doors 40 feet (12.2 meters) tall covered in gilt renditions of literary figures and quotations. Completed in 1941, it was named Ingersoll Memorial Library after the borough president. The Business Library grew out of the Brooklyn Athenaeum (1852) and Brooklyn Mercantile Library (1857), both housed at Atlantic Avenue and Clinton Street; they consolidated and moved to 197 Montague Street in 1869. The new library included a business reference department and was renamed the Brooklyn Library in 1878, becoming part of

the Brooklyn public library system in 1943. The Business Library's current building opened in 1962 at 280 Cadman Plaza West, where it shared space with the Brooklyn Heights branch. In 2007 the Central Library completed renovations that included the 200-seat Dr. S. Stevan Dweck Auditorium and an improved front plaza; planning also began for a Visual and Performing Arts Library (designed by Enrique Norten of TEN Arquitectos) to be built on Flatbush Avenue adjacent to the Brooklyn Academy of Music. In the early twenty-first century the Brooklyn Public Library is the fifth largest library system in the country, with 60 libraries. It serves the 2.5 million residents of Brooklyn with more than five million circulating and reference items in 50 languages; more than one million people hold Brooklyn Public Library cards, and there is a library within a half mile (0.8 kilometer) of every resident in the borough.

GraceAnne A. DeCandido, Kate Lauber

Brooklyn–Queens Expressway

[Interstate 278, BQE]. Expressway that stretches from the Brooklyn–Battery Tunnel to the Grand Central Parkway in Queens. Originally called the Brooklyn–Queens Connecting Highway, it spans 11.7 miles (18.8 kilometers). Construction began in 1937, and under the guidance of Robert Moses the six-lane expressway was completed in sections through 1964 at a total cost of $137 million of city, state, and federal funds. Moses ran into opposition when he tried to build the expressway through historic Brooklyn Heights and agreed to an alternate plan drawn up by neighborhood residents that resulted in a cantilevered section topped by the Brooklyn Esplanade. Planned before the interstate highway system was developed, the expressway's design was obsolete almost immediately, with narrow lanes and no shoulders; it has seen many reconstruction projects since its completion. In 2007 the Brooklyn Academy of Music commissioned musician Sufjan Stevens to write a symphony and accompanying film about the expressway titled *The BQE*.

Kate Lauber

Brooklyn Rapid Transit Company

[BRT]. A precursor of the Brooklyn–Manhattan Transit Corporation, formed in 1896. See also Subways.

Brooklyn Surface Railroad Riots. Violence that erupted throughout Brooklyn between 14 January and 2 February 1895 among striking surface railroad workers. See Riots.

Brooklyn Technical High School. Specialized high school at 29 Fort Greene Place. Plans for a science high school were promoted at the end of World War I by Albert L. Colston, chairman of the mathematics department at Manual Training High School, who recognized the need for an advanced science, mathematics, and engineering curriculum in the city. Under his direction the technical program at Manual Training High School was overhauled, and an innovative engineering program was introduced that won approval from the Board of Superintendents in November 1918 and attracted more than 1200 students the following year. The need for a modern facility was soon apparent, and in May 1922 the Board of Education announced plans for a technical high school. A renovated factory loft building at 49 Flatbush Avenue Extension (near the Manhattan Bridge) was the first site of Brooklyn Technical High School, which opened on 11 September 1922 with nearly 2500 students; Colston was named its principal. Mayor James J. Walker broke ground in 1930 for the present nine-story building on the block between South Elliott Place and Fort Greene Place, built at a cost of $5 million (unprecedented in the United States) and opened in September 1933. Students were admitted only after passing a demanding entrance examination. From November 1938 the school had a radio station, WNYE, that was used by the Board of Education. There were 6000 students from throughout the city by 1960; in 1970 the school became coeducational. Facilities for high-technology programs were added as part of $13 million in renovations begun in 1984. Enrollment stood at nearly 5000 in the early twenty-first century. Among the graduates of Brooklyn Tech are the Nobel laureates George Wald (class of 1923; prize in physiology or medicine, 1967) and Arno Penzias (class of 1951; prize in physics, 1978).

Brooklyn theater fire. Fire on 5 December 1876 in an elegant theater at 313 Washington Street, where 1000 spectators saw Miss Kate Claxton perform in *The Two Orphans*. The fire broke out backstage shortly before the end of the play. Although there was enough time for all to evacuate the building, the stairs became blocked when 500 patrons in the balcony rushed for the exits, and 295 people were killed. The fire consumed the entire theater: more than 100 victims were so badly burned that they were buried in a common grave in Green-Wood Cemetery. The disaster became internationally known and compelled Brooklyn and New York City to impose stricter standards for fire inspections in theaters. In its number of casualties the fire was exceeded only by that at the Iroquois Theater in Chicago in 1903.

Edward T. O'Donnell

Brooklyn Times–Union. Daily newspaper. Launched in 1848 as the *Williamsburgh Daily Times*, it became the *Brooklyn Daily Times* on the unification of Brooklyn and Williamsburgh in 1855. The newspaper supported the antislavery movement and the presidential candidacy of Abraham Lincoln. Walt Whitman was a reporter and later the managing editor after he left the *Brooklyn Eagle*. Published seven days a week, the newspaper at one point had a circulation area that included all of Brooklyn and parts of Long Island. It became known as the *Brooklyn Times–Union* after buying the *Standard Union* in 1932. In 1937 it was bought by the *Brooklyn Eagle*.

Brooklyn Union Gas Company. Utility formed in 1895 that consolidated all the gas companies in Brooklyn through the merger of the Brooklyn Gas Light Company (1825), Fulton Municipal Gas, Citizens' Gas Light, Metropolitan Gas Light, Williamsburg Gas Light, People's Gas Light, and Nassau Gas Light. It later purchased several smaller companies and expanded into Queens. The company originally manufactured gas but began to convert to natural gas after New York City was connected by the transcontinental pipeline in 1950 to the gas fields of the southwestern United States. By August 1952 the conversion was complete. Later it acquired the New York and Richmond Gas Company (1957), which served Staten Island, the Kings County Lighting Company, and the Brooklyn Borough Gas Company (1959). Supply problems in the early 1970s led the company to produce synthetic gas, to import liquefied natural gas, and to purchase subsidiaries engaged in exploration and production. In 1997 the company reorganized as a holding company, changed the parent name to KeySpan Energy, and the following year purchased the generating assets of Long Island Lighting Co. In 2007 the U.K.-based company National Grid acquired KeySpan for $11.8 billion.

Brooks Brothers. One of America's oldest continually operated retailers of men's clothing; opened in 1818 by Henry Sands Brooks at Catherine and Cherry streets, the center of the wholesale clothing trade. It became known for fine quality and was among the

first stores to offer both custom- and ready-made clothing. After Brooks's death in 1833 the business was taken over by his sons Henry, Daniel, John, Elisha, and Edward. They gave the firm its current name in 1850 and opened a store at Broadway and Grand Street in 1858. The firm supplied uniforms for Union soldiers during the Civil War, efforts that made its original store a target of mob violence during the draft riots in 1863; it remained a military outfitter for many years. The years after the war were marked by several important developments. The store on Cherry Street closed in 1874, and the remaining one moved with the retail district to successive sites uptown until finally settling at Madison Avenue and 44th Street in 1915. In 1900 the firm became the first in the country to offer shirts with button-down collars. Partners were increasingly drawn from outside the Brooks family, and in 1903 the firm was transformed from a partnership into a corporation. In the following years stores were opened in Boston, San Francisco, Los Angeles, and Newport, Rhode Island. From the mid-1920s Brooks Brothers faced increasing financial difficulties. Its earnings dropped steadily during the 1930s, and by the end of 1935 it had an operating deficit of more than $1 million. In 1946 it was taken over by Julius Garfinckel, a retail firm in Washington, ending control by the Brooks family. Under the new management unprecedented sales and profits were achieved during the mid-1950s. Between 1955 and 1988, when the business was bought by the retail chain of Marks and Spencer, Brooks Brothers expanded its operations from six to 47 stores in the United States and 21 in Japan. It nonetheless suffered during an economic recession in the late 1980s as it was forced to compete with more stylish designers and stores. To attract younger customers it brought its conservative "Ivy League" styling up to date and adjusted its standards to produce more affordable clothing. In 2001 the company was sold to Retail Brand Alliance, a privately held firm. By the early twenty-first century most of Brooks Brothers' sales came from its outlet and online stores. In 2010 there were four stores in New York City: the flagship building at 345 Madison Avenue, 1270 Sixth Avenue, 1234 Broadway, and One Liberty Plaza.

The World Trade Center's twin towers were directly across the street from the One Liberty branch, and during the terrorist attack of 11 September 2001, the store was used as a triage center and makeshift morgue. The building was one of the first in the immediate vicinity to reopen after the attacks.

Eileen K. Cheng

Brown, Claude (*b* New York City, 23 February 1937; *d* New York City, 2 February 2002). Author. He published *Manchild in the Promised Land* (1965), a memoir of his brutal childhood in Harlem during the 1940s and his escape from street life as an adolescent. Brown had a troubled youth. He was shot in the abdomen at age 13 during an attempted robbery, and he spent three stints at a reform school, Warwick. Each time he returned to Harlem. Brown eventually moved to Greenwich Village, began playing piano, and took high school classes at night. He went on to Howard University, where he turned an article he had written for *Dissent* into his book *Manchild.* It sold four million copies worldwide and earned Brown social respect from critics such as Ralph Ellison, James Baldwin, and Richard Wright. Brown published another account of life in Harlem—this time, about other people's lives—*The Children of Ham,* in 1976. He died of respiratory failure.

Rowan Moore Gerety

Brown, Elmer E(llsworth) (*b* Kiantone, near Jamestown, N.Y., 28 Aug 1861; *d* New York City, 3 Nov 1934). Educator. He graduated from the State Normal College in Illinois in 1881, became a superintendent in Belvidere County (Illinois) later that year, and earned an AB at the University of Michigan (1889) and a PhD at the University of Halle-Wittenberg in Germany (1890). After working as a high school principal and teaching at the University of Michigan and the University of California at Berkeley he was appointed commissioner of education by President Theodore Roosevelt in 1906. In 1911 he resigned to become the seventh chancellor of New York University. There he continued the expansion begun by his predecessor, Henry Mitchell MacCracken, by developing a coeducational facility called Washington Square College (1914), improving the professional schools, establishing New York University Press (1916), enlarging the library system, and renovating buildings and property (including the School of Education in 1929). On his retirement in 1933 the university had more than 40,000 students and was the largest private university in the United States.

Paul H. Mattingly

Brown Brothers Harriman. Firm of commercial bankers. It was formed by Alexander Brown in Philadelphia in 1818 as the firm of John A. Brown, an offshoot of a firm of Irish linen importers. In 1825 a branch called Brown Brothers was opened in New York City by James Brown, a son of Alexander Brown; with the firm of William and James Brown of Liverpool, it became an important commission house and merchant bank. The branch moved its offices to 59 Wall Street in 1843. Brown Brothers was known as a conservative house that helped to reorganize railroads during the late nineteenth century, and it was a leading provider of letters of credit throughout the world. In 1907 seven of the 14 partners were members of the Brown family. After becoming independent of the firm in England in 1918 the American operation expanded during the 1920s and opened a large bond department. On 1 January 1931 it received its current name after merging with the private banks of W. Averell Harriman (formed in 1919) and the Harriman brothers (formed in 1927 by Harriman and his brother E. Roland Harriman). With the passage of the Banking Act of 1933 the firm ceased underwriting corporate securities and became a commercial bank. By 1994 Brown Brothers Harriman was the oldest and largest private commercial bank in the United States. In 2001 it moved its headquarters to 140 Broadway after 168 years at its Wall Street location; in the early twenty-first century it had 15 offices worldwide and 2700 employees.

Brownson, Orestes A(ugustus) (*b* Stockbridge, Vt., 16 Sept 1803; *d* Detroit, 17 April 1876). Philosopher and writer who lived in New York City from 1826 to 1831. In 1838 he launched the *Boston Quarterly Review* as a radical publication. His indictment of capitalism in his essay "The Laboring Classes" was seized on by the Whigs in 1840 as a means of tarring President Martin Van Buren, whom Brownson supported. The demagoguery of the election led Brownson to doubt the possibilities of democratic reform. He discontinued the *Review* in 1842 to write for the *U.S. Democratic Review,* published in New York City by John L. O'Sullivan. After exploring several faiths and organizing his own church in 1836, he caused a sensation by converting to Catholicism in 1844. As the editor and principal writer of *Brownson's Quarterly Review* (1844–64, 1873–75) he became an important critic of developments in literature, philosophy, science, religion, and government. Among the topics he explored were the relationship between church and state and the nature of civil and religious liberties. He moved the *Review* to New York City in 1855 and to Elizabeth, New Jersey, after a quarrel with Archbishop John Hughes. Brownson wrote an autobiography, *The Convert* (1857), and *The American Republic* (1866), a philosophical essay on the solubility of the Union.

Robert Emmett Curran

brownstones. Residential, sandstone row houses of two to four stories built throughout New York City during the nineteenth century. They evolved when the rising price of property in Manhattan during the 1840s and 1850s caused developers to modify the design of the traditional Federal or Greek Revival row house: a front setback was carved out to provide a feeling of spaciousness; the basement was raised to admit light, so that it could be used as a scullery and servants' work area; a large staircase with rails of wrought iron was installed, leading to a high stoop with a balustrade; and the entire building was extended into the rear yard to enlarge the space for family and servants. Brownstones were built in blocks of several at a time, and their flat cornices, continuous string-coursing, and regular stoops gave them an imposing regularity. Italianate windows and door hoods above the entrances accentuated the facades with striking shadows. "Jersey freestone," a reddish-brown sandstone of varying hues, was quarried in Passaic County, New Jersey, sawed by modern steam machinery into sheets 4 or 6 inches (10 or 15 centimeters) thick, and mounted over a brick structural frame. Weathering eventually changed the stone to a chocolate brown and darkened the mortar to give the buildings a somber veneer. Although wealthy families at first resisted the new structures they came to appreciate their stolid private space, and during the social turbulence of the 1850s many families moved to the areas of major brownstone development, such as Gramercy Park and Brooklyn Heights. In the 1880s and 1890s creative and eclectic stylistic innovations appeared: heavy arched windows in the Richardsonian Romanesque style, asymmetrical features in the Queen Anne style, and the triangular roof lines, gabled niches, and three-paneled window bays of Charles Eastlake. The trim of some buildings was decorated with red, yellow, and tan brick and terra-cotta, and several blocks of brownstones on the Upper West Side displayed a stunning variety of color.

The interior of a brownstone was cramped. One entered the front door into a vestibule about five feet (1.5 meters) square. Straight ahead were an ascending staircase and a hallway leading to the rear of the building; to the side of the vestibule lay a front parlor, at the rear of which overlooking the backyard lay a nearly identical dining room, where most entertaining took place. The parlor and the dining room could be united by opening a set of double doors surrounded by a decorative molding. Brownstones were often sufficiently deep that between the front and back rooms a third room could be interposed, usually a formal dining hall with a marbleized fireplace and gilt mirror. In a typical brownstone the family quarters were on the second story and the servants' quarters on the third, which sometimes contained interior rooms ventilated by air shafts.

The confining and expensive brownstones could not compete with the sprawling luxury apartments of the Dakota and the Ansonia or the suburban homes that became popular at the turn of the century, and in the early 1930s blocks of brownstones were leveled to allow for the construction of offices, notably around Rockefeller Center. Of those brownstones that remained many in midtown were subdivided before World War II into cheap rental apartments and rooming houses. Further demolition of brownstones funded by Title I of the Housing Act of 1949 and overseen by Robert Moses angered many residents and inspired them to political action. A renewal of interest in historic preservation led to the renovation of brownstones in Greenwich Village, on the Upper West Side, in Chelsea, and later in Park Slope. The Landmarks Preservation Commission, formed in 1965, protected the brownstone heritage of areas such as the Metropolitan Museum Historic District, Riverside Drive, and West 80th and 81st streets.

A row of brownstone houses

Brownsville. Neighborhood in southeastern Brooklyn (2000 pop. 85,000) bounded to the north by Eastern Parkway, to the east by Van Sinderen Avenue, to the south by Linden Boulevard, and to the west by Rockaway Parkway. It is named for Charles S. Brown, who built 250 frame houses there after 1865. Development remained slow until 1887, when Aaron Kaplan purchased land, built tenements, and enticed Jewish garment makers to the area from the Lower East Side. Further settlement was spurred by the opening of the Fulton Street elevated railway in 1889. As the neighborhood became more accessible, two-

family homes and small tenements with storefronts at street level replaced earlier houses, and by 1910 large multifamily buildings dominated. The area was largely Jewish, with sweatshops and pushcarts and few sewers or paved streets. Living conditions improved after 1920, as did rapid transit connections to Manhattan with the completion in 1922 of the New Lots branch of Interborough Rapid Transit. The neighborhood prospered from the 1920s to the 1940s and was a center of labor radicalism: it elected socialists to the state assembly between 1915 and 1921 and a candidate of the American Labor Party in 1936. Margaret Sanger opened the first birth control clinic in the United States at 46 Amboy Street on 16 October 1916 (it was closed nine days later by the vice squad). During these years the neighborhood inspired some of the most evocative accounts of the Jewish experience in New York City, including Henry Roth's novel *Call It Sleep* (1934) and Alfred Kazin's memoir *A Walker in the City* (1951). Some local residents who later became prominent include the composer Aaron Copland, the actor Danny Kaye, and the impresario Sol Hurok.

Many of its residents moved to the suburbs after World War II. There followed a cycle of decay, abandonment, vandalism, and arson, which high-rise public housing projects built during the 1950s and 1960s did little to alleviate. Later housing renewal efforts were more successful, notably those sponsored by the Council of East Brooklyn Churches to provide affordable one-family houses at Marcus Garvey Village and Nehemiah Housing. At the beginning of the twenty-first century, Pitkin Avenue, the main commercial thoroughfare, was lined with small businesses, shoe and clothing outlets, and restaurants. Loew's Pitkin Theater, a lavish movie theater built in 1930 by Thomas W. Lamb, remained at the corner of East New York Avenue and Pitkin Avenue as a retail store. The heavyweight boxing champions Mike Tyson and Riddick Bowe both grew up in the neighborhood. Brownsville attracted many immigrants from the Caribbean during the 1980s, especially from Jamaica (accounting for 30 percent of all immigrants), Guyana and Haiti (each about 15 percent), Grenada, Barbados, and Trinidad and Tobago. In the early twenty-first century the population of Brownsville was largely African American, with smaller groups of Latinos and West Indians. The neighborhood remained mostly low-income, with one of the highest densities of public housing projects in the city.

Elizabeth Reich Rawson

Bruce, Lenny [Schneider, Leonard Alfred] (*b* Mineola, N.Y., 13 Oct 1925; *d* Los Angeles, 3 Aug 1966). Comedian. Raised in Mineola on Long Island, he ran away from home at age 16 to work on a farm before serving in the navy from 1942 to 1945. Bruce performed on a small scale in New York City area nightclubs and burlesque houses after the end of the war; in 1948 he first performed for a wider audience on *Arthur Godfrey's Talent Scouts.* In the 1950s Bruce moved from nightclubs to Hollywood and a television audience. During this time he became among the first comedians to attract large followings for performing routines that involved profane language and discussion of topics such as religion, race, sex, and drug use. In his bit "Christ and Moses," Bruce described a confused Jesus wondering why 40 Puerto Ricans should live in one room in Spanish Harlem while Francis Cardinal Spellman wore an $8000 ring. This style earned Bruce enemies in law enforcement; he was arrested on a series of obscenity and drug charges in California, Chicago, Philadelphia, and New York City over the following years and was denied entry into Australia and the United Kingdom. The arrests made nightclub owners hesitant to hire him. His 1964 conviction on obscenity charges after a show at Cafe au Go Go in Greenwich Village effectively excluded him from working in New York City. Bruce left New York for California, where he died in 1966 of a drug overdose. In 2003 Governor George Pataki posthumously pardoned Bruce for his obscenity conviction.

Ben Silk

Bruckner, Henry (*b* Bronx, 17 June 1871; *d* Bronx, 14 April 1942). Public official. After representing the Bronx as a state legislator (1900) he was a commissioner of public works (1901–12), a member of the U.S. Congress (1912–17), and a borough president (1918–33). His loyal adherence to Tammany Hall enabled him to win elections consistently. During the same time he developed Bruckner Beverages, the city's largest bottler of soda water. Bruckner's political career ended when Judge Samuel Seabury recommended his removal from the borough presidency after an investigation of Tammany Hall. Although Bruckner declined to resign, Edward J. Flynn, Democratic leader of Bronx County, did not designate him for reelection. Bruckner Boulevard is named for him.

Ada Louise Huxtable, *Will They Ever Finish Bruckner Boulevard?* (New York: Macmillan, 1970)

Neal C. Garelik

Bruckner Boulevard. Highway that runs from the Lower Bronx to the Bronx River, formerly known as Eastern Boulevard. Designed to connect the Bronx–Whitestone and Triborough bridges with Pelham Bay Park, it was formed in 1895 from three roads that were originally separated by swamps: Ludlow Avenue, which connected the Bronx River and Unionport; Sixth Street, which lay in Unionport; and Willow Lane, which ran from Unionport to Pelham Bay Park and covered portions of an ancient Native American path. On 29 July 1942 Eastern Boulevard was renamed for Henry Bruckner, a former Bronx borough president. In the late 1940s the road was widened, in anticipation of the Bruckner Expressway that was to be built over it, and a drawbridge was added over the Bronx River. In 1956 Robert Moses's plan to build the Bruckner Expressway was approved by the city; the project was completed in 1972 at more than six times the original projected cost. In December 1996 the boulevard underwent a makeover, which included new curbs, plantings, sidewalks, and lighting.

Henry Cooper

Bruère, Henry (Jaromir) (*b* Saint Charles, Mo., 15 Jan 1882; *d* Winter Park, Fla., 17 Feb 1958). Reformer. After moving in 1905 to New York City, in 1907 he formed the New York Bureau of Municipal Research, which studied the structure of the city government and its administration of social services. He became city chamberlain during the administration of Mayor John Purroy Mitchel in 1914 and chairman of the Committee for Better Housing under Mayor Robert F. Wagner. Bruère wrote *The New City Government: A Discussion of Municipal Administration, Based on a Survey of Ten Commission-governed Cities* (1912). He lived at 340 West 86th Street.

Bernard Hirschhorn

Bruno, Guido [Kisch, Curt Joseph] (*b* Mladá Boleslav, Bohemia, 15 Oct 1884; *d* Bala Cynwyd, Pa., 31 Dec 1942). Book dealer and printer. He grew up near Prague, emigrated to the United States in 1907, and from 1914 to 1916 was the proprietor of Bruno's Garret on Washington Square South, which functioned as an art gallery, lecture hall, talent agency, and print shop specializing in the offbeat. He published local news gazettes, literary chapbooks, and whimsically illustrated pamphlets, as well as *Fragments from Greenwich Village* (1921). He was also a partner in the short-lived Thimble Theater at 10 Fifth Avenue. In his later years Bruno sold rare American manuscripts and autographs.

Arnold I. Kisch, *The Romantic Ghost of Greenwich Village: Guido Bruno in His Garret* (Frankfurt am Main: Peter Lang, 1976)

Jan Seidler Ramirez

Brushville. Former name of Queens Village. Named Little Plains in the 1640s, it was re-

named after Thomas Brush, who established a wheelwright and blacksmith shop there in 1824. Later he built a tavern, a general store, and a tobacco-curing warehouse. In 1865 residents voted to adopt the name Queens despite the risk of confusing the village with the county; the word Village was added in 1924 by the Long Island Rail Road when it erected an elevated station.

Vincent Seyfried

Bryant, Louise (Anna Louisa) (*b* San Francisco, 5 Dec 1885; *d* Sèvres, France, 6 Jan 1936). Journalist. She graduated from the University of Oregon in 1909, became editor of the Portland-based *Society* magazine, and married her first husband. In 1914 she met John Reed, a journalist and activist, whom she later married, and moved to Greenwich Village. While in New York City, she wrote for several socialist and radical magazines. She traveled to Russia with Reed during the Bolshevik Revolution and wrote *Six Red Months in Russia* (1918). After Reed's death in 1920 she went to central Asia for reporting and published *Mirrors of Moscow* (1923). She became a foreign correspondent and notably conducted the first interview by a non-Italian with Mussolini. A retrospective film *Reds* (1981) about her life with Reed starred Diane Keaton as Bryant.

Jessica Montesano

Bryant, William Cullen (*b* Cummington, Mass., 3 Nov 1794; *d* New York City, 12 June 1878). Poet, editor, and civic leader. He was initially a staunch Federalist. After moving to New York City in 1825 he succeeded E. L. Godkin as the editor of the *New York Review* and the *Evening Post*. In 1829 he bought the *Post,* where he continued to work until nearly the end of his life. Initially revered as a poet, he became the city's most influential resident through his public work, and he abandoned Federalism for liberal positions on a number of issues, including abolition and free soil; he also supported Abraham Lincoln. In 1867 he bought his last home, a house at 24 West 16th Street. An influential advocate of public parks, public health, and other civic causes, Bryant was among those who created the Century Association in 1846, Central Park in the 1850s, and the Metropolitan Museum of Art in 1870, and he was the first president of the board of trustees of New York Medical College. Bryant Park on 42nd Street honors his memory.

Charles Henry Brown, *William Cullen Bryant* (New York: Charles Scribner's Sons, 1971)

Jeff Finlay

Bryant High School. Former name of William Cullen Bryant High School.

William C. Bryant

Bryant Park. Nine-acre (3.6-hectare) public park in Manhattan, located between Fifth and Sixth avenues and 40th and 42nd streets. Designated a public space in the Dongan Charter of 1686, the site was a potter's field from 1823 to 1840. The city subsequently constructed the Croton Distributing Reservoir on the eastern portion of the site, while the western side became a public park named Reservoir Square. The Crystal Palace, an iron and glass exhibition building constructed for New York's first world's fair, stood in Reservoir Square from 1853 until it burned down in 1858. In 1884 the park was renamed for poet, newspaper editor, and parks advocate William Cullen Bryant. In 1899 the city demolished the reservoir and replaced it with the New York Public Library, completed in 1911. During the early twentieth century the park became a haven for the homeless, especially after the Rapid Transit Board used it as a dumping ground during construction of the Queensboro Subway. In 1932 the George Washington Bi-Centennial Celebration Committee constructed a temporary replica of Federal Hall in Bryant Park, fencing the park off and charging an admission fee. The city paid to demolish the structure after mismanagement and corruption emptied the committee's coffers, and the park remained a vacant lot. Robert Moses made redesigning Bryant Park top priority when he became parks commissioner in 1934, choosing a beaux-arts plan by Queens architect Lusby Simpson. By the following year the park had been raised 4 feet (1.2 meters) above street grade, surrounded by an iron fence and graced with a large central lawn, bluestone walkways, and London plane trees. Moses and Simpson sought to create an oasis in midtown, but by the mid-twentieth century the park had instead become a refuge for alcoholics, panhandlers, and prostitutes. In 1966 Parks Commissioner Thomas P. F. Hoving and the Avenue of the Americas Association implemented a plan to enliven Bryant Park with weekly fashion shows, concerts, and performances. During the city's fiscal crisis of the 1970s, however, the park—known as Needle Park because of its resident drug dealers—further deteriorated. In 1979, the independent Parks Council constructed bookstalls and cafes in the park to attract passersby. Simultaneously, the Bryant Park Restoration

Bryant Park looking toward the New York Public Library, 1937

Corporation (now Bryant Park Corporation, BRC), a private nonprofit organization formed by trustees of the New York Public Library and the Rockefeller Brothers Fund, began an ambitious program to privately manage the park by creating a business improvement district to fund its restoration and future operations. Led by BRC executive director Daniel Biederman and founded on the ideals of urbanist William H. Whyte, the decade-long restoration process resulted in a meticulously maintained and financially self-sustainable park that today features a restaurant, Wi-Fi Internet access, ice skating, and outdoor movies. Crime almost disappeared. The park maintained a close relationship with the New York Public Library and in the twenty-first century housed more than 80 miles (129 kilometers) of book stacks underneath its great lawn. The privatization of the park, which is wholly managed and funded by BRC, remains a controversial issue. Critics contend that BRC focuses on commercial events such as the biannual Fashion Week rather than on public access, while BRC argues that commercial events bring in fees that help maintain and improve the park for its users.

Kate Lauber

Buchalter, Louis "Lepke" (*b* New York City, 1897; *d* Ossining, N.Y., 4 March 1944). Organized-crime figure. He grew up on the Lower East Side and worked in extortion, protection rackets, loan sharking, and various illegal enterprises for both labor and management. Known for his violent tactics and his quiet but luxurious style of life, he was soon a target of the district attorney of Manhattan, Thomas E. Dewey. After violating narcotics and antitrust laws he went into hiding in 1937, spending most of his time on Third Street in Brooklyn. He surrendered in 1939. While in prison he was convicted of masterminding the murder of a store owner in Brooklyn, and he was executed at Sing Sing State Prison.

Margaret Latimer

bucket shops. Fraudulent businesses that ostensibly buy and sell stocks, bonds, and commodities on behalf of customers but in fact use their money to engage in deceptive and speculative practices. During the nineteenth century bucket shops had little effect on stock prices because they failed to execute most orders that their customers placed. In other cases they would bilk their customers by freezing orders to buy when a downward trend was expected in the market and then pocketing the difference. Bucket shops were forced to discontinue their practices after an investigation by Charles Evans Hughes in 1909. The long bear market of 1919–21 saw new firms open that executed orders and then reversed them through dummy accounts; rising stock prices after 1922 forced these operations out of business. In March 1923 an investigation by the district attorney Joab Banton was joined by the attorney general of New York State. By this time it was estimated that scores of customers had been cheated out of $800 million since November 1918. The New York Stock Exchange barred its members from dealing with bucket shops, and in 1924 a "padlock" injunction closed the National Stock, Cotton and Grain Exchange. Despite this success Banton estimated in June that fraud still exceeded $1 billion a year. It was not until October 1934 that a federal law outlawed bucket-shop techniques and the Securities and Exchange Commission declared all such operations illegal.

George J. Lankevich

Buckley, Charles A(nthony) (*b* New York City, 23 June 1890; *d* New York City, 22 Jan 1967). Congressman and Bronx political leader. As a young man he worked as a construction laborer and was an active member of the North End Democratic Club. Elected to Congress in 1934, he became the chairman of the public works committee, which oversaw federal construction contracts. In 1953 he became the Democratic leader of Bronx County. Buckley's political influence in the city weakened after he opposed Mayor Robert F. Wagner's successful reelection campaign in 1961, and he lost his congressional seat to the reformer Jonathan Bingham in a Democratic primary in 1964. He nonetheless remained in charge of the Democratic Party in the Bronx to the end of his life. He lived at 21 West 192nd Street.

Chris McNickle

Buckley, William F(rank), Jr. (*b* New York City, 24 Nov 1925; *d* Stamford, Conn., 27 Feb 2008). Writer, publisher, and commentator. Born into a wealthy family, he served in the U.S. Army during World War II and graduated from Yale in 1950. In 1955 he founded *National Review* in New York City, which became the leading journal of conservative opinion in the United States. As the candidate of the Conservative Party for mayor of New York City in 1965 he attacked the city's liberal social policies and advocated fiscal responsibility and law and order. He finished third behind the Republican candidate John V. Lindsay and the Democratic candidate Abraham D. Beame but exceeded expectations by winning 13.4 percent of the votes. In 1966 he became the host of *Firing Line,* an interview program taped weekly in New York City and broadcast nationwide on public television until 1999. Buckley retired as editor in chief of *National Review* in 1990 but continued to write a syndicated newspaper column and publish spy novels and works on politics and history. Buckley maintained residences on Park Avenue in Manhattan and in Stamford, Connecticut.

Buddhists. New York City is an important center of American Buddhism, in part because its residents include immigrants from most countries that have a strong Buddhist tradition, among them China, Japan, Thailand, Korea, Tibet, Burma, Vietnam, Cambodia, Laos, and Sri Lanka. The first Buddhists in the city were Chinese who settled there in the mid- to late nineteenth century. It is not known where they established their first temple because they often worshipped in nondescript rooms at the headquarters of secular Chinese associations. Buddhism became a subject of wide interest after the Theosophical Society was formed in the city in September 1875 by Helena Blavatsky. Japanese Buddhism established a presence in the city in 1930 when the artist and writer Sokei-an Sasaki, an adherent of Rinzai Zen Buddhism, formed the Buddhist Society of America (renamed the first Zen Institute of America in 1945). Later led by Mary Farkas and situated at 113 East 30th Street, this organization began publishing *Zen Notes* in 1954. Another important Japanese sect, Jodo Shinshu, was represented by the New York Buddhist Church, formed in 1938 at 331 Riverside Drive as an affiliate of Buddhist Churches of America. The church held separate Sunday services in Japanese and English and in 1948 began supporting the American Buddhist Academy, which ordains priests and offers a master's degree in Buddhist studies. During the 1960s Buddhism was popularized by such beat poets as Allen Ginsberg and Jack Kerouac and other figures in the counterculture. The Zen Studies Society was formed in 1968 at 223 East 67th Street, and the Chinese (Ch'an) Institute of Chung-Hwa, Buddhist Culture Meditation Center, opened in 1979 in Elmhurst.

Tibetan Vajrayana Buddhism also gained a large following, with institutions ranging from such formal ones as the Tibet Center (Gelugpa school) and the Dharmadhatu of New York (Kagyu school) to less formal ones like the Buddhist Center (Sakya school), led by the guru Lama Pema Wangdak. The New York Buddhist Vihara, an enclave of monks formed in 1980 in Kew Gardens, Queens, and directed by a Sri Lankan spiritual leader, represented Heravada Buddhism, an ascetic tradition most closely associated with Thailand and Southeast Asia. American-born Buddhists in the city took an early interest in efforts to modernize the religion, to make its hierarchy more democratic and open to women, and to encourage dialogue between its sects. The American Buddhist Movement, formed at 301 West 45th Street in 1980 by

Kevin O'Neil, published the *American Buddhist* between 1980 and 1988 and by 2000 had more than 500 members, mostly middle class and American born. By this time there were 11 Buddhist temples in Chinatown and several more in Flushing, and the Buddhist Association of the United States, which was primarily Chinese, supported the Temple of Enlightenment at 3070 Albany Crescent in the Bronx. Most Buddhist organizations in the city maintain rural retreats in upstate New York.

budget. Municipal spending was relatively low in seventeenth- and eighteenth-century New York City, when efforts at social betterment were conducted largely by private charities and religious organizations, and the city's taxing power was strictly circumscribed. The city's total budget in 1850 was $3,368,163, or $6.53 per inhabitant. Spending increased after the city established a system for the comprehensive collection and assessment of property taxes in 1859.

After consolidation in 1898 the government of the newly enlarged New York City spent $78 million in its first year. Nearly continuous growth between 1898 and 1933 raised the municipal budget to $578 million. Its expansion during this period reflected the substantial infrastructure investments required to tie the new city together, as well as the demand for improved services in the 1920s. During this 35-year period, municipal expenditures rose at an average annual rate of 6 percent.

Municipal spending did not decline until 1933, four years after the collapse of the New York Stock Exchange, because of a fiscal crisis in 1932 that stopped the city's ability to borrow. Although the rate of growth in the 1930s was slower than in the 1920s, World War II affected the municipal budget more profoundly than the Depression. The war forced advocates of the New Deal to redirect federal resources toward defending the nation and away from economic "pump-priming" (an activity that included federal aid to cities like New York City). From 1933 to 1945 municipal spending rose to $737 million, an average of 2 percent a year.

After the war the budget followed a pattern of steady growth that lasted until the mid-

1960s. Pent-up demand for the expansion of the municipal government was financed primarily by the growth of revenues from municipal taxes on real property and sales, though by this time transfers from the State of New York and the federal government were beginning to make substantial contributions as well. Between the end of World War II and 1965 the budget grew an average of 8 percent a year, reaching $3.34 billion.

From the mid-1960s municipal spending grew at unprecedented rates. It surpassed $4 billion in 1967, $5 billion in 1968, $6 billion in 1969, $7 billion in 1971, $8 billion in 1972, $9 billion in 1973, and $10 billion in 1974, reaching $11.654 billion in 1975. From 1965 to 1975 the budget grew by an average of 13 percent a year, driven largely by three forces. First, in 1965 the federal government and New York State required the city to help finance public assistance and Medicaid for poor New Yorkers. Under the federal mandate the state paid half of the program's costs, and the state in turn compelled the city to pay half of that. This requirement that the city pay for 25 percent of welfare and Medicaid costs from municipal revenues, coupled with socioeconomic changes that were increasing the number of dependent poor, drove municipal spending up by $3.3 billion between 1965 and 1975. Second, the municipal government expanded the municipal bureaucracy by 60,000 positions, partly to provide the mandated welfare and health services. In addition the expansion of a collective bargaining program introduced in the 1950s provided the leaders of municipal unions with a new forum for winning higher wages and benefits for their members. The expansion in the number and compensation of municipal employees added $3.6 billion to the municipal budget between 1965 and 1975. Third, debt service, or payments of principal and interest to the holders of municipal bonds and notes, rose by nearly $1.5 billion as the city enlarged its program of capital projects financed by borrowing.

The rapid growth of expenditures required that municipal officials find new revenue sources, notwithstanding the boom in revenues that accompanied the expansionary economy of the 1960s. During the second half of the 1960s the city raised rates on existing sales and property taxes and also introduced new taxes on business and personal income. After 1969, when the local economy began to experience a long recession, municipal officials stopped raising taxes and began using proceeds from note and bond sales to pay day-to-day operating expenses. These practices contributed to a steep rise in debt service costs during the first half of the 1970s. By 1975 the city had accumulated a budget deficit of more than $3 billion and needed to borrow $7 billion simply to pay off notes that were coming due.

The second of the city's twentieth-century fiscal crises began in May 1975, when the financial institutions that had been underwriting municipal bond and note sales ceased doing so. In the face of municipal default the state created the Municipal Assistance Corporation in June. The corporation was to issue long-term bonds, backed by municipal revenues, in order to pay off municipal creditors. In September, after it became clear that a refinancing strategy would not be sufficient, the state also created the Emergency Financial Control Board to control municipal spending. During the control period expenditure growth was limited by freezing welfare benefits to the poor and wages of municipal employees as well as eliminating 60,000 municipal positions. Furthermore, capital spending was stopped, except for projects supported by intergovernmental funds. The state also helped limit the growth of expenditures by assuming the cost of certain services previously funded by the city, including higher education. Because of these measures and more favorable economic conditions, the city's budget was brought into balance by 1981, enabling the city to begin to regain access to public credit markets. Between 1975 and 1982 municipal spending rose an average of only 4 percent annually.

During the 1980s economic growth and the desire to make up for the effects of the fiscal crisis led to an expansionary period in municipal budgeting. Between 1982 and 1990 the budget grew an average of 7 percent a year, to $26.6 billion. The greater part of the increase, $7.8 billion, reflected an attempt to restore the size and wages of the municipal workforce to the levels that had prevailed before the fiscal crisis. Some 50,000 workers were added to the payroll.

Between 1990 and 1994 the budget grew to $31.8 billion, despite worsening national and local economic conditions. Increasing fiscal stress resulted from the expansion of municipal employment and higher debt service, reflecting the refinancings during the fiscal crisis and the resumption of capital spending during the 1980s.

In 1995 the city's adopted budget called for a reduction in spending for the first time since 1980. Continued local economic stress and conservative fiscal policies pursued by newly elected Mayor Rudolph Giuliani led to a relatively slow pace of budget growth, just 2 percent annually from 1994 to 1998. During Giuliani's second term a better economy and changed policies led to more rapid growth of 6.3 percent annually, bringing the budget to $41.7 billion in fiscal year 2002.

The terrorist attacks of 11 September 2001 created fiscal problems that newly elected Mayor Michael Bloomberg was forced to address. In response to large projected budget gaps, the city borrowed about $2 billion to help cover operating expenses and raised property taxes 18 percent. The local economy recovered quickly, and municipal spending continued to rise relatively rapidly, with the adopted budget for fiscal year 2008 reaching $59.4 billion.

building trades. Most builders in colonial New York City were known as "mechanics"; some were politically active as Sons of Liberty and members of the General Committee of Mechanics, which opposed the importation of British manufactured goods. As the market economy grew after the American Revolution, such groups evolved into trade societies and unions, among them the New York Society of Journeymen House Carpenters. A group of journeymen stonecutters in 1823 engaged in the first known strike by masons. At issue was the 10-hour day, which was later won by masons, bricklayers, and other workers. In 1867 New York City and Brooklyn bricklayers joined the first national union in that trade, but the union met with competition and fractured in a dispute over secret oaths; its membership shrank from 7000 to fewer than 300, only to be revived in a joint union with masons. Those in the building trades later organized citywide in the General Trades' Union of New York City under the leadership of John Commerford. Union action in favor of the eight-hour day was aggressive but failed. During a severe depression in the 1870s, the Committee of Safety was formed to demand more public works projects. Skirmishes between workers and the police culminated in a riot at Tompkins Square on 13 January 1874. Building trades unions adopted restrictive entry requirements, including steep initiation fees and stringent rules of apprenticeship, and organized joint actions and sympathy strikes against builders who did not recognize unions. By the turn of the twentieth century contractors came to regard the union hiring hall as a convenient source of highly skilled workers, whose wages were the highest in the country. Corruption and an effort by contractors to regain control led to a total halt to construction in the city in 1903. Later, unions shut out immigrants, and Jewish and Italian workers formed their own unions and locals. Unions expanded through all the building trades during the skyscraper boom of the 1920s. As some union officials extorted bribes,

organized crime appeared, at first to protect picket lines and then to become embedded in locals for many years. The political conservatism of the New York City building trades was highlighted during the "hard hat" demonstration of May 1970 when 200 construction workers attacked a rally against the Vietnam War. The reputation of the building trades was solidified in the weeks after the terrorist attacks on the World Trade Center in 2001 when workers flooded to Ground Zero to clear it and prepare it for new construction.

Bulgarians. Bulgarians settled in New York City about 1900 along avenues B and C at Third and Fourth streets on the Lower East Side. The Bulgarian American Mutual Aid Society, formed in 1906, was the first organization of its kind in the United States. It was soon followed by the Bulgarian Subsidiary Committee (1915–17), which helped immigrants and orphans of World War I. Promoting Bulgarian culture was the goal of the Bulgarian Students Association (1924–27), the Bulgarian Society (1929), and the Bulgarian Institute (1935). Political organizations were formed by refugees and political exiles who settled in New York City after World War II. The Bulgarian National Committee, formed in 1946, was a coordinating organization that eventually moved its headquarters to suburban New Jersey. Through its publication *American-Bulgarian Review,* the American Bulgarian League (1947–68) sought to unite anticommunist groups in fighting for democracy in Bulgaria; a similar goal was later pursued by the Bulgarian National Front (1958–67) through its publication *Borba* (Fight). The Bulgarian Social Democrats (1955–57) published *Svoboden Narod* (Free People) before moving their organization to Austria. During the 1950s and 1960s most of New York City's Bulgarian population moved to neighborhoods throughout Manhattan and to the Bronx (especially Tremont Avenue and Fordham Road) and suburbs in New York, New Jersey, and Connecticut. There was also a Bulgarian National Council (1960–65) that served as an umbrella organization for all political entities. In the early twenty-first century more than 3800 Bulgarians lived in the city, including teachers, writers, artists, small business owners, food-service and maintenance workers, and painters. Many were Eastern Orthodox and belonged to the church of Sts. Cyril and Methodius in Manhattan or St. Apostol Andrew in the Bronx, a popular site for social gatherings and cultural events and a center for the study of the Bulgarian language.

Bulls Head. Neighborhood in central Staten Island, at the intersection of Victory Boulevard and Richmond Avenue. The area was named for a ferocious bull with large eyes and short horns that adorned the sign of a tavern said to be a gathering place for Tories during the American Revolution. After the tavern was destroyed by fire, the town was known as Phoenixville and later as London Bridge. Residents in 1849 formed the Asbury Methodist Episcopal Church (now the Son-Rise Charismatic Interfaith Church), named after the American Methodist preacher Francis Asbury, who visited Staten Island as early as 1771. In the graveyard lies Ichabod Crane, whose name was borrowed by his friend Washington Irving for the short story "The Legend of Sleepy Hollow." A number of farmers who settled in the neighborhood in the 1920s were the first members of a sizable Greek community that built Holy Trinity–St. Nicholas Greek Orthodox Church on Richmond Avenue in 1930. A new church building was constructed facing Victory Boulevard in 1965, and the Hellenic Cultural Center was added in 2002, retaining part of the 1930 church. Until the mid-1960s Richmond Avenue was lined with truck farms. In later years the area became more ethnically diverse, with a large influx during the 1980s of immigrants from India, Korea, and the Philippines. Bulls Head is commercial and residential.

Bulova. Firm of watchmakers. Formed as the J. Bulova Company in 1875, it was incorporated in 1911 and reincorporated under its current name in 1923. It achieved immense commercial success in the mid-twentieth century, especially under the leadership of Arde Bulova (1889–1958). At its operations in Queens neighborhoods of Woodside and Flushing it made innovations in watchmaking and developed a number of watchmaking tools. Foreign competition and outmoded technology brought on its decline during the late 1960s and 1970s. In 1979 the firm was bought by the Loews Corporation, which reversed its decline by improving quality control, introducing many new styles of watches, and advertising extensively. The firm returned to profitability in 1986. In 2007 the Loews Corporation sold Bulova to the Japanese-held Citizens Holdings Company, which closed its Queens headquarters on Grand Central Parkway.

Peter A. Coclanis

Bunshaft, Gordon (*b* Buffalo, 8 May 1909; *d* New York City, 6 Aug 1990). Architect. He attended the Massachusetts Institute of Technology (BArch 1933, MArch 1935), worked briefly in Buffalo, and was introduced to modern architecture while visiting Europe on a traveling fellowship. On his return he worked at intervals in New York City in the offices of Edward Durell Stone and Raymond Loewy before joining the firm of Skidmore, Owings and Merrill, where he became a full partner in 1949 and remained until 1979. Bunshaft's precise, refined architecture was influenced by Le Corbusier and Ludwig Mies van der Rohe, while displaying a sensitivity to local, technological, and financial constraints. His best-known works are commercial buildings for which he was a design partner: Lever House (1952), the first glass-walled private office building, which introduced the idea of a plaza beside a high structure and helped to inspire the zoning revisions of 1961; the Veterans Administration Hospital in Brooklyn (1951); Chase Manhattan Plaza (1961), a catalyst for the renewal of Wall Street; and the controversial but powerful 9 West 57th Street (1974), which slopes to fit into the zoning "envelope." An art collector, Bunshaft placed works by important artists in most of his buildings.

Bureau of City Betterment. Civic organization, a forerunner of the Institute of Public Administration.

Bureau of Educational Experiments. Original name of the Bank Street College of Education.

Bureau of Municipal Research. Civic organization, a forerunner of the Institute of Public Administration.

burlesque. The evolution of theatrical burlesque in New York City at first paralleled its evolution elsewhere: traditional parodies of standard theatrical works, exemplified by John Gay's *Beggar's Opera* (performed in New York City in 1750 by the English company of

Walter Murray and Thomas Kean), gradually gave way to more unsophisticated forms of entertainment less concerned with lampooning works of literature than with displaying female bodies. The beginnings of this trend may be traced to the early nineteenth century, when female stage performers began to appear in tights. The first of these was Francisque Hutin at the Thalia Theater in New York City in 1827. Adah Isaacs Menken wore beige tights for her role in *Mazeppa* at the Broadway Theatre in April 1866, thus giving an illusion of nudity and causing a sensation. Tights were worn by an entire female chorus when *The Black Crook* opened in September of the same year at Niblo's Garden (an event that also marked the first performance in New York City of the cancan), and by the English troupe the "British Blondes," which in September 1868 performed a burlesque of Greek mythology, *Ixion,* under the direction of Lydia Thompson at Wood's Theatre. By May 1869, 14 of the 16 theaters in New York City were offering "naked drama." The person perhaps most responsible for Americanizing the burlesque show was Michael B. Leavitt, the producer of the Rentz–Santley shows. He combined ideas borrowed from the productions of Thompson with elements of minstrelsy, variety shows, and theatrical extravaganzas, all performed in an unvarying sequence: musical numbers and comedy, a series of specialty acts (the olio), and an after-piece and finale. Dancing figured prominently in Leavitt's productions, which drew large audiences in New York City and elsewhere in the 1870s and 1880s. One of the first women from his troupe to gain recognition as a performer in her own right was May Howard, who by 1888 appeared at variety houses in Manhattan as the leader of a company that bore her name and that later achieved great prominence. Another important troupe in this period was the Rose Sydell Burlesque Company, better known as the "London Belles." One of the first theater owners in New York City to offer burlesque entertainment was Henry Clay Miner, first at the Bowery and then at the Eighth Avenue Theatre (built 1881). Joseph Weber and Lew Fields did so as well at their Broadway Music Hall (opened September 1896).

By the turn of the century the characteristics of the modern burlesque show had become fixed: chorus girls in tights, bare-bellied solo cooch dancers (female dancers whose routines were derived from belly dancing and featured erotic movements), and comedians. The years 1900 to 1914 were the heyday of burlesque in New York City. The best-known performers included Billy Watson, who appeared with a "beef trust" of chorines each weighing as much as 200 pounds (90 kilograms), "Sliding Billy" Watson, Bozo Snyder, Leon Errol, and Alexander Carr, and in later years Al Jolson, Jack Pearl, Fanny Brice, Eddie Cantor, Joe Cook, Bud Abbott and Lou Costello, Phil Silvers, and Joey Faye. The importance of New York City as a center of burlesque grew with the establishment of national burlesque chains, called wheels. The first of these, the Columbia wheel, was formed in 1905 by Samuel Scribner and Lawrence Weber and devoted to "clean" burlesque, or burlesque suitable for families. Its flagship theater, the Columbia, opened in New York City in January 1910 at Seventh Avenue and 47th Street; in Brooklyn, Columbia controlled the Star Theater on Jay Street. Many other theaters were controlled by the Minsky family. Among those that were not were the Olympic and Irving Place, both near 14th Street, and the Eltinge on 42nd Street. As the burlesque of the wheels became increasingly hard to distinguish from vaudeville, the burlesque of resident stock companies, which was most closely identified with the Minskys, became increasingly risqué. The character of burlesque changed markedly with the introduction about 1927 of the striptease, which began as an encore and in the following years grew in explicitness and prominence; by 1930 the Irving Place Theater was known specifically for this brand of entertainment. Among the best-known strippers were Ann Corio, Margie Hart, Gypsy Rose Lee, and Georgia Sothern. When Fiorello H. La Guardia became mayor in 1934, he began a crusade against burlesque, which by then had acquired an unsavory reputation. Although burlesque was allowed in 1937 to continue in modified form, it was banned in May 1942. Theatrical burlesque had a resurgence in New York City in the early twenty-first century, although its audience does not match that patronizing strip clubs throughout the city.

William Green

Burlingham, Charles C(ulp) (*b* Plainfield, N.J., 31 Aug 1858; *d* New York City, 6 June 1959). Admiralty lawyer and civic reformer. Known as "New York's first citizen," he served two terms as president of the Association of the Bar of the City of New York and was later a confidential adviser to Mayor Fiorello H. La Guardia. For half a century Burlingham remained highly influential in judicial appointments and politics.

Frank Vos

Burr, Aaron (*b* Newark, N.J., 6 Feb 1756; *d* Port Richmond [now in Staten Island], 14 Sept 1836). Vice president of the United States. After a distinguished military career, he arrived in New York City in 1783 as a colonel after British forces evacuated, settling

Portrait of Aaron Burr by John Vanderlyn, 1802

at 3 Wall Street (1783–84). He established a thriving legal practice, became active in politics, and served in the state assembly (1784–85, 1797–99), as the attorney general of New York State (1789–91), and in the U.S. Senate (1791–99). During these years he lived at 10 Maiden Lane (1784–90), 4 Broadway (1790–94), and Mortier House in Greenwich Village (most of the time from 1794 to 1804). In 1799 he was instrumental in chartering the Manhattan Company, which was the second bank in New York City, and in the following year he mounted a successful candidacy for the vice presidency. From the 1780s he was a political rival of Alexander Hamilton, whom he blamed for his own loss of the presidency in 1800 and of the governorship of New York in 1804. He eventually challenged Hamilton to a duel that took place on 11 July 1804, at Weehawken, New Jersey, in which Hamilton was killed. The duel ended Burr's political career. Enmeshed in political intrigues in the West, he stood trial for treason (of which he was acquitted), spent several years in Europe, and returned to New York City in 1812 to resume the practice of law. Houses at 127 and 131 MacDougal Street were built for him in 1829. In 1833 he married Eliza Jumel, with whom he lived for several months in a house at Edgecombe Avenue near West 160th Street (now known as the Morris–Jumel Mansion). He spent the end of his life in genteel poverty and his last weeks at Winant's Inn at 2040 Richmond Terrace in Port Richmond (later named the St. James Hotel and the Port Richmond Hotel).

Barbara A. Chernow

Burroughs, William Seward (*b* St. Louis, Mo., 5 Feb 1914; *d* Lawrence, Kans., 2 Aug 1997). Writer. A central figure of the beat generation, he was born into a family of moderate wealth with a legacy of American corporate life: his grandfather on his father's side was an inventor credited with perfecting the adding machine, and his uncle on his mother's side worked as a publicist for John D. Rockefeller. While attending Harvard University, Burroughs frequently visited New York City and the homosexual subculture of Greenwich Village. After graduating in 1936 he traveled throughout Germany and Austria, where he studied medicine and married a German Jew to help her escape the Nazis (the two separated once back in New York yet remained friends for many years).

Moving between Chicago and New York City, he avoided the draft in the early 1940s owing to his psychiatric record. While in the city in 1943, he was introduced to Allen Ginsberg, a student at Columbia University, and Jack Kerouac, a recent graduate. During this same period Burroughs married a Barnard student by common law, Joan Vollmer Adams, who had converted her apartment on 115th Street into a bohemian gathering spot. He also quickly became a mentor to the younger Ginsberg and Kerouac and would later coauthor a novel with Kerouac titled *And the Hippos Were Boiled in Their Tanks.* In 1946 Burroughs began experimenting with several drugs, including morphine, marijuana, and heroin, and left New York City to move to Texas (to be joined later by Joan and her daughter from a previous marriage); the following year the couple had a son. After a brief stint in New Orleans he found himself an expatriate in Mexico City, where he began his first book, *Junk* (later published as *Junkie* and, finally, *Junky*). Although the novel deals predominantly with the subaltern communities of 1940s America, it ends with the autobiographical event that took place on 6 September 1951 in which Burroughs shot and killed his wife in a drunken game of "William Tell" at a party. After a few weeks in jail, he was released on bail and eventually acquitted of manslaughter; it was during the laborious trial that he wrote his short novel *Queer.* Burroughs returned to New York City in 1953 to live with Allen Ginsberg. The two writers had a brief affair, and Burroughs again left the city for Mexico.

He eventually returned to the city in 1974, having secured a teaching position at City College with the help of Ginsberg. Despite struggling to pay the rent on his Lower East Side apartment, he was frustrated with teaching and rejected a position at the University of Buffalo. Instead he supported himself by doing reading tours; in 1978 the Nova Convention (held throughout the state of New York) was organized in his honor, with guests such as Frank Zappa, Timothy Leary, and John Cage. In 1974 he left New York City for the final time, moving to Kansas to once again escape his heroin addiction.

Garrett A. Felber

buses. The first person to operate horse-drawn omnibuses in New York City was Abraham Brower in 1831. The Fifth Avenue Coach Company operated horse-drawn buses from 1885 and motorbuses from 1905, and established single- and double-decker buses as durable mass transit vehicles. By 1908 all horse-drawn buses had been retired. Mayor John F. Hylan provided bus franchises to private operators from 1920. Bus service began in Staten Island in 1921 after the local streetcar company discontinued its operations. By 1925 Fifth Avenue Coach had developed a large network in Manhattan, including a route connecting with Jackson Heights, Queens, that it served primarily with double-deckers. In 1926 Fifth Avenue Coach acquired Manhattan's leading streetcar operator, New York Railways. Fifth Avenue Coach operated two bus routes along the Grand Concourse from 1924 to 1928. It then yielded the franchise to the Third Avenue Railway, which operated a far-reaching streetcar network in the Bronx and received an exclusive bus franchise; many of its routes entered upper Manhattan by means of the bridges across the Harlem River. In Queens fledgling bus operators emerged in the 1920s and developed a large network, and from 1931 the Brooklyn–Manhattan Transit Corporation (BMT) ran buses in Brooklyn that provided access to its streetcars and subways. Trolley buses, which were hybrid vehicles combining features of motor buses and streetcars, were first introduced in the 1920s in Staten Island and quickly abandoned. In 1932 and again in 1948, trolley buses were installed on some Brooklyn routes before being eliminated in 1960.

Mayor Fiorello H. La Guardia set out in 1934 to establish a coherent, citywide policy on surface transit: he eliminated some streetcar lines and granted franchises to strong private bus operators in each borough. In Queens the eastern part of the borough was served by North Shore Bus, the southwestern part by Green Bus, and the northwestern part by Triboro Coach; there were also three smaller operators that evolved from former trolley operators, specifically Jamaica Bus, Queens Transit, and Steinway Omnibus. Between February 1935 and June 1936, Fifth Avenue Coach formed the subsidiary New York City Omnibus and converted all the routes formerly operated by New York Railways to bus routes. The only streetcar routes left in Manhattan by 1936 were those of Third Avenue Railway, which operated along Broadway, Third Avenue, and Amsterdam Avenue, and across 42nd, 59th, and 125th streets. In 1936 Fifth Avenue Coach introduced the first of 160 double-decker buses in its network; between 1938 and 1950 Fifth Avenue Coach and Third Avenue Railway introduced large, single-deck diesel-powered buses on heavily traveled routes. In Staten Island, La Guardia granted franchises to two companies, the more powerful of which, Staten Island Coach, took over all the routes in the borough in 1937.

Berenice Abbott, Greyhound Bus Terminal, *244–48 West 34th Street, 14 July 1936*

Queens Transit and Steinway Omnibus came under common ownership in 1939. In 1940 the city bought the BMT and inherited the huge streetcar network in Brooklyn. Between 1941 and 1956 this entire network was converted to bus service, using large (typically 400–500) orders for large diesel-powered buses. Third Avenue Railway and the city signed a new franchise agreement in 1940 that provided for complete conversion of its streetcar lines in Manhattan and the Bronx to bus service by 1960. The conversion took place between March 1941 and August 1948, after which Third Avenue Railway became the Surface Transportation Corporation.

In Staten Island the bus franchise of Staten Island Coach was sold in March 1946 to Isle Transportation, which abandoned the operation in February 1947 and sold it to the city's Board of Transportation, preserving important services to the Staten Island Ferry at St. George. In March 1947 the core of the Queens Bus Division of the New York City Transit Authority (NYCTA) was formed when North Shore Bus returned its franchise to the city, forcing the Board of Transportation again to rescue a local bus operation. Green Bus continued to operate independently and obtained ownership of Triboro Coach (1947), Jamaica Bus (1949), and Command Bus (1979). In 1948 the city acquired two small bus companies in Manhattan with five routes, including ones along First and Second avenues and across 49th and 50th streets. Fifth Avenue Coach and New York City Omnibus merged in 1954, and in 1956 they acquired Surface Transportation. In April 1957 surface transit routes became converted entirely to buses with the replacement of the last streetcar route, which crossed the Queensboro Bridge.

Between 1948 and 1962 the bus routes of New York City were controlled entirely by the city in Brooklyn and Staten Island, by the city and five private companies in Queens, and largely by the combined operation of Fifth Avenue Coach and Surface Transportation in Manhattan and the Bronx. Transfers were eliminated in Manhattan and the Bronx in 1962, after which the NYCTA and private companies in every borough except the Bronx allowed selective transfers between their own routes only. Early in the same year an investment group led by Harry Weinberg purchased Fifth Avenue Coach, prompting a strike by drivers on 1 March when the new management sought to discharge some unionized employees as a cost-cutting measure. The city quickly intervened and took over the entire system, creating a subsidiary of the NYCTA, the Manhattan and Bronx Surface Transit Operating Authority (MABSTOA); from 1962 until 2006 MABSTOA and the NYCTA operated virtually all local routes except for those of private companies in Queens and Brooklyn (Green, Triboro, Jamaica, Command, and Queens–Steinway). Bus drivers stopped making change on 31 August 1969, requiring customers to use exact coins, subway tokens, or more recently, Metrocards (see below). Fare boxes do not accept bills.

Express buses that transported passengers from the outer boroughs to Manhattan for a premium fare began in 1968. These routes are now operated by the NYCTA and until 2005 by a number of private companies, including Command Bus (which served Brooklyn), New York Bus Service and Liberty Lines (which served Riverdale, Co-op City, Williamsbridge, and other outlying sections of the Bronx), and the aforementioned Queens private concerns.

In 1980 the NYCTA discovered structural problems with its new fleet of Flxible buses, manufactured by Grumman. Used buses were borrowed from Washington, D.C., while the buses were being repaired, but the repairs were unsuccessful and the Flxible buses were permanently taken out of service in 1984. Small, private bus lines continued to be acquired by larger lines and by the city, which in 1980 took over Avenue B and East Broadway Transit of Manhattan. Queens Transit and affiliate Steinway (Omnibus) Transit were sold in 1986 and then merged as the Queens Surface Corporation. In 2005–6, the remaining private companies in Queens, Brooklyn, and the Bronx (Command, Green, Triboro, Jamaica, Queens Surface, Liberty Lines, and New York Bus Service) were purchased outright by the Metropolitan Transportation Authority (MTA) and combined into a new public corporation called MTA Bus Company, ending 100 years of privately operated bus service in New York City.

Since 2008 NYCTA and MABSTOA have operated virtually all local bus routes in Manhattan, the Bronx, Brooklyn, and Staten Island, as well as express routes between Manhattan and Staten Island, Brooklyn, and Queens. Local routes in Queens are divided between the NYCTA and MTA Bus Company, which also operates important express routes between Manhattan and Queens, the Bronx, and Brooklyn. The combined NYCTA, MABSTOA, and MTA bus systems in 2007 taken together comprised 320 routes (250 local and 70 express) and carried 850 million passengers a year on 5800 buses. Brooklyn alone had 60 routes and 1400 buses. In Manhattan buses carried fewer passengers than subways: they were perhaps most useful to passengers traveling crosstown (who cannot easily do so by subway) and to the elderly and handicapped (half fares for passengers older than 65 were introduced in 1969, "kneeling buses" in 1976, and wheelchair lifts in 1980). Beginning in 1997, 60-foot- (18-meter-) long, three-axle, articulated buses, which carry 50 percent more people than conventional 40-foot (12-meter) models, were introduced in the Bronx and Manhattan. In 2004 hybrid-electric buses, which combine a small diesel engine with an electric motor, were introduced as a means to reduce diesel fuel consumption and resulting exhaust emissions.

Since 1997 the bus system has had increased ridership. The Metrocard system integrated the subways with all bus operations (both NYCTA/MABSTOA, the former private companies, and MTA's Nassau County buses) and permitted free transfers between and within both modes. Subway tokens were eliminated as a bus fare medium in 2003. For most of transit history in New York City, bus and subway fares have been the same, differing only from 1 July 1948 to 1 July 1950, when subways cost 10 cents and buses 7 cents. While there were some small differences in bus fares in the 1948–56 period, depending on whether the Board of Transportation/NYCTA or a private operator controlled a particular route, by 1956 all local bus fares were standardized at 15 cents and have since then remained tied to the subway fare.

Intercity buses first served New York City in 1924. With the construction of the Holland and Lincoln tunnels, intercity services expanded, and many small, independent terminals were built in the western part of midtown. Plans by the city to develop a single, off-street bus terminal with ramps leading directly to the Lincoln Tunnel took shape in 1945 and led to the construction in 1947–50 of the Port Authority Bus Terminal, where all intercity buses now depart and arrive.

Andrew Sparberg

Bush Terminal. Industrial park in northwestern Brooklyn, bounded to the north by Upper New York Bay, Gowanus Bay, and 32nd Street; to the east by Third Avenue; to the south by 41st Street; and to the west by Upper New York Bay. The first facility of its kind in New York City to have many tenants, it was planned as a center of manufacturing and distribution by Irving T. Bush, who hoped to make of it "an industrial city within a city." It consisted of one warehouse in 1890 but later had its own rail system, fire and police forces, steam and power plants, deep-water piers, and access to the highway. New buildings were erected from 1902. At its greatest extent the facility occupied about 200 acres (81 hectares) between 27th and 50th streets, handled 50,000 railroad freight cars, and had 18 piers that were the port of call for 25 steamship lines. By the 1960s it was called Industry City and had 150 tenants employing 25,000 workers, most of whom lived nearby in Sunset Park. It was bought by a group led by Harry B. Helmsley in 1965. The active port was deemed unusable in the 1970s because of industrial contamination. In the early 1990s Bush Terminal had 6.5 million square feet (600,000 square meters) of floor space in 16

buildings of six to 12 stories each and was managed by the firm of Helmsley–Spear. Most of the occupants are manufacturers and distributors of garments, printed products, women's fashion accessories, processed food, plastics, electronics, and toys. In the twenty-first century the city and state gave $36 million to develop a new park on the 23 acres (9.3 hectares) between 43rd and 51st streets and new waterfront access points to link upland communities.

John J. Gallagher

Bushwick. Neighborhood in northeastern Brooklyn (est. 2000 pop. 100,000), bounded to the north by Flushing Avenue, to the east by Queens County, to the south by the Evergreens Cemetery and Conway Street, and to the west by Broadway. One of the original six towns of Brooklyn during Dutch rule, it was established as Boswijck (heavy woods) in 1660 between Bushwick Creek and Newtown Creek and remained a farming community well into the nineteenth century. Many German immigrants lived there after 1840, and between 1850 and 1880 at least 11 breweries were located within a 14-block area known as brewer's row. Peter Cooper's first factory made glue in Bushwick in the 1840s. With Williamsburgh the town became part of the City of Brooklyn in 1854. In 1869 Adrian Martenses Suydam broke up the family farm to build housing, and the land was the site of 125 residences by 1884. Development increased after the opening in 1888 of an elevated line to Manhattan. After the Depression of the 1930s, the German population gave way to Italians, and after World War II blacks and Puerto Ricans moved to Bushwick. Many factories closed between the 1950s and the 1970s. Of the seven local breweries remaining after World War II, the last two, Rheingold and F and M Schaefer, ceased operations in 1976. Arson and looting during the blackout of 1977 further damaged the neighborhood. In the 1980s some sections were revitalized by new and refurbished housing. About one-third of the new immigrants who settled in Bushwick in the 1980s were from the Dominican Republic, with smaller numbers from Guyana, Ecuador, Jamaica, India, and China. Notable buildings in the neighborhood include the Reformed Church of South Bushwick at 15 Himrod Street (1853) and St. Mark's Lutheran Church and School at 626 Bushwick Avenue (1892). Knickerbocker Avenue and Broadway are the main commercial streets. The population is primarily composed of African Americans and Latinos, with smaller groups of Italians and Asians. In the early twenty-first century Bushwick remained economically disadvantaged and plagued by violence and drug use. However, young artists and students catalyzed the development of a burgeoning cultural and commercial presence in the neighborhood.

Tony Sanchez, *Bushwick Neighborhood Profile* (New York: Brooklyn in Touch Information Center, 1988)

Elizabeth Reich Rawson

Bushwick Savings Bank. Bank that merged with the Bay Ridge Savings Bank to form Anchor Savings Bank.

BusinessWeek. Weekly magazine launched in 1929 by the McGraw–Hill Publishing Company, originally titled *The Business Week.* It grew into the nation's largest business publication: from 1975 it traditionally carried more advertising pages annually than any magazine in the United States. Starting in 1988 the magazine began publishing annual rankings of business programs (master's of business administration, MBA), later adding undergraduate school rankings. Its worldwide circulation at the beginning of the twenty-first century was nearly one million worldwide, and in 2008 it won the National Magazine Award for the second year in a row. The company's headquarters are at 1221 Avenue of the Americas.

The Business Week Almanac (New York: McGraw–Hill, 1982)

Donald S. Rubin

Butler, Nicholas Murray (*b* Elizabeth, N.J., 2 April 1862; *d* New York City, 7 Dec 1947). Influential university president. At Columbia College he was a student (AB 1882, PhD in philosophy 1884) and a teacher of philosophy (1885–90). In 1889 he founded the New York College for the Training of Teachers (now Teachers College), of which he was president until 1891. As the dean of the faculty of philosophy at Columbia (from 1890) he opposed a curriculum narrowly based on the classics and worked to ease admission and graduation requirements for undergraduates. He also launched the *Educational Review* (which he edited from 1891 to 1919), was active in efforts to reform the public schools in New Jersey and centralize those in New York City, as well as in the movement for municipal consolidation, and was president of the National Education Association (1893–94) and an initiator of its Committee of Ten (1892–94), which advocated a liberalization of the high school curriculum. He also helped to form the College Entrance Examination Board in 1900 and was its first chairman (to 1914). In 1902 he became the president of Columbia University after the incumbent, Seth Low, was elected mayor of New York City. During his long tenure (to 1945) he greatly increased the size and standing of the university as well as the power of his office, enabling Columbia to add five divisions (including a summer school, an extension division, and a school of journalism), 30 buildings, 2800 faculty members, and more than 23,000 students. He also continued to be active in other fields and was instrumental in forming the Carnegie Foundation for the Advancement of Teaching (1905), which sponsored an influential report on reforming medical education by Abraham Flexner, and the Carnegie Corporation (1911), of which he was later chairman (1937–45). In 1912 he was nominated by the Republicans as their vice-presidential candidate after the death of Vice President James S. Sherman, and he unsuccessfully sought the Republican presidential nomination in 1920. A staunch advocate of international peace through conciliation, he was chairman of the Lake Mohonk Conferences on International Arbitration, president of the Carnegie Endowment for International Peace (1925–45), and a sponsor of the Kellogg–Briand treaty (1929). For these efforts he shared the Nobel Peace Prize with Jane Addams in 1931. Butler's published writings include *Across the Busy Years: Recollections and Reflections* (1939–40).

Harold S. Wechsler

Butter and Cheese Exchange. Original name of the New York Mercantile Exchange.

butterflies. Butterflies thrive in New York City, where they are supported by a variety of habitats including fields, shrub thickets, developing woodlands, shaded trails and glades, wet meadows, and salt marshes. Community gardens throughout the city also host a wide variety of butterflies. The most abundant species are Swallowtails, Whites, Sulphurs, Gossamer Wings (*Lycaenidae*), Brushfoots (*Nymphalidae*), Skippers, and Milkweeds. Monarchs can be seen at Ocean Breeze Park in Staten Island; this species may travel up to 2100 miles (3379.6 kilometers) during its migration from New York City to Mexico. In autumn the Viceroy, a common orange-and-black butterfly that mimics the Monarch, can be seen throughout the city before its migration south; it is especially common in Staten Island, where large stands of seaside goldenrod provide food for its larval caterpillar. Alkaloids from the plant make both the caterpillar and its metamorphosed adult distasteful to predators.

John T. Tanacredi

Butterick, Ebenezer (*b* Sterling, Mass., 29 May 1826; *d* Brooklyn, 31 March 1903). Businessman. He worked as a tailor and in 1863 was one of the first people to produce clothing patterns in a variety of sizes. In 1864 he moved to New York City, where with two partners he formed E. Butterick and Company at 589 Broadway. By 1871 his firm made patterns in more than 12,500 styles and had sales of $4 million a year. Through Butterick's patterns, fashionable, closely fitting apparel was made available to women who could not afford the services of dressmakers.

E. Butterick's report of New York fashions, summer 1873

Buttermilk Channel. A body of water separating Governors Island from the southeastern tip of Red Hook in Brooklyn. Its name may have been inspired by the white water of its shallow rapids. Over the years the channel was dredged to at least 40 feet (12 meters). In Brooklyn it adjoins the entrance to the Atlantic Basin and Docks (built in the 1840s), now the site of the Red Hook container port.

Elizabeth Reich Rawson

Butts, Calvin O(tis), III (*b* New York City, 19 July 1949). Pastor, activist, and president of the State University of New York College at Old Westbury. A graduate of Morehouse College, Union Theological Seminary, and Drew University, in 1989 he became the pastor at Abyssinian Baptist Church in Harlem, which in the twenty-first century has a membership of almost 10,000. Butts has led campaigns against police brutality, negative billboard advertisements for alcohol and tobacco products in the inner city, and rap lyrics that advocate violence and demean women.

Sherrill D. Wilson

Byrnes, Thomas F. (*b* Dublin, Ireland, 15 June 1842; *d* New York City, 7 May 1910). Detective and superintendent of police. He became widely known in the 1880s when he solved the robbery of $3 million from the Manhattan Bank. In 1883 the state legislature placed under his command all precinct detectives, whose primary activity until then had been to collect payoffs for the precinct captain. He advanced to the rank of chief inspector in 1888 and became superintendent of the force in 1892. Byrnes was a brutal man who purportedly invented the "third degree" and modernized the police force. He enjoyed cooperative relations with the underworld, which eventually led to his firing in 1895 by the Board of Police Commissioners. Upon his retirement, he was said to have amassed a fortune.

Joseph P. Viteritti

C

cable cars. The first commercial passenger cable railway in the United States ran on the world's first elevated line, on Greenwich Street and Ninth Avenue in Manhattan, from 1868 until the introduction of steam locomotives in 1871. The country's only bridge cable railway opened on the Brooklyn Bridge in 1883; in 1885 the cars that ran along it installed cable grips similar to the grip patented by A. S. Hallidie. A cable street railway was built along 10th Avenue (now Amsterdam Avenue) north of 125th Street. Cable street railways were also constructed along 125th Street in 1886 (the nation's only crosstown line), Seventh Avenue south of Central Park to Broadway to Bowling Green in May 1893 (later extended to South Ferry), Third Avenue in December 1893 (extended to City Hall in February 1894), Columbus Avenue in 1894, and Lexington Avenue in 1895.

The first cable car lines were long and had few curves. Cars were pulled by "ropes"—long, braided cables of iron and hemp that rested on pulleys and moved at a steady speed of 9 miles (14.5 kilometers) an hour. Each car was run by a "gripman" who operated a clamp (or "plough") that protruded below the car, passed through a slot between the rails, and gripped the cable. Although cables accelerated service, they were expensive to operate: loose cable strands could snag on the car grip and cause the car to be dragged forward and smash into cars ahead of it, and a cable lasted only a few months.

Cable railways in Manhattan were distinctively designed: their cables and their drive machinery were installed in pairs so that a car could be easily switched from a line requiring work or inspection to its duplicate, a system that was effective except when tangles developed. For such emergencies the railways used electrical signaling systems to have the cable stopped by the appropriate powerhouse. One of the powerhouses occupied a basement 40 feet (12 meters) deep under the eight-story Cable Building at Broadway and Houston Street (designed by McKim, Mead and White) that was constructed to minimize noise and vibration. Around the turn of the century electric streetcars replaced cable cars; one cable powerhouse became an electrical substation. The cable railway on the Brooklyn Bridge converted to electric traction after the completion of a subway tunnel under the East River in 1908. The Brooklyn Heights line was the last cable line in the city, going electric in 1909. In 1976 an aerial cableway was built between Manhattan Island and Roosevelt Island, the first such facility for commuters in an American city.

Sheldon C. Silberstein

cable television. The city's Board of Estimate awarded the first cable television franchises in 1965, at a time when civic groups and consumer advocates saw cable technology as a means of increasing public access to the airwaves. Their hopes were borne out initially by such experiments as the Washington Heights Neighborhood Action Program.

Manhattan was the first borough to be wired for cable television, which was seen as a means of circumventing the problems that tall buildings created for broadcast reception. Cable service in Riverdale in the Bronx was provided by Community Antenna TV (CATV). In 1970 the city granted 20-year monopoly franchises to two cable companies, each for roughly half of Manhattan: Teleprompter (later renamed Manhattan Cable TV), controlled by Howard Hughes, and Sterling Manhattan (later renamed Paragon Cable), owned by Time Inc. This scheme was criticized by consumer advocates, who wanted the cable business regulated as a public utility. By the mid-1970s all of Manhattan was wired for cable television, as was Staten Island (by Staten Island Cable). For the rest of the city, progress was slow. Companies competed for the franchises, but the process was marred by corruption, politics, changes in laws and technology, and financial problems. In 1988 only 39 percent of the city had access to cable television, which was still largely unavailable outside Manhattan and Staten Island. The deadlock was broken in the following years, and a number of cable franchises offered services to the other boroughs, such as Brooklyn Queens Cable, owned by Warner Communications, and Queens Inner Unity Cable System, part of Inner City Broadcasting (a firm controlled by Percy Sutton, a former borough president of Manhattan).

By the mid-1990s cable television was available in all of New York City. When Time and Warner Communications merged in 1990 they created a new entity that inherited the customers of Brooklyn Queens Cable, thereby becoming the largest cable provider in the city, with more than 700,000 subscribers. Richard Aurelio of Time Warner, a former deputy mayor under Mayor John V. Lindsay, became a major figure in cable television. In 1992 he founded New York 1 News, the city's first 24-hour television news station. Public-access cable also emerged in the 1990s. Fledgling stations like Manhattan Neighborhood Network, Bronxnet, Brooklyn Community Access Television (BCAT), and Queens Public Television (QPTV) began offering a variety of news, education, and entertainment programs. On 17 November 1998 the City Council authorized nine franchises to sell cable television to New York City residents for a period of 10 years: Time Warner Cable of New York City (five), Time Warner Cable Partners (two), Cablevision Systems, and Queens Inner Unity Cable System.

After 2006 the cable provider companies of Time Warner Cable and Cablevision split off from their parent companies, leading to speculation that one would acquire the other. Both companies increased telecommunication capacity so that they could provide both telephony and broadband services. Meanwhile, programming costs rose so dramatically after 1995 that even traditional broadcasters like NBC, CBS, and Fox were asking for payment for programming services. By 2010 Time Warner Cable had a near monopoly on cable service in Manhattan, while Cablevision had a significant presence in the outer boroughs. New York City remained the headquarters of the dominant players in the industry: News Corp, Viacom, and Time Warner.

James Bradley, Kevan Jackson

Cabrini, Frances Xavier [Maria Francesca] (*b* Sant'Angelo Lodigiano, Italy, 15 July 1850; *d* Chicago, 22 Dec 1917). Catholic saint and missionary. In 1880 she formed the Missionary Sisters of the Sacred Heart, and in 1889 she moved to New York City to open a mission. With the order she taught at St. Joachim's Chapel (defunct), the Church of Our Lady of Pompeii, and Transfiguration Catholic Church in Manhattan; St. Rita of Cascia in the Bronx; and the Church of St. Stephen (in 1941 renamed Sacred Heart–St. Stephen) in Brooklyn. In 1892 she opened Columbus Hospital (later known as Cabrini Medical Center). The order opened a school in 1899 that is now Cabrini High School. Mother Cabrini was the first American citizen to be canonized. The Shrine Chapel at Cabrini High School contains her remains. A statue of her stands in St. Patrick's Cathedral, and a parish on Roosevelt Island was named for her.

Theodore Maynard, *Too Small a World: The Life of Francesca Cabrini* (Milwaukee: Bruce, 1945); Pietro Di Donato, *Immigrant Saint: The Life of Mother Cabrini* (New York: McGraw-Hill, 1960); Mary Louise Sullivan, *Mother Cabrini: Italian Immigrant of the Century* (New York: Center for Migration Studies, 1992)

Mary Elizabeth Brown

Cabrini Medical Center. Hospital opened in 1892 by Mother Frances Xavier Cabrini and the Missionary Sisters of the Sacred Heart at 41 East 12th Street. Originally called Columbus Hospital, it moved in 1906 to its current site on East 19th and 20th streets. In 1920 the Missionary Sisters purchased St. Lawrence Hospital at 163rd Street and Edgecombe Avenue in the Bronx; this site served as an extension of Columbus Hospital until 1937. In the

early 1970s it was renamed Cabrini Medical Center after a merger with the Italian Hospital. In the early twenty-first century, the hospital had 519 beds and included an ambulatory surgery program, a psychiatric day hospital, the Cabrini Home Health Agency, and the Cabrini Hospice. Other related facilities include the Stuyvesant Polyclinic (outpatient services) and St. Cabrini Nursing Home in suburban Dobbs Ferry. Cabrini is a teaching affiliate of the Mount Sinai School of Medicine and is still sponsored by the Missionary Sisters of the Sacred Heart.

Bernadette McCauley

cabs. See Taxicabs.

Cadman, Samuel Parkes (*b* Wellington, Shropshire, England, 18 Dec 1864; *d* Plattsburgh, N.Y., 12 July 1936). Minister. He led the influential Methodist Metropolitan Temple from 1895 to 1901 and the Central Congregational Church in Brooklyn from 1901 until the end of his life. A leader in the ecumenical movement, he was president from 1924 to 1928 of the Federal Council of Churches and from 1928 to 1936 was the host of its radio program, broadcast on Sunday afternoons by the National Broadcasting Company. Cadman was sympathetic to Darwinian thought and critical biblical scholarship.

Fred Hamlin, *S. Parkes Cadman: Pioneer Radio Minister* (New York: Harper and Brothers, 1930)

Charles Yrigoyen, Jr.

Cadman Plaza. Area in northwestern Brooklyn bounded to the north by approaches to the Brooklyn Bridge, to the east by Adams Street, to the south by Court and Joralemon streets, and to the west by Cadman Plaza West. When the name came into use in 1939, it referred only to the approach to the Brooklyn Bridge. To build the plaza several blocks were demolished during the 1940s, which in the following decade became the site of a complex of grassy, tree-lined malls. Standing on or near the plaza are the New York State Supreme Court (1957), the Brooklyn General Post Office (1885–91), the Federal Building and Courthouse (1961), and the Brooklyn War Memorial (1951); there is sculpture throughout. On some days a farmers' market is held in front of Borough Hall, which was renovated between 1982 and 1988. In the early twenty-first century Cadman Plaza functions as a recreation area for the residents of Brooklyn Heights.

Cadman Plaza, 2009

Ellen Marie Snyder-Grenier

Cadmus, Paul (*b* New York City, 17 Dec 1904; *d* Weston, Conn., 12 Dec 1999). Painter. He studied at the National Academy of Design (1919–26) and the Art Students League (1929–31) and became known for his satirical views of modern society. Local sites inspired much of his work, including his well-known painting *The Fleet's In!* (1934), which won him national attention for its explicit sexual depiction of sailors and prostitutes in Riverside Park. Egg tempera became his primary medium in 1940, and in the following decade he perfected magic realism, the style for which he was best known, using a precise and delicate technique to portray scenes of sex and horror in everyday settings. Cadmus produced comparatively few works after the 1940s and moved to Connecticut in 1975.

Philip Eliasoph, *Paul Cadmus: Yesterday and Today* (Oxford, Ohio: Miami University Art Museum, 1981)

Eileen K. Cheng

Caesar, Sid (*b* Yonkers, N.Y., 8 Sept 1922). Comedian. Having studied saxophone and clarinet at the Julliard School in Manhattan, he worked at resorts in the Catskills and played in several prominent big bands led by Charlie Spivak, Claude Thornhill, Shep Fields, and Art Mooney, among others. While serving in the U.S. Coast Guard during World War II he was stationed in Brooklyn, where he met the composer Vernon Duke. Together they worked on the military revue *Tars and Spars* (1944) and also its motion-picture version. After appearing in the revue *Make Mine Manhattan* (1948), he won a role in the television program *Admiral Broadway Revue* (1949). For much of his career he worked as part of a team with Imogene Coca, Carl Reiner, and Howard Morris. His skill as a sketch comic and dialectician were well served in the popular television series *Your Show of Shows,* which was filmed at NBC's New York studios from 1950 to 1954. He maintained his popularity in *The Sid Caesar Show* on television and returned to Broadway in *Little Me* (1962), for which he received a Tony Award nomination the following year. He continued to act in film and television through the early twenty-first century, collecting two Emmy Awards and another eight nominations between 1951 and 1997. In 1982 he wrote his first autobiography, *Where Have I Been,* and in 2004 he wrote a second, *Caesar's Hours.*

David J. Weiner

Café des Artistes. Restaurant in Manhattan. It is located on the ground floor of the Hotel des Artistes.

Café Society. One of the only integrated downtown jazz clubs in New York City, Café Society opened in Greenwich Village in 1938. The club was modeled after European political cafes and named in jest after the phrase coined for the lifestyle of chic, upscale society types. Its owner, Barney Josephson, was a New Jersey shoe salesman. Journalist Helen Lawrenson described it as "The Wrong Place for the Right People" and "our first political nightclub. Jazz and politics were what it was all about." Some early founders, such as Lawrenson and John Hammond, were members of the Communist Party's Popular Front; Hammond was in charge of the booking and Lawrenson acted as hostess and publicity writer. Café Society featured impressive artists such as pianists Mary Lou Williams, Art Tatum, Earl Hines, Bud Powell, Albert Ammons, and Hazel Scott; singers Billie Holiday and Lena Horne; and blues musicians Big Joe Turner, Josh White, and Big Bill Broonzy. It was here that Holiday first performed the controversial song about lynching, "Strange Fruit." The club also attracted notable personages such as Frank Sinatra, Paul Robeson, Joe Louis, and Adam Clayton Powell, Jr. (who met his second wife, Hazel Scott, at the club). Jazz critic Leonard Feather lived above the club. In 1940 Josephson opened the Café Society Uptown on East 58th Street between Lexington and Park avenues. With the club and its owner under continued surveillance by J. Edgar Hoover and the Federal Bureau of Investigation, Josephson's brother Leon, who had invested money in the club's formation, was subpoenaed in 1947 and sent to prison the following year after refusing to testify before the House Un-American Activities Committee (HUAC). The Society Uptown, which was considered more chic than the more informal downtown club, was sold in 1947 to Max Gordon, owner of the rival club the Village Vanguard. The revamped bistro, Le Directoire, featured French music and failed shortly after opening. The Society Downtown suffered as well because of negative publicity after the HUAC hearings and closed in 1948.

Garrett A. Felber

Caffin, Charles H(enry) (*b* Sittingbourne, England, 4 June 1854; *d* New York City, 15 Jan 1918). Art critic and writer. The son of an Anglican minister, he graduated from Pembroke College, Oxford University, in 1873 and moved in 1892 to the United States. He moved in 1897 to Long Island and in about 1908 to Manhattan. His perceptive criticism on new trends in painting, sculpture, and photography was published in the *Evening Post* (1897–1900),

the *Sun* (1901–4), and the *New York American* (1913–18).

Sandra Lee Underwood, *Charles H. Caffin: A Voice for Modernism, 1897–1918* (Ann Arbor, Mich.: UMI Research Press, 1983)

Patricia Hills

Cage, John (Milton, Jr.) (*b* Los Angeles, 5 Sept 1912; *d* New York City, 12 Aug 1992). Composer and writer. A supporter of the composers' organization New Music, he moved to New York City in 1943 and became an important figure in the musical avant-garde. In the 1950s much of his work came to be influenced by eastern philosophy and Zen Buddhism, and indeterminacy (chance methods) began to play a large role in the composition and performance of his music. His works are scored for instruments ranging from toy piano and prepared piano (a piano that is altered by the addition to its strings of nuts, bolts, and other objects) to plants, juice blenders, and transistor radios; one of his best-known works, *4'33"* (1952), calls for the performer or performers to remain silent and consists only of random sounds heard in the auditorium. Among his compositions are several scores for the choreographer Merce Cunningham. Cage was known for his facility with styles and moods from the stark to the numbingly complex. His published writings include *Silence* (1961) and *A Year from Monday* (1967).

Paul Griffiths, *Cage* (New York: Oxford University Press, 1981); Richard Fleming and William Duckworth, eds., *John Cage at Seventy-five* (Lewisburg, Pa.: Bucknell University Press, 1989)

Barbara L. Tischler

Cagney, James (*b* New York City, 17 July 1899; *d* Stanfordville, N.Y., 30 March 1986). Actor. The son of an Irish bartender and a Norwegian mother, he grew up on the Upper East Side working as a waiter and poolroom racker to help support his family. After graduating from Stuyvesant High School he attended Columbia College. He sang in a production of *Pitter-patter* on Broadway in 1920 and joined the vaudeville circuit; he later returned to Broadway, where his performance in *Penny Arcade* (1929) won him roles with Joan Blondell in motion pictures, often as characters from the city. He played a gangster in *Public Enemy* (1931) and won an Academy Award for his portrayal of George M. Cohan in *Yankee Doodle Dandy* (1942). Cagney left retirement to portray a police commissioner in the film *Ragtime* in 1981. His autobiography, *Cagney by Cagney*, was published in 1975.

James E. Mooney

Cago, Joe. See Valachi, Joseph.

Cahan, Abraham (*b* Podberezye [now Pabrade, Lithuania], 7 July 1860; *d* New York City, 31 Aug 1951). Editor, writer, and political leader. He was educated at the state teachers' seminary in Vilnius, where he was introduced to the radical ideas of the Narodnaya Volya (People's Will Party), which was responsible for assassinating Tsar Alexander II in March 1881. After evading the Russian police he moved to New York City in June 1882, where he soon became active in politics: he gave his first socialist lecture in Yiddish on 18 August 1882. A leader of Yiddish-speaking radical unionists, he helped to launch the *Jewish Daily Forward* in 1897; as its editor from 1901 until his death he made it a forum for immigrants seeking to organize industrial unions. He also edited *Tsukunft*, wrote for the *Naye Zeit* and the *Arbeiter Tsaytung*, and published articles, stories, and literary criticism in the *Sun*, the *New York World*, the *Evening Post*, the *Workman's Advocate*, and the *Atlantic Monthly*. Cahan also worked on Lincoln Steffens's *Commercial Advertiser* for four years. His published writings include *Yekl: A Tale of the New York Ghetto* (1896), which William Dean Howells called the "vanguard of New York," *Imported Bridegroom* (1898), *The White Terror and the Red* (1905), and *The Rise of David Levinsky* (1917), his well-known novel about an immigrant's experience in New York City. Cahan lived for many years at 224 East 11th Street.

Moses Rischin, *The Promised City: New York's Jews, 1870–1914* (Cambridge, Mass.: Harvard University Press, 1962)

Seth Kamil

Calatrava, Santiago (*b* Valencia, Spain, 28 July 1951). Architect, engineer, and sculptor. A graduate of the Institute of Architecture in Valencia and the Federal Institute of Technology in Zurich, Calatrava integrates his architecture and civil engineering background into his innovative designs. In 1999 the *New York Times* chose his design for its time capsule chronicling life in the late twentieth century. In the early twenty-first century Calatrava was working on the World Trade Center Transportation Hub for the Port Authority of New York and New Jersey. He has had two major exhibitions in New York City: "Sculpture Into Architecture" (Metropolitan Museum of Art, 2005) and "Structure and Expression" (Museum of Modern Art, 1993).

Dianna Ng

Calisher, Hortense (*b* New York City, 20 Dec 1911; *d* New York City, 13 Jan 2009). Author of novels and short stories. She attended Hunter College High School and graduated from Barnard College in 1932. Her short stories, first appearing in the *New Yorker* in 1948, earned her recognition for her well-defined style and identifiable themes. Inspired by elements of her own life and childhood, she produced around 24 novels and short stories. Calisher was a finalist for the National Book Award for her first novel, *False Entry* (1961), and was nominated twice afterwards. She was awarded the Kafka Prize in 1987 for the novel *The Bobby-Soxer* (1986), and a Lifetime Achievement Award in 1989 from the National Endowment for the Arts. President of PEN American Center (1986–87) and the American Academy of Arts and Letters (1987–90), Calisher also taught at many prestigious universities, including Barnard College from 1956 to 1957 and Columbia University from 1968 to 1970 and 1972 to 1973.

Meryl Cates

Callas, Maria [Kalos, Sophia] (*b* New York City, 2 Dec 1923; *d* Paris, 16 Sept 1977). Soprano. Born to Greek immigrants, she grew up in Astoria. In 1937 her family returned to Athens, where she began her formal musical education. She returned in 1945 to the United States, and in the fall of 1956 debuted at the Metropolitan Opera with the leading role in *Norma*. She later performed the leading roles in *Tosca* and *Lucia di Lammermoor*. From 1971 to 1972 she gave a series of master classes at Julliard. Callas is considered one of the greatest sopranos and operatic actresses of all time.

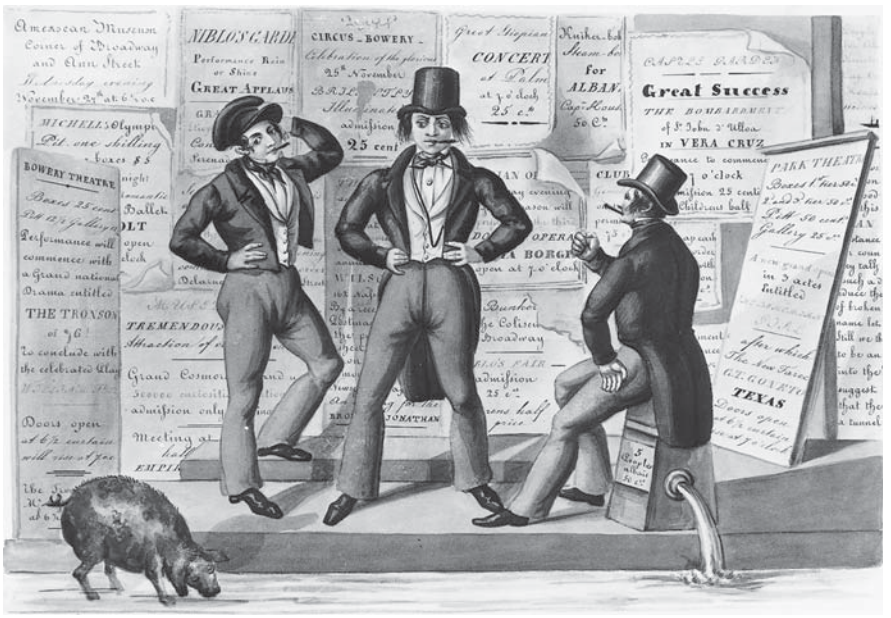
Jessica Montesano

Calloway, Cab(ell) (*b* Rochester, N.Y., 25 Dec 1907; *d* Hockessin, Del., 18 Nov 1994). Singer and bandleader. After growing up in Baltimore and Chicago he briefly played the drums and worked as a master of ceremonies. For a time he led the band the Alabamians before taking over another one known as the Missourians, which he renamed Cab Calloway and His Orchestra. Within a few years of his debut at the Cotton Club in 1931 he became a sensation known for his dancing and his white suits as well as his singing. Calloway's band attracted such musicians as Milt Hinton and Dizzy Gillespie and remained one of the most successful bands of the swing era until it was dismantled in 1948. Many of his songs, such as "Minnie the Moocher" (1931), celebrate the drug culture and disreputable aspects of nightlife in New York City. He performed and recorded music for various entertainments, including animated films, the motion pictures *Stormy Weather* (1943) and *The Blues Brothers* (1980), the opera *Porgy and Bess* (1952), and the musical *Hello, Dolly!* (1968). Calloway wrote an autobiography, *Of Minnie the Moocher and Me* (1976).

Douglas Henry Daniels

Calvary Cemetery. Roman Catholic cemetery in Woodside, Queens. Owned by the Archdiocese of New York and managed by the trustees of St. Patrick's Cathedral, it is the largest cemetery in the United States in terms of interments or bodies buried there, which numbered almost three million in the early

twenty-first century. Located near the Long Island Expressway and Queens Boulevard, it comprises Old Calvary Cemetery and New Calvary Cemetery. The original tract of land occupied 80 acres (32 hectares) of the Alsop farm on the northern bank of Newtown Creek on Laurel Hill; it was purchased by the trustees of St. Patrick's Cathedral in 1846 for $18,000. The first burial was on 31 July 1848. Initially most burials were of children and poor Irish immigrants from the tenements of lower Manhattan. Early burial parties arrived by ferry across Newtown Creek, but in 1870 there was overland access. By 1867 the original tract was full and church authorities began to annex neighboring farms. The northern edge of the cemetery reached Queens Boulevard in 1888. Tracts were later added south and then north of what is now the Brooklyn–Queens Expressway (1879), and south of what is now the Long Island Expressway between 50th and 58th streets (1900). For many years there were more burials at this cemetery than at any other in the city, but by the twenty-first century almost all the space had been filled. Those buried in Calvary include three generations of Robert F. Wagners, the comedian Lou Costello, presidential candidate Alfred E. Smith, actor Lionel Barrymore, and mobster Thomas Lucchese.



The Visitor's Guide to Calvary Cemetery, with Map and Illustrations (New York: J. J. Foster, 1876)

Vincent Seyfried, John Rousmaniere

Calvary Church. Episcopal congregation formed in 1835. The church, designed in the Gothic Revival style by James Renwick, Jr., was built at the northeast corner of Park Avenue and 21st Street in 1846. Renwick, who later designed St. Patrick's Cathedral on Fifth Avenue between 50th and 51st streets, originally intended for the Calvary's facade to be built of white marble but eventually decided to use brown sandstone instead. Part of the Gramercy Park neighborhood, Calvary was the family church of such prominent New Yorkers as the Roosevelts (including Theodore and Eleanor) and Edith Wharton. Samuel Shoemaker, rector in the 1930s, initiated extensive outreach activities, including evangelistic efforts aimed at local office workers and programs for alcoholics upon which the popular Alcoholics Anonymous "12 Steps" program was based. The church was also a center of the Oxford Group Movement, which emphasized personal transformation. In the mid-1970s it formed a united parish with Sixth Avenue's Church of the Holy Communion and St. George's Episcopal Church of Stuyvesant Square; the building continues to be used for worship services.

Robert Bruce Mullin

Calyo, Nicolino (*b* Naples, 1799; *d* New York City, 9 Dec 1884). Painter. In 1834 he emigrated to the United States, where he worked in Philadelphia and Baltimore and then settled in New York City in 1835. He is best known for a series that he painted in gouache of the Great Fire (16–17 December 1835), which was engraved by William James Bennett (1787–1844) and enjoyed wide circulation. Between 1839 and 1846 he depicted street vendors in two series called "The Cries of New York." He made dioramas, panoramas, and theatrical set designs with his sons John Calyo (1829–93) and Hannibal Calyo (1835–83) and also painted portraits, miniatures, and landscapes.

Nicolino Calyo, The Soap-Locks, *1847*

Annette Blaugrund

Cambreleng, Churchill C(aldom) (*b* Washington, N.C., 24 Oct 1786; *d* Huntington, N.Y., 30 April 1862). Prominent congressman. He grew up in North Carolina and in 1802 moved to New York City, where he later became a close associate of John Jacob Astor. Elected to the U.S. House of Representatives in 1820, he was the first congressman from the city to earn national recognition as a Jacksonian, and he led the powerful Committee on Ways and Means during the Bank War of 1836, during which controversy sparked over the Second Bank of the United States. He remained in office for 18 years, a record that went unbroken in the city for almost a century. After leaving Congress he remained active in Democratic politics. Cambreleng is buried in Green-Wood Cemetery.

James Bradley

Cambria Heights. Neighborhood in southeastern Queens. It lies within St. Albans and is bounded to the north by 115th Avenue, to the east by Nassau County, to the south by 120th Avenue, and to the west by Springfield Boulevard. It acquired the name "Cambria" in the 1920s from the Cambria Title Savings and Trust Company, a coal company in Pennsylvania. "Heights" was added because of the area's relatively high elevation of 49 feet (15 meters). The area was developed in 1923 on 163 acres (66 hectares) of farmland formerly owned by the Buck, Fausner, and Hartmann families and acquired by Oliver B. LaFreniere, a real estate agent from East New York. It was first populated by Jewish, German, Irish, and Italian residents. After World War II the neighborhood developed into a largely African American, middle-class suburb. In the 1980s there was an increase in immigration from the Caribbean. About half of this population immigrated from Jamaica, while many others did so from Haiti, Guyana, Trinidad and Tobago, and Barbados. In the early twenty-first century the population consisted largely of Jews, Latinos, and African Americans.

Vincent Seyfried

campaign finance. The New York City Campaign Finance Act, enacted in 1988 pursuant to a charter amendment, provides for partial public funding in primary, runoff, and general elections for qualifying candidates for mayor, other citywide offices, borough president, and City Council. The campaign finance program is one of a very few operated by an American city, and in its coverage of offices and elections it is one of the most extensive in the United States at any level of government. Participation in the program is voluntary. Candidates who wish to qualify for public funds must limit contributions and expenditures and abide by reporting and

disclosure rules. Those who raise a minimum amount of private contributions (the amount varying according to the office sought) are eligible for a dollar-for-dollar match of public funds, to a maximum of $500 per private contribution. The program is administered by a five-member campaign finance board, which is a nonpartisan, independent city agency. It publishes an annual voter's guide that it distributes to every household having at least one registered voter. Unlike his opponents, Michael Bloomberg did not use public financing in his campaigns for mayor in 2001, 2005, and 2009.

Richard Briffault

Campanella, Roy (*b* Philadelphia, 19 Nov 1921; *d* Woodland Hills, Calif., 26 June 1993). Baseball player. His father was Italian and his mother African American, so he was at first barred from playing Major League Baseball because of the color barrier. He played in the Negro Leagues until he joined Jackie Robinson on the then–Brooklyn Dodgers and was their regular catcher from 1948 to 1957. Campanella was one of Major League Baseball's first African American players. He played in the All-Star Game eight times and was Most Valuable Player in the National League three times. He played in six World Series, winning against the Yankees in 1955. In 1958 he was driving to his suburban Long Island home when his car skidded on a slick road, hit a telephone pole, and flipped over. As a result of the accident, Campanella was paralyzed from the shoulders down. He spent the rest of his life in a wheelchair. In 1969 Campanella became the second player of African American descent to be inducted into the Major League Baseball Hall of Fame, following Jackie Robinson.

Frank Dyer

Campbell, Tunis (*b* Middlebrook, N.J., 1 April 1812; *d* Boston, 4 Dec 1891). Abolitionist, minister, author, and politician. As an abolitionist and minister in New York City, he lectured frequently in the Five Points neighborhood, often under dangerous conditions. As a headwaiter at Manhattan's Howard House, Campbell developed a formal style of table service, modeled loosely on military maneuvers, that challenged the obsequious servility that most nineteenth-century whites expected of black service workers. In 1865 Campbell became the governor of five Sea Islands off the coast of Georgia, and during Reconstruction he built a strong political machine and militia in McIntosh County, Georgia. He won several elective offices, including state senator, but at the end of Reconstruction he was jailed on trumped-up charges by his Democratic political enemies. After serving a year in a convict labor camp, he returned to the North and died in Boston in 1891.

Russell Duncan, *Freedom's Shore: Tunis Campbell and the Georgia Freedmen* (Athens: University of Georgia Press, 1986)

Daniel Levinson Wilk

Canadians. Canada's relationship with New York City dates to the seventeenth century, when traders from New France competed with the Dutch for peltry and access to American Indian trade networks. By the early eighteenth century, mission Indians from Montreal and Canadian fur traders known as *coureurs des bois* had opened up a lucrative smuggling route to Albany, from whence furs were sent on to New York City and exported to England. Among the earliest Canadian settlers in New York City were a handful of coureurs des bois, defecting French soldiers, and colonists welcomed by Governor Thomas Dongan, a Catholic, in the 1680s.

The largest single exchange of people between New York City and Canada occurred during and immediately after the American Revolution, when some 30,000 evacuated Loyalists settled in the future Canadian provinces of New Brunswick, Nova Scotia, Ontario, and Quebec. Among them were David Mathews, a former mayor of New York City; the Reverend Charles Inglis, the departing rector of Trinity Church; and the lawyer William Smith, Jr., an early historian of New York State and later a chief justice of Quebec. Landseekers from New York State, known as "late Loyalists," streamed into Canada until the outbreak of war in 1812, when perhaps eight in ten residents of Upper Canada (later Ontario) had roots in the former American colonies.

The flow of migrants reversed in the mid-nineteenth century, as Canadians began flooding across the border amid land pressures and dwindling economic opportunities at home. The number of Canadians born in the United States rose from 147,711 in 1850 to 980,938 in 1890 (a figure equivalent to 20.3 percent of Canada's population at that time) and 1,286,389 in 1930. The Canadian-born population of New York City remained relatively low, reaching 15,546 in 1890 and 45,423 (including 6863 French Canadians and 5305 Newfoundlanders) in 1930. Yet Canada also served as a way station for an untold number of European immigrants later destined for New York City.

Many Canadian-born New Yorkers eventually retraced their footsteps across the 49th parallel, and most who stayed assimilated quickly and tended not to form a distinct group. French Canadians, however, clung to their ethnic and linguistic identity, founding a New York chapter of the Société de Saint-Jean Baptiste des Etats-Unis, a nationalist fraternal organization, in 1850, and briefly supporting a newspaper, *Le Public Canadien* (1867–68). In 1882 the Roman Catholic Saint Jean-Baptiste Church was built on Lexington Avenue at 76th Street to serve the French Canadians of Yorkville, some of whom had previously worshipped in a nearby stable. By this time, the city had begun to attract English-speaking Canadian professionals and businesspeople, some of whom gravitated to such elite social clubs as the Canadian Club of New York (initially launched in 1885), the Canadian Society of New York (1897), and the Canadian Women's Club of New York (1920). On Prospect Park West in the 1930s there lived a small colony of Newfoundlanders who worked on fishing smacks that sailed from Sheepshead Bay.

Canadian emigration slowed in the latter half of the twentieth century. The 1960 U.S. census listed 40,345 Canadian-born New Yorkers, including 6270 French speakers and 4838 Newfoundlanders, and another 25,641 American-born children of Canadian parents. The number of Canadian-born New Yorkers dipped to 15,874 in 1980 before creeping back up to 21,039 in 2006, when some 45,000 Canadians lived in the metropolitan area. According to the 2000 census, some 10,645 New Yorkers claimed French Canadian ancestry, compared to 9744 who claimed Canadian ancestry—this despite the vastly higher numbers of non-French Canadians arriving in the city throughout the nineteenth and twentieth centuries. Regardless, tourists formed the most prominent group of Canadians in New York City in the new millennium: buoyed by a strong Canadian dollar, some 880,000 visited the great metropolis in 2007.

The list of notable Canadian New Yorkers includes the financier Morris Robinson (1784–1849), a son of Nova Scotia Loyalists and the founding president of the Mutual Life Insurance Company of New York; Edward P. Doherty (1840–97), who as a first lieutenant with the 16th New York Cavalry during the Civil War commanded the troops that pursued and killed John Wilkes Booth, and who later served as the New York City inspector of street pavings; the political scientist, philanthropist, and urban reformer Elgin R. L. Gould (1860–1915); the entrepreneur Elizabeth Arden (1878–1966), who moved to New York City in 1908 and founded one of the largest cosmetics firms in the world. Canadian journalists include Peter Jennings (1938–2005), American Broadcasting Company (ABC) and *World News Tonight* anchor from 1983 to 2005; Robert MacNeil (*b* 1931), cohost of *The MacNeil–Lehrer Report* from 1975 to 1995; the real estate developer Mortimer B. Zuckerman (*b* 1937), also editor-in-chief of *U.S. News and World Report* and owner of the *Daily News*; and Malcolm Gladwell (*b* 1963), an essayist for the *New Yorker* and author of *The Tipping Point* (2000). Canadian comedians include Dan Aykroyd (*b* 1952), Martin

Short (*b* 1950), and Mike Myers (*b* 1963), who starred on the television show *Saturday Night Live,* produced by the Canadian-born Lorne Michaels (*b* 1944).

Mike Woodsworth

Canal Street. Major thoroughfare running east–west in southern Manhattan. It connects Brooklyn in the east (via the Manhattan Bridge) across Manhattan to New Jersey (via the Holland Tunnel). Canal Street forms the main spine of Chinatown and borders the Little Italy, Tribeca, and SoHo neighborhoods. It takes its name from an actual canal dug in the area in the early nineteenth century to drain contaminated water from the Collect Pond to the Hudson River. The pond was eliminated in 1811, and Canal Street was completed in 1820, built to follow the path of the canal. During the early twentieth century it was the center of the bustling jewelry trade. In the 1920s the Citizens Savings Bank built its domed headquarters at the Bowery, which remained a landmark on the street in the early twenty-first century. In recent years Canal Street has become a successful commercial district and tourist area filled with open storefronts, street vendors, banks, and jewelry stores.

Benjamin Yakas

Canarsie. Neighborhood in southeastern Brooklyn, lying on a low section of shore along Jamaica Bay and bounded to the north by East 108th Street and Fresh Creek Basin, to the east by Jamaica Bay, and to the south and west by Jamaica Bay, Paerdegat Basin, Ralph Avenue, and Ditmas Avenue. Originally part of Flatlands, the land was named for the Indians who occupied it at the time of European settlement. It remained a quiet area of fishing and farming for much of the eighteenth century. Germans arrived during the 1870s, soon followed by Dutch, Scotch, and Irish settlers. By the 1920s there were also Jews and Italians, many of whom made their living fishing in oyster beds in Jamaica Bay. In 1907 a seaside resort called the Golden City Amusement Park opened at Seaview Avenue and Canarsie Road, which was destroyed by fire in 1934 and leveled for the construction of the Belt Parkway in 1939. In the 1920s pollution in Jamaica Bay devastated the fishing industry, and the local economy suffered severely during the Depression. As marshes were filled in during the 1950s and 1960s several apartment complexes and one- and two-family houses were built. Soon row houses covered the area. The rapidly growing population consisted mostly of middle-class whites, including many Italians and Jews from Crown Heights, East New York, Brownsville, Bedford–Stuyvesant, Bushwick, and Williamsburg. The ethnic composition underwent marked change in the 1980s, as the neighborhood and especially its northeastern section attracted a large number of blacks from the Caribbean nations of Jamaica (accounting for a quarter of the total), Haiti, Guyana, Barbados, Trinidad and Tobago, and Grenada, as well as immigrants from China, the Soviet Union, and Israel. The main commercial streets in Canarsie are Flatlands Avenue, Avenue L, and Rockaway Parkway, and there are two large recreation areas (the Canarsie Pier and Canarsie Park); the neighborhood has a suburban ambiance.

canning. In New York City the processing of foods in glass bottles was begun in 1818 by the English immigrant Thomas W. Kensett. He employed a process developed by Nicholas Appert that consisted of packing food in wide-mouth glass bottles, which were then sealed with corks and submerged in vats of boiling water. With his father-in-law, Ezra Daggett, he opened a business in the city in 1819 for bottling salmon, lobster, oysters, meats, and vegetables. In 1825 the two obtained a patent for a process of preserving foods in tin-plated canisters, which soon replaced glass. Canning was seen as a means of preventing scurvy during the long voyages of sailing ships: in 1828 the *Journal of the Franklin Institute* suggested that canned vegetables would be both more nutritious and more palatable than other ships' provisions, and the first canneries opened in the port cities of New York City, Boston, and Baltimore (to which Kensett moved his operations in 1828 to be closer to the supplies of oysters and fruits in which his firm specialized). Canning was also used to preserve luxury foods for the wealthy. There was only one canning establishment in New York City in 1846, the firm of Wells, Miller and Provost, on Front Street near Peck Slip. From 1856 Gail Borden sold canned condensed milk in the city and maintained his headquarters there, although the milk was processed at Wolcottville (now Torrington), Connecticut, and from 1861 at Wassaic, New York, the site of a large factory built with financial backing from Jeremiah Milbank. In 1887 the French immigrant Alphonse Biardot and his sons Octave and Ernest opened a canning operation at the corner of Warren and Greenwich streets in Manhattan, where they canned meat soups and vegetable soups as the Franco-American Company.

By the mid-nineteenth century canneries were common in areas such as upstate New York where fruits and vegetables were grown, and the city became a place where canned foods were not so much processed as distributed and consumed.

Edward F. Keuchel

Cannon, Harriet Starr (*b* Charleston, S.C., 7 May 1823; *d* Peekskill, N.Y., 5 April 1896). Religious leader. After the death of her sister in 1856 she joined the Sisterhood of the Holy Communion (formed 1852), an Episcopal order run by Ann Ayres and William Augustus Muhlenberg that assisted the poor in New York City. In 1858 she was placed in charge of a ward at St. Luke's Hospital. Her tendencies toward traditional monasticism were resisted by Muhlenberg and Ayres for being too "popish," and she was dismissed from the sisterhood in 1858. At the invitation of Bishop Horatio Potter later that year she and her associates took over the management of the House of

Mercy, a refuge for prostitutes at 86th Street and Broadway, and so impressed Potter with their success that he helped them to form a community along traditional, Catholic lines. The Community of St. Mary, formally organized on 2 February 1865, was the first monastic community officially constituted by an Anglican bishop since the sixteenth century, and Cannon was elected its first mother superior. Although resisted at first by some Protestants the community soon prospered. Among its many enterprises in New York City were St. Mary's Free Hospital for Poor Children and St. Mary's School on West 46th Street. In 1872 the order purchased as a headquarters an extensive property at Peekskill-on-Hudson where Cannon spent the rest of her life.

Kevin Kenny

Cantor, Eddie [Itzkowitz, Isidore] (*b* New York City, 31 Jan 1892; *d* Los Angeles, 10 Oct 1964). Comedian and singer. Born on Eldridge Street on the Lower East Side, he became successful performing songs and skits in vaudeville, in the *Follies* of 1917–19, 1923, and 1927 and other musicals produced by Florenz Ziegfeld, and in some of the first sound motion pictures produced by Samuel Goldwyn (including *Whoopee*, 1930, and *Roman Scandals*, 1933). He was popular on radio and television for more than 30 years. His best-known songs, "Whoopee" and "You'd Be Surprised," combined cynicism with naïveté. Cantor wrote a number of books, including *My Life Is in Your Hands* (1928), *Caught Short!: A Saga of Wailing Wall Street* (1929), and *Take My Life* (1957). He was the first president of the American Federation of Radio Artists, forerunner of the American Federation of Radio and Television Artists.

Barbara Cohen-Stratyner

Eddie Cantor

Cantor Fitzgerald. Global financial services firm. It was founded in 1945 by Bernard Gerald Cantor and John Fitzgerald as a limited partnership. The firm specializes in bond trading, as well as investment banking, asset management, and market data and brokerage services. It is one of 17 primary dealers that trade U.S. government securities directly with the Federal Reserve Bank of New York. During the 11 September 2001 terrorist attacks on the World Trade Center, the firm lost 658 employees, more than any other company and two-thirds of its workforce, in its offices on high floors of the North Tower. The firm distributed 25 percent of its profits over the following five years to families of the victims and paid for 10 years of health insurance for them.

Benjamin Yakas

Canyon of Heroes. Term for an area in lower Manhattan that is the route of TICKERTAPE PARADES.

capital, federal. For a discussion of New York City as an early capital of the United States, see CONGRESS.

Capital Cities Communications. Corporation formed in 1954 that acquired FAIRCHILD PUBLICATIONS in 1968 and the AMERICAN BROADCASTING COMPANY in 1986.

Capote, Truman (Garcia) [Persons, Truman (Streckfus)] (*b* New Orleans, 30 Sept 1924; *d* Los Angeles, 25 Aug 1984). Novelist. He moved to New York City in 1935 at age 10, then to Connecticut, and returned to the city in 1942, where he graduated from Dwight School and began working for the *New Yorker.* He also wrote short stories for numerous publications including the *Atlantic Monthly* and *Harper's Magazine.* He first achieved recognition in 1948 with his novel *Other Voices, Other Rooms,* which stayed on the *New York Times* best-seller list for nine weeks and catapulted him into celebrity. His newfound acclaim brought him into contact with an elite social circle in New York City, where he made acquaintances that shaped the character Holly Golightly, heroine of *Breakfast at Tiffany's* (1958). On the publication of *In Cold Blood* in 1966 Capote hosted the celebrated Black and White Ball at the Plaza Hotel in Manhattan, called the party of the century. From the late 1960s his literary output declined with his increasing fame and deteriorating health.

Robert Morrow, Max Seppo

Cardinal Hayes High School. School for boys at 650 Grand Concourse in the Bronx, opened in 1941 by Francis Cardinal Spellman as a memorial to his predecessor, Patrick Cardinal Hayes. To accommodate a surge in the high-school-age population during the late 1950s and early 1960s the school opened three annexes and reached an enrollment of 3400; with the opening of additional high schools by the archdiocese the last of the annexes was closed in 1970. Enrollment stood around 1100 in the early twenty-first century. The school's building, designed in an art deco style by the firm of Eggers and Higgins, has a distinctive curved facade built to parallel the curve of the Grand Concourse. Among the notable alumnae are filmmaker Martin Scorsese and entertainer Regis Philbin.

Gilbert Tauber

Cardozo, Benjamin (Nathan) (*b* New York City, 24 May 1870; *d* Port Chester, N.Y., 9 July 1938). Justice of the Supreme Court. The son of the judge Albert Cardozo, he was considered a brilliant jurisprudent, and by 1900 was recognized as one of the most adept lawyers in New York City. Shortly after winning a seat on the New York Supreme Court he was appointed in 1914 to fill a vacancy on the state court of appeals. Elected its chief judge in 1926, he won widespread admiration for his well-crafted opinions, which balanced respect for legal precedent with a belief that the law should adapt to social change. In 1932 he left the court of appeals when he was appointed to the U.S. Supreme Court to fill the seat vacated by Oliver Wendell Holmes, to whom he was widely regarded as the most fitting successor. His view that innovative legislation may ease social problems often placed him in the minority of the court as it struck down some of the reforms of the New

Benjamin Cardozo, 1914

Deal. His ideas eventually prevailed: among his last opinions was one written for the majority upholding the Social Security Act. The Cardozo School of Law, opened in 1976 at 55 Fifth Avenue, is part of Yeshiva University.

Carey, Hugh L(eo) (*b* Brooklyn, 11 April 1919). Governor and congressman. Born to Irish parents in Park Slope, where he attended parochial schools, he fought during World War II as part of the army's 104th Timberwolf Division, crossing the Rhine at the Bridge at Remagen and helping to liberate the Nordhausen (Dora–Mittelbau) concentration camp. He was released from five years of active duty as a decorated lieutenant colonel. Carey earned a bachelor's degree in 1949 and a law degree in 1951 from St. John's University. In 1960 he was elected to the U.S. House of Representatives; in 1974 he was elected governor of New York State in a landslide against Republican governor Malcolm Wilson. Facing state budget deficits and New York City's financial crisis, Carey kept the city out of bankruptcy through state aid, through the creation of the Municipal Assistance Corporation and the Emergency Financial Control Board, and by successfully lobbying for federal aid and loan guarantees to the city. In 1975 he signed the Willowbrook Consent Decree, which began the process of releasing people from large mental health institutions. He centralized administration of the unified court system and created a nonpartisan merit system for the appointment of judges to the court of appeals. He vetoed death penalty legislation. Reelected in 1978, he cut income taxes and streamlined the government. Carey declined to run for a third term and became a partner at the law firm Harris Beach PLLC.

Kramer, *The Days of Wine and Roses Are Over: Governor Hugh Carey and New York State* (Lanham, Md.: University Press of America, 1997)

Steven A. Levine

Carlin, George (*b* New York City, 12 May 1937; *d* Santa Monica, Calif., 22 June 2008). Comedian. Raised on West 121st Street in Morningside Heights in Manhattan, Carlin drew much of the inspiration for his early material from his working-class, Irish American upbringing in New York City. Carlin joked that his childhood friends referred to the neighborhood as "White Harlem" in order to sound tough. He attended parochial schools before dropping out of Bishop Dubois High School in 1953. He then joined the U.S. Air Force and began in show business as a radio disc jockey at an off-base station in Shreveport, Louisiana. Carlin performed mainstream material in the 1960s, working mostly in nightclubs, and in television and movies to a lesser extent. He shed his conventional image in 1970, appearing in long hair and jeans and discussing drugs and the Vietnam War. In 1972 Carlin released the albums *FM & AM,* his first Grammy winner, and *Class Clown,* which featured his famous routine "Seven Words You Cannot Say on Television." A lawsuit followed the airing of the routine on WBAI, a New York City radio station operated by the Pacifica Foundation. In 1978 the U.S. Supreme Court's ruling in the case of *Federal Communications Commission [FCC] v. Pacifica Foundation* affirmed the FCC's right to regulate "indecent" material on radio and television. Carlin hosted the first-ever episode of *Saturday Night Live* in New York City in 1975. He recorded many of his 14 Home Box Office (HBO) specials at New York City venues, including Carnegie Hall and the Beacon Theater. From the 1980s on Carlin dealt with a vast array of topics, including deceptive language ("language that takes all the life out of life"), religion, consumerism, and civic ideals ("Rights aren't rights if someone can take them away. They're privileges. All we've ever had in this country is a Bill of Temporary Privileges."). His 1998 book *Brain Droppings* became a best seller; in 2004 Comedy Central named Carlin the second-greatest stand-up comedian of all time, behind only Richard Pryor.

Ben Silk

Carlisle DeCoppet. Firm of securities brokers. Formed in 1891 in New York City as DeCoppet and Doremus by Edward J. DeCoppet and Robert P. Doremus, it became the leading trader on the New York Stock Exchange of odd lots (transactions of fewer than 100 shares of stock). It was one of half a dozen such traders in the 1920s, when odd lots accounted for 25 percent of all trading on the exchange. It was renamed Carlisle DeCoppet after merging with the firm of Carlisle and Jacquelin in 1969. Working solely with other brokers and conducting no business with the public, the firm by 1975 was the last one dealing in odd lots, which by this time accounted for only 3 percent of all stock-market trading in the United States. After losing its most important customer, the firm of Merrill Lynch, Pierce, Fenner and Smith, in 1975, Carlisle DeCoppet offered its securities processing system to the New York Stock Exchange, which assumed responsibility for odd lots in December 1976.

Mary E. Curry

Carlson, Chester F(loyd) (*b* Seattle, 8 Feb 1906; *d* New York City, 19 Sept 1968). Inventor of photocopying. After graduating from the California Institute of Technology in 1930 he worked in the patents section of Bell Laboratories in New York City, where he became concerned with the need to copy documents quickly and accurately. He perfected a dry copying process in his laboratory in a rented room in Astoria in Queens, where the first successfully photocopied image was made in October 1938. He received his first patent for the process in November 1940, but he had great difficulty convincing investors that xerography had commercial potential. While working for the Mallory Company in 1944 he visited the Battelle Memorial Institute in Columbus, Ohio, and granted the patent for xerography to the development corporation of the institute in return for being allowed to use its facilities to improve the xerographic process. His work at Battelle was sponsored from 1947 by the Haloid Company, a paper manufacturing firm in Rochester, New York, after its president, Joseph Wilson, read about the research in *Radio News*. In the following year Haloid announced that a breakthrough in xerography had been achieved; it copyrighted the trade name XeroX and in 1949 introduced the XeroX Copier Machine, model A.

Carnegie, Andrew (*b* Dunfermline, Scotland, 25 Nov 1835; *d* Shadowbrook, Mass., 11 Aug 1919). Industrialist, author, philanthropist, and peace activist. He moved to the United States with his parents in 1848 and settled in Allegheny City, which is today part of Pittsburgh. After working briefly in a cotton mill, he took a job as a telegraph messenger, then secured a position as secretary to Thomas Scott, then a divisional superintendent of the Pennsylvania Railroad. Carnegie eventually rose in the ranks to become the Pittsburgh division superintendent of the railroad. He retired from the railroad in 1865 to go into business for himself, primarily bridge-building and iron mills. Within only a few years, he had earned his first millions. In 1872 he became one of the nation's first—and soon its most successful—steelmakers. He married Louise Whitfield in 1887; their daughter, Margaret, was born in 1897. Carnegie devoted his later years to writing, philanthropy, and peace activism. He was a fierce opponent of the Spanish–American War and an outspoken advocate for treaties and world organizations devoted to international peace. In 1901 he sold his majority share in Carnegie Steel, worth $226 million, to J. P. Morgan, who was organizing the U.S. Steel Corporation. Considered by many to be the founder of modern philanthropy, he gave away most of his fortune during his lifetime. The remainder was bequeathed to the Carnegie Corporation of New York. Among his many gifts was Carnegie Hall at 57th Street and Seventh Avenue, considered by many professionals to

Andrew Carnegie's mansion (designed by Babb, Cook, and Willard), ca *1910. The house with its gardens and conservatory occupied half a block between 90th and 91st streets on Fifth Avenue; it became the Cooper–Hewitt Museum in 1977*

be the most prestigious concert venue in the world.

David Nasaw

Carnegie [Carnagey]**, Dale** (*b* Harmony Church, near Maryville, Mo., 24 Nov 1888; *d* Queens, 1 Nov 1955). Pioneer in teaching public speaking, personality development, and corporate solutions. After moving to New York City he became business manager for the legendary journalist Lowell Thomas, who was on a lecture tour. After the tour was completed, Carnagey opened an office in the Carnegie Hall Building (which led him to change his surname), where he taught public speaking. Employing a staff to research habits of successful people, he devised a method of instruction that combined acting, writing, and sales techniques, which he outlined in *How to Win Friends and Influence People* (1936). The book ultimately sold 30 million copies and has been translated into more than 35 languages. His motivational principles were adopted by figures ranging from Norman Vincent Peale and Pope John Paul I to Frank Perdue and Lee Iacocca. More than seven million people took the Dale Carnegie courses in 75 countries and 29 languages. Carnegie's residences in New York City included 244 West 56th Street in Manhattan and, during the last 25 years of his life, 27 Wendover Road in Forest Hills Gardens, Queens.

Giles Kemp and Edward Claflin, *Dale Carnegie: The Man Who Influenced Millions* (New York: St. Martin's, 1989)

Val Ginter

Carnegie, Hattie [Kanengeiser, Henrietta] (*b* Vienna, 14 March 1886; *d* New York City, 22 Feb 1956). Fashion designer. Her adopted surname was apparently inspired by that of the industrialist Andrew Carnegie. Between the 1930s and 1940s she was one of the foremost designers in the United States. She employed more than 1000 persons at her couture house on East 49th Street and in businesses that made ready-to-wear clothing as well as perfume and accessories. Among the designers who worked for her were Jean Louis, Norman Norell, Claire McCardell, and Pauline Potter (later known as Pauline de Rothschild).

Caroline Rennolds Milbank

Carnegie Corporation of New York. Philanthropic organization formed in 1911 by Andrew Carnegie and endowed with $135 million to "promote the advancement and diffusion of knowledge and understanding among the people of the United States and the British dominions and colonies." It was the largest single foundation established by Carnegie, who was its first president and served until his death in 1919. Under Carnegie's stewardship the corporation reflected his interests in libraries and pipe organs. Its first major effort was to fund the construction of the Carnegie Free Public Libraries throughout the English-speaking world; by the time the program ended in 1917, it had constructed 2509 library buildings at a cost of $56 million. After Carnegie's death the corporation broadened its scope, and between 1919 and 1923 it created the National Research Council, the American Law Institute, and the National Bureau of Economic Research. Frederick P. Keppel, the corporation's president from 1923 to 1942, emphasized cultural philanthropy and in particular programs in adult education and the arts. During his tenure the corporation provided funds for promoting arts societies and the study of art in public schools to the American Federation of Arts (founded by Carnegie's associate Elihu Root in 1909 in opposition to the Ashcan School). It also helped the People's Institute to sponsor lectures by philosophers and social scientists like Morris Raphael Cohen and Lewis Mumford, and funded classes at the Workers' Education Bureau of America (formed in 1921 by Charles A. Beard and others).

After the 1940s the influence on public policy of the Carnegie Corporation lessened as that of newer and larger foundations like the Ford Foundation increased, and as the federal government formed new agencies and markedly increased its role in education with the passage of the Elementary and Secondary Education Act of 1965. The corporation continued nonetheless to finance research and writing projects, including Gunnar Myrdal's study of race problems, *An American Dilemma* (1944), and David Riesman's study of alienation, *The Lonely Crowd* (1950), as well as such educational projects as the Children's Television Workshop and *Sesame Street,* first broadcast in 1969. By the early 1990s the Carnegie Corporation had donated more than $500 million to universities, libraries, and research institutes to further the goals of individualism, liberty, equal opportunity, internationalism, and peace. By 2005 its capital fund had a market value of $2.2 billion.

Ellen C. Lagemann, *The Politics of Knowledge: The Carnegie Corporation, Philanthropy and Public Policy* (Middletown, Conn.: Wesleyan University Press, 1989)

Stephen Weinstein

Carnegie Hall. Concert hall situated at the southeast corner of 57th Street and Seventh Avenue. It was built between 1889 and 1891 and was known until 1894 as the Music Hall. The hall cost $1 million and was paid for by Andrew Carnegie, after a suggestion from conductor Walter Damrosch that a home was needed for the Oratorio Society and the New York Symphony Society. The building was designed in a neo-Renaissance style by the architect William B. Tuthill and built by the firm of Isaac A. Hopper and Company entirely of terra-cotta and brick, with an iron framework on a natural foundation of solid granite. Originally the building comprised four public spaces: the Main Hall, now seating 2804; the Chamber Music Hall (renamed Carnegie Recital Hall in 1898 and Weill Recital Hall in 1986), seating 268; Chapter Hall, used for lectures, meetings, and religious services until its renovation in 1985, when it was renamed

Carnegie Hall, 2009

the Kaplan Space and became used primarily for rehearsals and recordings; and the Recital Hall, which became the home of the Carnegie Lyceum in 1898, the Carnegie Playhouse in 1960, and the Carnegie Hall Cinema in 1970. In 1894 and 1896 two towers housing 150 studios were constructed around and atop the original building as a means of providing supplemental income. These residential and working spaces, designed by the architect Henry J. Hardenbergh, later housed such tenants as Charles Dana Gibson, the Authors' Club, Isadora Duncan, the American Academy of Dramatic Arts, Agnes de Mille, and the studios of the Victor Talking Machine Company, where Enrico Caruso made his first American recordings in 1904.

Carnegie Hall officially opened on 5 May 1891 and was widely praised for its acoustical excellence, favorable sightlines, and intimate ambience. The inaugural music festival lasted five days and was highlighted by an appearance by Tchaikovsky, who conducted several of his own works. The American debut of the Polish pianist Jan Ignace Paderewski at the hall on 17 November 1891 was followed by the debut of virtually every important classical musician of the next hundred years.

In its first century more than 50,000 events took place at Carnegie Hall. From 1892 the principal tenant was the Philharmonic Society of New York (from 1928 the Philharmonic–Symphony Society of New York, later known generally as the New York Philharmonic), which remained there until 1961. During these first 100 years more than 1300 compositions received their world premiere or American premiere at the hall, among them Antonín Dvořák's symphony *From the New World* (world premiere, 16 December 1893), George Gershwin's *Concerto in F* (1928), and Duke Ellington's *Black, Brown and Beige* (1943). Many well-known composers took part in performances of their own works, including Camille Saint-Saëns, Gustav Mahler, Sergei Prokofiev, Maurice Ravel, Ottorino Respighi, Aaron Copland, Igor Stravinsky, Virgil Thomson, William Schuman, John Cage, and Philip Glass. The hall was the site of performances by leading orchestras, chamber ensembles, and soloists from throughout the world, and by performers of jazz, folk music, popular music, and rock, among them James Reese Europe and his Clef Club (1912), Fats Waller (1928), Benny Goodman (1938), Dizzy Gillespie (1947), Woody Guthrie (1946), Pete Seeger (1946), Miles Davis (1957), Edith Piaf (1957), Judy Garland (1961), Frank Sinatra (1964), the Beatles (1964), and the Rolling Stones (1964). The acoustics of the hall also made it a forum for public speakers, including explorers, authors, politicians, and religious leaders.

Carnegie retained ownership of the hall until his death in 1919. His wife, Louise Whitfield Carnegie, sold the building in 1924 to the real estate developer Robert E. Simon; on his death in 1935 ownership passed to his son Robert E. Simon, Jr., who maintained the building until 1960. Scheduled for demolition as the New York Philharmonic prepared to move to a new home in Lincoln Center, Carnegie Hall was saved by a coalition of musicians, politicians, and civic figures led by the violinist Isaac Stern. It was bought by the City of New York in 1960 and registered as a National Historic Landmark in 1964.

On 18 May 1986 Carnegie Hall closed for the most comprehensive renovation and restoration in its history. In seven months at a cost of $60 million the firm of James Stewart Polshek and Partners restored much of the building to the way it had appeared in 1891, while improving its technical features. At the same time steps were taken to help ensure the financial stability of the hall: an adjacent lot on 57th Street (which had been acquired by Andrew Carnegie in 1903) was subleased by the Rockrose Development Corporation from the Carnegie Hall Corporation to allow for the construction of a 60-story building, Carnegie Hall Tower. During the late 1990s it added many educational programs, including a Family Concerts series, as well as its acclaimed Professional Training Workshops. In 2003 the new Judy and Arthur Zankel Hall opened to accommodate the hall's expanded educational programming, in addition to hosting a wide variety of performances.

Carnegie Hill. Neighborhood on the Upper East Side of Manhattan, bounded to the north by 98th Street, to the east by Lexington Avenue, to the south by 86th Street, and to the west by Fifth Avenue. The area was the rural site of a few charitable institutions, modest houses, and squatters' shacks when the steel magnate Andrew Carnegie built an imposing neo-Georgian mansion at 91st Street and Fifth Avenue in 1902. An affluent residential neighborhood took shape after he sold nearby lots to such wealthy businessmen as Otto H. Kahn, James A. Burden, and John Henry Hammond. Along with such mansions, gracious townhouses and luxury apartment buildings were erected until the Depression. The neighborhood boasts many private schools and cultural institutions, among them the Cooper–Hewitt Museum, the Guggenheim Museum, and the Jewish Museum. Elegant shops and restaurants now line Madison Avenue, the main commercial street. Much of the area is protected by landmark designation.

carousel manufacturing. Brooklyn was a center of carousel manufacturing between

1875 and 1918, when animal carvers such as Charles I. D. Looff, M. C. Illions, Charles Carmel, Solomon Stein, and Harry Goldstein developed a wildly exuberant "Coney Island style." The style is exemplified in horses by Carmel at Prospect Park, Coney Island, and Playland Park (Rye, New York), by Illions at Flushing Meadows, and by Stein and Goldstein at Central Park.

Stephen Weinstein

Carpatho-Rusyns. The Carpatho-Rusyns are a Slavic people. They are also known as Rusyns, Ruthenians, Carpatho-Russians, Carpatho-Ukrainians, and Lemkos. During the 1880s they began immigrating to the United States from the north-central ranges of the Carpathian Mountains, until 1918 part of the Austro-Hungarian Empire. Most of the Carpatho-Rusyns in New York City are descendants of immigrants who arrived between 1880 and 1914. They settled primarily on the Lower East Side and in Brooklyn, working as laborers in the garment industry, in small factories, and in the service trades. When most of their homeland became part of Poland and Czechoslovakia after World War I, a few thousand more Carpatho-Rusyns immigrated; many were Lemkos from the Polish province of Galicia. In New York City Lemkos formed the League for the Liberation of Carpatho-Russia (1917), which published a newspaper and strove to unify the Carpathian homeland with a democratic Russia. During the 1930s Carpatho-Rusyns settled in Yorkville alongside Czechs and Hungarians, and their numbers increased by several hundred after World War II, when Carpatho-Rusyns fled the communist regimes of Eastern Europe, the Ukraine, Czechoslovakia, and Poland.

Carpatho-Rusyns have sometimes aligned themselves with Russians, Slovaks, Ukrainians, and Czechs, but have also maintained their own religious and secular organizations. Their political organizations in New York City have supported a range of solutions for the Carpatho-Rusyn homeland: unity with the Soviet Union (Carpatho-Russian National Committee, 1939), unity with an independent Ukraine (Organization for the Defense of the Lemko Land, 1940), and unity with Czechoslovakia (Council of Free Carpatho-Ruthenia in Exile, 1951). These groups have issued their own publications in Russian, Ukrainian, and the Carpatho-Rusyn vernacular. The predominant faith of Carpatho-Rusyns is Eastern Christianity, and New York City has several parishes belonging to the Byzantine Ruthenian Catholic Church and the American Carpatho-Russian Orthodox Greek Catholic Church. The most architecturally striking sanctuary is the Byzantine Ruthenian Church of St. Mary, built in 1963 on the corner of East 15th Street and Second Avenue in Manhattan. Many Carpatho-Rusyns also belong to parishes of the Orthodox Church in the United States, which is oriented toward Russian Orthodoxy. Carpatho-Rusyn Jews include a community of Hasidim in Borough Park led by the grandson of the renowned rabbi of Mukachevo (Ukraine). Several Carpatho-Rusyn cultural organizations have their headquarters in New York City: the Carpathian Research Center (1958), the Lemko Research Foundation (1978), and the Carpatho-Rusyn Research Center (1978). Perhaps the best-known Carpatho-Rusyn in the cultural history of the city was the artist and filmmaker Andy Warhol.

Paul Robert Magocsi

Carpenter and Vermilye. Original name of the investment banking firm Dillon, Read.

Carrère and Hastings. Firm of architects formed in 1884 by John M(erven) Carrère (1858–1911) and Thomas Hastings (1860–1929), former students at the École des Beaux-Arts in Paris who had worked as draftsmen in the offices of McKim, Mead and White. The partners were successful from the outset, receiving commissions for large country estates, churches, and hotels. In 1897 the firm achieved national prominence after winning the design competition for the New York Public Library with a plan that combined a majestic facade with rich interior spaces. Later the firm completed the First Christian Science Church (1903) at Central Park West and 96th Street, the triumphal arch and colonnade at the approach to the Manhattan Bridge (1905), Richmond Borough Hall (1906), Grand Army Plaza (1912) in Manhattan, the Frick mansion (1914), and the Richmond County Courthouse (1919). After Carrère's death Hastings continued to practice under the firm's name. In association with other architects he designed several notable office buildings, including the Cunard Building (1921) and the Standard Oil Building (1922). Marble busts of Carrère and Hastings were placed on the first landing of the main staircase at the New York Public Library.

Rebecca Read Shanor

Carroll, Earl (*b* Pittsburgh, 16 Sept 1893; *d* Mount Carmel, Pa., 17 June 1948). Theater producer. In 1923–32 he produced the revue *Vanities,* which along with Florenz Ziegfeld's *Follies* and George White's *Scandals* was one of the best-known Broadway shows of the jazz age. Critical reaction was mixed; the *Brooklyn Eagle* once remarked that "Carroll's showmanship consisted in selling gutter humor and naked female flesh to morons," but reviews in the *New York Times* were more positive. In 1927 Carroll was found guilty of perjury for denying that the champagne in which a nude showgirl bathed at one of his late-night parties contained alcohol, and he was sent to prison. After his release he had an inconsequential career in Hollywood.

George A. Thompson, Jr.

Lounge of the Earl Carroll Theatre, 755 Seventh Avenue

Carroll Gardens. Neighborhood in northwestern Brooklyn, occupying 40 blocks and bounded to the north by Degraw Street, to the east by Hoyt Street, to the south by Ninth Street, and to the west by the Gowanus and Brooklyn–Queens expressways. It was originally considered part of Red Hook. The current name was adopted in the 1960s by real estate agents; the eponym of the neighborhood is Charles Carroll, an immigrant from Ireland and a signer of the Declaration of Independence. The area was settled by Irish immigrants in the early nineteenth century. From the late nineteenth century to the 1950s it attracted many Italians, and between 1920 and 1950 most of the Irish population left for more affluent communities. The Carroll Gardens Association, formed in 1964, gradually succeeded in improving the image of the neighborhood and in breaking a political machine that had dominated since the 1930s. In the 1960s many young, middle-class professionals moved to the area, drawn by its safety, tranquility, and proximity to Manhattan. Carroll Gardens is distinguished by its brownstones and its exceptionally large front yards, a feature resulting from a plan drawn up in 1846 by the land surveyor Richard Butts. These yards may be seen on First to Fourth places between Henry and Smith streets and on President, Carroll, and Second streets between Smith and Hoyt streets. Part of this area was designated a historic district in 1973 (President and Carroll streets between Smith and Hoyt streets and Hoyt Street between President and First streets). In the early twenty-first century Carroll Gardens remained a mostly middle-class, Italian enclave where several dialects of Italian are spoken. There are a number of fraternal and benevolent societies representing towns in Italy, frequent bocce games, a procession on Good Friday, extravagant fireworks displays on Independence Day, and a large number of Italian restaurants, delicatessens, bakeries, and pastry shops.

Nan Ellin

Carrville. Former neighborhood in west central Brooklyn, lying in Bedford next to Weeksville. Along with Weeksville it was settled in the 1830s by free black farmers, laborers, and craftspeople. The name is of unknown origin but may be a corruption of Crow Hill, a name applied to the surrounding area. A church opened in 1839 but soon closed. An African free school was established about the same time, but in 1841 white trustees of school district no. 3 took over its management and renamed it Colored School no. 2; it later moved to Weeksville. A racially integrated organization laid out Citizens Union Cemetery in the area in 1851 (black burials were often prohibited in white cemeteries). In the 1850s Carrville and Weeksville became demographically one large black community, large sections of which were destroyed along with the cemetery when a road that became Eastern Parkway was cut through the area in 1869–70. Carrville was all but obliterated when streets were laid out from 1870 to 1875.

Ellen Marie Snyder-Grenier

Carson, Johnny (John William) (*b* Corning, Iowa, 23 Oct 1925; *d* Los Angeles, 23 Jan 2005). Television host and comedian. He began his career in the Midwest and California, working as a comic and television host. In October 1962 he became the host of *The Tonight Show Starring Johnny Carson* on the National Broadcasting Company (NBC), which was filmed in New York City. On the show, the city was often the butt of his monologues; he famously joked, "Anytime four New Yorkers get into a cab together without arguing, a bank robbery has just taken place." In May 1972 the show moved to Burbank, California; he went on to host *The Tonight Show* until 1992. Carson was inducted into the Television Academy Hall of Fame in 1987.

Jessica Montesano

Carter, Elliott (Cook), Jr. (*b* New York City, 11 Dec 1908). Composer. Born into a prosperous family, he was educated in France, at the Horace Mann School in New York City, and at Harvard University before studying composition with Nadia Boulanger in Paris. After finding his distinctive voice during the late 1940s, he produced a large corpus of music marked by intricate rhythmic relationships and complex melodic counterpoint. Long a resident of West 12th Street, he served on several college faculties, including a two-decade involvement (1964–84) at the Juilliard School. He was widely honored by the city's musical community during his centennial year when he participated in many concerts and symposia.

James M. Keller

Carter, Henry. Given name of Frank Leslie.

Cartier. Firm of jewelers formed in Paris in 1847. It opened its first American branch on 1 November 1909 at 712 Fifth Avenue under the direction of Pierre Cartier (1878–1965). In exchange for a pearl necklace the firm in 1917 acquired the Renaissance palace of the banker Morton F. Plant at 653 Fifth Avenue, which became its new location. The branch in New York City offered jewels from the main shop in Paris before setting up its own workshop, where art deco jewelry was produced based on Egyptian and Oriental models as well as on modern designs. Cartier's nephew Claude Cartier (1925–75) took over the branch in 1948 and remained president until 1962, when the company was taken over by outside interests. Robert Hocq, Joseph Kanoui, and Alain-Dominique Perrin assumed control of the firm in 1972 and of the branch in New York City in February 1976. The result was the formation of Cartier International, again bringing the management of all the houses under one hand. In 1984 Alain Dominique Perrin founded the Cartier Foundation for Contemporary Art.

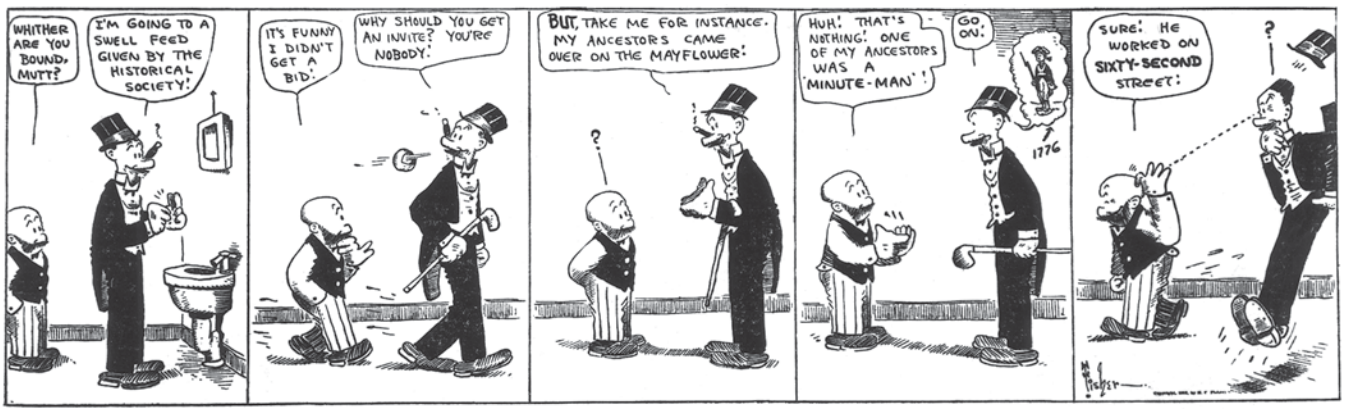
carting. During the first two centuries of the history of New York City, cartmen dominated

intracity transport. They pledged to obey municipal ordinances derived from English and Dutch law, in consideration of which they were given a monopoly on licenses. The cartmen refused employment to blacks, juveniles, and nonresidents and held strikes in 1677 and 1684 to protect their monopoly and resist further municipal regulation. In 1691 the city set fees for cartage and rules for the ownership of carts, standardized the measurement of loads, and required that cartmen serve any orderly person seeking their assistance; these laws remained in effect with little change until 1844. By the colonial period there were about 400 cartmen in the city, some of whom specialized in the transport of furniture, mercantile goods, firewood, hay, or food. The typical cartman was recognizable by his white frock, farmer's hat, and clay pipe. After the American Revolution cartmen helped to rebuild the city's economy. A political controversy arose when Mayor Richard Varick in 1789 ended the custom of awarding freemanships to licensed carters, a loss that denied suffrage to many impoverished carters. In an effort to have the custom reinstated, the cartmen aligned themselves with the emerging Democratic Republican Party and in 1795 helped to elect the cartman Alexander Lamb to the state assembly.



In the first decades of the nineteenth century cartmen defended their monopoly against Irish immigrants looking for work. After a bitter dispute in 1818, Mayor Marinus Willett divided the business between general carting, to be performed by citizens, and dirt carting, to be performed by the Irish. In 1825 a new law restricted general carting licenses to citizens. Despite the protests of black residents of New York City the business remained rigidly segregated. Throughout the nineteenth century cartmen evoked the anger of the middle class because of their reckless driving, surly behavior, cruelty to horses, and rate gouging during plagues and fires. They raised their rates each year on 1 May, when the city's residents traditionally moved into new dwellings. Their monopoly was again attacked during the Workingman's Movement of 1829 and remained a political controversy throughout the 1830s, when 3500 cartmen sided with the Whig Party against the Democrats, who favored the elimination of restrictive licensing. In 1844 the Board of Aldermen abolished licensing restrictions and the requirement that each driver own his cart, partly because more cartmen were needed in the expanding city. The business began to collapse in the 1850s as the carters' monopoly became unenforceable in the growing metropolis and larger express wagons replaced small carts.

cartooning. During the last quarter of the nineteenth century cartoons emerged as a medium that captured the dynamism and adventure of New York City. As a cartoonist for *Harper's Weekly* Thomas Nast lambasted William M. "Boss" Tweed and popularized such characters as the Democratic donkey and the Tammany Hall tiger. *Puck,* launched in 1876, provided a forum for such cartoonists as Joseph Keppler and Bernard Gillam; the *Judge* followed in the same vein from 1881. Charles Dana Gibson contributed caricatures of social and political figures to *Harper's* and other magazines, and in 1895 R. F. Outcault introduced "Hogan's Alley" in Joseph Pulitzer's newspaper the *New York World.* In a single, crowded panel, each installment depicted the pathos, tumult, and squalor of life in the Irish slums through the experiences of a baby-faced urchin in a yellow nightshirt. The harsh, mischievous humor of the strip became so popular that Outcault was persuaded by William Randolph Hearst to move to the *New York Journal,* where the series was renamed "The Yellow Kid." Outcault portrayed a childhood robbed of its innocence by ugliness, menace, and delinquency. In a typical panel from 1897 a chaotic dog show takes place in an alley while a parrot sagely advises in the customary slang of the strip: "Children if you want to live tro dis stay on yer perch." The yellow ink used to print the cartoon gave rise to the term "yellow journalism."

Outcault's success inspired the first comic strips, so named because they included several panels: the "Katzenjammer Kids" (1897) by Rudolph Dirks, based on the German strip "Max und Moritz" by Wilhelm Busch; "Happy Hooligan" (1899) by Frederick Burr Opper; "Buster Brown" (1902) by Outcault; and "Mutt and Jeff" (1907) by Bud Fisher, the first strip to appear daily. From 1913 the *New York American* printed the first strip in which each installment was an episode in a continuing story: "Bringing Up Father," by the Irish immigrant George McManus (1884–1954), satirized wealthy New Yorkers and romanticized the Irish working class through the adventures of Jiggs and Maggie, an Irish working-class couple who struck it rich and were suddenly thrust into a life of leisure. Jiggs constantly sought to slip away from his elegant surroundings and return to the corner saloon and the corned beef and cabbage of his old neighborhood, but whenever his ambitious and showy wife, Maggie, discovered his escapades she pummeled him with "fisticuffs" and kitchenware. McManus contrasted the haughty silliness of the rich and vacuous with the earthy charm, wisdom, and good humor of the slums. Although he showed respect for a society that allowed a hod carrier and a washerwoman to acquire great wealth, he suggested that no one could ever fully leave poverty behind and questioned whether anyone should want to. The strip became hugely popular, appeared in about 500 newspapers, and at its height reached 80 million readers in 46 countries, running for 41 years. Rube Goldberg's comic strip recounting the adventures of Boob McNutt was popular for 20 years. Other cartoons served political ends or were aimed at a more sophisticated readership: from 1911 to 1917 the leftist magazine *Masses* published cartoons by such artists as French Sloan, George Bellows,

"Sixty Seconds Make One Minute," Bud Fisher cartoon

Boardman Robinson, and Art Young; cartoons by James Thurber, Peter Arno, and Charles Addams also appeared in the *New Yorker.*

From the 1920s newspapers and pulp magazines printed comic strips based on detectives and adventure characters. *Famous Funnies* (1934) began by reprinting comic strips from newspapers and then introduced strips of its own, many with humorous animal characters. Other early comic books included *Tip Top Comics* and *King Comics.* The first "superhero," Superman, was created by Jerry Siegel and Joe Shuster and first appeared in *Action Comics* (1938), published by Detective Comics (later known as DC Comics), which soon after introduced Batman (by Bob Kane and Bill Finger, first featured in *Detective Comics* in 1939). In 1941 Marvel Comics introduced Captain America (by Joe Simon and Jack Kirby). From 1940 to 1952 Will Eisner (*b* New York City, 1917) produced his influential weekly strip "The Spirit," chronicling the adventures of a masked crime fighter in a seamy version of New York City called Central City. Judith O'Sullivan has described the city as at once the Spirit's "adversary and amour," which "is blighted but possesses a cunning life of its own. . . . Unlike the Spirit itself, the city is vigorously aggressive, asserting itself immediately in the strip's first frame." The Spirit was the product in part of the Yiddish theater, an insecure, confused, lower-middle-class New Yorker given to self-deprecating monologues. One of the many cartoonists influenced by Eisner was Jules Feiffer, whose weekly comic strip popularized a distinctive brand of humor infused with neurosis, angst, and the absurdities of urban life. A rather more sophomoric approach was taken by William M. Gaines: in April 1955 he launched the satirical magazine *Mad,* in which cartoons and comic strips parodied advertisements and popular culture. Gaines began the magazine after spending part of his earlier career publishing comic books devoted to crime and horror, a type of publication that provoked a strong reaction from the political right. In the face of growing pressure and hearings by subcommittees of the U.S. Senate, comic book publishers in the 1950s adopted a form of self-censorship called the Comics Code of America. Among the less controversial comics of the period was "Apartment 3-G" (1961), a conventional soap opera in the form of a comic strip by Nick Dallis and Alex Kotzky, in which three young women share an apartment in Manhattan next door to a bearded sage who offers them paternal guidance. After assuming control of Marvel Comics, Kirby and Stan Lee in 1962 introduced Spider-Man, an anguished teenager turned crime fighter. The company later published a large number of comic strips set in New York City and helped revitalize the comic book business. Although in the 1970s and 1980s both Superman and Batman gained new life in big-budget motion pictures, by the 1990s New York City was no longer the undisputed center of comic book publishing.

Comic strips continue to be published in newspapers ranging from the *Daily News* (which also prints cartoons in its sports section) to the *Village Voice* (which publishes Feiffer, the politically oriented comic strips of Mark Alan Stamaty, and the "Real Life Funnies" of Stan Mack). Caricatures of literary and political figures by David Levine appear regularly in the *New York Review of Books.* The *New Yorker* runs numerous single panel cartoons. The School of Visual Arts offers a Bachelor of Fine Arts in cartooning and was known as the School of Cartoonists and Illustrators when it opened in 1947.

Jeff Sklansky

Cartwright, Alexander Joy, Jr. (*b* New York City, 17 April 1820; *d* Honolulu, 12 July 1892). Inventor of baseball. In 1842 he joined the Knickerbocker Fire Fighting Brigade, where he started playing town ball. From 1843 to 1845 he worked as a bank teller; after the bank was lost to a fire, he opened a stationery shop and bookstore. In 1845 he formed the Knickerbocker Base Ball Club, which set down 20 rules for the game. On 19 June 1846 his club played the New York Nine club in the first baseball game ever (Cartwright was the umpire). In 1849 he moved to California in search of gold, teaching the game to those he met along the way. In 1852 he moved to Honolulu, where he founded a fire department, hospital, and library; managed the finances of the Hawaiian royal family; and founded baseball leagues that are considered the predecessors of the modern American League and National League.

Henry Cooper

Caruso, Enrico [Errico] (*b* Naples, 27 Feb 1873; *d* Naples, 2 Aug 1921). Singer. Caruso sang opera in Italy before traveling to the United States, where he gave his first performance at the Metropolitan Opera in November 1903, in Verdi's *Rigoletto*. He soon became the best-known operatic tenor of his generation. With the Metropolitan Opera he sang 37 roles in 626 performances in New York City and 235 on tour. He also made more recordings than any other singer of his time (for Victor) and many concert appearances, some to promote Liberty Bonds during World War I. On 11 December 1920 he suffered a throat hemorrhage while performing at the Brooklyn Academy of Music; he gave his last performance on 24 December 1920 in New York City. Caruso was known for a robust yet warm, mellow voice, and reissues of his recordings remain popular. He lived from 1908 to 1920 at the Hotel Knickerbocker (42nd Street and Broadway) and from 1920 to the end of his life at the Vanderbilt Hotel (34th Street and Park Avenue).

Cascade Linen and Uniform Service. Firm of laundry and linen suppliers in Brooklyn, formed in 1898 as General Linen Supply and Laundry by Charles Bonoff, a Russian immigrant. It eventually became the largest firm of its kind in the world. The main plant at Myrtle and Marcy avenues in Brooklyn incorporates the original building and uses the oldest operating electric generator in New York City. In 2005 the company was indicted on charges of violating federal antitrust laws by allegedly agreeing not to compete for customers with other linen suppliers.

Kenneth T. Jackson

Casey, William (Joseph) (*b* Elmhurst, Queens, 13 March 1913; *d* Glen Cove, N.Y., 6 May 1987). Businessman and political leader. After earning a BA at Fordham University (1934) and a law degree at St. John's University (1937) he worked during World War II in the Office of Strategic Services, where he developed a passion for espionage and politics. In the late 1940s he returned to the city to give lectures on tax law at New York University. Soon considered an expert, he gained wealth and power through his extensive knowledge of financial markets and in 1957 joined the law

firm of Hall, Casey, Dickler and Howley, where he remained until 1971. He was a powerful insider in both New York City and Washington, D.C., and gained several government posts while maintaining strong ties to businesses and law firms in the city. In 1978 he formed the Manhattan Institute, a nonprofit education and research institute. He was appointed director of the Central Intelligence Agency in 1981 by President Ronald Reagan. Casey's tenure was marked by controversy and suggestions that he had taken part in an illegal scheme to sell arms to Iran and finance an insurgent movement in Nicaragua with the proceeds; subpoenaed by a congressional committee, he died shortly before he was scheduled to testify.

James Bradley

Casita María. Oldest settlement house serving New York City's Latino population. It opened its doors in El Barrio in 1934 on the first floor of a building at 32 West 113th Street. Founded by educators Elizabeth and Claire Sullivan and an organizing committee of local leaders, it was created to combat rising juvenile delinquency and to provide a center for organized sports and recreation. Although initially intended for children's after-school programs, the addition of adult activities, including English-language workshops, resulted in the need for larger quarters. Satellites appeared on East 110th Street, East 102nd Street, and East 107th Street. The growth of the settlement house paralleled the rapid increase of the Puerto Rican community following World War II. In 1958 Casita María moved its headquarters to 928 Simpson Street in the South Bronx. Among the largest multiservice organizations in the city, Casita María offers social services and educational programs such as preschool Head Start, summer and day camps, youth clubs, and occupational training. It runs the Corsi and Carver Centers in East Harlem and the Mount Pleasant Senior Housing Complex in Mount Pleasant, New York.

Virginia Sánchez Korrol

casitas. Wood-framed buildings of one story and one or two rooms built on vacant, city-owned lots by Puerto Rican residents of the southern Bronx, East Harlem, and the Lower East Side. Once a common form of housing among the poor of the Puerto Rican rural highlands, coastal regions, and urban shantytowns, the casita first appeared in New York City in the late 1970s, where it became used variously as a shelter and meeting place for social clubs, block associations, cultural centers, and horticultural groups. Constructed from recycled scrap lumber and store-bought materials, it is characterized by a pitched roof, an entrance at the gabled end, and a porch (or "balcón"), the railings of which are commonly fashioned with decorative X's, and is often painted in the vibrant colors of the Caribbean. A casita may have a working kitchen with a refrigerator, stove, and running water and is frequently surrounded by a landscaped, dooryard garden and a nonvegetated, cleanswept yard (or "batey"), which simulates the rural, preindustrial Caribbean topography. The casita and its surrounding property are protected from vandals by a chain-link fence. A number of casita builders lease property from the city as participants in the Green Thumb community garden program. Members of neighborhoods often construct a casita in an attempt to keep neglected city property from being used for dumping, drug abuse, "chop shops," and prostitution, yet the city considers casitas "illegal structures" and routinely demolishes them.

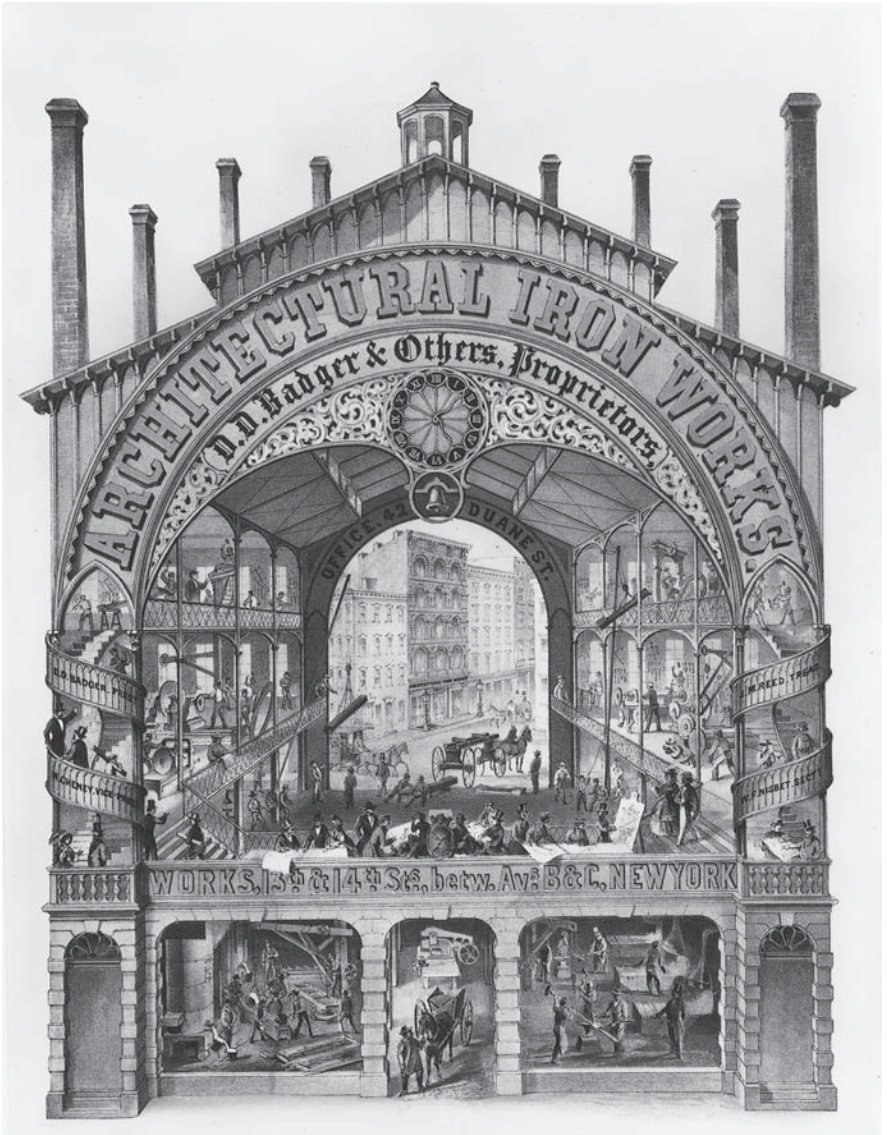
Joseph Sciorra

Castelli, Leo (*b* Trieste, Italy, 4 Sept 1907; *d* New York City, 21 Aug 1999). Art dealer. He moved to the United States in 1941, studied at Columbia University, and in 1957 opened the Leo Castelli Gallery at 4 East 77th Street. In the following decades the gallery displayed the work of some of the leading figures in contemporary American art, including Jasper Johns and Robert Rauschenberg (mounting their first exhibitions in 1958), Frank Stella (1959), Roy Lichtenstein (1961), John Chamberlain, Dan Flavin, Donald Judd, Ellsworth Kelly, Claes Oldenburg, James Rosenquist, Richard Serra, Cy Twombly, and Andy Warhol. In 1971 the gallery moved to 420 West Broadway, where it helped to fuel the development of SoHo as an art district. In the early twenty-first century the Leo Castelli Gallery was located at 18 East 77th Street in Manhattan.



Avis Berman

cast-iron architecture. Architectural use of cast-iron components for major structural purposes, particularly entire iron fronts for commercial buildings in mid-nineteenth-century American cities. By the late eighteenth century, technological advances made the high-carbon ferrous alloy known as cast iron available in quantity and at affordable prices, leading to its use in Britain and France for pipes, bridges, and aqueducts, and later for interior columns of market halls and libraries. American engineers and architects adapted the medium to the needs of rapidly growing American cities, creating storefronts and eventually entire building facades of cast iron.

Cast iron had major advantages for builders. Inexpensive, versatile, and lighter than stone, it was strong in compression, meaning that slender cast-iron columns could bear great weight and allow large window openings. While not completely fireproof, it was fire-resistant. Although behind most iron fronts were conventional interior structures of timber with brick walls, the fronts themselves, often highly ornate, were weight-bearing walls of repeating arches and panels supported by cast-iron columns. Cast iron required far less hand labor than brickwork and no hand carving, as ornamental detailing was achieved in the casting process. The Italianate designs then fashionable were well suited to mass production in iron. Construction was rapid because the many iron parts were prefabricated, then

Cast-iron architecture at 620 Avenue of the Americas, 2009

Poster for D. D. Badger's Architectural Iron Works

bolted together at the building site to form a frame that was raised into place.

New York City became the center of cast-iron architecture in the United States. At first cast iron was employed for small exterior decoration of the sort still seen on Greek Revival and Federal houses in Greenwich Village and Brooklyn Heights. Later, slender columns provided structural support in building interiors (for example, holding up balconies in the Park Theatre, rebuilt in 1822). In 1823 New York City specified iron for gas mains. By the end of the 1820s, shop fronts with cast-iron columns and glass show windows were introduced; they occupied the ground floors of otherwise conventional brick or stone commercial buildings, offering more light and floor space to display merchandise. Such a storefront was advertised for rent in 1825 on John Street near the East River. In 1837 inventor Jordan L. Mott offered for sale complete prefabricated iron storefronts.

In the 1840s New Yorker James Bogardus began an impassioned campaign for buildings made entirely of cast iron, inside and out. During a stay in England and on the Continent (1836–40), he had learned about pioneering British uses of cast iron and about Italian Renaissance architecture. Eager to demonstrate the advantages of cast iron and to silence scoffers, he built for himself on Centre Street a four-story iron factory for producing a grinding mill he invented. Casting of the iron components was contracted out to several small foundries in the city. As the factory was being erected, Bogardus found two customers: pharmacist John Milhau ordered a full iron facade to modernize his existing small brick building at 183 Broadway (1848), and the merchant Edgar Laing had a row of five stores with four-story iron fronts erected at the corner of Murray and Washington streets (1849). Bogardus filled both orders from the supply of parts cast for his own factory, so that all three buildings were created from the same few basic iron elements. With these three buildings Bogardus demonstrated the feasibility of constructing complete iron fronts, and other architects and engineers quickly adopted the new construction method.

In 1850–51 Bogardus constructed in Baltimore a large five-story building with two iron facades for A. S. Abell, publisher of the *Baltimore Sun*. In 1854, after a huge fire in December 1853 destroyed the publishing plant of Harper and Brothers, Bogardus rapidly constructed a new headquarters at 333 Pearl Street, reusing patterns from his *Sun* iron building. To achieve fire-resistant construction he employed an interior frame of cast-iron columns and exposed bowstring trusses with wrought-iron beams and brick jack arches.

The strength and relative lightness of cast iron allow construction of tall structures. Bogardus built four high, freestanding cast-iron towers in Manhattan. Two were open-frame watchtowers for the fire department, one 100 feet (30 meters) tall on Ninth Avenue (1851) and another 125 feet (38 meters) tall on Spring Street (1853). The Bogardus watchtowers were later destroyed, but a similar one still stands in Marcus Garvey Park in Harlem and is now on the National Register of Historic Places; built in 1856 by engineer Julian Kroehl, it is 47 feet (14 meters) tall. In 1855 Bogardus built a tower 175 feet (53 meters) tall on Centre Street for a manufacturer of gunshot, and in 1856 he erected a 217-feet- (66-meter-) tall shot tower on Beekman Street. Gunshot was produced by dropping molten metal through a sieve from a great height into a vat of cold water below. To prevent hot pellets from being blown into the street, Bogardus's iron-frame shot towers had infill brick walls that were not load bearing. This use of a brick wall in a self-supporting iron frame is often cited as a precursor of skyscraper curtain-wall construction.

Also innovative were constructions with glass walls supported by iron frameworks, creating vast spaces flooded with light. This technique was employed for the Crystal Palace (1853), a huge pavilion of iron and glass designed by the firm of Carstensen and Gildemeister, built in Bryant Park to house the first American World's Fair. Among later examples of glass-and-iron buildings, none was grander or caught the public fancy more than the train shed at Cornelius Vanderbilt's Grand Central Depot (1869). Its soaring, filigreed iron arches and glass roofs made it a tourist attraction second only to the U.S. Capitol, whose low dome had been replaced with a soaring cast-iron dome (completed in 1865).

Architectural iron was supplied by established foundries, which made stock parts sold through catalogues and also did custom work. The modest foundries that produced cast iron were scattered throughout Manhattan, Brooklyn, and the Bronx, mostly along waterways, so that pig iron, coal, and special sand

Hugh O'Neil Building, 2009

for molding could be brought in by water, and finished products readily shipped out. The first foundry in the city to offer architectural iron was that of James L. Jackson; founded in 1840, from 1857 the firm occupied a large site on East 28th Street, near the present site of Bellevue Hospital. In 1846 the ironsmith Daniel D. Badger moved his operations from Boston to Manhattan, establishing a small foundry at 42 Duane Street. He was known for a patented iron storefront that combined cast-iron columns with rolling shutters made of iron, giving strong protection against burglars and above all against fire. He later set up a foundry on East 14th Street, one of the largest in the city, which shipped iron building elements all over the country. Other important ironworks in the city included Aetna, Excelsior, Atlantic, Jordan Mott's foundry (from 1828 on the shore of the Harlem River in the southern Bronx, where Mott also built a village for his workers called Mott Haven), the foundry of the brothers J. B. and W. W. Cornell (on the Hudson River near 26th Street), and Jones, Beebe and Company, which provided iron for the U.S. Capitol and bridges in Central Park. Later, the Hecla ironworks, established by Neil Poulsen in 1876 in Greenpoint, excelled at large-scale ornamental ironwork for what were then called elevator buildings.

The heyday of cast-iron architecture in New York City began in the mid-1850s and lasted for about three decades. Scores of large, handsome structures were built with cast-iron fronts, and many still stand in the early twenty-first century, notably the Haughwout Building (1856) on Broadway at Broome Street, the Cary Building (1856) on Chambers Street, and a restrained classical building by Bogardus at 254 Canal Street (1857). In 1869 Peter Gilsey used a lavish Second Empire style for his eight-story hotel on Broadway, with large iron fronts on both Broadway and 29th Street, which became a favorite of theatergoers. Cast iron also was used for large public buildings since demolished, such as the Tompkins Market on Third Avenue at Sixth Street (1860) and the Manhattan Market at 34th Street and the Hudson River (1877), for large ferry terminals such as the Brooklyn Ferry at Fulton Street (1863), as well as for modest iron-front buildings of no more than five stories built on lots 25 feet (8 meters) wide throughout the commercial districts of lower Manhattan and downtown Brooklyn.

Retailers who catered to the carriage trade built some of the most stylish cast-iron fronts along the Ladies' Mile, a historic district from the Flatiron Building to Madison Avenue and Broadway at Fifth Avenue; few of these buildings still stand. Among the best known were A. T. Stewart (1862; later known as Wanamaker's), which gradually expanded to fill an entire city block, becoming one of the largest iron structures in the world; the James McCreery Store (1868); Lord and Taylor on Broadway (1869), perhaps the exemplar of the retail emporium; Arnold Constable on Fifth Avenue (1876); B. Altman on Sixth Avenue at 18th Street (1876); and Stern Brothers on West 23rd Street (1878). Fabric merchants and other wholesale firms that drew buyers from around the country occupied imposing iron-front headquarters, particularly in the areas now known as SoHo and Tribeca, where many survive with historic district protection. Most surviving buildings are in the Italianate or Second Empire styles and are intended to resemble stone—for example, the Gunther Building (1871) at the corner of Broome Street; 72 Greene Street (1872), a many-columned building with a pedimented entrance, known as "the king of Greene Street"; and 30 Greene Street (1872). Richard Morris Hunt received critical acclaim for the Roosevelt Building at 478 Broadway (1874), a highly original Greek revival structure, and for a now-demolished building next door done in a brightly painted Moorish style (1876). The expanse of glass windows in cast-iron buildings could be remarkable—for example, in 1 Bond Street (1880) or 361 Broadway (1881).

In the last two decades of the nineteenth century, use of cast iron for entire building facades tapered off; the safety elevator allowed brick and stone commercial buildings to become progressively taller, and steel was increasingly employed as a structural medium from the mid-1880s. Cast iron continued to be used for interior structural columns, often in combination with timber and rolled-iron beams, and was still used for smaller structures or in decorative ways, giving business to small foundries in the city into the twentieth century. In 1904 the Hecla ironworks provided 133 ornamented kiosks of cast iron and glass for the new subway entrances of Interborough Rapid Transit. Cast iron was also used in decorative window enframements, such as the elegant glass and iron front of Charles Scribner's bookstore on Fifth Avenue at 48th Street (1913), and the front of 181 Madison Avenue, a 19-story art deco building at the corner of 34th Street (1928). The ubiquitous, simple, one-story storefront continued to be made of cast-iron elements into the 1920s, but thereafter the use of cast iron for architecture was practically at an end.

From the time of the Depression, cast-iron buildings were endangered by neglect, changing patterns of commerce, and demolition. Whole cast-iron districts were threatened by urban renewal after World War II. These dangers stimulated a new interest in iron architecture and efforts at preservation. Several iron-front buildings received landmark designation, and an area of SoHo encompassing 139 iron-front buildings on 26 city blocks was designated a historic district by the city in August 1973 and a National Historic Landmark in June 1978.

Margot Gayle, Carol Gayle

Castle [née Foote], **Irene** (*b* New Rochelle, N.Y., 7 April 1893; *d* Eureka Springs, Ark., 25 Jan 1969). Dancer. In 1911 she married the English dancer Vernon (Castle) Blythe (1877–1918), a member of Lew Fields's comedy troupe. The two performed with Fields in his popular musical comedy *The Summer Widowers* (1911) before beginning their career in Paris as the dance team Vernon and Irene Castle. For the next five years they were the most popular team of ballroom dancers in the world, appearing mostly in cabarets and at their salon at the Castle House, 26 East 46th Street; they also made a number of films, performed in musicals on Broadway (including Irving Berlin's *Watch Your Step* [1914]), commissioned dance music from such composers as Berlin and James Reese Europe, and wrote the book *Modern Dancing* (1914). After her husband's death in an airplane crash in 1918 Irene Castle continued to act in films before retiring in 1924. She wrote *My Husband* (1919) and *Castles in the Air* (1958). The Castles were portrayed in a 1939 film *The Story of Vernon and Irene Castle*, starring Fred Astaire and Ginger Rogers. They are buried together in Woodlawn Cemetery in the Bronx.

Barbara Cohen-Stratyner

Castle Clinton. Fort built between 1808 and 1811 on an artificial stone island 100 yards (90 meters) off the Battery. Originally known as the West Battery, it was one of seven forts proposed in 1807 by Lieutenant Colonel Jonathan Williams to protect New York Harbor from invasion by the British. The current name dates to 1815. Although the design is traditionally attributed to John McComb, Jr., it was probably the work of Williams; McComb probably designed only the entranceway to the fort and served as the building contractor. The original plan called for many tiers of massive brownstone blocks, but because of financial constraints, only one tier with 28 gun mountings was built. The fort was never used in combat, and after the War of 1812 it ceased to be an important military facility; it was given to the city in 1823 and converted into Castle Garden, a center for popular entertainment. It was the starting point on 9 September 1830 of a balloon flight of 30 miles (48 kilometers) made by the "aeronaut" Charles Durant, and the site in 1850 of a performance by the singer Jenny Lind presented by P. T. Barnum. The fort was reclaimed by the city in 1855 and used as an immigration station until 1890; it was converted in 1896 into the New York Aquarium by the firm of McKim, Mead and White. Robert Moses forced the aquarium to move in 1941 and sought to demolish the fort to accommodate a bridge between Brooklyn and the Battery and later a ventilation unit for the Brooklyn–Battery Tunnel. After the aquarium was demolished, a conflict ensued over preserving the remaining walls of the fort. In 1950 the fort was ceded to the U.S. Department of Interior and designated a national monument. Restored during the 1970s, Castle Clinton then housed ticket booths for the ferries to the Statue of Liberty and Ellis Island. In the early twenty-first century the castle was used as a venue for performing arts, as a transportation hub for heritage tourism and the recreational use of New York Harbor, and as an interpretive center focusing on the history of the castle.

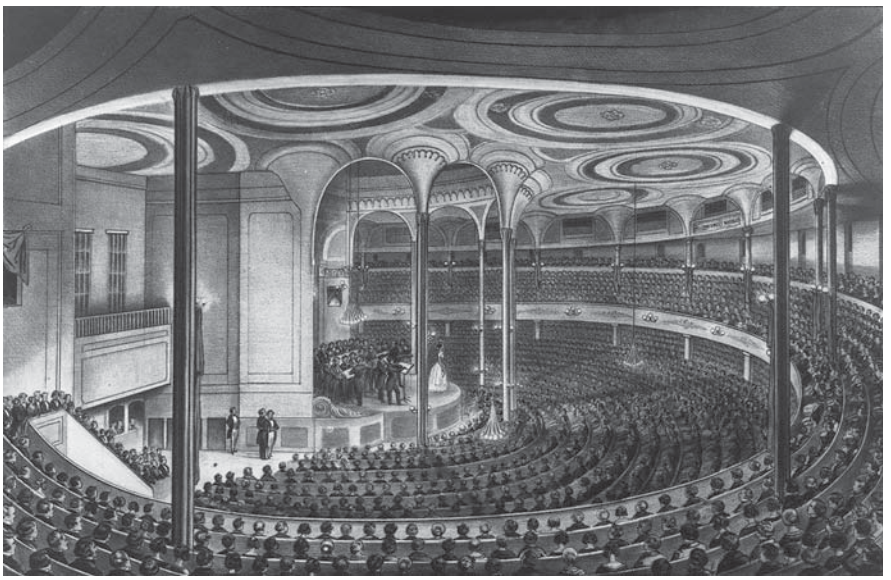
Andrew S. Dolkart



Castle Clinton (left), ca *1900; on the right is a fireboat station at the edge of Battery Park*

Castle Hill. Neighborhood in the southeastern Bronx lying on a peninsula bounded to the north and east by Westchester Creek, to the south by the East River, and to the west by Pugsley's Creek. Its most striking topographical feature is a small hill that led Captain Adriaen Block, the first European observer, to characterize the land as a castle; later it was owned by the Wilkins family and named after their estate. By the 1920s there were a few one-family houses scattered among truck farms that gradually diminished in number before disappearing in the 1940s. Low-income housing projects were built on empty lots in the 1960s. In the mid-1990s the Young Men's Christian Association and the Elias Karmon Gymnasium occupied Castle Hill Point. In the early years of the twenty-first century the neighborhood experienced a slight revival, owing to the renewed interest in the neighboring "SoBro," a nickname for the South Bronx, and Parkchester neighborhoods.

Gary D. Hermalyn

Castleton. Former township in northern Staten Island, covering about 3880 acres (1570 hectares) and bounded to the north by the Kill van Kull and to the east by Upper New York Bay. Its area encompasses the neighborhoods of New Brighton, Brighton Heights, Randall

Jenny Lind at Castle Garden, 1850

Manor, Silver Lake, Castleton Corners, St. George, Tompkinsville, Four Corners, and West New Brighton. One of the original four subdivisions of the County of Richmond, it was the governor's manor and was named for Governor Thomas Dongan's manor of Cassiltowne in County Kildare, Ireland. The manor house, which stood on a lot bounded to the north by Richmond Terrace, to the east by Dongan Street, to the south by Castleton Avenue, and to the west by Bodin Street, was reportedly a place for assembly and celebration by local Indians before being destroyed by fire on 25 December 1878.

Martha S. Bendix

Castleton Corners. Neighborhood in northern Staten Island bounded to the east by Manor Road and to the south by Victory Boulevard. Once called Centreville, the neighborhood lay at a corner of Governor Thomas Dongan's land grant and was the site of a brewery during the nineteenth century. After the Verrazano–Narrows Bridge was completed in 1964, the Staten Island Expressway was extended to the area, spurring the construction of houses. During the 1980s there were modest levels of immigration to the area from India, Korea, the Philippines, China, Israel, and Egypt. Castleton Corners early in the twenty-first century is largely a white, middle-class residential area, with a growing number of Asians and some commercial sections.

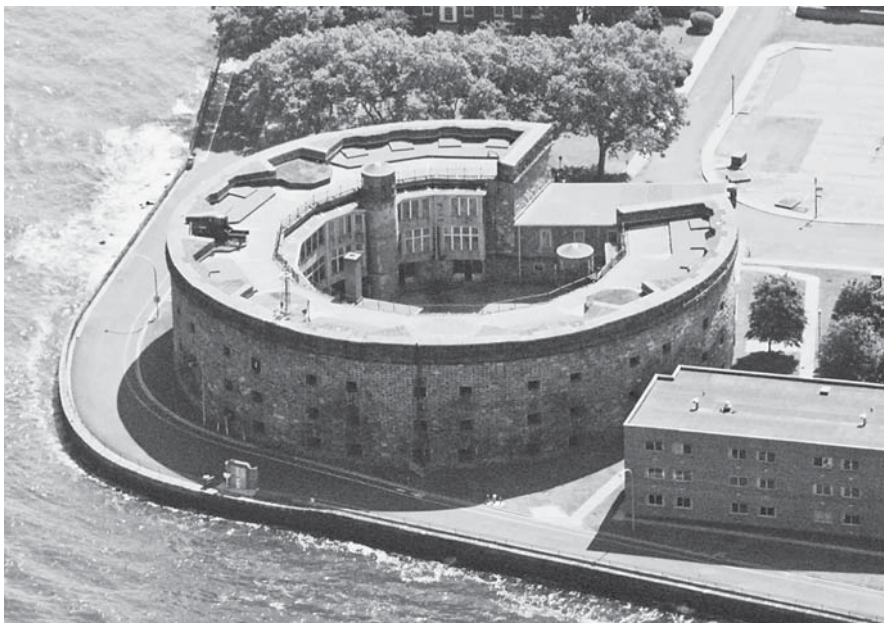
Martha S. Bendix

Castle Williams. Fort on Governors Island, begun in 1807 and completed in 1811 according to the designs of Jonathan Williams. It was popularly known as the "cheese box" because of its circular shape. Two hundred feet (60 meters) in diameter, with ivied red sandstone walls 40 feet (12 meters) high and 8 feet (2.5 meters) thick, it housed three tiers of guns and was intended to blast away at any enemy ships that managed to force their way past Forts Wadsworth and Hamilton at the southern entrance to the harbor. During the Civil War, Castle Williams housed Confederate prisoners of war; in the first half of the twentieth century it was a disciplinary barracks for the U.S. Army, and later it was operated by the U.S. Coast Guard.

Kenneth T. Jackson

Castro, Bernard (*b* Palermo, Sicily, 11 Aug 1904; *d* Ocala, Fla., 24 Aug 1991). Businessman. He moved to New York City in 1919, worked as an apprentice upholsterer, and learned English at night school. In 1931 he invented the fold-out sofa bed, or convertible, and in the same year opened a retail store at Fifth Avenue between 14th and 15th streets. Sales were sluggish until he began running advertisements on local television in 1948 that featured his daughter Bernadette. He eventually opened 48 stores in 12 states and maintained a conspicuous billboard in Times Square for about 30 years, until September 1983. Under his daughter's management the firm operated five stores in the city in 1991. The Castro Convertibles Corporation was bought by Krause's Sofa Factory in 1993 after declining sales.

Marc Ferris



Caswell–Massey. Pharmacy. It was established in 1752 by William Hunter in Newport, Rhode Island, and later moved to New York City, where it was acquired by John Caswell and William Massey. Situated successively at Fifth Avenue and 25th Street and then at 48th Street and Lexington Avenue, it is reportedly the oldest pharmacy in the city. The business was taken over in 1906 by the brothers Ralph and Milton Taylor, and it remained in their family until it was sold in 1989 to a holding company based in Hong Kong. Under the name Caswell–Massey the company operates more than two dozen outlets and distributes nationwide an array of specialty soaps, colognes, and beauty care products. In 1999 Anne Robinson, a descendant of President John Quincy Adams, bought the company and restored it to profitability. Early in the twenty-first century it was a small national chain.

Owen D. Gutfreund

Cathedral College. Private college, opened in Brooklyn in 1914 as the Cathedral College of the Immaculate Conception. In 1967 it moved to Douglaston, Queens, where it provided undergraduate education to candidates for the Catholic priesthood. After the school closed in 1989 the building became a pastoral center and a house for seminarians attending local colleges and for retired priests.

Christina Plattner

Cathedral of St. John the Divine. The largest church in the United States, situated at Amsterdam Avenue and West 112th Street in Morningside Heights and incorporated in 1873; the principal church of the Episcopal Diocese of New York. The firm of Heins and LaFarge drew up plans in 1891 and the first stone was laid in 1892. In 1911 the commission for the design was transferred to the firm of Cram and Ferguson, and the east end and the crossing were completed. The sanctuary and choir were built in a Romanesque style; the nave was designed in a French Gothic style by Ralph Adams Cram, its main vault built to a height of 124 feet (38 meters). After the entire length of 601 feet (183 meters) was finished in 1941, construction halted until 1979. Stained-glass windows depicting biblical characters and modern personages were installed, and the traditional decor was embellished with modern themes. During the 1980s and early 1990s the Cathedral of St. John the Divine became known for its attention to the arts, the community, youth, the elderly, ecumenism, the environmental movement, and international issues. It is reportedly the world's largest cathedral and the third-largest church, after the Basilica of Our Lady of Peace of Yamoussoukro in the Ivory Coast and St. Peter's in Rome. Construction resumed on the southwest tower from 1982 to 1992, employing young city dwellers apprenticed to a master mason from England, and in 2007 the scaffolding surrounding it was removed. After the gift shop in the north transept was destroyed by fire in December 2001, scaffolding was erected throughout the cathedral and the

Castle Williams, 2009

Cathedral of St. John the Divine, 2009

entire interior was cleaned of soot. This work was completed, and the full length of the cathedral was reopened in 2008. Construction of a new residential building on the southeast site of the cathedral close also began in March 2007.

Howard E. Quirk, *The Living Cathedral of St. John the Divine: A History and Guide* (New York: Crossroad, 1993)

J. Robert Wright

Cathedral School. Episcopal elementary and secondary school, occupying 13 acres (5 hectares) on the grounds of the Cathedral of St. John the Divine at Amsterdam Avenue and West 112th Street in Manhattan. Founded by Bishop Henry Potter in 1901, it was a boarding school for 40 boys, originally to provide the boys choir for a large Gothic cathedral. The choir earned a long-standing reputation as one of the finest in the United States. In 1964 the school began admitting non-singing boys, and in 1974 it became coeducational under Bishop Paul Moore. In the early twenty-first century it enrolled around 250 students from nursery school and pre-kindergarten through eighth grade.

Richard Schwartz

Cather, Willa (Sibert) (*b* Winchester, Va., 7 Dec 1873; *d* New York City, 24 April 1947). Novelist. At nine she moved with her family to Nebraska, where she grew up among European pioneers who inspired much of her writing. She graduated from the University of Nebraska at Lincoln in 1895 and moved to Pittsburgh, where she worked as a journalist. After publishing her first collection of poems and short stories she was invited to join the editorial staff of *McClure's* in New York City in 1906. From 1908 to 1913 she lived at 82 Washington Place. On the success of her novel *O Pioneers!* (1913) she left her editorial position and moved to 5 Bank Street, where she remained until 1927. Her portrayals of simple, courageous men and women living on the prairie in such novels as *My Ántonia* (1917) reflected her nostalgia for the American West, a feeling intensified by her increasing awareness of materialism in the city during the early twentieth century. She won a Pulitzer Prize for the novel *One of Ours* (1922). Cather lived at the Grosvenor Hotel at 35 Fifth Avenue from 1927 until 1932, when she moved to 570 Park Avenue.

James Leslie Woodress, *Willa Cather: A Literary Life* (Lincoln: University of Nebraska Press, 1987)

James E. Mooney

Catholic Charities of the Archdiocese of New York. Charitable organization formed in 1920 by Archbishop Patrick Hayes to centralize Catholic charities after a 1919 diocesan survey revealed waste and duplication in staffing and services. At the outset it was responsible for 32 charitable institutions, including hospitals, orphanages, nurseries, and homes for the aged, as well as various other groups. It set up divisions responsible for families, health, children, protective care, social action, and finance. Via the 9/11 Neediest Fund and the 9/11 United Services Group, it was instrumental in providing assistance to residents after the 2001 terrorist attacks. In 2008 it delivered approximately $577 million in services.

Matthew J. Brennan

Catholic Club of the City of New York. Organization formed in March 1871 to promote Catholic service and the study of Catholic history, literature, science, and art. Initially known as the Xavier Union, it was an offshoot of the Xavier Alumni Sodality (1863), an organization of graduates of St. Francis Xavier College. The club was incorporated in 1873 and renamed the Catholic Club on 22 November 1888. The club was a lay organization with its own administration but had the approval of the Roman Catholic Archdiocese of New York. It operated a building at 120 Central Park South from March 1892 and published a bulletin from 1891 to 1930. In 1925 it had a reference library of 30,000 volumes, the largest of its kind in the country open to the public. The club declined after 1930 and ceased operations in 1958.

Marion R. Casey

Catholic Medical Center (of Brooklyn and Queens). Hospital system formed in 1967 by the Diocese of Brooklyn to reduce costs through centralized management; it was the first network hospital system approved by New York State. The center comprised Holy Family Nursing Home (1879) and St. Mary's Hospital (1882) in Brooklyn, and St. John's Hospital (1891), Mary Immaculate Hospital (1902), St. Joseph's Hospital (1962), and the Monsignor Fitzpatrick Skilled Nursing Pavilion (1987) in Queens, as well as the country's largest hospital-based home care program. The center merged with Manhattan's St. Vincent's Hospital in 2000 to form the Saint Vincent Catholic Medical Center (SVCMC); this organization closed in 2010. In order to regain solvency, in 2006 SVCMC sold Mary Immaculate Hospital and St. John's Hospital and closed St. Mary's Hospital. SVCMC retained Holy Family Nursing Home and the Monsignor Fitzpatrick Skilled Nursing Pavilion.

Matthew J. Brennan

Catholics. At the end of the Revolutionary era Catholics in New York City numbered no more than 200, but they became the city's largest religious denomination by the mid-nineteenth century and have remained so to the present day.

1. Colonial and Early Federal Periods, 1640–1815

For much of the colonial period Roman Catholic worship in New York City was clandestine because the Dutch and English prohibited the public practice of Catholicism. In 1643 the French Jesuit missionary Isaac Jogues visited New Amsterdam and found only two

Catholic inhabitants. With the restoration of the Stuarts in 1660 Catholics enjoyed a brief period of toleration in England and the colonies. In New York Catholics were able to practice their religion from 1674 to 1688. Under Governor Thomas Dongan (1682–88), an Irish Catholic, the colonial assembly passed the "Charter of Liberties and Privileges" on 30 October 1683, granting religious freedom to all Christians. Dongan also brought to the colony three English Jesuits, who opened a school and celebrated Mass. The Glorious Revolution in England in 1688–89 and Leisler's Rebellion in New York City in 1689–91 brought a temporary end to religious toleration of Catholics. By 1696 there were only 10 known Catholics, and in 1700 a law barred Catholic priests from entering the colony under penalty of life imprisonment. A combination of anti-Catholic and antiblack hysteria swept the city during the "Negro plot" of 1741, when rumors circulated that Catholics had encouraged a slave revolt. Among the victims executed for treason was John Ury, an Anglican clergyman who was mistaken for a Catholic priest.

The repeal of the antipriest law in 1784 and the arrival of the Irish Capuchin friar Charles Whelan led to the organization of the first Catholic parish in the city. Whelan found a poor community of about 200. A group of 22 Catholic laymen organized the first parish, and on 10 June 1785 "The Roman Catholic Church in the City of New York" was incorporated. In little more than a year a small brick church was erected at the corner of Barclay and Church streets on three lots leased from Trinity Church. The building was formally dedicated as St. Peter's Church on 4 November 1786.

In 1808 Pope Pius VII established the Diocese of New York, which contained all of New York State and northern New Jersey. The first bishop, Richard Luke Concanen, O.P., died in Italy in 1810, unable to reach his diocese because of the Napoleonic Wars. The initial development of the see in 1808–15 was due to an Alsatian Jesuit, Anthony Kohlmann. He built the original St. Patrick's Cathedral (1815) on Mott Street and opened the New York Literary Institute, a short-lived Jesuit college that closed in 1813.

2. The Immigrant Church

New York's first resident bishop (1815–25) was John Connolly, O.P., another Irish Dominican. On his arrival in 1815 he found only three churches and six or seven priests in the whole diocese. But between 1815 and 1842 the number of Catholics increased from about 15,000 to 200,000, most then Irish, but also many Germans and a few French. The massive influx of immigrants intensified ethnic rivalry within the Catholic community. Despite these problems the Catholic Church in New York City became larger and stronger (and poorer) during the decades before the Civil War. The Sisters of Charity founded in 1809 by Elizabeth Ann Bayley Seton, a native New Yorker, opened a Catholic orphanage in 1817. Father John Power, the pastor of St. Peter's Church in 1819–49, launched the *Truth Teller,* the first Catholic newspaper in the city, in 1825, and in the following year helped to establish St. Mary's Church on Grand Street, the third Catholic church in the city. The popular Cuban-born priest, Felix Varela, founded Christ Church (1827), which was divided into the parishes of St. James and Transfiguration in 1833. Chronic debt plagued many of the parishes.

During the 1840s John Hughes became the most influential Catholic prelate in the United States. Born in Ireland in 1797, he became the coadjutor (assistant) bishop to Bishop John DuBois in 1838 and successfully eliminated "trusteeism" by shifting the control of parish property from lay parish trustees to the pastors and the bishop. In 1840, at the invitation of Governor William Seward, Hughes challenged the monopoly of public education in New York City by the Public School Society, a government-subsidized Protestant organization, and demanded comparable funding for Catholic schools. After an acrimonious political struggle the state legislature replaced the Public School Society in 1842 with elected school boards and prohibited religious instruction in public schools. As a consequence Hughes decided to build his own system of parochial schools. Ironically, his success in Albany led to the secularization of the public schools, a result that he neither intended nor desired.

Hughes became the fourth bishop of New York on 20 December 1842 and continued to attract national attention by his vigorous response to anti-Catholic bigotry. In 1844 a nativist mob killed 13 Irish Catholics and destroyed three churches in Philadelphia. When nativists threatened similar attacks in New York City, Hughes posted armed guards around his churches. He warned the nativist mayor-elect James Harper that if harm should come to his churches, he would transform the city into "a second Moscow" (a reference to tactics against Napoleon in 1812). His leadership maintained the peace and prevented the sort of bloodshed that occurred elsewhere. To alleviate the chronic shortages of priests and sisters, Hughes invited 10 religious communities to the diocese.

The enormous growth of the Catholic community led the Holy See to restructure the church in New York State by establishing new dioceses in Buffalo and Albany (1847) and in Brooklyn and Newark, New Jersey (1853). Within six years the original Diocese of New York was reduced to one-tenth its former size and made an archdiocese on 19 July 1850 with Hughes as the first archbishop. The first two bishops of Brooklyn, John Loughlin (1853–91) and Charles E. McDonnell (1892–1921) were both priests of the Archdiocese of New York.

During the massive Irish and German immigration of 1840–65 the number of Catholics in the diocese reached almost 400,000, making them the single largest denomination in the city. "National parishes," which were ethnic rather than territorial, were formed to meet the pastoral needs of German- and French-speaking Catholics. The same practice was followed later for Italian and Slavic im-

migrants. At the close of the Civil War there were 32 parishes in Manhattan, of which 23 were territorial (and mainly Irish), eight were German, and one was French. In all, Hughes was responsible for the establishment of 61 new parishes within the present confines of the Archdiocese of New York and for the construction of the new St. Patrick's Cathedral on Fifth Avenue (begun 1858, consecrated 1879). On his death in 1864 perhaps as many as one of every two New Yorkers was a Catholic, and the parochial schools educated 16 percent of the 100,000 children in the city.

Hughes's successor, John McCloskey, was the first native-born archbishop of New York (1864–85) and the first American cardinal (1875–85). In 1872 John Kelly replaced William M. "Boss" Tweed as the head of Tammany Hall and inaugurated a period of Catholic political domination (his wife was a niece of McCloskey). William R. Grace, a successful businessman, became the city's first Catholic mayor in 1880. Catholic charitable institutions continued to provide health and social services, notably St. Vincent's Hospital (1849), the Catholic Protectory (1863), the New York Foundling Hospital (1870), and the Mission of the Immaculate Virgin for the Protection of Homeless and Destitute Children (1871). The first black Catholic church north of the Mason–Dixon line, St. Benedict the Moor, opened in 1883 in a former Protestant church on Bleecker Street in Greenwich Village and later moved to the new black neighborhood around West 53rd Street.

Michael Augustine Corrigan, archbishop 1885–1902, was a leading figure in the conservative wing of the American Catholic hierarchy and a conscientious administrator who added 99 parishes to the archdiocese. However, his administration was marred at the outset by his public clash over local politics with Edward McGlynn, the charismatic pastor of St. Stephen's Church. McGlynn defied Corrigan to support Henry George, the reform candidate in the mayoral campaign of 1886, leading to McGlynn's suspension and excommunication. The McGlynn Affair had a polarizing effect in the archdiocese and was an embarrassment to the American hierarchy. Significantly, Corrigan was the only archbishop of New York in 150 years who was not made a cardinal.

3. Two Dioceses in One City

The creation of Greater New York City in 1898 left the city's Catholics divided between two dioceses, the Archdiocese of New York and the Diocese of Brooklyn. The former was composed of Manhattan, the Bronx, and Staten Island (as well as seven upstate counties) and the latter of Brooklyn, Queens, and the rest of Long Island. Both dioceses grew rapidly during the early twentieth century. In the Diocese of Brooklyn the Catholic population increased from 500,000 in 1900 to 800,000 in 1920; in the Archdiocese of New York the Catholic population increased from 825,000 in 1900 to 1.3 million in 1920, with much of the growth occurring in the Bronx, Westchester, and Staten Island.

Many of the new Catholics were Italian immigrants whose numbers grew from 12,223 in 1880 to 554,449 in 1910. In the Archdiocese of New York both Corrigan and his successor, John Cardinal Farley (1902–18) responded to this pastoral challenge by recruiting priests from Italy. The most famous of the Italian missionaries was not a priest, however, but Mother Frances Xavier Cabrini, who arrived in New York City in 1889 and was canonized in 1946, the first U.S. citizen to receive this honor.

The heyday of Irish domination of the Catholic Church in New York City occurred in the early twentieth century under Cardinal Farley and his successor, Patrick Cardinal Hayes (1919–38), a first-generation Irish American from the Lower East Side. Their counterpart in Brooklyn was Thomas E. Molloy (1922–56). At the celebration of the centennial of the Diocese of New York in 1908, 40,000 men marched up Fifth Avenue to the cathedral while hundreds of thousands watched from the sidelines. Hayes's most notable contribution was the organization of several hundred charitable institutions and agencies of the archdiocese into the Catholic Charities of the Archdiocese of New York.

Francis Cardinal Spellman (1939–67) was the last of the brick-and-mortar archbishops of New York. He added 45 new parishes, spent almost $600 million building and renovating Catholic educational and charitable facilities, and centralized the financial and administrative operations of the archdiocese. In the late 1940s the Catholic population of the Archdiocese of New York increased markedly because of a huge influx of Latin American Catholics, first from Puerto Rico and then from Cuba, the Dominican Republic, and other countries. Spellman established an archdiocesan office for Hispanic Catholics, sent large numbers of diocesan priests to learn Spanish, and welcomed the newcomers into his diocese.

In 1957 the Diocese of Brooklyn was reduced in size when Nassau and Suffolk counties were made a separate diocese with its seat in Rockville Centre. Brooklyn became the only totally urban diocese in the United States under Bryan J. McEntegart (1957–68) and the smallest in area, though it remained one of the largest in population, with more than one million Catholics. On 4 October 1965 Pope Paul VI became the first pope to visit New York City; he addressed the United Nations and celebrated an outdoor Mass at Yankee Stadium.

Both Terence J. Cooke (1968–83) in New York and Francis J. Mugavero (1968–90) in Brooklyn assumed their posts amid major changes in the church in the wake of the Second Vatican Council and widespread turmoil in American society. In both dioceses the total Catholic population remained relatively stable, but only because Latin American immigrants replaced older middle-class Catholics. In New York Cooke used his financial acumen to establish a cooperative system whereby wealthier parishes were taxed to support poorer ones. In October 1979 Pope John Paul II visited the city, celebrating Mass at both Shea Stadium and Yankee Stadium, and returned again for a another visit in 1995.

4. The Contemporary Scene

John Cardinal O'Connor (1984–2000) assumed a high media profile as archbishop of New York, clashing with local and state officials over the issue of abortion and establishing warm relations with both the New York Jewish community and labor leaders. His successor, Edward Cardinal Egan (2000–2009), revamped the finances of the archdiocese and initiated the first comprehensive consolidation of parishes. Egan was succeeded in 2009 by Archbishop Timothy Dolan. In Brooklyn, Thomas V. Daily (1990–2003) succeeded Bishop Mugavero and was succeeded by Nicholas A. DiMarzio (2003–).

In 2007 the Catholic Church in New York City consisted of 410 parishes, 193 in the Archdiocese of New York and 217 in the Diocese of Brooklyn. The Catholic population of the archdiocese (including the seven upstate counties) was 2.5 million, with 1505 priests; the Catholic population of the Diocese of Brooklyn was 1.5 million, with 722 priests. Both New York and Brooklyn maintained extensive school systems, with 93,548 and 57,318 students, respectively. Both dioceses also remained home to large numbers of immigrants, mainly Hispanic, but also growing numbers of Haitians, Asians, and Africans. Each Sunday Mass was celebrated in more than 30 languages in New York City.

Catholic schools. The first Roman Catholic school in New York City opened in 1800 at St. Peter's Church in lower Manhattan. It remained the only Catholic school until 1817, when a "free school" was set up in the basement of St. Patrick's Old Cathedral under the leadership of Bishop John Connolly. Both schools were characterized by poor conditions because their parishes could not afford to maintain them. During the tenure of John DuBois, appointed Connolly's successor in 1826, the first school building in the Diocese of New York was erected at St. Patrick's Cathedral in 1837, and a second school was built in the following year at St. Peter's. DuBois also helped to establish Catholic secondary education in New York City, opening St. Joseph's Select School for girls in 1833 (which became Mount St. Vincent's Academy in 1847) and St. Mary's Academy in 1835. While DuBois was indisposed, his duties as the diocesan administrator were assumed by John J. Hughes, who in 1840 oversaw the opening of St. Joseph's Seminary in the Bronx, staffed successively by Italian Vincentians and French Jesuits before the Diocese of New York took charge. Hughes was appointed bishop in 1842, at a time when anti-Catholic sentiment in the public schools was strong. Children were not allowed to read from the Catholic version of the Bible, and with the passing of the Maclay Bill in 1842, religious instruction was prohibited in public schools. In response Hughes announced that the archdiocese would give priority to building Catholic schools, a task that until then had been handled primarily by individual parishes. Hughes in effect committed himself and other leaders of the church to establishing a Catholic parochial school system in New York City. By 1858 the assets of the Catholic educational system of New York City were valued at about $2 million. At the time of Hughes's death in 1864, there were about 15,000 children attending the 12 select schools and 31 free schools in the Archdiocese of New York.

Parochial schools served the city's growing immigrant population. German parochial elementary schools and high schools began opening in the city in the 1860s. Not all Catholics supported parochial education: some feared that it would further separate Catholics from the mainstream of society, and others believed that Catholic leaders should focus on churches, not schools. Most Catholics were concerned about the financial burden that schools placed on their parishes. By a decree of the Third Plenary Council of American bishops, held in 1884 in Baltimore, each pastor was required to build a parochial school in his parish within two years; anyone who failed to do so was subject to removal from his pastorate. A strong advocate of the council's decrees concerning Catholic education was Michael A. Corrigan, under whose leadership the Archdiocese of New York opened 75 schools and 3 academies by the time of his death in 1902 (although it fell short of the goal of a school in every parish). Under Corrigan's successor, John Cardinal Farley, the Cathedral Girls' High School, a free parochial school, opened in 1905. By 1908 there were 3736 girls attending Catholic secondary schools in the Archdiocese of New York. St. Peter's, a Catholic high school opened in 1915 in Staten Island, attracted many Catholic students who could not afford the tuition of a private high school. The Jesuits established Regis High School in 1914 exclusively for scholarship students; other religious orders ran Catholic secondary schools and met their operating expenses by charging tuition. The Sisters of Charity, who maintained 10 academies, were the main order providing secondary education for girls; the Jesuits and the De La Salle Brothers directed most of the secondary schools for boys. Farley invited a number of other communities into the archdiocese to help support secondary education, including the Christian Brothers of Ireland and the Religious of the Sacred Heart of Mary. By the time of his death in 1918, he had opened 50 schools with about 28,000 students. Most parish churches in New York City that did not have a school had plans to build one by the time Francis Spellman was appointed archbishop in 1939. He expanded parochial education for boys, opening Cardinal Hayes High School (1941) in the Bronx, the first secondary school to be administered by diocesan clergy. During his tenure a controversial bill was introduced in Congress by Representative Graham Barden that would have required the federal government to pay the states $50 for each child enrolled in public primary and secondary schools. The Catholic church fought passage of the bill because parochial schools would not receive any of the money. This led Spellman to disagree publicly with Eleanor Roosevelt and others who did not support state aid for parochial education.

The number of parochial schools grew between 1940 and 1965 (the peak year for Catholic parochial school attendance in the United States). In Manhattan, the Bronx, and Staten Island the number of schools increased from 146 to 183. Despite this growth most Catholic schoolchildren were not enrolled in parochial schools, which in 1966 enrolled about 40 percent of all Catholic students and 27 percent of Catholic high school students. The 1970s saw the opening of parochial schools at each of the seven African American parishes; many of the students attending these schools were non-Catholics. The staffs of Catholic schools, historically composed of members of male and female religious orders, gradually changed after about 1965. By the early twenty-first century the majority of Catholic schoolteachers were laypersons.

Margaret M. McGuinness

Catholic Worker. Weekly newspaper launched in 1933 by Dorothy Day.

cat shows. Madison Square Garden was the site of the first cat show in North America, sponsored by the Englishman James T. Hyde on 8 May 1895. The Atlantic Cat Club held its first show at Madison Square Garden in 1903 and about 10 more in later years; in 1906 the club became affiliated with the Cat Fanciers Association. Another affiliate of the association, the Empire Cat Club, was formed in 1913 and in 1917 began staging annual shows in New York City, until 1984 usually at Madison Square Garden and occasionally at hotels in Manhattan. Later venues included the New York Passenger Ship Terminal at Pier 90 in Manhattan (1985), the Jacob K. Javits Convention Center (1986), the Borough of Manhattan Community College (1988), and the Seaview Home on Staten Island (from 1989). Madison Square Garden was also the site of shows held by the Knickerbocker Cat Club (in the 1970s) and the International Cat Association (annually from 1985). In 1971 the Brooklyn Cat Fanciers, a club affiliated with the Cat Fanciers Federation, began holding an annual show at the Hall of St. Finbar's, at Bay 20th Street and Bath Avenue. In 2008 the annual Cat Championship, sponsored by the Cat Fanciers' Association, was held at Madison Square Garden.

Joseph S. Lieber, Kayla Soyer Stein

Catt [Chapman; née Lane]**, Carrie (Clinton)** (*b* Ripon, Wis., 9 Jan 1859; *d* New Rochelle, N.Y., 9 March 1947). Suffragist. After serving briefly as the president of the National American Woman Suffrage Association she shifted her attention to New York City, where in 1909 she organized the New York City Woman Suffrage Party to unify local suffragists. She organized efforts to hold a referendum in 1915 on giving women the vote by amending the state constitution; after this failed she regained the presidency of the national suffrage association, a post she held until the 19th Amendment to the U.S. Constitution was passed. She reorganized the association after 1920 as the League of Women Voters but concentrated her energies on pacifism and international feminism. With Nettie Rogers Shuler she wrote *Woman Suffrage and Politics: The Inner Story* (1923). Her office was at 171 Madison Avenue; she lived at 404 Riverside Drive.

Cattell, James McKeen (*b* Easton, Pa., 25 May 1860; *d* Lancaster, Pa., 20 Jan 1944). Psychologist. He graduated from Lafayette College, studied at Johns Hopkins University and the University of Göttingen, and earned a doctorate in 1886 at the University of Leipzig. He became the first professor of psychology in the world in 1889 at the University of Pennsylvania and in 1891 was appointed the first professor of psychology at Columbia University, where he was the head of the psychology department. During the next two decades he helped to establish psychology as a discipline and an independent experimental science. He shared the functionalists' interest in measuring intelligence and developed the first tests based on pain thresholds and reaction times. His contributions to studies of intelligence testing and individual differences continued to be widely acknowledged, and many of his students became well known. He helped to form the American Psychological Association in 1892 and was its president in 1895. With J. M. Baldwin he launched *Psychological Review,* of which he remained the editor until 1903, and *Psychological Monographs* (now *Psychological Abstracts*). He also oversaw the weekly journal *Science,* which he converted into the journal of the American Association for the Advancement of Science; *Popular Science Monthly* (1900), which he renamed *Scientific Monthly;* and the magazine *American Naturalist* (1908). He also published the biographical directories *American Men of Science* (1906) and *Leaders in Education* (1932). In 1915 he began publishing *School and Society* and helped to form the American Association of University Professors. He was known for his outspokenness on controversial issues and his contentious relationship with the president of Columbia, Nicholas Murray Butler; he was nearly dismissed in 1910 for criticizing the university's pension plan and again in 1913 when he published *University Control,* which attacked Wall Street for its influence on American colleges. He was finally dismissed in October 1917 after the trustees charged him with treason and sedition for defending conscientious objectors during World War I (the historian Charles A. Beard resigned to protest their decision). Cattell never returned to teaching but continued conducting research, writing, and working as a science editor. He also helped to form the Psychological Corporation, a firm that provided psychological services to businesses (1921), and Science Press and was president of the American Association for the Advancement of Science (1924), the International Congress on Psychology (1929), and the Science Service in Washington (1930–34). He was the first psychologist elected to the National Academy of Sciences (1890) and the American Academy of Science (1901).

Kevin Kenny, Sandra Opdycke

CBGB (& OMFUG) [Country, Bluegrass, Blues and Other Music for Uplifting Gourmandizers]. A rock club at 315 Bowery near Bleecker Street in lower Manhattan, opened in 1973 by Hilly Kristal. After a brief, undistinguished period as a venue for its namesake musical styles it began featuring rock groups in 1974. It soon became the center of an emerging music scene that came to be known as punk rock. Among those who appeared there were such pioneering punk and new wave groups as the Ramones, Television, the Patti Smith Group, Blondie, the Dead Boys, Richard Hell and the Voidoids, and the Talking Heads. Over the next three decades it became the best-known rock club in the United States, and possibly the world. CBGB closed in October 2006 after a protracted rent dispute, with a final concert performed by Patti Smith.

CBS. See Columbia Broadcasting System.

Cedar Grove. Neighborhood in east central Staten Island. Once known as Cedar Grove Beach, it was first shown on maps in 1850 as a small colony of summer houses for sport fishermen. The Cedar Grove Beach Club was formed in 1938. The 67 bungalows in the area were condemned by the City of New York in 1962 for a highway that was never built; the occupants of the bungalows still rent them from the city.

Martha S. Bendix

Cedar Tavern. Drinking establishment. It first opened its doors on Cedar Street in 1866. It moved to its Greenwich Village location, at 24 University Place, in 1945. In the 1950s it gained a reputation as a gathering place for avant-garde artists, writers, filmmakers, and musicians, including Jackson Pollock, Larry Rivers, Frank O'Hara, John Ashbery, Jack Kerouac, Alfred Leslie, and David Amram. The leading figures of the New York School and Beat Generation found the bar a congenial place to meet, drink, socialize, and exchange ideas on life and art. The Cedar, in turn, accepted the artists' eccentricities and forgave their excesses. In 1964 the bar moved to 82 University Place, where it continued to attract celebrities like F. Murray Abraham as well as neighborhood drinkers and New York University students. It closed in November 2006.

William M. Gargan

Celler, Emmanuel (*b* New York City, 6 May 1888; *d* New York City, 15 Jan 1981). Democratic congressman. After graduating from Columbia College and Columbia Law School, he was admitted to the bar in 1912. In 1922, running for Congress in a Brooklyn district that had never gone Democratic, Celler squeaked to victory, denouncing prohibition and nativism to its Jewish, Italian, Greek, and

Irish voters. As his district became increasingly multiethnic, multiracial, and Democratic, Celler, ever sensitive to his minority constituents, was reelected to 24 consecutive terms. From the first, he opposed the discriminatory national origins quota system in U.S. immigration law. During World War II, he lambasted the Roosevelt administration and the State Department for their strict application of the quotas, which made the rescue of Europe's Jews from the Holocaust nearly impossible. After the war, Celler authored measures permitting Indians and Filipinos to immigrate and become naturalized U.S. citizens and 300,000 displaced persons to enter the country. With the 1965 passage of the Hart-Celler immigration reform act, which he cosponsored, he finally achieved his goal of ending immigration quotas based on national origins. Celler was a staunch supporter of the New Deal, Fair Deal, and Great Society programs. As chairman of the House Judiciary Committee (1949–53, 1955–73), he introduced and steered through Congress each of the civil rights bills from 1957 to 1968 and four constitutional amendments (23rd through the 26th). After Elizabeth Holtzman defeated Celler in the 1972 Democratic primary, he continued practicing law in New York City. His autobiography is titled *You Never Leave Brooklyn* (1953).

Lawrence Rubin, "Oral History Memoir of Congressman Emanuel Celler." 24 June 1970 and 1 August 1972, William E. Wiener Oral History Library of the American Jewish Committee, New York

Lutheran Cemetery, Middle Village, Queens

cemeteries. During the city's first two centuries, most burials were in churchyards or synagogue plots in or near residential areas in Manhattan and Brooklyn, or in family plots on farms or estates. In 1820 there were 100 cemeteries in Manhattan alone, 23 of them between City Hall and the Battery. Thirty years later, however, there were only 23 cemeteries on the entire island, and New Yorkers were being buried in remote parts of Kings and Queens counties. There were two reasons for this development, and they added up to a burial crisis in New York City. One was the rapidly increasing demand for downtown land for real estate development as the metropolitan area's population tripled between 1830 and 1850. The other was the city's long, bleak history of recurring yellow fever and cholera epidemics for which the blame was almost universally assigned to "miasmic vapors" rising from graves.

One solution to the burial crisis was to contain miasmic vapors in costly underground, marble-clad burial plots, two of which (the New York Marble Cemetery and the New York City Marble Cemetery) were built near Third Street and Second Avenue in the early 1830s. They are still maintained and very occasionally accept new burials. Another solution was to build or pave over old burial grounds, making little or no effort to honor the remains. An untold number of cemeteries in all the boroughs, most of them used by the working class or African Americans, disappeared in this fashion in the nineteenth and twentieth centuries. Among the few that have been restored is the African American Burial Ground at Duane Street in Manhattan. The city's potter's field for indigent people was moved in 1823, with its remains, from its original site (now Washington Square) to the site of Bryant Park, and then in 1869 to Hart Island, off the Bronx. The most lasting solution to the burial crisis of the early nineteenth century was to close burial grounds and churchyards in heavily populated parts of Manhattan and Brooklyn and transfer the remains to, and make new burials in, large new cemeteries in outlying rural areas. After burials were banned south of South Street in 1830 (the line was moved northward with the population), many churches and cemetery associations sold their land and founded new cemeteries in Kings and Queens counties or acquired sections in existing cemeteries. Many families were outraged to have their ancestors taken away from nearby crypts and graves. *The New York Times* reported that when remains were exhumed from a Baptist churchyard in 1863 it caused a great fervor.

The few colonial-era burial grounds that survive include those of the Staten Island Reformed Church and the Spanish–Portuguese synagogue, Shearith Israel, in Manhattan; the Revolutionary Cemetery in Bay Ridge, Brooklyn; the Moore-Jackson Cemetery in Woodside, Queens; and Trinity Churchyard in Manhattan. All are inactive. Trinity Church's other cemetery, at 155th Street and Broadway, is the only Manhattan cemetery that conducts burials on a regular basis. The first of the new cemeteries that received transfers and new burials was Green-Wood Cemetery, in Brooklyn, founded in 1839. At 474 acres (192 hectares), it was so large that when the state legislature passed the 1847 Rural Cemeteries Act permitting the construction of other nonsectarian burial grounds outside the city, no new cemetery was permitted to have more than 200 acres (81 hectares) in any one county. The first cemeteries created under the authority of the act, Cypress Hills (1847) and the Evergreens (1849), were built on the Queens–Kings border. Many of their initial burials included mass transfers from old downtown churchyards or members of numerous fraternal societies and military, ethnic, and other associations that acquired plots in cemeteries. In 2008 there were 17 cemeteries on or near the Jackie Robinson Parkway running along the county line. The first major nonsectarian cemetery in the Bronx was Woodlawn, founded in 1865. At the same time as these very large public cemeteries appeared in what became the outer boroughs, wealthy families founded private cemeteries in suburban New York City, reacting to the theft of the body of department-store tycoon A. T. Stewart in 1878.

To make the new rural cemeteries attractive, Andrew Jackson Downing, Alexander Jackson Davis, Frederick Law Olmsted, Richard Morris Hunt, and other leading architects and landscape architects were retained to design and build them. A rural cemetery served multiple uses—as a burial ground, as a patriotic emblem where the bodies of war heroes and other veterans were interred, and also as a public park where families picnicked on summer afternoons. The new cemeteries grew very rapidly, and in 1893 the Brooklyn *Daily Eagle* estimated that more than two million remains lay in Brooklyn and Queens. Rural cemeteries were nonsectarian, but

Moravian Cemetery, 2009

many burial grounds were built for the whole range of religious communities, including Jews, Friends, Protestants, Muslims, and Roman Catholics. The oldest Roman Catholic cemetery is St. Patrick's Old Cathedral, in Manhattan, dedicated in 1815.

At the end of the twentieth century many of New York City's old rural cemeteries were nearly filled and new, large burial grounds appeared in New Jersey and upstate New York. Amid continuing concern about maintenance, the New York State legislature mandated that one-fourth of burial fees be set aside in a fund for perpetual care (later called permanent maintenance) of graves. Still, many old, underfunded cemeteries suffered from neglect and were adopted by historical and genealogical societies that engaged in energetic conservation and preservation projects. In the early twenty-first century the largest cemetery in the city was Calvary, in Queens, the cemetery of the Roman Catholic Archdiocese of New York, with more than three million remains.

John Rousmaniere

censorship. Many struggles over the censorship of speech and the press have been waged in New York City, long considered the national center of publishing and broadcasting. One of the earliest cases in the United States occurred in the city in 1735, when John Peter Zenger, a German immigrant, was charged with seditious libel for printing in his *Weekly Journal* that William Cosby, the royal governor of New York, was among other things a "rogue"; Zenger's lawyer persuaded the jury to acquit him by arguing that the truth was sufficient to defend against a charge of libel, an argument contrary to the prevailing doctrine of English law. No major cases arose during the eighteenth and nineteenth centuries, although conflicts over freedom of the press were common. In 1873 Anthony Comstock, perhaps the best-known censor in the history of the city, formed the New York Society for the Suppression of Vice and became its secretary. The organization was later renamed the New York Society for the Improvement of Morals by John S. Sumner, who became its director. Comstock was largely responsible for the passage of the federal statute on obscenity of 1873, which was popularly known as the Comstock Act and barred from the mails any "obscene, lewd, and lascivious" publications. He and others were influential in censoring many works, including those of Ovid, Boccaccio, Rabelais, Rousseau, Fielding, Flaubert, and André Gide; they also condemned *The Genius* by Theodore Dreiser (1916) and *God's Little Acre* by Erskine Caldwell (1933). In response to the Comstock Act many publishers practiced informal censorship by urging authors to change the words and tone of their books before publication. The publishing house of D. Appleton pressured Stephen Crane to make such changes when it agreed to issue his novel *Maggie: A Girl of the Streets* in 1896. Even films were subject to censorship. In 1913 producers attempted to show *The Inside of the White Slave Traffic,* a film depicting the sexual coercion of innocents into a life of brothels, at the Park Theater. When a half-dozen police officers arrived with orders to confiscate the film, the 500 women waiting to see the next screening nearly broke into a riot, rushing toward the door. When several thousand sympathetic protesters joined their cause, the police had to send for reinforcements to disperse the crowd. Section 211 of the Comstock Act also barred from the mails devices used for birth control and was invoked to suppress Margaret Sanger's newspaper the *Woman Rebel* in 1914 and to close her birth control clinic in Brownsville in 1916.

Sections of the police department regulations known as the "New York cabaret laws" set the precedent for the censorship of artistic expression by the city. Section 20 of the regulations reads as follows: "No person shall be permitted to appear in any scene, sketch or act with breasts or lower part of torso uncovered or so thinly covered or draped as to appear uncovered." In 1947 the police commissioner denied dancer Helen Gould Beck (Sally Rand) the identification card that she needed to perform legally because he believed that her performance would violate section 20. Beck received her permit when the judge who heard her case ruled that this denial was a prior restraint on free expression and symbolic speech (*Beck v. Wallender,* 71 N.Y.S. 2d 237 [1947]). The regulations also banned obscene language in public performances, which led to the prosecution of many performers, including the comedian Lenny Bruce in 1964, and prevented performers with police records from working in the city, among them the musicians Billie Holiday and Thelonious Monk.

Many precedents for federal standards of censorship have been set in New York City, especially those defining obscenity and pornography. In 1934 the national statute defining obscenity was overruled in federal court in New York City in a case concerning *Ulysses* (1922) by James Joyce (*United States v. One Book Entitled Ulysses,* 72 F. 2d 705 [1934]); it was held that obscenity should be determined by the effect that a book read in its entirety would have on a person of average sexual instincts. This definition became known as the "Ulysses standard" and was refined and made more specific by subsequent decisions. The rule that prevailed before the Ulysses standard was nonetheless applied in New York City as late as 1952, when a city magistrate determined that magazines containing pictures of nude and seminude women were obscene. The case of *New York Times Company v. Sullivan* (1964), heard in a county court in Alabama, helped to set guidelines for freedom of the press: it concerned an advertisement placed in the *New York Times* containing some false statements about the civil rights record of the city of Montgomery. The *Times* was fined $500,000 by the court in Alabama, but the U.S. Supreme Court reversed the verdict by ruling that a public official suing for libel must prove that the material in question was published with knowledge of its falsity or with reckless disregard for its truth or falsity. The standard set by the court, which became known as the "Sullivan rule," continued to be tested in courts in the city; two of the most prominent cases were *General William Westmoreland v. CBS* (1985) and *General Ariel Sharon v. Time Magazine* (1985).

A furor was created in 1989 when homoerotic photographs by Robert Mapplethorpe were included in federally funded exhibitions. The National Endowment for the Arts responded to the controversy by requiring the recipients of its grants to eschew obscenity. Opposition to the new rules was led by a number of performers and arts administrators in the city, including Karen Finley and Joseph Papp. The Giuliani administration's aggressive tactics in reducing crime and improving the quality of life in New York City often brought it into conflict with free speech advocates such as the New York Civil Liberties Union, which participated in 34 lawsuits against the city during Giuliani's mayoralty. Efforts by the Giuliani administration to block the use of amplified sound for rallies in Times Square and charge $100,000 fees for First Amendment events in public parks were defeated in court, as was an attempt to revoke sound permits from the "Black Israelites" preaching in Times Square. The administration also denied a rally permit to the Ku Klux Klan, which ultimately was permitted to hold the rally as long as its members did not wear masks.

The most famous censorship case of the Giuliani administration involved an art piece at the Brooklyn Museum by British artist

Chris Ofili. His painting *The Holy Virgin Mary,* part of the *Sensation* exhibit, featured a black African depiction of the Virgin Mary surrounded by images from blaxploitation movies, close-ups of female genitalia cut from pornographic magazines, and, most notoriously, elephant dung. Exclaiming, "There's nothing in the First Amendment that supports horrible and disgusting projects," Giuliani attempted to penalize the museum for conveying offensive ideas, including an attempt to evict the museum from its city-owned building. The Eastern District Court found that the city's actions violated the First Amendment, and the city chose to settle the case in 2000, paying the museum and withdrawing its eviction efforts.

In the early twenty-first century there were a few high profile incidents relating to censorship. Attempts to limit public demonstrations in order to preserve order were viewed as censorship by some. Mayor Michael Bloomberg was criticized by free speech advocates for restricting large demonstrations such as that of 15 February 2003, an anti–Iraq War protest, and that of the August 2004 Republican Convention. While pornography in its various forms has traditionally been considered legal, in 2009 Governor David Paterson proposed taxing Internet downloads of pornography as part of an attempt to close a massive budget deficit.

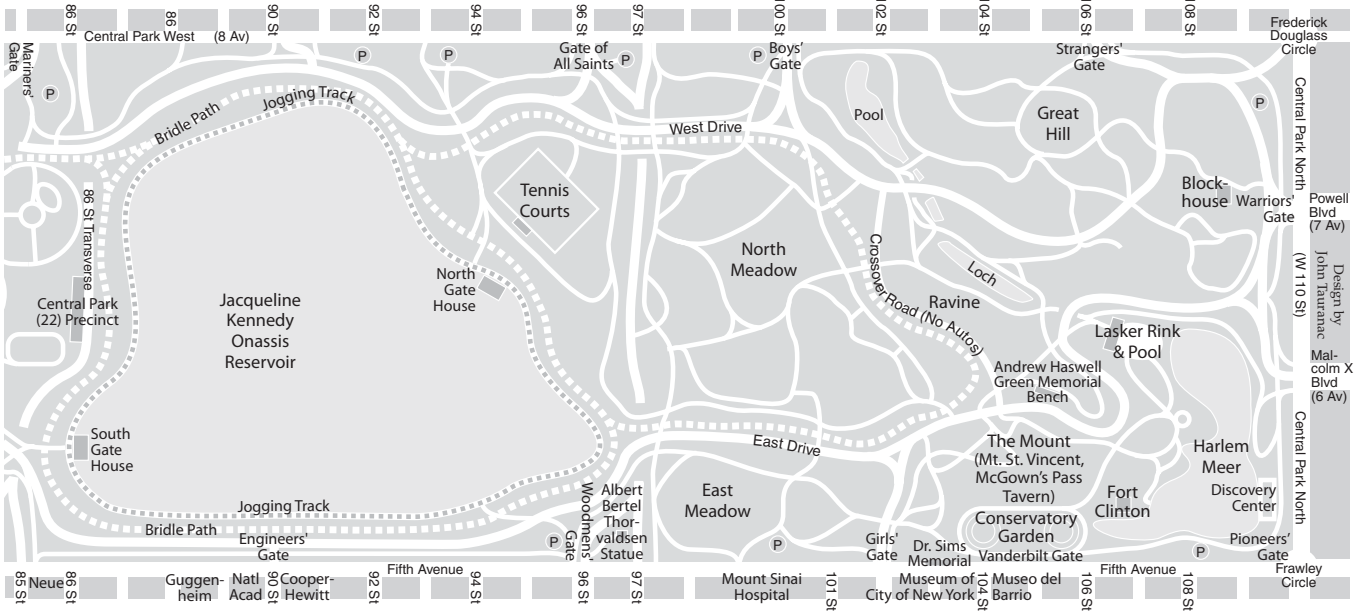
Center for Migration Studies [CMS]. Nonprofit organization founded at 209 Flagg Place, Staten Island, in 1964 by the Society of Saint Charles–Scalabrinians under Silvano M. Tomasi to collect and disseminate information on contemporary human international migration. The CMS holds conferences, including one annually on American immigration laws and policies; publishes the quarterly *International Migration Review,* books, and papers; and maintains a library and archive rich in Italian Americana. Lydio F. Tomasi, CS, served as executive director from 1967 to 2001; Joseph Fugolo, CS, succeeded him. In 2003 CMS's editorial office moved to 27 Carmine Street in Manhattan.

Mary Elizabeth Brown

Central Baptist Church. Church at 166 West 92nd Street designed by Walter Cook and built in 1915 to serve Baptists descended from the congregation of the Laight Street Baptist Church, founded in 1842.



Sharon Wilkins

Central Grammar School. Original name of Boys and Girls High School.

Central Park. Public park in Manhattan, covering 843 acres (340 hectares) bounded to the north by 110th Street, to the east by Fifth Avenue, to the south by 59th Street (Central Park South), and to the west by Central Park West. It was the first landscaped public park in the United States. Advocates of its construction were mostly wealthy merchants and landowners who admired the public grounds of London and Paris and argued that comparable facilities would give New York City an international reputation; they also believed that a public park would offer their families an attractive setting for carriage rides and provide workers with a healthful alternative to the saloon. After three years of debating the size and cost of the park, the state legislature in 1853 authorized the city to use the power of eminent domain to acquire a parcel of more than 700 acres (285 hectares) in the middle of Manhattan. A site bounded by 106th Street, Fifth Avenue, 59th Street, and Eighth Avenue was chosen, where an irregular terrain of swamps, bluffs, and rocky outcroppings made the land undesirable for private development.

Control over the park was initially set by the state legislature, which was predominantly Republican. It appointed the Central Park Commission in 1857 to prevent local New York City Democrats from gaining control. The commission was the city's first planning agency and, under the leadership of Andrew Haswell Green, oversaw the planning of upper Manhattan as well as management of the park itself. In 1857 it held a contest to design the park, the first such contest in the country: the winning entry was the "Greensward plan," which called for a pastoral landscape in the English romantic tradition and was submitted by Frederick Law Olmsted, the superintendent of the park, and Calvert Vaux, a former partner of Andrew Jackson Downing. Their plan called for a combination of the pastoral (open, rolling meadows), the picturesque (the Ramble), and the formal (the dress grounds of the Mall, or Promenade, and Bethesda Terrace). An impression of uninterrupted expanse was maintained by building four transverse roads 8 feet (2.5 meters) below the park's surface to carry crosstown traffic. Pressure from local critics soon led Olmsted and Vaux to separate carriage drives, pedestrian walks, and equestrian paths from each other. Assisted by Jacob Wrey Mould, Vaux designed more than 40 bridges to eliminate grade crossings between the various routes.

The construction of the park was one of the most extensive public works projects undertaken in the city during the nineteenth century. About 1600 residents of shantytowns in the area were displaced, including Irish pig

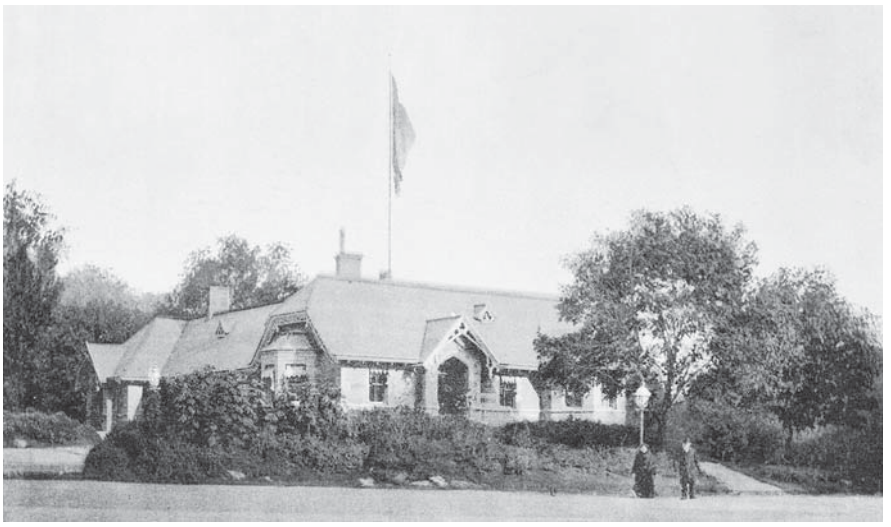
farmers and German gardeners. Seneca Village, a black settlement at Eighth Avenue and 82nd Street that had three churches and a school, was also demolished. About 20,000 workers were engaged, including native-born stonecutters, engineers from New England, Irish laborers, and German gardeners. They blasted out ridges with gunpowder (more than was used in the Battle of Gettysburg), removed nearly 3 million cubic yards (2.3 million cubic meters) of soil, planted more than 270,000 trees and shrubs, and built a curvilinear reservoir just north of an existing rectangular one. The park opened to the public in the winter of 1859, when thousands skated on lakes built over former swamps. In 1863 the northern boundary was extended to 110th Street.

In the decade after the opening, more than half of those visiting the park arrived in carriages (which less than 5 percent of the city's population could afford to own), and each day there were elaborate carriage parades in the late afternoon. Middle-class residents

Central Park, 2009

Central Park entrance, 2009

went skating in winter and attended concerts on Saturday afternoons in summer. Many Irish and Germans were discouraged from going to the park by stringent rules, especially a ban on group picnics. Small tradesmen were not allowed to use commercial wagons for family drives, and only schoolboys with a note from their principal could play ball on the meadows. These rules were repeatedly contested. By 1865 there were more than seven million visitors to the park a year, and during the late nineteenth century the park was opened to a wider range of uses. Under a new city charter (1870) the park came under local control and the mayor appointed park commissioners, who gradually authorized new facilities, including a carousel, goat rides, tennis on the lawns, and bicycling on the drives. The zoo moved into permanent quarters in 1871 and soon became the most popular feature. In the 1880s workers successfully campaigned for concerts on Sunday, their only day of rest.



In the early twentieth century, neighborhoods populated mostly by immigrants developed at the park's borders, and the number of visitors to the park reached a peak. Progressive reformers joined with workers in advocating facilities for active recreation. In 1927 August Heckscher donated the first equipped playground, which was built on the southeastern meadow. When plans were announced to drain the rectangular reservoir, Progressives pushed to have a sports arena, a swimming pool, and playing fields built over it. Others, inspired by the "city beautiful" movement, proposed a formal civic plaza and promenade to connect the museums at the eastern and western borders. Landscape architects and preservationists campaigned against these suggestions, and the site was made into the Great Lawn. Mayor Fiorello H. La Guardia gave control of a new centralized park system in 1934 to Robert Moses, who during his 26 years in office provided many of the facilities requested by Progressive reformers. During the Depression he used federal money to build 20 playgrounds on the periphery of the park, renovate the zoo, realign the drives to accommodate automobiles, build athletic fields in the North Meadow, and expand recreational programs. He later added permanent ball fields to the Great Lawn for corporate softball teams and neighborhood little league teams. In the early 1950s and early 1960s private benefactors contributed the Wollman Skating Rink, the Lasker Rink and Pool, new boathouses, and a chess and checkers house. The park became the site of summer performances by the New York Shakespeare Festival in 1957 and by the New York Philharmonic in 1965.

Thomas Hoving and August Heckscher (grandson of the philanthropist), the parks commissioners appointed by Mayor John V. Lindsay, encouraged such events as rock concerts and "be-ins" during the 1960s, making the park a symbol of both urban revival and the counterculture. During the 1970s severe budget cuts, a steady decline in maintenance, and the revival of the preservation movement prompted a new approach to managing the park. A private fund-raising body known as the Central Park Conservancy took charge of restoring features of the Greensward plan in 1980, including Sheep Meadow, Bethesda Terrace, and Belvedere Castle (designed by Vaux and Mould); by 1990 the group contributed more than half the budget for the park and greatly influenced decisions about its future. In the early twenty-first century, the conservancy established a long-term agreement with the city to oversee maintenance of the park, combining its private funds with public monies. Public events, always limited in number, became severely restricted in 2005 when they were capped at six cultural events a year on the Great Lawn.

Central Park Casino. Nightclub in Central Park near Fifth Avenue and 66th Street, designed in 1864 by Calvert Vaux. Under the name Ladies' Refreshment Salon, it was used

Central Park Casino

as a small nightclub in the early 1920s. After James J. Walker was elected mayor in 1925, it was leased to his friend the restaurateur Sidney Solomon and lavishly redesigned by Joseph Urban. From 1926 to 1934 the club was a high-priced establishment that became widely known as the center of the mayor's active social life. After he resigned in 1932 there were plans to have the structure serve a wider public, but the parks commissioner, Robert Moses, a political rival of Walker, demolished it and replaced it with a playground.

Sandra Opdycke

Central Park Conservancy. The Central Park Conservancy, a not-for-profit organization composed of a board of private citizens authorized by contract with New York City to restore, manage, and preserve Central Park, was founded in 1980 by Mayor Edward I. Koch, Parks Commissioner Gordon J. Davis, and Central Park Administrator Elizabeth Barlow Rogers. In 2007 it provided more than 84 percent of Central Park's annual $25 million operating budget and was responsible for all basic care of the park. It has a 60-member board consisting of two city officials ex officio (the parks commissioner and the Manhattan borough president), five trustees appointed by the mayor, and many who represent the business, banking, and legal community of New York City.

Elizabeth Barlow Rogers

Central Park jogger. Name popularly applied to a 28-year-old investment banker who was raped and assaulted by a gang of youths near the northern part of Central Park on the evening of 19 April 1989. The crime gained notoriety because of its randomness and brutality, as well as its racial overtones (the victim was white and her attackers black). In 1990 five of the assailants were convicted of various charges in two trials; the victim returned to work after eight months, but suffered permanent injuries. In the late 1990s Trisha Meili released her identity and story to the public and authored a book about her experience. She also became a prominent motivational speaker and advocate, through the Achilles Foundation, of individuals with disabilities participating in running.

Central Park West. Avenue in Manhattan running from 59th Street at Columbus Circle to 110th Street at Fredrick Douglass Circle along the western edge of Central Park. Buses and cars run both north and south along the avenue, which is also served by the local B and C trains and the express A and D trains. The avenue is home to the American Museum of Natural History, the New-York Historical Society, and a large number of residential buildings, some of which command the highest real estate prices in the city.

Ben Silk

Central Park West, 2009

Central Park Zoo. Zoo located at 830 Fifth Avenue (and 64th Street) in Central Park. The zoo began as a de facto menagerie in 1860, when New York City residents and local circuses began "donating" or dropping off unwanted animals—72 black swans and a bear cub, for instance—at the Arsenal, a munitions depot for the New York National Guard. Converted into the Central Park Menagerie in 1864 (and not included in the original design for Central Park), the Arsenal housed a variety of animals in metal cages, including Mike Crowley, the first chimpanzee ever shown in the United States. As part of a Works Progress Administration project in 1934, Parks Commissioner Robert Moses renovated the site behind the Arsenal as a zoo, moving his own Parks Department offices to the building itself (where they remain today).

Moses's renovations and new zoo design were state-of-the-art for the 1930s. Prior study of sea lion behavior and habitat had even informed the architect's design of the sea lion pool, which was almost unheard of for the day. Admission was free of charge. But the facilities eventually proved inadequate, and in 1980 the Wildlife Conservation Society signed an agreement with the New York City Department of Parks and Recreation to oversee the renovation and management of the zoo. After five years of demolition and construction, the zoo reopened in 1988 with a design by Kevin Roche and John Dinkeloo following the safari zoo model, which seeks to replicate animals' natural habitats.

In the early twenty-first century the zoo was home to more than 130 species of animals in habitats ranging from the Antarctic (penguins) to the equatorial tropics (toucans), including several endangered species (red pandas, thick-billed parrots, and Wyoming toads) and two species that have been at the zoo since its original incarnation in the 1860s: polar bears and sea lions. The zoo attracts one million visitors annually.

Rowan Moore Gerety

Central Synagogue. Reform temple at the corner of 55th Street and Lexington Avenue in Manhattan. The building is a twin-towered structure erected in 1870–72 as the fifth house of worship of Ahawath Chesed (formed in 1846 by Bohemian Jews on the Lower East Side); the congregation merged in 1898 with the members of Shaar Hasomayim and took its current name in 1920. Designed by Henry Fernbach, one of the first Jewish architects in the United States, the building was erected of sandstone with limestone trim in a Moorish Revival style and modeled after the Dohany Street Synagogue in Budapest. The synagogue is the oldest in continuous use in New York City; it was designated a city landmark in 1966 and is the only synagogue in the state to have been designated a National Historic Landmark (1975). Across 55th Street is the Phyllis and Lee Coffey Community House (1965–68, designed by Kahn and Jacobs), built as a memorial to Jonah B. Wise, one of the congregation's distinguished rabbis.

Herbert Maier Schwarz, *Your Temple: A Unique Story of Devotion* (New York: Central Synagogue, 1958); Stella F. Fuld, ed., with Janet Stone and Mildred Ross, *Central Synagogue, 140 Years* (New York: Harry N. Abrams, 1979)

Joy M. Kestenbaum

Centreville. Name formerly applied to Castleton Corners.

Century Association. Private club of about 2000 men and women who are authors, artists, and amateurs of letters and the fine arts. For the club's purposes, amateurs are defined as "men and women of any occupation provided their breadth of interest and qualities of mind and imagination make them sympathetic, stimulating, and congenial companions in a society of authors and artists." The club was formed in the early nineteenth century, when a group formed the Bread and Cheese Club; after its demise, some of its members, together with members of the National Academy of Design, created the Sketch Club in 1829. It met fortnightly at the homes of its members. At a meeting in 1847, when it became clear that the number of artistically minded New Yorkers who wanted to join was too large for anyone's living room, the Century was formed; it took its name from the number of men who were invited to join. The Century made its home in a variety of odd places around the city until it finally settled down, on 10 January 1891, in its present Renaissance-style building at 7 West 43rd Street, designed by McKim, Mead and White (all three of whom were members). Much of the furniture still in the building was designed by the firm. Many of the artist members, several from the Hudson River School, contributed paintings in lieu of entry fees. In the early twenty-first century the Century added musicians as members.

Henry S. F. Cooper, Jr.

Century Illustrated Monthly Magazine. Periodical launched in 1870 as *Scribner's Monthly,* edited by the poet and essayist Josiah Gilbert Holland. In 1881 it became independent of Charles Scribner's Sons and was renamed. An engraving process developed by Alexander W. Drake and the printing of Theodore Low De Vinne made the magazine the most visually appealing publication of its day. Edited by Richard Watson Gilder, it sought to inspire, uplift, and unite the nation. "The War Series," which consisted of memoirs of Union and Confederate veterans and ran for three years, raised circulation to 250,000 in the 1880s. *Century* declined in the face of competition from mass-market magazines like *McClure's* and ceased publication in 1930.

Marc H. Aronson

Century 21. Department store. Located at 22 Cortland Street across from the World Trade Center Plaza, it sells brand-name and high-end clothing, accessories, shoes, and home wares at discounted rates. Century 21 has several locations throughout New York and New Jersey. The Manhattan flagship store, which is the firm's headquarters, was renovated and reopened in the summer of 2002 after the terrorist attacks of 11 September 2001.

Jessica Montesano

ceramics. The production of pottery in New Amsterdam began after the necessary raw materials were discovered there in abundance. The first documented potter in the settlement was Dirck Claesen, who worked in Manhattan during the 1650s. During the seventeenth century most potters in the city produced simple household containers and roof tile of an unrefined red earthenware. In later years suitable clay was found for making stoneware, which unlike redware could be made hard and watertight. Stoneware was produced by Dutch, German, and English potters in New York City as early as the 1730s, long before it was made elsewhere in the colonies in comparable quantities. In 1718 a stoneware pottery was opened on Pottbaker's Hill between Reade and Duane streets by William Crolius, a potter from Neuwied. It became one of the most enduring potteries of its kind in the city, carried on by his sons William Crolius and John Crolius; by John's four sons, including Clarkson Crolius, who was also city collector, an assemblyman, and a member of the Common Council; and later by Clarkson Crolius, Jr., a civic leader and the last member of the family to run the pottery, from which he retired in 1850. A small porcelain factory staffed by skilled French workers was opened about 1813 by Henry Mead. After it failed in 1824, another factory was opened in the following year on the same site by two Frenchmen, Louis François Decasse and Nicolas Louis Édouard Chanou. It was known for producing products of high quality before being destroyed by fire in 1828.

Toward the mid-nineteenth century the demand for stoneware declined, in part because of the invention of glass canning jars. The city's prosperity as a marketing center pushed ceramics manufacturers to the outskirts, especially Brooklyn, Staten Island, and New Jersey. At the same time the demand for porcelain and white earthenware manufacture increased. During the 1840s and 1850s handwork and small shops in the porcelain industry were gradually replaced by mechanized production in larger factories that could produce goods at lower cost, making porcelain available to the middle class for the first time. Between 1840 and 1860 many porcelain workers were skilled German and English immigrants, and Brooklyn became one of the country's leading ceramic centers, along with Trenton, New Jersey, and East Liverpool, Ohio. Hotels, boardinghouses, and saloons proliferated and required dinnerware, bar vessels, and toilet accessories. At the Crystal Palace Exhibition of the Industry of All Nations in 1853, the country's first international exposition, the firms of Charles Cartlidge and William Boch and Brothers exhibited their wares. Both had factories in Greenpoint, in Brooklyn, and produced heavy porcelain tableware and a wide range of house trimmings, including name plates, keyhole covers, and knobs for doors, drawers, and shutters. Cartlidge's firm closed in 1854. In 1867 Thomas C. Smith joined Boch and Brothers, which was renamed the Union Porcelain Company and later the Union Porcelain Works. Soon the largest and most successful ceramics manufacturer in the area, it had a sizable factory complex that in 1884 employed 200 workers and made an average of $250,000 in annual sales. It designed art wares that were exhibited nationally and remained in operation until about 1922. From the time of World War I traditional ceramic forms were often rejected for more sculptural ones. In the following decades New York City became an international center for ceramic art, where many artists, especially European and Asian immigrants, settled near the universities where they worked and taught.

Alice Cooney Frelinghuysen

Cerf, Bennett (Alfred) (*b* New York City, 25 May 1898; *d* Mount Kisco, N.Y., 27 Aug 1971). Publisher and writer. After attending

Columbia College (BA 1919) and the Columbia School of Journalism (1920), he briefly worked at the *New York Herald Tribune* and a brokerage firm on Wall Street. In 1923 he joined the publishing firm Boni and Liveright, where he became a vice president. Cerf left in 1925 to found the Modern Library with his business partner Donald Klopfer, which led to the creation of Random House in 1927 (named so because he thought they would be publishing "a few books on the side at random"). In his 40-year tenure at Random House he published such writers as Franz Kafka, Eugene O'Neill, William Faulkner, and Theodor Geisel (Dr. Seuss). After a drawn-out court case in 1933 he published James Joyce's *Ulysses.* Cerf compiled numerous volumes of jokes and riddles and was a panelist on the television quiz show *What's My Line?* from 1951 to the show's end in 1967. In 1969 he bequeathed to Columbia University the Random House archives, which contain records of such writers as Gertrude Stein, William Faulkner, and Sinclair Lewis. Among Cerf's more than two dozen books are *Try and Stop Me* (1945), *The Book of Riddles* (1960), and his memoir *At Random: The Reminiscences* (1977).

James E. Mooney, Irina Ikonsky

Chabad. See Lubavitchers.

Chadwick, Henry (*b* Exeter, England, 5 Oct 1824; *d* Brooklyn, 20 April 1908). Sportswriter and father of baseball. He moved to New York City with his family in 1837, settling in Brooklyn. In 1856 he filed cricket reports for the *New York Times* and later that year became a cricket and baseball editor for the *Brooklyn Daily Eagle,* a position he held until 1894. He was the best-known promoter of "New York," or "Brooklyn," baseball and helped to make it more popular than both "Massachusetts" baseball and cricket. While writing about baseball for the *New York World* and the *Sun* he developed the box score, a method of compiling game statistics. From 1881 to 1908 he edited the *Spalding Baseball Guide,* the leading publication of its kind. Throughout his career he promoted baseball as an outlet for competitive energies and an alternative to drinking and fighting; he devoted much of his time to combating gambling, which threatened the wholesome reputation of what he called "America's game." In 1896 the National League voted to give him a lifetime pension. Known to many as the "father of baseball," Chadwick worked in baseball journalism to the end of his life. He is buried in Green-Wood Cemetery.

Edward T. O'Donnell

chamberlain. The office of chamberlain was established in 1868 to maintain financial records, deposit public moneys, and compile quarterly financial reports. Appointed by the mayor, the chamberlain received a commission on the accounts that he supervised. The establishment of the comptroller's office in 1802 diminished the chamberlain's powers. The office of the chamberlain became a part of the department of finance in 1916 and was abolished in 1938.

Neal C. Garelik

Chambers, Whittaker [Jay Vivian] (*b* Philadelphia, 1 April 1901; *d* Westminster, Md., 9 July 1961). Journalist and spy. He graduated from Columbia University and worked as a freelance journalist. After joining the Communist Party in 1931 he was a spy courier for the Soviet Union until the Nazi–Soviet pact of 1939 led him to abjure communism. From 1939 to 1948 he enjoyed a prominent career as a senior editor at *Time,* specializing in cultural and world affairs. He achieved notoriety in 1948 when in testimony before the House Un-American Activities Committee he accused Alger Hiss, then president of the Carnegie Endowment for International Peace in New York City, of having removed and copied classified documents while working at the State Department. Hiss claimed innocence but in 1950 was convicted of perjury and served four years in prison. Chambers spent his later years issuing apocalyptic warnings of the Soviet threat and became something of a hero for American conservatives. He wrote a memoir, *Witness* (1952).

Allen Weinstein, *Perjury: The Hiss–Chambers Case* (New York: Alfred A. Knopf, 1978)

Martin Ebon

Champion, Gower (*b* Geneva, Ill., 22 June 1919; *d* New York City, 25 Aug 1980). Choreographer, director, and dancer. He grew up in Los Angeles, and at the age of 15 began a career as a dancer when he won a contest at the Coconut Grove with Jeanne Tyler. While serving in the U.S. Coast Guard (from 1942) he met Sid Caesar, and after leaving the service he became reacquainted with high school friend Marjorie Belcher (later known professionally as Marjorie Bell). The two formed a dance team, married on 5 October 1947, and appeared on Milton Berle's television program and at the Persian Room of the Plaza Hotel. With Caesar and Imogene Coca they worked on the *Admiral Broadway Review* (1947–48), an important early television program that was a forerunner of *Your Show of Shows.* In the following years Champion worked as a choreographer, winning the first of his seven Tony Awards for the Broadway show *Lend an Ear* (1948). He conceived of and directed the musical revue *Three for Tonight* (1955) at the Plymouth Theatre in New York City and also directed *Bye Bye Birdie* (1960), *Carnival* (1961), *Hello, Dolly!* (1964), *I Do! I Do!* (1966), and *Sugar* (1972). In 1980 he directed David Merrick's production of *42nd Street*; he died hours before the curtain rose on opening night.

Alana Erickson Coble

Chanin, Irwin (*b* New York City, 29 Oct 1891; *d* New York City, 24 Feb 1988). Real estate developer. With his brother Henry Chanin (1894–1973) he opened a firm to build houses in Brooklyn, the Bronx, Queens, and Staten Island; the two eventually expanded their operations to Manhattan, where they erected apartment buildings and many theaters and hotels on Broadway and became leading developers in the 1920s. Irwin worked with the firm of Sloan and Robertson to design the Chanin Building, a dramatic structure of 56 stories with a terra-cotta facade on 42nd Street and Lexington Avenue near Grand Central Terminal. Completed in 1929, it was the Chanins' most ambitious project, containing more commercial space than the Woolworth Building and known as the tallest building north of Wall Street until the Chrysler Building was completed in 1930. With the onset of the Depression, the Chanins experienced financial difficulties and eventually lost most of their properties.

Marc A. Weiss

Chapin, Alfred C(lark) (*b* South Hadley, Mass., 8 March 1848; *d* 2 Oct 1936). Mayor of Brooklyn. He practiced law and belonged to the Democratic Party. As mayor from 1888 to 1891 he brought improved police protection, an increased water supply, a growth in park acreage, and the construction of the monumental arch at the entrance to Prospect Park.

Ellen Fletcher

Chapin School. Independent elementary and secondary school for girls and young women founded by teacher Maria Bowen Chapin. It opened in 1901 at 12 West 47th Street as Miss Chapin's School for Girls and Kindergarten for Boys and Girls, with 78 students and 7 teachers. After occupying two larger buildings, the school moved in 1928 to a neoclassical-style building at 100 East End Avenue. Designed and built for the school by the New York firm of Delano and Aldrich, the building stood in enlarged form at the same location in the early twenty-first century. The Chapin School, Ltd. became the school's official name in 1934. In 2007 it had 665 female students (K–12) and more than 100 full-time faculty members.

Ella M. Foshay

Charging Bull. Sculpture. *Charging Bull* is a 7000-pound (3175-kilogram) bronze sculpture in Bowling Green Park, near Wall Street in Manhattan. Created by the Sicilian artist Arturo Di Modica at his own expense (some $360,000), the bull was illegally installed in front of the New York Stock Exchange just before Christmas 1989, only to be impounded by the police several days later. It was reinstalled in its present location in 1990 as a response to public outcry, where it remains on

long-term loan to the city's Department of Parks and Recreation.

Rowan Moore Gerety

Charity Hospital. Hospital on Blackwell's Island; a forerunner of Elmhurst Hospital Center.

Charity Organization Society [COS]. Society organized in 1882 in New York City by the reformer Josephine Shaw Lowell to evaluate and refer applicants for charity. It kept extensive records about living conditions in the city and concentrated on poverty, an approach that led other groups to shift their focus from charity and moral correction to social welfare. Known for taking an active interest in those with whom they worked, the society's "friendly visitors" later became a model for social caseworkers. Among the directors was the reformer Edward T. Devine. With the Association for Improving the Condition of the Poor and the Children's Aid Society, the society in 1891 became an owner of the United Charities Building at 105 East 22nd Street, which was donated by John M. Kennedy. During the same year the society formed a national publication committee that launched the journal *Charities Review,* which after several changes of name eventually became the *Survey,* the most influential publication of its kind in the country. The society also sponsored Laurence Veiller's tenement exhibition in 1900 and his work in drafting the city's Tenement House Law of 1901. In 1939 the Charity Organization Society merged with the Association for Improving the Condition of the Poor to form the Community Service Society.

Charles H. Revson Foundation. Charitable organization formed in 1956 by Charles H. Revson (*b* 11 Oct 1906; *d* 24 Aug 1975), a founder of the cosmetics firm Revlon. During his lifetime the foundation donated $10 million to medical, educational, and Jewish organizations in New York City: these gifts funded a diagnostic center at the Albert Einstein College of Medicine, an institute of ophthalmology at New York Medical Center, Revson Plaza at Columbia University, and the fountain at Lincoln Center for the Performing Arts. Enlarged by an endowment after Revson's death, the foundation in 1978 took on a full-time staff, began a formal grant-making process, and defined four areas of activity: urban affairs, education, biomedical research policy, and Jewish philanthropy. Contributions are aimed in particular at projects relating to the future of New York City, the changing role of women in society, government accountability, and the impact of modern communications on education. By the early twenty-first century, the foundation's endowment had grown to $200 million and it dispersed over $9 million annually. Its offices are at 55 East 59th Street in Manhattan.

Kenneth W. Rose

Charles Scribner's Sons. Firm of book publishers formed in 1846 by the booksellers Charles Scribner and Isaac Baker, who specialized in didactic material. The firm was led from 1871 to 1930 by Charles Scribner and employed William Crary Brownell as its literary advisor from 1888 to 1928; it also published *Scribner's Magazine* (1886–1914), edited by Edward I. Burlingame, and operated a bookstore at 597 Fifth Avenue (now a landmark) designed by Ernest Flagg, whose sister Louise married Charles Scribner, Jr. From 1910 to 1947 Maxwell Perkins redefined the image of the editor and championed such authors as F. Scott Fitzgerald, Ernest Hemingway, and Thomas Wolfe. Owned and managed for many years by the same family, Scribner's was long highly regarded as a publishing house. In 1984 it was acquired by Macmillan and the bookstore was sold.

Marc H. Aronson

Charleston. Neighborhood in southwestern Staten Island (2000 pop. 17,000) bounded to the north by Clay Pit Ponds, to the east by Sandy Ground, to the south by Tottenville, and to the west by Arthur Kill. It was known as Androvetteville in the eighteenth century. The area is rich in the type of clay needed for making bricks, and in 1854 a Bavarian immigrant named Balthazar Kreischer opened a factory where heat-resistant bricks were made by German and Irish workers. By the 1890s these workers numbered more than 300. A company town called Kreischerville took shape that consisted of Kreischer's Italianate mansion, the residences of two of his sons, an inn, a hotel, a grocery store, and housing for workers. The family also built St. Peter's Evangelical Reformed Church (1883), now known as the Free Hungarian Reformed Church. After the factory closed in 1927, the neighborhood took its current name. Some of the old clay pits may be seen at Clay Pit Ponds State Park. In the 1970s there were discussions about using municipally owned land for an amusement park and including Charleston in various development schemes, one of which for a new town was advanced by James Rouse. A much-reported anti-gay crime in 1990 brought negative notoriety, as did the closing of a restaurant at the Kreischer Mansion. In 2005 over 130 acres (53 hectares) of city-owned land, first called the Charleston Retail Site, became the Bricktown Centre, a shopping center with nearby ball fields, recreational land, and a school planned.

Howard R. Weiner

Charlotte Gardens. Famous urban renewal project in South Bronx, bounded to the north by East 174th Street, to the east by Southern Boulevard, to the south by Jennings Street, and to the west by Crotona Park. By 1975 the abandoned and devastated area was being compared to bombed-out Germany after World War II. In October 1977 President Jimmy Carter visited the area and pledged federal aid for its redevelopment. Ronald Reagan also expressed concern about the neighborhood during his presidential campaign in 1980. The South Bronx Development Organization

Charlotte Gardens

received $3 million in federal aid, and in the summer of 1983 a complex of 94 ranch houses was completed, each house selling for a subsidized price between $49,500 and $60,000, depending on amenities. The project was the most successful attempt to redevelop South Bronx during the 1980s, and in the twenty-first century, Charlotte Gardens was a suburban presence amid many similar small-scale neighborhoods throughout the surging borough.

Joel Schwartz

Charlotteville. Neighborhood in northwestern Queens, lying within Woodside and bounded to the north by 31st Avenue, to the east by 68th Street, to the south by Northern Boulevard, and to the west by Hobart Street. Development was begun by John A. Mecke but was interrupted by his death in May 1867. In June and August 1868 his heir auctioned off lots, and in 1880 the area was annexed to Woodside. A large unsold portion was redeveloped in the 1890s as North Woodside. The name gradually fell into disuse as Woodside expanded after consolidation.

Vincent Seyfried

charter. New Amsterdam was incorporated by a charter of the Dutch West India Company in 1653. Under English rule "the Mayor Aldermen and Commonality of the City of New York" was incorporated in response to local petition. According to the charters of Governors Richard Nicolls (1665), Thomas Dongan (1686), Lord Cornbury (1708), and John Montgomerie (1731), the mayor and other officials were appointed by the provincial governor and council.

Until the late eighteenth century, the charter change process assured New York City a measure of independence. When the city requested powers from the state beyond those given in Montgomerie's charter, its autonomy began to diminish. Popular election of the mayor (1834) and some department heads (1849) followed. By the mid-1850s the city's affairs were virtually controlled by the state; changes to the municipal charter were made only by the (usually) Republican state legislature. The charter of 1870 re-empowered the city. It was said to have been "bought" by William M. "Boss" Tweed for $600,000. The reform charter of 1873 strengthened the powers of the comptroller. In 1881 the state legislature granted a charter to Brooklyn that became a model for other American cities. The Charter of Greater New York (1898) set the present boundaries of the city and provided for central governing institutions.

A new charter in 1901 decentralized city government by strengthening the borough presidents and establishing a powerful board of estimate. The legislature in 1914 gave all cities in the state except New York City a role in defining their charters; that right was extended to New York City in 1924. A referendum in 1935 on the proposals of the (Thomas Day) Thatcher Commission brought about proportional representation for City Council elections.

From the 1960s changes to the charter were usually introduced not in the City Council but by commissions formed by the mayor under powers granted by state law in 1961. The (John T.) Cahill Commission (1961) established an electoral system for the City Council that assured representation for minority parties, strengthened the mayor's budgetary powers, and weakened the borough presidents and the comptroller. The (Roy) Goodman Commission (1973–75), formed by the state legislature, proposed decentralizing city government.

In response to a federal lawsuit over equal representation, the (Michael I.) Sovern Commission (1983) eliminated council seats filled by at-large (borough-wide) elections and introduced a reapportionment scheme for the council. A second suit challenging the system of representation used by the Board of Estimate, *Morris v. Board of Estimate* (1989), inspired the formation of (Richard) Ravich (1986–88) and (F.A.O.) Schwartz, Jr. (1988–89), commissions, appointed by Mayor Edward I. Koch. They recommended (and achieved) abolishing the Board of Estimate and redistributing its powers; changing procedures for budgeting, land use, elections, and administration; devising safeguards of governmental integrity; and transforming the City Council into a more effective legislature.

Over the following two decades Mayors Rudolph W. Giuliani and Michael Bloomberg appointed six charter commissions (1998, 1999, 2001, 2002, 2003, 2004–2005), more than for any similar period in the city's history. Critics alleged that the mayors used the revision process inappropriately to advance their political agendas or to seek policy changes in a manner that bypassed the City Council. Commissions appointed by Mayor Bloomberg failed to achieve nonpartisan elections in the city, but the 2004–2005 commission, headed by Ester R. Fuchs, did gain voter approval of significant charter changes, creating an ethical code for administrative law judges and entrenching good financial management practices first adopted during the 1970s fiscal crisis. See table of changes beginning on p. 230.

Chase, Edna Woolman (*b* Asbury Park, N.J., 14 March 1877; *d* Sarasota, Fla., 20 March 1957). Magazine editor. She began working for the fashion magazine *Vogue* in 1895 and was appointed editor in chief in 1914 by its owner, Condé Nast. In the same year she staged a fashion show in New York City, the first in the United States. Throughout her career she made innovations in graphic design and photography, adhered to high standards in fashion, and encouraged American fashion designers. She was put in charge of all editions of the magazine in 1948 and retired in 1952. With Ilka Chase she wrote *Always in Vogue* (1954).

Mary Ellen Zuckerman

Chase, William Merritt (*b* Williamsburg, Ind., 1 Nov 1849; *d* New York City, 25 Oct 1916). Painter. After studying art in Indiana he moved to New York City in 1869, where he attended the National Academy of Design. He studied in Munich, Germany (1872–78), and returned to New York in 1878 to teach at the Art Students League. Setting up a number of studios, including one at 51 West 10th Street and another in the Tiffany Building, Chase painted still lifes and impressionistic landscapes of the parks and harbors of Brooklyn and Manhattan. He also opened the Chase School of Art (now Parsons The New School for Design) in 1896. Among his pupils were Georgia O'Keeffe, Edward Hopper, and Rockwell Kent. President of the Society of American Artists and part of the Ten American Painters, Chase was known for his Tenth Street studio, which represented the novelty and status of the nineteenth-century artist. An exhibition of his landscape paintings was held at the Brooklyn Museum of Art in 2000.

Irina Ikonsky

Chase Manhattan. Commercial bank formed in 1955 through the merger of the Manhattan Company and Chase National Bank. Its total resources of $7.6 billion made it the then-largest bank in New York City and the second-largest bank in the United States. Although the new bank was nominally governed by the charter of the Manhattan Company (written in 1799), in practice Chase National managed its operations. A 60-story building designed by the firm of Skidmore, Owings and Merrill was the headquarters for the new bank; built in 1955–61 at a cost of $121 million at 1 Chase Manhattan Plaza, near Pine Street and Liberty Street, it spurred a revival of office building construction in the city's financial district. David Rockefeller, son of John D. Rockefeller, Jr., was president of the bank from 1961 to 1969 and

Changes to the City Charter, 1653–2008

1653
Legislative: New Amsterdam receives its first charter from the Dutch West India Company, establishing the offices of schout, two burgomasters, and five schepens, all of whom are appointed by the director general. Together these officeholders form a court of inferior jurisdiction as well as a legislative body.
Executive: The burgomasters are responsible for nominating church wardens, fire inspectors, and surveyors, subject to the approval of the colony's director general.

1665
Legislative: Under English rule the Dutch form of government continues briefly, but is replaced by a mayor, five aldermen, and one sheriff. Serving together as the city's governing body, these officials are appointed by the governor.
Executive: The mayor is empowered to grant tavern licenses.

1686
Legislative: The charter of Governor Thomas Dongan calls for the freemen in each of the city's six wards to elect one alderman and one assistant, who together with the mayor and the recorder form the Common Council. This body possesses most of the power for governing the city, including the power to regulate markets, transportation of goods, and access to docks; it may also levy fines on offenders. All legislation passed expires after three months unless confirmed by the governor and the council.
Executive: The mayor is appointed annually by the governor. He is a justice of the peace and judge of the court of common pleas; he also has the power to award tavern licenses, to appoint the city's high constable, and (with the Common Council) to grant citizenship.
Courts and Boards: The mayor, recorder, and alderman are justices of the peace. The mayor, recorder, and any two aldermen constitute a court of sessions of peace. The mayor or recorder and any two others qualify as a court of common pleas.

1689
Legislative: Liesler's Rebellion results in the overthrow of the colonial government established by Dongan's charter. A province-wide convention calls for elections in the autumn of 1689.
Executive: Peter Delanoy becomes the city's first elected mayor, but is overthrown in 1691.

1730
Legislative: The charter of Governor Thomas Montgomerie leaves the function of the city's government virtually unchanged. It does create a seventh ward (the Montgomerie Ward), thereby increasing the number of aldermen and assistant aldermen to seven each. Laws passed by the Common Council expire after one year unless confirmed by the governor and by the council.
Executive: Receiving advice from the council of state, the governor continues annually to appoint the mayor to a one-year term.
Courts and Boards: The mayor, recorder, and aldermen are *ex officiis* justices of the peace. The mayor or recorder and any three others may hold general courts of session of peace. The mayor or recorder and three or more aldermen constitute a court of record to hear civil cases.

1777
Executive: On advice from the council of state, the governor of the state appoints the mayor.

1791
Legislative: The city eliminates the names of wards in favor of using numbers.

1813
Legislative: The state legislature declares that the Common Council will perform the same duties required of supervisors of other state counties.
Executive: The Common Council takes over the powers of clerk of the market from the mayor.

1821
Executive: An amendment to the state constitution authorizes the Common Council to select the mayor, a power formerly exercised by the state legislature and the governor.

1830
Legislative: A new charter separates the Board of Aldermen and the Board of Assistant Aldermen into distinct bodies, which together form the Common Council. Each ward elects one alderman and one assistant alderman for one-year terms. Legislation may originate in either chamber, but must be approved by both before being sent to the mayor. Restraints are placed on the fiscal powers of the Common Council: it may not draw money from the treasury except for purposes previously specified by legislation and it may not borrow against the credit of the corporation except in anticipation of future revenues. The council does retain the power to appoint the heads of the executive departments.
Executive: Removed from the Common Council, the mayor nonetheless gains power of veto over the ordinances and resolutions it passes. This veto may be overridden if a majority of both boards re-passes the legislation. The office of deputy mayor (since 1675 a position held by an alderman chosen by the mayor to act in his absence) is transferred to the president of the Board of Aldermen. No city departments fall under the direct control of the executive.

1834
Executive: An amendment to the state constitution calls for annual public mayoral elections.

1849
Legislative: The term for aldermen, but not assistants, is increased to two years. Assistants receive the sole power to impeach city officials. The Common Council surrenders the power to appoint the heads of executive departments and to perform executive business; still, it retains the powers to tax and spend and to administer municipally owned lands. Though now elected, the heads of executive departments remain beholden to the Common Council, as their appointments must be approved.

Executive: The mayor's term of office is increased to two years and he becomes head of the police department (but not chief). He lacks full executive powers, as the 10 executive department heads are elected rather than named by the mayor, and most appoint their own subordinates.

(*continued*)

Changes to the City Charter, 1653–2008 (*Continued*)

1853
Legislative: A Board of Councilmen replaces the Board of Assistant Aldermen and together with the Board of Aldermen comprises the Common Council. The Board of Councilmen is made up of 60 men elected annually from as many newly drawn districts of roughly equal population. The councilmen take charge of all legislation concerning expenditures; the Board of Aldermen may only suggest amendments. Denied the right to sit as judges in municipal courts and to appoint policemen, members of the Common Council also lose control of the police department, which is placed under a Board of Commissioners. All contracts, leases, and sales in excess of $250 must be open to public bidding.
Executive: The mayor accrues further power, as the Common Council now needs a two-thirds majority in each chamber to override his veto. The elected heads of executive departments remain largely independent of the mayor. A Board of Commissioners composed of the mayor, recorder, and city judge presides over the police department.
Courts and Boards: The removal of councilmen as judges in municipal courts yields a more independent judiciary.
1857
Legislative: The city's aldermen are no longer elected by ward, but rather one each from 17 larger districts. The Board of Councilmen is made up of six members elected from each senate district in the city for one-year terms. The Common Council loses powers to the comptroller, who becomes administrator of the city's real estate and auditor of its accounts, its overseer of disbursement, and its collector of taxes. No longer members of the Board of Supervisors of New York County, aldermen gain power to remove department heads by a two-thirds vote (without the mayor's approval).
Executive: Empowered to appoint and to remove most heads of executive departments, albeit with the aldermen's consent, the mayor shores up control over the executive branch. At the same time the state supplants the Municipal Police with its own Metropolitan Police, combining New York, Kings, Richmond, and Westchester counties; a commission of five state-appointed overseers along with the mayors of New York City and Brooklyn (as *ex officiis* members) supervises the Metropolitan Police.
Courts and Boards: A separate New York County Board of Supervisors is created as a check on city government. A board of six elected and six appointed (by the mayor) supervisors replaces the mayor, recorder, and alderman as the members of the board.
1864
Board of Estimate: The Board of Estimate and Apportionment is established; it includes the commissioners of the Metropolitan Police and the comptrollers of New York City and Brooklyn and is responsible for estimating the annual cost of operating the Metropolitan Police.
1868
Council: An amendment to the city charter abolishes the Board of Councilmen, replacing it with the Board of Assistant Aldermen. Each assembly district elects an assistant and an alderman to two-year terms.
1870
Council: The charter of William M. "Boss" Tweed and its amendments of 1871 modify the Board of Aldermen to consist of 15 men elected from the city at large. The Board of Assistant Aldermen consists of one man elected from each assembly district. Members of each board serve one-year terms. All legislation involving expenditures requires a three-fourths vote of approval from each board. The comptroller, corporation counsel, commissioner of public works, and heads of various municipal departments receive non-voting seats on the Board of Aldermen.
Mayor: The mayor augments his power as he receives the right to appoint officials in executive departments (except those of finance and law) without the Common Council's approval. Groups of commissioners with terms of between four and eight years lead most departments; thus the mayor further expands his influence in city government beyond his two-year term. His veto is enhanced as a three-fourths majority vote of each board of the Common Council is required to override his veto. After 13 years of state control, the police department is placed under the mayor's authority.
Board of Estimate: The Board of Supervisors of New York County is terminated as a distinct body and its powers are returned to the former supervisors (see 1813), the aldermen, the mayor, and the recorder. A newly created Board of Apportionment includes the mayor, the comptroller, the commissioner of public works, and the president of the department of public parks. The board's duties include estimating and apportioning money sufficient to run each department of city government for each given year. It sends this budget for certification to the county supervisors (the mayor, recorder, and alderman). By taxing real and personal estate, the supervisors raise funds sufficient to meet expenditures and interest due on the city's bonds.
1873
Council: The "Reform Charter" eliminates the Board of Assistant Aldermen, making the Board of Aldermen alone the Common Council. Three aldermen are elected from each senate district along with six others as at-large candidates, totaling 21 members. To forestall one-party domination of the council, voters may vote for no more than two aldermen from their senate district and four at-large candidates. The term of office for aldermen is reduced from two years to one. These changes do not take effect until 1875.
Mayor: Pending approval by the Board of Aldermen, the mayor appoints all department heads and commissioners except the commissioners of public instruction, the comptroller, the corporation counsel, the president of the police department, and the commissioner and president of public works.
Board of Estimate: The Board of Apportionment becomes the Board of Estimate and Apportionment; its reorganized membership includes the mayor, the comptroller, the president of the Board of Aldermen, and the president of the Department of Taxes and Assessment. Based on requests from individual departments, it estimates the cost of government operations, apportions a sum to each department, and establishes a tax rate. The aldermen make non-binding recommendations on the budget; the comptroller certifies it. The board is given the power to issue stocks and bonds.
1874
Council: The number of aldermen making up the Common Council is set at 22. Six aldermen are elected at large and 16 others are elected as representatives of as many aldermanic districts.

(*continued*)

Changes to the City Charter, 1653–2008 (*Continued*)

Board of Estimate: The mayor and the recorder are removed as supervisors of the County of New York, thereby making the Board of Supervisors and the Board of Aldermen equivalent.

1884

Council: The president of the Board of Aldermen is no longer elected by his fellow aldermen, but rather by the general electorate as an at-large candidate.

1888

Council: One representative from each of the city's 25 assembly districts and a president elected at large now comprise the Board of Aldermen. All serve one-year terms (increased to two years in 1892).

1898

Council: A Municipal Assembly consisting of a Council and a Board of Aldermen replaces the Common Council. The Council includes 28 members elected to four-year terms from 10 council districts (four in Manhattan, three in Brooklyn, and one each in the Bronx, Queens, and Staten Island). Each district elects three members, though Staten Island elects only one. Elected at large, the president serves as the 29th member. The Board of Aldermen includes one member from each of the 60 assembly districts who serves a two-year term. Board members elect a president from among their number. Allowed to attend meetings, the heads of various municipal departments may not vote. This marks the demise of the Common Council.
Mayor: The term of the mayor is increased to four years, though he may not seek reelection. His appointments must transpire within the first six months of his tenure, but they do not require confirmation by the Municipal Assembly. The mayor's hand in financial and franchise issues benefits from a clause mandating a five-sixths majority in the Municipal Assembly to override his veto. The office of comptroller remains elective.
Board of Estimate: The office of borough president is created. Elected to four-year terms, the borough presidents take responsibility for local administration and public works (streets and sewers). Members of the Board of Estimate include the mayor, the comptroller, the corporation counsel, the council president, and the president of the Department of Taxes and Assessments. The board submits an annual city budget to the Municipal Assembly, which may vote only to decrease individual apportionments. However, the mayor may veto such decreases.

1901

Council: The city charter is amended to eliminate the Municipal Assembly in favor of a single Board of Aldermen. Seventy-three aldermen are elected from as many districts to two-year terms. The president of the board is once more elected at large. A majority vote of the board determines the filling of vacancies; the person filling the vacancy must hail from the same party as his predecessor.
Mayor: The term of the mayor is reduced to two years, though he is again eligible for reelection.
Board of Estimate: The Board of Estimate and Apportionment is now made up of the mayor, the comptroller, the president of the Board of Aldermen (each of whom has three votes), and the five borough presidents (each of whom has one vote). The borough presidents' terms of office are reduced to two years but they gain new powers, including those formerly assigned to the Board of Public Improvements, as well as the power to regulate buildings, sewers, and highways. In 1902 the Board of Estimate and Apportionment takes over the duties and the powers of the Board of Public Improvements.

1905

Mayor: The term of the mayor is increased to four years.
Board of Estimate: The Board of Estimate and Apportionment takes the power to grant franchises over from the Board of Aldermen.

1911

Board of Estimate: Empowered to authorize public improvements, the Board of Estimate and Apportionment also may determine the tax revenue needed to pay for them.

1917

Board of Estimate: The Board of Estimate and Apportionment is empowered to regulate buildings and zoning.

1924

Council: An amendment to the state constitution grants the city home rule: its legislature is free from virtually all state interference in the city's governance; pending approval by public referendum, the legislature is empowered to amend the city charter. A new Municipal Assembly is established; the Board of Aldermen constitutes the lower chamber, the Board of Estimate and Apportionment the upper. The Board of Aldermen is comprised of a president elected at large, five borough presidents, and 65 men elected from as many districts for two-year terms.
Board of Estimate: The Board of Estimate and Apportionment is composed of the mayor, the comptroller, the president of the Board of Aldermen, and the five borough presidents.

1938

Council: A smaller City Council replaces the 65-member Municipal Assembly. Council members are elected by a system of proportional representation: each borough elects one councilman for each 75,000 voters. Councilmen serve two-year terms.
Mayor: The office of deputy mayor is created; it is eliminated in 1939.
Board of Estimate: Renamed the Board of Estimate, the Board of Estimate and Apportionment is empowered to veto any legislation of the City Council. The Commissioners of the Sinking Fund surrender their powers to the board, which now represents the most powerful governing body in the city.

1945

Council: The term for councilmen is increased to four years, matching the length of the mayor's term.

1946

Mayor: The office of deputy mayor is restored as a full-time position.

1949

Council: Proportional representation is abolished; subsequently one councilor is elected from each state senate district within the city.

(*continued*)

Changes to the City Charter, 1653–2008 (*Continued*)

1958
Board of Estimate: The voting powers within the Board of Estimate are changed. The mayor, comptroller, and president of the City Council each have four votes; the five borough presidents have two.

1963
Council: A new charter provides for the election of one councilman from each state senate district within the city and two councilmen-at-large from each borough.
Mayor: Empowered to appoint additional deputy mayors, the mayor also may estimate general fund revenues for budget purposes, a responsibility previously within the comptroller's purview. The mayor may also estimate the maximum debt that the city may incur for capital projects.

1975
Board of Estimate: Six amendments to the city charter pass via referendum. Overall they represent an attempt to improve governmental efficiency and to increase oversight of individual agencies, particularly in fiscal matters. The powers of the City Council, the Board of Estimate, and the office of the mayor remain unchanged.

1978
Board of Estimate: The number of votes on the Board of Estimate changes, giving two each to the mayor, the comptroller, and the president of the City Council, and one to each borough president. But the proportions remain the same, so the change is not substantive.

1989
Council: The City Council is expanded from 35 to 51 seats to improve the prospects of racial and ethnic minority candidates. The council receives full power over the municipal budget as well as authority over zoning, land use, and franchises.
Mayor: The mayor controls municipal agencies and approves contracts through them, proposes an annual budget and an estimate of revenues, and appoints seven members to the newly created City Planning Commission.
Board of Estimate: A new City Planning Commission replaces the Board of Estimate, which is eliminated. Empowered to recommend zoning changes, to grant special land-use permits, and to vote on sites chosen for city projects, the City Planning Commission consists of 13 members: seven appointed by the mayor, one by the president of the City Council, and one by each of the borough presidents.

1993
Council: The City Council votes to rename the president of the City Council the public advocate. The public advocate presides over all stated meetings of the City Council. He or she also serves as an *ex officio* member of council committees and thus retains the right to introduce and co-sponsor legislation. Additionally, the outcome of a referendum imposes a two-term limit on City Council members and on citywide elected officials.

1996
Council: Voters reject a City Council proposal to extend term limits.

2008
Mayor: At the urging of Mayor Michael Bloomberg (who would have exhausted his term limit in 2009), the council votes 29 to 22 to extend the term limit to three terms; this occurs after the defeat (22 to 28 with one abstention) of an amendment to submit the issue to public referendum. Legal challenges to the extension fail in federal court; similarly, a proposed law in the New York State legislature fails to pass.

Compiled by Edward T. O'Donnell, Alex Poole

chairman from 1969 to 1981. One of the most influential corporate leaders of his time, he introduced electronic automation and expanded the bank's international activities. Chase helped to bring about several major projects in Manhattan during the late 1960s and early 1970s, including Madison Square Garden, New York Plaza, South Street Seaport, the World Trade Center, and Lincoln Center. In the mid-1970s inflation, the oil embargo, poor real estate investments, and loans to developing countries caused the most severe crisis for the bank since the Depression. Although Chase Manhattan recovered in the 1980s, the city's investment banks then dominated the financial stage. The bank greatly expanded its global operations in these years, opening 30 international branches, 11 representative offices, and 65 subsidiaries in more than 50 countries. A recession in the city's banking sector led to Chemical Bank's acquisition of Chase Manhattan in 1996; the merger, valued at $10.4 billion, created the then-largest bank in the United States. The new entity continued to operate under the name Chase Manhattan Bank until its acquisition of the J. P. Morgan and Company in 2000, when it became JPMorgan Chase and Company.

Ann C. Gibson, Tao Tan

Chase National Bank. Commercial bank founded in 1877 at 104 Broadway by John Thompson and named after Salmon P. Chase, secretary of the treasury under President Abraham Lincoln. After Henry W. Cannon became chairman in 1887 it moved its offices to Nassau Street and became an established correspondent bank, providing capital through short-term loans to other banks. Its growth continued under the leadership of A. Barton Hepburn, president from 1904 to 1911 and chairman from 1911 to 1917. The Chase Securities Corporation, formed in 1918, underwrote and managed large securities, which it sold to individuals and institutions from 1927; it was liquidated after the passage of the Glass–Steagall Act (1933), which prohibited commercial banks from underwriting securities. During the 1920s Chase also merged with several important banks in the city, such as the Metropolitan Bank (1851) in 1921, the Mechanics National Bank (1810) in 1926, and Equitable Trust (1902) in 1930. The merger with Equitable Trust made Chase the largest bank in the world and established its connection with the Rockefeller family: John D. Rockefeller, Jr., the largest shareholder in Equitable, eventually owned nearly 4 percent of the

stock in Chase. These mergers were largely the work of Albert H. Wiggin, chairman of the bank from 1911 to 1933. His reputation was sullied when investigations by the Senate Banking and Currency Committee in 1933 revealed that he and his colleagues at Chase had made a profit of $10 million during the stock market crash of 1929 by short-selling shares in their own bank. Wiggin was succeeded in 1933 by Rockefeller's brother-in-law Winthrop W. Aldrich. By 1946 Chase had more than $6 billion in assets. John J. McCloy, a businessman and government official who became chairman in 1953, introduced retail banking and engineered the formation in 1955 of Chase Manhattan Bank through a merger with the Manhattan Company, a bank with more than 50 branches in New York City.

Chase School of Art. Original name of Parsons The New School for Design.

Chatham Square. Two-block square in Chinatown at the intersection of the Bowery, East Broadway, Oliver Street, St. James Place, Park Row, Worth Street, Mott Street, Doyers Street, Division Street, and Catherine Street. Once home to large numbers of saloons and brothels in the Five Points district of nineteenth-century New York City, Chatham Square now features the Kim Lau Memorial Arch, erected in 1962 in memory of the Chinese Americans who died in World War II, and a statue of Lin Ze Xu, a nineteenth-century Chinese anti-drug hero.

Ben Silk

Chayefsky, Paddy [Sidney] (*b* New York City, 29 Jan 1923; *d* New York City, 1 Aug 1981). Playwright. Brought up in the Bronx, he graduated from City College and wrote realistic, intimate dramas for television. The best known of these early works was *Marty* (1953), the story of a lonely butcher in the Bronx who typified the urban working class in the 1950s. His screen adaptation of *Marty* (1955) and his scathing social satires *The Hospital* (1971) and *Network* (1975) won Academy Awards for best screenplay. His stage plays *The Tenth Man* (1959), *Gideon* (1961), and *The Passion of Josef D* (1964) were all produced on Broadway.

Sara J. Steen

Chebra Ansche Chesed. Original name of Temple Ansche Chesed.

Chelsea (i). Neighborhood on the West Side of Manhattan (2000 est. pop. 42,000), bounded to the south by West 14th Street and to the west by the Hudson River. The northern and eastern boundaries correspond roughly to 30th Street and Sixth Avenue. A farm owned by Jacob Somerindyck and his wife covered a parcel bounded by what became 24th Street, Eighth Avenue, and 21st Street, and by the Hudson River, the eastern bank of which lay along what is now 10th Avenue. The farm was bought on 16 August 1750 and named Chelsea by Thomas Clarke, a retired British army captain. It was extended to what is now 19th Street by his daughter Charity and her husband, Benjamin Moore. They opposed a plan of 1807–11 to add streets north of 14th Street and in 1813 deeded the property to their son, Clement Clarke Moore. He eventually became a developer and a faculty member of General Theological Seminary, which in 1825 accepted a site that he donated on Ninth Avenue; he also donated land on 20th Street for St. Peter's Episcopal Church (1836–38). For the next 30 years one-family houses were built by speculators and residents, among them faculty of the seminary, building tradespeople, and merchants. A mansion was built on Ninth Avenue facing the seminary by the merchant and banker Don Alonzo Cushman, who developed other properties including a row on 20th Street that was named for him. The neighborhood expanded to include adjacent properties that had been owned by Robert Ray and Henry Eckford, and an industrial area took form along the Hudson. Ray donated land at Ninth Avenue and 28th Street for the Church of the Holy Apostles (consecrated 1848).

In the 1820s Scottish weavers formed Paisley Place east of Seventh Avenue and south of what is now 17th Street; there were also German, Italian, and British enclaves. Several Baptist, Methodist, and Presbyterian churches were formed, as were the Church of St. Vincent de Paul (by French Catholics in 1840), St. Columba Roman Catholic Church (by Irish Catholics in 1845), and Congregation Emunath Israel (1851). By 1869 a theater district extended along 23rd Street from Sixth Avenue to Eighth Avenue, and Samuel Pike opened an opera house west of Eighth Avenue. This was soon acquired by Jay Gould and Jim Fisk and renamed the Grand Opera House. About 50 people were killed during a riot between Irish Catholics and Irish Protestants on 12 July 1871 at Eighth Avenue and 24th Street. Freight handling and warehousing became important industries in the area, and the area west of 10th Avenue became the site of lumberyards, breweries, factories, rail yards, and piers.

About 1900 the population peaked at 85,000. The opera house flourished into the early twentieth century, and many performers stayed at the Chelsea Hotel. Several motion picture studios opened in the neighborhood after 1907, the most productive of which was Adolph Zukor's Famous Players (1912). The Hellenic Orthodox Community of St. Elefthe-

Chatham Square

rios Church (1918) was the site in 1931 of Athenagoras's enthronement as the archbishop of North and South America; later destroyed by fire, the church was rebuilt in 1976. In 1930 a block dating from the time of Clement Clarke Moore was replaced by London Terrace, a high-rise apartment complex bounded by 24th Street, Ninth Avenue, 23rd Street, and 10th Avenue. A few other high-rise structures were also built, but additional plans for development were abandoned during the Depression. The announcement of the Elliott Housing Project in 1939 marked the beginning of urban renewal, although construction was delayed during World War II when the site was used to house 1000 members of the U.S. Coast Guard. The West 400 (21st–23rd) Block Association—the oldest continuously operating block association in the country—was formed in 1952. About 1960 the Chelsea Houses were built on a parcel bounded by 27th Street, Ninth Avenue, 25th Street, and 10th Avenue, and the Robert Fulton Houses were built on Ninth Avenue between 16th and 19th streets. Penn South (1962), a housing cooperative circumscribed by 29th Street, Eighth Avenue, 23rd Street, and Ninth Avenue, was sponsored by the International Ladies' Garment Workers' Union. The Chelsea Residence was established to allow mentally disabled adults to live independently.

Several piers dating from the 1960s were obsolete at completion because they could not handle containerized cargo. At the same time townhouses were refurbished and the neighborhood became fashionable. In 1973 22 rooming houses (on 22nd and 23rd streets west of Ninth Avenue) were sold by Louise Gard, a major holder of such accommodations, and eventually became the Fitzroy Place cooperative apartments. The neighborhood also became a center for television production. Warehouses were converted into nightclubs and restaurants replaced bodegas. Humanities High School was renamed in 1990 for the civil rights activist and local resident Bayard Rustin. Like much of Manhattan, Chelsea experienced a renaissance during the 1990s and into the early twenty-first century, becoming one of New York City's most sought after addresses.

Hilda Regier

Chelsea (ii). Small neighborhood in northwestern Staten Island, bounded to the north by South Avenue, to the east by the William T. Davis Wildlife Refuge, to the south by Meredith Avenue and Victory Boulevard, and to the west by the Arthur Kill. The area was sometimes called Prallstown, after the Prall family that was granted the land in 1675, and during the American Revolution it was facetiously known as Peanutville because the villagers stored nuts for those who rode the ferries between New York and New Brunswick, New Jersey. It consists mostly of open marshland and is little developed apart from a few businesses, among them the large communications complex known as the Teleport. There are also several small pockets of older, one-family houses.

John-Paul Richiuso

Chelsea Hotel. Hotel located at 222 West 23rd Street in Manhattan and opened in 1884 as an apartment building with 40 units. One of the first residential cooperatives in New York City, the building is a 12-story brick structure with iron balconies in an eclectic Victorian style that has French and British influences. Early residents included several artists, among them Charles Melville Dewey (from 1885). The building became a hotel in 1905 and was visited by the actresses Sarah Bernhardt and Lillian Russell and the writers Mark Twain and O. Henry. In the 1930s Thomas Wolfe wrote *You Can't Go Home Again* at the hotel, and the artist John Sloan lived there. It later attracted the writers James T. Farrell, Dylan Thomas, Brendan Behan, and Arthur Miller and the composer Virgil Thomson (from 1940 until his death in 1989). Andy Warhol's film *The Chelsea Girls* (1966) was made there. In the lobby are displayed works by artists associated with the hotel, including Larry Rivers, André François, and Patrick Hughes.

Robert Baral, *Turn West on 23rd: A Toast to New York's Old Chelsea* (New York: Fleet, 1965); Florence Turner, *At the Chelsea* (New York: Harcourt Brace Jovanovich, 1987)

Hilda Regier

Chelsea Market. Mixed-use public space and indoor mall located between Ninth and 11th avenues between 15th and 16th streets. Located in the original National Biscuit Company (Nabisco) headquarters, the complex that was built in the 1890s was renovated in 1997. It is comprised of 22 buildings that total over 2 million square feet (185,800 square meters). The birthplace of the Oreo cookie now houses bakeries, restaurants, and upscale stores on its ground floor and broadcasting companies, including Oxygen Network, Food Network, and NY1, on its higher levels. The opening of Chelsea Market helped speed gentrification in Chelsea and the Meatpacking District at the end of the twentieth century. With the opening of the High Line in 2009, the market became one of the focal points of the elevated park, which runs through the upper floors of the main building.

Chelsea Market, 2009

Anne Epstein

Chelsea Piers. Manhattan piers on the Hudson River between Little West 12th and West 23rd streets completed in 1910 by the firm Warren and Wetmore. They were the primary piers for the White Star and Cunard lines and served as a major embarkation point for troops and materiel during World War I and World War II. The piers were involved in critical events surrounding the RMS *Titanic* and RMS *Lusitania* disasters: the *Titanic* was

Chelsea Piers, 1909

Chelsea Piers, 2009

en route to pier 59 when it sank, and survivors were dropped off at White Star pier 54 by the RMS *Carpathia* on 18 April 1912. The *Lusitania* left Cunard pier 54 on 1 May 1915 before being torpedoed. By the 1950s the piers were primarily used for cargo and gradually fell into disuse. By the 1990s five of the original piers had been demolished or destroyed by fire, and in 1994 the remaining four were converted into the Chelsea Piers Sports and Entertainment Complex, which houses new sports facilities, restaurants, a marina, and film studios.

Caleb Smith

Chemical Bank. Commercial bank formed in 1824 as a subsidiary of the New York Chemical Manufacturing Company, a maker of drugs and chemicals in Greenwich Village. It was situated first at 216 Broadway, opposite St. Paul's Church, well north of most of the 12 banks then operating in the city, which were clustered around Wall Street. Chemical owed much of its early success to its second president, John Mason, a leading merchant and founder of the New York and Harlem Railroad. Mason served the bank from 1831 until his death in 1839 and reduced its reliance on chemical manufacturing. After Mason's death the bank was run successively until 1878 by his cousins by marriage, Isaac Jones and John Jones, who disbanded the chemical works and renewed the bank's charter in 1844. In the following year the bank moved to large headquarters at 270 Broadway at Chambers Street. The bank was instrumental in 1853 in forming the New York Clearing House, the first such organization in the United States. During the panic of 1857 it acquired the nickname "old bullion" for its policy of paying specie on demand. As the bank's reputation grew during the nineteenth century, the value of its stock reached $425 a share in 1860 and $1500 a share in 1875, the highest of any bank based in New York City.

During the early twentieth century Chemical Bank continued to expand. It bought the Citizens National Bank in 1920 and opened its first branch office in 1923, at Fifth Avenue and 29th Street. The first international office opened in London in 1929, and in the same year the bank converted to a state charter that enabled it to merge with the United States Mortgage Trust Company. Later, Chemical acquired more than a dozen banks in New York City, including the Corn Exchange Bank Trust Company in 1954, from which it gained many additional branches; the New York Trust in 1959, operator of an extensive wholesale banking network; and Security National Bank in 1975, a leading bank on Long Island. It was one of the founding members in 1985 of the New York Cash Exchange (NYCE), an automated teller network that radically transformed consumer banking, and in 1991 it merged with Manufacturers Hanover Trust to create the second-largest bank in the United States. In 1996 Chemical Bank acquired Chase Manhattan Bank, but retained Chase's name for the combined entity until the acquisition of J. P. Morgan and Company in 2000, when it became JP Morgan Chase and Company.

History of the Chemical Bank, 1823–1913 (New York: privately printed, 1913)

Stephen Weinstein

chemicals. As early as 1626 the chief commercial agent of the Dutch West India Company remarked on the potential in New Amsterdam for processing lime, used in the manufacture of mortar and glass. Although before 1700 most chemicals were produced and used within private households, entrepreneurs continued to explore opportunities for commercial mineral refinement. Large naval stores used tar oil and pitch, and a number of small firms tanned hides; produced paints, dyes, and varnishes; refined sugar; made soap and candles; and operated breweries and distilleries. The noxious odors and chemical dangers that accompanied the development of the industry drove out many residents, and others demanded regulation within the city limits: tar pits were banned in 1676, as were lime-burning pits and rum distilleries in 1703. By the early eighteenth century factories produced glass, dyes, paper, potash, and linseed oil, and the city became a leading center of sugar refining, with large factories owned by John van Cortlandt, William Rhinelander, Peter Livingston, and Nicholas Bayard (who in 1730 opened a multistory refinery on Wall Street between William and Nassau streets). Tanning was centered on Beekman's Swamp; tanneries and starch factories, breweries, tar houses, furnaces, and potteries were on the shores of the Collect. In 1744 tanning and water pits for the dressing of leather were banned from the city. The Society for the Promotion of Arts, Agriculture, and Economy was formed in 1766, and professorships in chemistry were established at King's College (now Columbia University) in 1767 and 1792.

The manufacture of fine chemicals dates to 1793 when the Schieffelin family began to mix drugs at a shop on Pearl Street; the firm remained an important manufacturer of pharmaceuticals into the twentieth century. In 1797 restrictions were placed on the manufacture of glue, soap, and tallow. With the development of coal and petroleum destructive distillation (slow cooking in homemade ground kilns or in kettles), the production of heavy chemicals increased markedly. From 1823 alums and acids were manufactured by the New York Chemical Manufacturing Company (a forerunner of Chemical Bank); Martin Kalbfleisch opened a color works in Harlem in 1835 and later diversified into sulfuric acid, sulfates, mineral acids, and salt production at factories in Harlem and Brooklyn. New York City had 3387 chemical factories in 1850, and at the end of the century it was a leading producer of heavy industrial chemicals such as acids, bleaches, soda, potashes, alums, coal-tar products, fertilizers, wood products, and cyanide; one of few areas in which it could not compete was dyemaking, which was dominated by German concerns. Chemical and paint factories were clustered along the East River in Brooklyn and its tributary Newtown Creek and near abattoirs, metal refineries, and other nuisance industries. But the industry was soon compelled to move away from heavily populated neighborhoods, first to upper Manhattan and then to outlying areas such as Hunts Point and Hudson County, New Jersey, where costs were low, restrictions on industry few, waterways deeper than Newtown Creek, riverbanks less crowded than those of the East River, and settlements sparser than those of lower Manhattan.

By the early twentieth century Manhattan had 1350 chemical plants that produced a quarter of the nation's heavy chemicals; the average plant employed 52 workers, and 11 plants employed more than 1000. Rapid

growth occurred in the production of such heavy chemicals as soda acids, ammonia, potash bleaching compounds, and compressed and liquefied gases. Procter and Gamble erected a large facility at Port Ivory on Staten Island in 1907. Most of the fertilizer manufacturers moved out of Manhattan and into New Jersey. In 1922 only one in 10 chemical workers in the city worked below 59th Street in 29 small plants; Brooklyn and Queens had 43 large plants. After World War II many chemical manufacturers set up facilities around Newark and Raritan bays and along their linking waterways. At the same time petrochemical plastics became a major product for giant firms like Union Carbide and the Allied Chemical and Dye Corporation. Thirty-seven factories produced plastics in 1947, and it was partly because of plastics manufacturing that even as the number of chemical firms based in the city continued to decline, their total output increased: in 1947 there were 1696 manufacturers in the metropolitan area, in 1963 there were 986, with a value added of $794.3 million, and in 1977 there were 685, with a value added of $1.6 billion.

Several leading chemical firms retained corporate headquarters in Manhattan during the 1970s, including makers of industrial products (Air Reduction, Allied Chemical, Celanese, National Distillers and Chemical, NL Industries, Texas Gulf Sulphur, and W. R. Grace) and of consumer products (American Home Products, Bristol–Myers, Colgate–Palmolive, and Pfizer). But only four chemical firms remained in the city in the early twenty-first century: W. R. Grace (food and agricultural products, industrial chemicals, videotapes, sealing compounds, plastic adhesives, paper, oil and gas field machinery, business research, and software), Quantum Chemical (propane, butane, and other gases; soaps and detergents; plastics and resins; polypropylene sheet and film; polyethylene and polypropylene resins; and industrial inorganic materials), Witco Chemical (cleaning and polishing preparations, organic plasticizers, plastics and resins, petroleum products, rubberized fabrics, filtering clays, and oils and greases), and Inspiration Resources (fertilizers and agricultural chemicals, herbicides and insecticides, and anhydrous ammonia).

C. A. Browne, *The Story of Chemistry in Old New York* (New York: American Chemical Society, 1935)

David B. Sicilia

Chemists' Club. Organization formed on 29 November 1898 to promote the interests of chemists. The first offices were at 108 West 55th Street. Under the leadership of its first president, C. F. Chandler, the club began assembling a library. By 1901 there were 140 resident and 119 nonresident members. With financial assistance from its president, Morris Loeb, the club purchased new quarters at 50–54 East 41st Street in 1909 and moved there in 1911. As chemical firms after World War I moved to midtown the club's membership greatly expanded and came to include business leaders as well as scientists. In the early twenty-first century the Chemists' Club had 2500 members and a staff of 90 was located at 3 West 51st Street.

Elizabeth J. Kramer

Cherry Lane Theatre. Off-Broadway theater. Located at 38 Commerce Street in Greenwich Village, it is New York City's oldest continuously running Off-Broadway theater. The building had served as a brewery, tobacco warehouse, and box factory prior to its conversion to a 250-seat theater in 1924 by Edna St. Vincent Millay and the Provincetown Players. In the 1960s the theater presented works by Samuel Beckett, Edward Albee, Eugene Ionesco, and Harold Pinter. Cherry Lane premiered Beckett's *Happy Days* in 1961 and Amiri Baraka's (then known as LeRoi Jones) *Dutchman* in 1964. Play-development programs begun by the theater in the late 1990s sought to develop the work of black and female playwrights in particular. In 1998 the theater opened a 60-seat black-box theater space dedicated to staging new works by Americans.

Sarah Wansley

Chesebrough–Pond's. Firm of cosmetics manufacturers. It was formed on Sullivan Street in Brooklyn in 1870 as the Chesebrough Manufacturing Company by Robert A. Chesebrough (1837–1933), who developed Vaseline petroleum jelly in the early 1850s in his oil refinery on Delevan Street. The firm was immediately successful and in the early 1880s became part of the Standard Oil trust, opened several branches in Europe, and built headquarters on State Street in Manhattan, where it remained for the next 75 years. After the breakup of Standard Oil in 1911, the firm became independent again. In 1955 it merged with Pond's Extract Company to become Chesebrough–Pond's and opened headquarters on Lexington Avenue. During the following decades the firm bought many cosmetics, perfume, and toiletry companies. Although its main offices were moved out of the city in 1972, many of its subsidiaries remained there. Unilever United States bought Chesebrough–Pond's in 1987.

James Bradley

chess. The first national chess tournament in the United States, the First American Chess Congress, was held in New York City in 1857. The tournament was won by Paul Morphy, a 20-year-old prodigy from New Orleans who the following year proved himself the best player in the world by defeating European masters during a Continental tour (in Paris he played blindfolded against eight players, winning against six and drawing with two). His stunning victories popularized the game in the United States, and he was acclaimed on his return to New York City in 1859. He later showed antipathy toward the game, and after returning to New Orleans in 1860 he never again played in public. Morphy's passage through New York City invigorated a chess community that became the center of American chess for a century, attracting the nation's strongest players and many prominent émigrés, among them the next three world champions: Wilhelm Steinitz (*b* Prague, 1836), Emmanuel Lasker (*b* Berlinchen, Germany [now Barlinek, Poland], 1868), and José (Raúl)

A street game of chess, 2009

Capablanca (*b* Havana, 1888). All took up residence in New York City, although Lasker did so late in life (1937), and Capablanca did so unofficially, first as a student at Columbia University and later as a nominal member of the Cuban diplomatic service. Steinitz, recognized as the world's best player when he moved to New York City in 1883, became the first official world champion in 1886 by defeating Johannes Zukertort of Germany in a match played in New York City, St. Louis, and New Orleans.

Tournaments held in New York City in 1924 (won by Lasker) and 1927 (won by Capablanca) were probably the most important international competitions ever held in the United States. The high point of American chess was the 1930s, during which the United States won the world team championships known as the Chess Olympiads four consecutive times (1931, 1933, 1935, and 1937). Competition in the United States at the time was organized primarily through chess clubs, the most influential of which were in New York City and belonged to the Metropolitan Chess League. An annual match between the Manhattan Chess Club (uptown) and the Marshall Chess Club (downtown) in which the strongest players in the country took part was the last and most important event of the season. All members of the four teams that won the Chess Olympiads were drawn from these two clubs: Reuben Fine, Samuel Reshevsky, Frank J. Marshall, Arthur Dake, Isaac Kashdan, Israel Horowitz, and Herman Steiner. After World War II the United States no longer dominated international chess, but the clubs in New York City continued to produce such prominent players as Larry Evans, William Lombardy, Robert Byrne, Donald Byrne, and most notably Bobby Fischer. After winning the World Championship in 1972 Fischer withdrew from public competition for two decades, eerily recalling the example of Morphy a century earlier. The 1960s and 1970s saw the development of a strong national chess federation sanctioning open tournaments throughout the country. The chess clubs lost their role as the leading organizers of the game, although the Manhattan and Marshall clubs remained exceptionally active and the city continued to attract leading players, both Americans and émigrés (especially from Russia and eastern Europe). The World Chess Federation chose New York City as the site for the first half of the World Championship Match of 1990, making it the fifth such event held there (more than in any other city except Moscow). In the twenty-first century chess in New York City flourishes not only at the grandmaster level but also in informal settings outdoors, particularly in Washington Square Park. Matches there are often accompanied by wagering, and a few enterprising players are able to make a living at their game. In Bryant Park the New York Chess and Backgammon Club rents out chess sets by the hour.

Chickering Hall. Concert hall opened by the piano makers of the same name in November 1875 at the northwest corner of Fifth Avenue and 18th Street. It was intended to compete with Steinway Hall on East 14th Street, and became well known in 1875 when Hans von Bülow played a series of piano recitals there. As fashionable society moved uptown the hall suffered from its location, and in 1893 the building was remodeled into retail stores.

Marc Ferris

child labor. Child labor reformers organized on a large scale during the late nineteenth century. In 1902–3 the New York Child Labor Committee was formed by settlement-house workers and reformers such as George Alger. Backed by wealthy business leaders and soon also by organized labor, scholars, and the clergy, the organization had on its staff such reformers as George Hall and Jeanie Minor. To gain the support of the public, reformers needed to destroy the prevailing notions that children required only a simple education and could build a lifetime career on work done in childhood. Another large obstacle was the esteem held for children who supported poor or ailing parents. The committee employed innovative techniques in attacking these attitudes. It conducted investigations establishing the detriment of work to children and then presented its findings to the public in flyers, leaflets, and photographs showing that child workers were defenseless, exploited, robbed of their childhood and often their lives, and limited in adulthood. Eventually persuaded of the moral and economic evil of child labor, the public supported legislative campaigns that focused on changing the law, and the child labor movement became one of the most sustained and widely supported in the city. Although far from complete, reform efforts had considerable success between 1903 and the 1930s. The age at which children could leave school was raised from 14 to 16 in 1935, the number of hours they could work daily and weekly was steadily reduced, and children were barred from working at night and under dangerous conditions. The laws also broadened in scope to include work not only in factories but also in stores, canneries, the home, and the street.

Adequate enforcement was difficult to achieve, and with regard to homework it was nearly impossible. There were not enough inspectors, the laws were often vague and contained loopholes, and enforcement was resisted by parents, employers, and even some public-school officials seeking to reduce class size and remove disruptive students. The situation gradually improved. Machines designed for semiskilled adults took over the work previously assigned to children, and during the Depression many children lost their jobs to adults. Enforcement of existing laws became more stringent. In the late 1930s homework was reduced after it was barred in many industries by the federal government, which also banned child labor under the age of 16 and established a minimum wage. Violations

Children's Aid Society. Philanthropic organization formed in 1853 by Charles Loring Brace. It was one of the first agencies of its kind in the United States and became well known for opening lodging houses (five for boys and one for girls) in the poorest districts of New York City. A night's lodging cost 10 cents and a meal cost 7 cents. The society also operated 21 industrial schools (six of them associated with lodging houses) where carpentry, woodworking, printing, dressmaking, laundry work, and typewriting were taught at no charge. Eventually it opened kindergartens, free reading rooms, night schools, baths, gymnasiums, and seaside vacation houses, as well as a convalescent home for sick children. It also found foster homes for about 90,000 children in Michigan, Iowa, Illinois, and Wisconsin. Although a few of the children were bound to trades, most were placed with farm families, on the assumption that farmers' homes were the best place to bring up homeless orphans or outcast children. (Most children were eventually adopted by their foster families.) In the 1890s the society organized a farm school in suburban Westchester County to give older boys training in agriculture before they were sent to the farms. At his death in 1890 Brace was succeeded by his son Charles Loring Brace, Jr.; together their tenures amounted to 75 years, during which they raised $25 million for the society.

children's book publishing. Until the early nineteenth century the only children's books produced in New York City were reprints of English works drawn from the popular publications of John Newbery. Amusing but moralistic fare devised from the educational precepts of John Locke was issued for a liberal Anglican audience by Hugh Gaine of Hanover Square and William Durell of Queen Street, his chief successor. The first publisher in the city to specialize in children's books was Samuel Wood, who began operations on Pearl Street in 1806 and published *Cries of New York* (1808), which gave children a glimpse of city life. About this time engraving techniques were introduced by Alexander Anderson: these replaced clumsy woodcut and copper-plate engraving as the primary means of producing illustrations and transformed the design of children's books. Other technological advances also fostered the growth of children's literature. The country's first stereotyping plant was opened in the city by David Bruce, allowing publishers to reissue popular works without maintaining extensive supplies of type. In 1839 Joseph A. Adams, a pupil of Alexander Anderson, invented a process to render multiple copies from a copper plate using engraved woodblocks. This process proved invaluable in augmenting a publisher's stock of illustrations.

During the 1840s New York City became the center of the book trade. A distinctly American style emerged in the work of F. O. C. Darley, who abandoned the custom of copying English conventions and based his style on observations of American life. Some of his best-known illustrations were those for "The Night before Christmas" (1862) by Clement Clarke Moore depicting Santa Claus in a rural landscape like those described by Washington Irving; his work became a model for other American illustrators. About the time of the Civil War the firm of R. Hoe and Company in the city introduced the power-driven press, which increased the profitability of longer prose works. The firms of James Harper, Charles Scribner's Sons, G. P. Putnam's Sons, and D. Appleton soon took advantage of this form of technology to publish children's stories by distinguished writers of mature fiction, often after the stories had been serialized in such popular children's periodicals as *St. Nicholas Magazine.* Unable to compete, many small specialty publishers suffered.

"A Misunderstanding," by Margaret Johnson, in St Nicholas's Baby World, *1884*

One such publisher, McLoughlin Brothers on Beekman Street, made important advances in illustration by adapting several color printing processes. Between 1860 and 1900 the firm introduced chromoxylography, chromolithography, and photo-engraving and helped to make popular a kind of picture book that led to other innovations during the early twentieth century. Another important publisher of children's books about the turn of the century was Grosset and Dunlap, formed in 1898.

Between 1916 and 1955 publishers in the city produced about 74 percent of the country's children's books, and their offerings often reflected a local bias. By 1926 children's departments had been set up by Harper and Brothers, Macmillan, Doubleday, Longman, E. P. Dutton, and Harcourt Brace. Output expanded, and illustrations became more sophisticated as the photo-offset process simplified color printing and refined its palette. Advanced technology and the artistic guidance of such astute editors as Louise Seaman (Bechtel) at Macmillan and May Massee at Doubleday led to the publication of stunning picture books. Other publishers followed suit, creating new openings for talented female editors and artists, including Ursula Nordstrom, director of the children's department at Harper from 1940 to 1973. In 1942 Simon and Schuster introduced a line of storybooks called Golden Books. They were produced by leading writers and artists under the direction of Albert Rice Leventhal and sold for 25 cents each; the books attained great popularity.

Children's book publishing in the city continued to flourish after World War II. A number of classic postwar children's books were deeply associated with the city, including *Stuart Little* by E. B. White, published by Harper in 1945, and Eloise, by Kay Thompson, published by Simon and Schuster in 1955, although by the early twenty-first century the partiality toward New York City had given way to a broader outlook.

Childs. Restaurant chain founded in 1889 by William and Samuel Childs. Their original self-service restaurant, on Cortlandt Street, catered mainly to office workers. The early expansion of the chain was aided by the pressure of the temperance movement against taverns. By 1916 there were more than 40 outlets, typically with white-tile walls to emphasize cleanliness and discourage loitering, a decor that was imitated by competitors. Childs later operated more expensive restaurants with waitress service. The flagship of the chain, opened in 1925, was at 604 Fifth Avenue. In 1961 the chain was acquired by the Riese Organization, which converted the remaining Childs restaurants into fast-food outlets. In 2003 the building on Coney Island that once housed one of the most prized Childs restaurants received landmark status from the city.

Childs, Richard S(pencer) (*b* Manchester, Conn., 24 May 1882; *d* Ottawa, Ont., 26 Sept 1978). Businessman and reformer. He was the son of the founder of the Bon Ami Company, a soap manufacturer that produces hypoallergenic soap from feldspar and tallow. His father founded the company in 1886 with the J. T. Robertson Soap Company. In 1904 Richard joined the Erickson Company, an advertising firm owned by one of his father's friends. In 1911 he began to work for his father's company, Bon Ami. In 1910 he formed the Short Ballot Organization with Woodrow Wilson (offices at 383 Fourth Avenue), which sought to reduce the number of elective offices at the state, county, and municipal levels. Childs believed that by reducing the number of elected offices, reformers could weed out corruption and increase the efficiency of the government; this would allow the few officials important enough to be elected to have cooperative and streamlined administrations, much in the manner that the president chooses his cabinet. These beliefs were likely inspired by his managerial experience in business, trying to streamline government like a company and use highly technically trained administrative experts. Childs promoted the Short Ballot through magazines like *McClure's, Collier's,* and *Everybody's.* In response to Childs's efforts toward simplifying local government, the city appointed a citywide medical examiner in 1918 and a citywide sheriff and register in 1942. Childs was the president of the City Club of New York (1926–38) and chairman of Citizens Union (1941–50). He wrote *Short Ballot Principles* (1911) and *Civic Victories: The Story of an Unfinished Revolution* (1952).

child welfare. During the eighteenth and nineteenth centuries New York City made innovative efforts to help neglected and delinquent children. The New York Poorhouse, opened in 1736, was the first public institution in the city to provide care for children, who at the time constituted a large number of those living in almshouses. In 1797 concern for the quality of care in poorhouses led to the formation of the New York City Ladies' Society for the Relief of Poor Widows with Small Children, a volunteer child-care agency. Reorganized as the Orphan Asylum Society, it established the New York Orphan Asylum (1807–19), where children received shelter until they were old enough to be apprenticed. In 1825 efforts to separate juvenile offenders from adult criminals in Bellevue Prison led to the opening of the nation's first and best-known juvenile reformatory, the House of Refuge. Although its founders, John Griscom and Thomas Eddy, envisioned a progressive, rehabilitative institution, a harsh penal attitude was soon assumed toward the juvenile inmates. Other institutions for needy children that were supported by private citizens in New York City included the Catholic Orphan Asylum, the Leake and Watts Orphan Asylum (opened in 1830–31), and the Colored Orphan Asylum (1836–63). Children and adults were housed together until nurseries opened on Randalls Island in 1848.

Having led the movement toward placing children in institutions, New York City was also a leader in removing them from congregate care and placing them in foster homes. The New York Juvenile Asylum (1851–60) sheltered children for as long as five years before placing them with families. The most important large-scale attempt to remove children from congregate institutions was that of the Children's Aid Society (1853), under the direction of Charles Loring Brace, which removed impoverished children from the streets and placed them in foster homes in the western United States. Although the society and other groups like it were nonsectarian, their work was perceived by some as a Protestant attempt to convert young Catholic and Jewish children. It was partly in response to this perception that the Hebrew Benevolent Society (1860) and the New York Catholic Protectory (1863) were incorporated. The New York Society for the Prevention of Cruelty to Children (1874) also protected children from homes that it deemed improper. Although private, it enjoyed the status of a law-enforcement agency and came to exercise a powerful influence in New York City. Efforts to remove children from the almshouse altogether culminated in the Children's Law (1875), which prohibited the retention of children between three and 16 years of age in almshouses throughout the state. The first law of its kind in the country, it led to the abolition of the nurseries on Randalls Island and contributed to the proliferation of private child-care agencies in the late nineteenth century. A direct outgrowth of the child protection movement was the establishment in New York City of the first children's court in the state (1900); reorganized as an independent tribunal by the New York City Children's Court Act (1924), it had the power to place neglected and delinquent children on probation and to refer them to diagnostic and treatment facilities.

In the early twentieth century New York City established a system under which child-care services were performed by private agencies under contract to the city. The city also experimented with its own foster home and adoption service, the Children's Home Bureau (1916), under the auspices of the Department of Public Charities. This service failed to take hold and was discontinued in 1917 because of a prevailing belief that children were better served by private organizations. The government again took on a role in institutional and foster care when private efforts diminished during the Depression and World War II: the Works Progress Administration opened 27 nursery schools in New York City from 1933 to 1943, which later came under the control of local child-welfare agencies. The Racial Discrimination Amendment (1942) and the more stringent Brown–Isaacs Law (1952) forbade racial discrimination in agencies receiving municipal funds.

New York City continued to strengthen its child-care system during the mid-twentieth century. The Citizen's Committee for Children of New York was organized in 1944 to investigate inadequate care for children whose mothers worked in war industries, and day care in the city continued to be characterized by effectiveness and activism. Although state aid to day care in the city ceased in 1947, 97 centers were opened by the Day Care Council of New York City (1948), a nationally recognized body that helped focus attention on day care and in 1961 gained the support of President John F. Kennedy. In the twenty-first century New York City was a nationally acknowledged leader in such early childhood education programs as Project Giant Step.

Mary McDonald

China Institute in America. Nonprofit educational institution focused on the understanding and appreciation of traditional and contemporary Chinese civilization, language, and culture. Founded in 1926 by American and Chinese educators John Dewey, Hu Shih, Paul Monroe, and Kuo Ping Wen, it was located at 2 West 45th Street until it moved to its current location at 125 East 65th Street in 1944. Since 1933 the institute has offered courses on Chinese civilization, language, and culture, in addition to sponsoring American and Chinese scholarship programs. In 2005 it established the Confucius Institute, which prepares and accredits Mandarin teachers to teach in New York City schools.

Chinatown. Neighborhood on the Lower East Side of Manhattan, covering about 35 blocks and bounded to the north by Kenmare and Delancey streets, to the east by Allen

Food market in Chinatown, 1992

Chinatown, 2009

Street, to the south by East and Worth streets, and to the west by Broadway. The first Chinese in New York City were mostly sailors and merchants working in trade between China and the United States from 1784 to 1850; usually they remained only briefly in the city, but some took English names and married local women, and by 1850 there was a Chinese American enclave. According to the state census of 1855, the first documented Chinese immigrant in New York City was a man who had taken the name William Brown and married an Irish woman after moving to the city in 1825. By 1859 the *New York Times* estimated that there were 150 Chinese men living in lower Manhattan, many of whom found work as sailors, cooks, candy and cigar vendors, and operators of boardinghouses catering to Asian sailors. In the 1870s the population of the neighborhood grew to more than 2000, spurred by a violent anti-Chinese movement in the West and the completion of the transcontinental railroad (1862–69).

Prospective Chinese immigrants were prevented from settling in the United States and becoming American citizens by the Chinese Exclusion Act (1882). Immigration laws also prevented most men from having their wives and families join them; as a result, the neighborhood became known as the "bachelor society," and the population remained under 4000 until World War II. Chinatown began as a tiny enclave bounded by Pell and Doyer streets and including the lower portion of Mott Street. Chinese immigrants could engage in only a few kinds of business, including hand laundries, which required a small initial investment and minimal knowledge of English and in which there was no competition from other ethnic groups. About the 1890s entrepreneurs opened restaurants in the neighborhood to attract tourists; soon there were also gift shops and Buddhist temples. For aid and the resolution of disputes, residents turned to traditional Chinese organizations, many of which were respectable; some fraternal ones known as tongs became embroiled in disputes over membership and gambling that sometimes became violent. In the early years of the twentieth century a series of battles between tongs became known by outsiders as the "tong wars."

After China and the United States became allies in World War II, President Franklin D. Roosevelt signed a measure in 1943 repealing the Chinese exclusion acts, and Chinese immigrants were granted the right to become citizens. At the same time a quota for Chinese immigration was set at 105 persons a year, and Chinatown continued to grow slowly. The neighborhood was seen as a community of hardworking people who respected law and family, and outsiders called it the "gilded ghetto" and its population the "model minority." By 1965 the neighborhood occupied seven blocks and had a population of 20,000 that was still disproportionately male. During the same year legislation was introduced to abolish the system of immigration quotas based on national origin, and after 1 July 1968, 20,000 Chinese immigrants a year were allowed to enter the United States. With the rapid growth of the Chinese community after 1965 and the easing of prejudices that had kept its housing patterns limited, Chinatown expanded beyond its traditional boundaries, absorbing much of Little Italy and parts of the Lower East Side, and becoming the most populous Chinese community in the western hemisphere. But over time the neighborhood lost its status as the only center of the Chinese population in New York City, as Chinese settlements took root in Elmhurst, Flushing, Sunset Park, and Bay Ridge. By the 1980s only about 30 percent of all Chinese in the city lived in Chinatown. At the same time the neighborhood became ethnically more diverse: although more than three-quarters of all immigrants who settled in Chinatown in the 1980s were Chinese, there were also enclaves of immigrants from Bangladesh, Burma, Vietnam, the Philippines, and Malaysia, as well as a Latin American population that was largely Dominican and Puerto Rican.

In the early twenty-first century Manhattan's Chinatown was the most populous and densely settled Chinese community in the nation, and the third largest in area. As of 2000, at least 150,000 ethnic Chinese inhabited the neighborhood. After the 9/11 attacks, given Chinatown's proximity to the afflicted area, business and tourism were temporarily stunted in the neighborhood. Much of the economy was underground, or was otherwise found in the grocery, jewelry, and technology industries; there was also a burgeoning bus line industry, aptly named the "Chinatown bus" lines, that was made up of buses from several companies that all departed from Canal Street. As high-end real estate in Manhattan continued to move downtown, Chinatown became the site of the construction of several luxury condominiums, although the vast majority of the population lived in either traditional tenement houses or in the subsidized housing projects in the area.

Peter Kwong, *The New Chinatown* (New York: Hill and Wang, 1987)

Charlie Chin, Cecilia Magnusson

Chinese. Chinese sailors and peddlers lived in New York City as early as the 1820s and 1830s, and in the 1850s about 150 sailors lived in lower Manhattan. Most planned to return to China after making a fortune, but some wanted to remain in the United States. In 1868 at least 10 Chinese in Manhattan had American citizenship. By the 1860s and 1870s, Chinese became targets of racism promoted by some politicians and union organizers. Mutual aid and protection societies known as *fang,* or *fong* ("house"), were organized according to kinship and geographical origin; they provided temporary lodging and financial assistance and sponsored social events, cultural festivals, and funerals. One of the first was Gongsi Fang, which remained an important institution well into the 1940s. During the 1870s many miners and railroad workers moved east to escape anti-Chinese agitation in the West, and their neighborhood in New York City grew as they settled along Pell, Mott, Bayard, Doyer, and Canal streets and later on Chatham Square; the area was soon known as Chinatown. The first grocery in the neighborhood was probably the Wo Kee store, opened in 1872 at 34 Mott Street and soon

Stafford M. Northcote, Hi Hee Chinese Theater *(1900)*

followed by other groceries and by vegetable stands and fish markets. About 300 Chinese were sent from San Francisco by James B. Harvey to replace militant Irish women employed in his Passaic Steam Laundry in Belleville, New Jersey. By the early 1880s all the Chinese workers were discharged, and many of them moved to Manhattan to open hand laundries. Relatives joined them from the Far West, Hong Kong, and China. Chinese scattered throughout the city, often in quarters attached to hand laundries, and Chinatown became the headquarters for a wide range of organizations.

According to the census of 1890 there were 2048 Chinese in the city in the 1880s; the true figure was probably between 8000 and 10,000, as immigrants often remained in New York City only temporarily. Before the 1940s most Chinese immigrants in the city were from Guangdong (Canton) and largely preserved their cultural traditions and ethnic identity. They adhered to traditional ethical principles, among them Confucian ideals of filial piety, loyalty, righteousness, and reciprocity, and celebrated important festivals, including the lunar New Year, Qing Ming (Tomb-Sweeping Day), and Mid-Autumn. Dragon and lion dancing took place on every proper occasion. Deities in Chinese popular religion were worshipped in temples, or "joss houses" (two were built in the 1880s), and ancestor shrines were erected. A Cantonese theater opened and newsstands sold Chinese-language newspapers that provided news from the homeland. Anti-Chinese sentiment intensified during the late nineteenth century, forcing Chinese to move to Chinatown to escape discrimination. Tourism nonetheless was an important source of income for the community by the 1880s. Excluded from most occupations except those requiring cheap labor, many Chinese ran "chop suey" restaurants, which like laundries required little capital or knowledge of English. They also exploited American curiosity about Chinese culture aroused by the visit to New York City in 1896 of a high-ranking Chinese official, Li Hongzhang (Hung-Chang), to promote the chop suey business. Stores in Chinatown imported food, clothing, and other goods from China, and souvenir shops offered items made with Chinese silk and porcelain.

Under the Chinese exclusion acts passed by the U.S. Congress during the late nineteenth and the early twentieth centuries, Chinese immigrants were barred from naturalization, becoming the first ethnic group to be excluded from the United States. Subsequently, they had ambiguous status and were subject to intimidation and political, social, and economic exploitation, especially if they had entered the country illegally. Clan associations of persons bearing the same surnames sponsored welfare programs and were usually dominated by wealthy merchants. Several dating from 1887 became some of the largest: Ng's Association, Loong Kung Kong Saw (formed by Liu, Guan, and Zhang), and Lee's Family Association. Organizations known as *hui guan,* or *gong suo* ("meeting halls"), were larger than clan associations and fang and were organized by persons from the same district in China. They provided medical services, cared for the elderly and the poor, built cemeteries, shipped the remains of deceased members to China, and built temples in which members performed sacrificial rites. The New York Ning Yang Hui Guan (Ning Yung Association), formed in 1890 by immigrants from Taishan (Toishan) in Guangdong, became the most powerful. Fang, clan associations, and hui guan belonged to an umbrella organization called Zhonghua Gong Suo (1883), or New York Chinese Consolidated Benevolent Association (CCBA). For many years the association was an informal local government: it acted as a liaison to other segments of American society, settled disputes among Chinese organizations, collected funds for legal expenses incurred defending the community's interests, and sponsored various social welfare programs. Its leaders were chosen by the merchant elite from the largest hui guan. Until the 1950s all Chinese in the metropolitan area were automatically members of the CCBA. Other influential organizations included the Chinese-American Citizens Alliance (organized by American-born Chinese), the Chinese Chamber of Commerce, and the Chinese Restaurants Association.

Chinese women were barred from joining their husbands in the United States, leading to a severe imbalance: for every Chinese 15-year-old girl in New York City there were 40 boys in 1910, 16 in 1920, 14 in 1930, and 9 in 1940. Many men turned to fang, which served as substitute families, and others to gambling, prostitutes, and opium, which were controlled by secret societies known as *tang,* or *tong.* During the early twentieth century the most powerful of these organizations in the city were Hip Sing and On Leong, which often fought bloody battles to defend their spheres of business. The "tong wars" did not end until the mid-1930s, after American authorities threatened to deport the tong leaders. Meanwhile, many immigrants became active in Chinese politics and supported Sun Yat-sen in overthrowing the Manchu Qing dynasty, donating money and even returning to China to take part in the revolution, which dominated Chinese-language newspapers in the city and often split the community. The number of social organizations increased. In response to the Ning Yang Hui Guan, non-Taishan Cantonese organized the Liancheng (Lun Sing) Gong Suo in 1900, which did not admit non-Cantonese organizations until after the 1970s and even then remained predominantly Cantonese. Prominent clan associations of the early twentieth century included the Wing Chun Tong of Chan's Family Association, known as Sam Yip Gung Saw (1900), Shao Lum Gung Saw (1911), and Wong Kong Har Tong (1911). The New York Chinese Public School (Niuyue Huaqiao Gongli Xuexiao) opened in 1908 to teach children the rudiments of Chinese language and culture. Supported by tuition and donations from associations and individuals, it operated

after school and on weekends and survived frequent financial crises, continuing to operate into the early twenty-first century. The quality of its offerings was criticized, and before the 1940s wealthy merchants often sent their children to China for middle school.

During the exclusion era, Chinese in the city did not remain silent. Wong Ching Foo founded *Chinese American* (*Huan Mei Xin Bao,* 1883–84), a bilingual weekly to fight for legal rights. In 1892 Wong and other community leaders formed the Chinese Equal Rights League to fight against the exclusion. In the 1920s Chinatown became a base for Chinese seamen, who formed organizations there and sought support in their struggle for equal treatment. Fang were especially vital during the Depression and saved many Chinese from starvation. In response to the Japanese invasion of China during the 1930s, Chinese in the city banded together to form the New York Overseas Chinese Anti-Japanese Salvation General Committee for Military Funds (1937), an organization that cut across all clan, district, and political lines to collect money for relief in China, expose Japanese atrocities against the Chinese, and arouse American sympathy for the Chinese cause. A leading organization, the Chinese Hand Laundry Alliance, adopted the slogan "To Save China, to Save Ourselves" and linked the struggle against exploitation and discrimination in the United States to patriotic support for China. During World War II many Chinese joined the American armed forces, and others worked for the merchant marine. They formed a number of organizations in the city, among them the Chinese Seamen's Patriotic Association, the Chinese Seamen's Union, and the Chinese section of the National Maritime Union. A labor shortage and an improvement in their public image also allowed many Chinese to find work in war-related industries, and in 1943 the Chinese Exclusion acts were repealed.

After the war Chinese veterans were granted legal residency, and many took advantage of the G.I. Bill of Rights to advance their education and careers. With the passage of the War Bride Act (1945) and the G.I. Fiancées Act (1946), women were allowed to join their husbands, and the ratio of men to women in the Chinese community gradually stabilized. Most of the women did not speak English and provided cheap labor for garment factories, where they worked in sweatshop conditions. Many sailors settled in the city, and the population grew to include northern and eastern Chinese, among them speakers of Mandarin and Fujian (Fukienese). Hand laundries declined as washers and dryers became widely available, but restaurants remained an economic mainstay, many of them specializing in the cuisines of Beijing, Hunan, Sichuan (Szechuan), and Shanghai. The establishment of the People's Republic of China in 1949 left thousands of Chinese students stranded in the United States. Many later settled in the metropolitan area, and some later became known internationally for their professional achievements, among them T. D. Lee of Columbia University and C. N. Yang of the State University of New York at Stony Brook, who together won the Nobel Prize for physics in 1957. The American-born children of immigrants often became professionals and moved out of Chinatown.

From the mid-1960s the population grew rapidly. Immigration accelerated after the Immigration Act of 1965 abolished restrictions on immigration according to race. New York City became the most popular destination for Chinese immigrants because of its employment opportunities, especially in garment factories, which from the 1960s accounted for an increasing portion of the economy in Chinatown. The largest social welfare agency, the Chinatown Planning Council, provided English classes, vocational training and placement, legal assistance, and mental health services and sponsored day-care centers, youth facilities, low-income housing projects, and a senior citizens' center. Other important social agencies formed during the 1960s and 1970s included the Chinatown Manpower Project, Asian Americans for Equality, and the Asian American Legal Defense and Education Fund. As its influence declined the CCBA was criticized, especially for its policy of appointing rather than electing officials, and during the 1980s demands were made for structural reforms. From this time on, all groups in the Chinese community, including the traditional CCBA and new immigrant organizations (such as the United Chinese Associations of New York, which mainly consisted of Fujian and other mainland Chinese immigrant organizations) as well as those organized by American-born Chinese, worked together to promote Chinese participation in local and national politics. John Liu became the first Chinese American (and the first Asian American) to be elected to the New York City Council in 2002. He was reelected in 2005. More Chinese American candidates have joined the race for seats in the New York City Council and the state assembly in recent years.

By 1980 the Chinese community in New York City was the largest in the country, surpassing that of San Francisco. Immigrants who settled in the city during the 1960s and 1970s were often professionals who had to take unskilled jobs because they did not speak English. Chinatown in lower Manhattan expanded and other Chinese communities grew in Brooklyn and Flushing; while Cantonese remained in the majority, immigrants from other regions such as Fujian and northeast China increased dramatically in the late twentieth century. Fashion, food, and ideas from throughout Asia were introduced, and from the late 1970s wealthy immigrants from Taiwan, Hong Kong, and Southeast Asia invested large amounts of capital in real estate and various businesses. Tens of thousands of well-educated Chinese professionals took jobs in city government, finance, law, medicine, technology, and academia. English replaced Chinese as the primary language in many families, and the number of interracial marriages increased.

At the beginning of the twenty-first century, several daily, weekly, and monthly Chinese newspapers and magazines were circulated in the metropolitan area, encouraging integration while also strengthening ties to China. The recognition by mainstream society and international audiences of the artistic accomplishments of New York City–based Chinese artists, such as those of film director Ang Lee (*Crouching Tiger, Hidden Dragon,* 2000, and other films) and playwright David Henry Hwang (*M. Butterfly,* 1988, and other plays), was celebrated in the Chinese community. Many cultural organizations became influential, such as Chen and Dancers, the Four Seas Players, the Asian American Dance Theater, and the Museum of Chinese in the Americas. Major landmarks in Chinatown include the statue of Confucius in Confucius Plaza and the statue of Commissioner Lin Zexu in Chatham Square.

Chinese Hand Laundry Alliance of New York [CHLA]. Organization formed on 23 April 1933 to protest an ordinance forcing Chinese hand laundries in New York City to cease operations. It defeated the ordinance and became the foremost agency in the struggle for the economic, political, and civil rights of Chinese laundry workers; it also helped launch the Chinese-language newspaper *China Daily News* (1940–89). At its peak in the 1940s the organization had about 5000 members. During the 1950s it was harassed by the Federal Bureau of Investigation for alleged ties to communism, and several members were deported. The alliance took part in the civil rights movement of the 1960s and remained in operation into the 2000s. In the 1990s the organization had about 300 members. In the early twenty-first century its offices were located at 149 Canal Street.

Renqiu Yu

Chisholm [née St. Hill], **Shirley (Anita)** (*b* New York City, 30 Nov 1924; *d* Daytona Beach, Fla., 1 Jan 2005). Congresswoman. The daughter of Quakers, she moved with her family at the age of two from Brooklyn to Barbados, her mother's native country, and remained there until the age of 10. She received her BA from Brooklyn College and an MA from Columbia University, and in 1964 she was elected to the state assembly as a Democrat from Bushwick and Bedford–Stuyvesant. In 1968 she became the first African American woman elected to the U.S. House of Representatives, from New York City's twelfth district. During her seven terms in office she supported legislation promoting education, employment, and the rights of Haitian refugees, served on the House Rules Committee, and was the secretary of the House Democratic Caucus. She sought the Democratic presidential nomination in 1972. Chisholm retired from Congress in 1982, owing partly to discouragement over the policies of President Ronald Reagan; in that same year she was appointed to the Purington Chair at Mount Holyoke College. She later led the National Political Congress of Black Women. She wrote *Unbought and Unbossed* (1970) and *The Good Fight* (1973).

Sule Greg C. Wilson

Choate, Joseph (Hodges) (*b* Salem, Mass., 24 Jan 1832; *d* New York City, 14 May 1917). Lawyer. He moved to New York City in 1855 and was a clerk for the law firm of William Evarts, where he soon became a partner. At the height of his career in the last decades of the nineteenth century he was the counsel for Standard Oil and the American Tobacco Company, and he also played a central role in the struggle by the Bell System to protect its telephone patent rights. In *Pollock v. Farmer's Trust* (1895) his emotional argument against the federal income tax persuaded the U.S. Supreme Court to void it. He was one of the most popular "club men" in the city and a favorite after-dinner speaker. He was also a founding trustee of the American Museum of Natural History and the Metropolitan Museum of Art. Known for his charm and keen intellect, Choate was for many years one of the best corporate lawyers in the nation.

Theron G. Strong, *Joseph H. Choate* (New York: Dodd, Mead, 1917)

Frederick S. Voss

Chock full o'Nuts. Firm of coffee importers formed in 1922 by William Black and incorporated in 1932. It began as a retailer of coffee beans and opened a restaurant in 1933 that soon expanded into one of the first fast-food chains in the city, well known for its simple menu, low prices, and takeout counters; its headquarters were at 425 Lexington Avenue. In 1953 the firm owned 25 restaurants in Manhattan and two in Brooklyn and introduced a commercial brand of coffee, which became a great success in part because of a catchy advertising jingle. At the height of its growth in the 1960s and 1970s, the firm owned more than 150 restaurants in the city. It concentrated increasingly on coffee in the late 1970s and in 1983 sold its remaining restaurants. In May 1994 the firm capitalized on the growing popularity of cafés by opening one on Madison Avenue and returning to New York City for the first time in 20 years. In 1999 the company was purchased by the Sara Lee Corporation, the second-largest coffee roaster in the world. In the mid-1990s Chock full o'Nuts had its headquarters at 370 Lexington Avenue, but it has since moved them to suburban Harrison, New York.

James Bradley

choirs. The Episcopal tradition of choirs of men and boys is maintained in New York City in St. Thomas Church on Fifth Avenue, with a unique boarding school for its boys. The Abyssinian Baptist Church in Harlem has a noted gospel choir. The Boys Choir of Harlem, a concert choir, was founded in 1968 by Walter Turnbull and later opened a large school. Early in the twenty-first century financial and other difficulties reduced its activities. Turnbull died early in 2007.

cholera. A relative stranger to American shores until the 1830s, cholera was the most feared epidemic disease of the nineteenth century. As transatlantic steamship travel and immigration from impoverished regions of the world to the United States increased, serious cholera epidemics in New York City occurred in 1832 (3513 deaths), 1849 (5071 deaths), 1854 (2509 deaths), and 1866 (1137 deaths). The blame for the epidemics during the 1830s rested on its victims: "intemperate" and impoverished New Yorkers, especially the Irish. In 1866 a new Metropolitan Board of Health was effective in drastically reducing the death rate from cholera in New York City. After Robert Koch's discovery in 1883 of the etiologic agent *Vibrio cholerae,* the means by which the cholera bacterium is transmitted became better understood. The first use of cholera culture methods to prevent entry of the disease at a seaport was performed by Hermann M. Biggs and T. Mitchell Prudden on behalf of the New York City Department of Health and the New York Quarantine Station in 1887. The last cholera epidemic in New York City, in 1892, was contained to fewer than 120 deaths, despite a number of political skirmishes.

choruses. The first choruses in New York City sang in Anglican and Episcopal churches in the late eighteenth century. The nineteenth century saw the rise of men's chamber choruses like the Mendelssohn Glee Club (1866, professional) and the University Glee Club (1894, amateur) and of such large, independent choral societies as the Oratorio Society. Formed in 1873 by Leopold Damrosch, the Oratorio Society gave the first of many annual performances of Handel's *Messiah* at Christmas of the following year, and in 1891 performed Berlioz's *Te Deum* for the opening of Carnegie Hall. Important choruses begun

Concert by the Choral Society at Madison Square Garden, 1883

in the first half of the twentieth century include the St. Cecilia Chorus (1906); the Schola Cantorum (1909–71), conducted from 1926 to 1971 by Hugh Ross; the Dessoff Choirs (1930), which originally specialized in music of the fourteenth to seventeenth centuries; the Cantata Singers, formed in 1934 by Paul Boepple and active into the late 1960s; and the Collegiate Chorale, formed in 1941 by Robert Shaw at the Marble Collegiate Church. The All-City High School Chorus was organized in 1936 by P. J. Wilhousky.

The New York Choral Society was formed as an amateur chorus in 1959 by Robert DeCormier, and several chamber choruses were established from the 1960s, including amateur ensembles like the Canby Singers (led by Edward T. Canby, 1960), the Sine Nomine Singers (Harry Saltzman, 1968), the Canticum Novum Singers (Harold Rosenbaum, 1973), and the New York City Gay Men's Chorus (Gary Miller, 1980), and such professional ones as the Amor Artis Chorale (Johannes Somary, 1961), the Gregg Smith Singers (1961), Musica Sacra (Richard Westenburg, 1964), the National Chorale (Martin Josman, 1969), Melodious Accord (Alice Parker, 1984), and the New York Concert Singers (Judith Clurman, 1988). The National Choral Council was formed in 1968 by Martin Josman and others to encourage and strengthen choral singing in the city and elsewhere through performance, community service, and education; it became the sponsor of a "Messiah Sing-In" each December at Lincoln Center. Several unique choruses were founded in the late twentieth century, including the New York City Labor Chorus (1991), the City Bar Chorus, composed of legal professionals (1993), and the New York City Housing Authority Youth Chorus (1997).

Among the notable church choirs in the city are those of St. Bartholomew's Church, the Church of the Ascension, Riverside Church, St. Patrick's Cathedral, St. Peter's Episcopal Church, St. Ignatius Loyola Church, St. Thomas Church (Fifth Avenue and 53rd Street), the Church of Our Saviour, First Presbyterian Church, Fifth Avenue Presbyterian Church, Church of the Incarnation (Episcopal), Marble Collegiate Church, Trinity Church Wall Street, and the Church of St. Mary the Virgin. Several churches in Manhattan have boys' choirs, including St. Thomas Church, the Church of the Transfiguration, Grace Church, and the Church of St. Luke-in-the-Fields. The Boys Choir of Harlem, formed in 1968 by Walter Turnbull, has toured throughout the world. In addition to the permanent choruses of the Metropolitan Opera and the New York City Opera, choruses are often engaged by opera and musical theater companies through the American Guild of Musical Artists, an organization of professional choristers. In the outer boroughs most choruses are affiliated with educational institutions (for example, the Brooklyn College Chorus, the Queens College Glee Club, and the Richmond Choral Society). Special events and festivals sponsored by local choruses include "Summer Sings" of the New York Choral Society and the "Messiah Sing-In" of the National Choral Council. Of the many performances by visiting choruses, perhaps the most popular are those of the Vienna Boys Choir at Carnegie Hall.

Bruce C. MacIntyre

Christ Church. Episcopal church in the Bronx, built in 1866 along what is now the Henry Hudson Parkway. Its members have included the baseball player Lou Gehrig, whose funeral was held there, and Fiorello H. La Guardia, in whose honor stained-glass windows were installed. It is a designated city landmark.

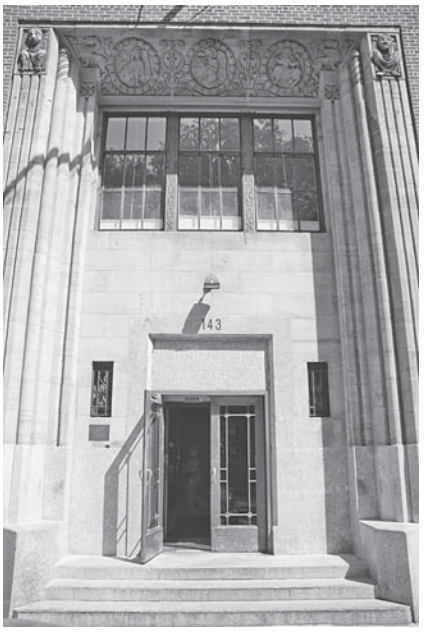
Thomas M. Hilbink

Christ the King Regional High School. Catholic high school at 68-02 Metropolitan Avenue in Queens, occupying a four-story building completed in 1964 as the last of six high schools built by the Diocese of Brooklyn to accommodate children born after World War II. Planned for 3000 students, the school originally consisted of a boys' school run by the Marist Brothers and a girls' school run by the Daughters of Wisdom. These were separated by a central block housing the library and other shared facilities. The school became coeducational in 1973 and eventually had a predominantly lay faculty. In 2006 enrollment was 1300.

Gilbert Tauber

Christian Scientists. Members of a religious organization based on the beliefs of founder Mary Baker Eddy. The Christian Science Society held its first meeting in New York City on 27 November 1887. It was incorporated as the Church of Christ, Scientist, in 1888 and renamed the First Church of Christ, Scientist, in 1896. In 1891 a splinter group founded the Second Church of Christ, Scientist, which in 1900 built its headquarters, designed by Frederick R. Comstock, at 68th Street and Central Park West. The First Church commissioned the architectural firm of Carrère and Hastings to design its beaux-arts building, completed in 1903. In 2004 the First Church sold its 2400-seat building to Crenshaw Christian Center East and joined the Second Church; the 68th Street congregation was renamed the First Church. In the early twenty-first century Christian Scientists maintained churches and reading rooms throughout the five boroughs.

Kevin Kenny, Kate Lauber



Christie's. Auction house formed in London in 1766 by James Christie. The success of its first salesroom in New York City, opened at 520 Park Avenue in 1977, led to the addition of a second, Christie's East, at 219 East 67th Street in 1979. Several records have been set at its operations in the city: the Tremaine Collection of Contemporary Art sold for $25,824,700 in 1988, the largest sum paid for the modern collection of a single owner, and in 1990 Vincent van Gogh's *Portrait of Dr. Gachet* sold for $82.5 million, the largest sum paid for any lot at auction. In 2000 a price-fixing scandal between executives at Christie's and Sotheby's, a rival auction house, became an issue of major concern. In the early twenty-first century Christie's New York City salesrooms served as anchors for operations in 13 other American cities and over 30 countries.

Janet Frankston

Christo [Javacheff, Christo Vladimirov] **and Jeanne-Claude** [Denat de Guillebon, Jeanne-Claude] (*b* Gabrovo, Bulgaria, 13 June 1935; *b* Casablanca, Morocco, 13 June 1935; *d* 18 Nov 2009, New York). Artists. The married couple are known for environmental installation art. They permanently moved to New York City in 1964. Their work, which has appeared on four continents, includes the wrapping of the Reichstag in Berlin and the Pont Neuf bridge in Paris. Their work *The Gates* was installed in New York City's Central Park in 2005.

Sarah Brafman

Christodora House. Young women's settlement house. Founded in the East Village in 1897 by the philanthropists Sara Libby

Christodora House, 2009

Carson and Christina MacColl, it originally occupied two floors in a tenement house at 1637 Avenue B. New Russian, Polish, and Ukrainian immigrants settled in New York City in increasing numbers after the turn of the century, and the settlement house provided them with essential social services. In 1928 funds donated by the railroad magnate Arthur Curtis James facilitated the construction of the present building, a 17-story edifice at 147 Avenue B on the corner of East Ninth Street. Because this was the world's tallest structure dedicated to social service, it became known as the "skyscraper settlement house." It had a music school, a poets' guild, a playhouse, a gymnasium, a swimming pool, and a dining hall with a river view. George Gershwin, whose brother led the poets' guild, gave his first public performance at a recital on the third floor in 1914. Christodora House continued to serve as a social settlement until shortly after World War II, when it fell into disrepair and was taken over by the city. Occupied by community groups in the 1960s, it was sealed after a fire destroyed its electrical system. It was sold at public auction in 1975, then renovated 10 years later and converted into luxury condominiums. The organization, however, continued to provide educational opportunities and leadership training for New York City youth into the early twenty-first century.

Robert Sanger Steel

Christy, Howard Chandler (*b* Morgan County, Ohio, 10 Jan 1873; *d* New York City, 3 March 1952). Illustrator. Trained as a painter, he became known for his drawings, which appeared in periodicals such as *Harper's* and *Scribner's* and in books by James W. Riley and others. He was also the creator of an ideal female type known as the "Christy Girl" that was featured in several books of drawings, including *The American Girl as Seen and Portrayed by Howard Chandler Christy* (1906) and *The Christy Girl: Drawings by Howard Chandler Christy* (1906). About 1920 he resumed painting, executing portraits, figure subjects, and *plein air* landscapes, as well as murals for the Park Lane Hotel and the Café des Artistes. His last studio was in the Hotel des Artistes at 1 West 67th Street. Christy is recognized as one of the foremost illustrators of the early twentieth century in New York City.

Carol Lowrey

Chrysler Building. Art deco skyscraper at 405 Lexington Avenue, standing 1046 feet (319 meters) tall and designed by William Van Alen. It began as a speculative venture by William H. Reynolds, the developer of Dreamland at Coney Island. In 1927 the entire project, including leases and architectural plans, was bought by the automobile magnate Walter P. Chrysler, for whom were added such details as the decorative stainless-steel eagle heads and Chrysler radiator caps and the helmet-like top, known as the vertex. Inside the pinnacle was a private executive dining hall known as the Cloud Club; the 71st story, which also afforded stunning views, was set aside for a visitors' center that displayed Chrysler's first tool kit. Upon completion in 1930, the building was the tallest in the world (surpassed a few months later by the Empire State Building). Tube lighting that illuminated the vertex at night was included in the original plans but not installed until 1981. The facade was designated a landmark in 1978, as was the lobby, known for its splendid ceiling mural and marble veneers and the marquetry on its elevator doors. In July 2008 the building was purchased by the Abu Dhabi Investment Council.

Carol Willis

Chumley's. Speakeasy, bar, and restaurant. Started by Leland Stanford Chumley in 1928 in a former blacksmithery at 86 Bedford Street, at the corner of Barrow Street, in the West Village. With its plain, unmarked door on Bedford Street and another with a small peephole on Barrow Street, it became famous for not displaying a sign or indication that the structure was anything other than a private residence. The square room inside, with tables set against walls decorated with old book jackets, was perfect for surreptitious meetings of the Industrial Workers of the World or for illicit drinking during the Prohibition era. It is widely thought that the address of Chumley's is at the root of the term "to 86" something, meaning to kill or end it. Legend has it that police would call the owner in advance of raids during Prohibition, prompting him to "86" everyone by sending them out the bar's Bedford Street exit or through windows and balconies onto the building next door.

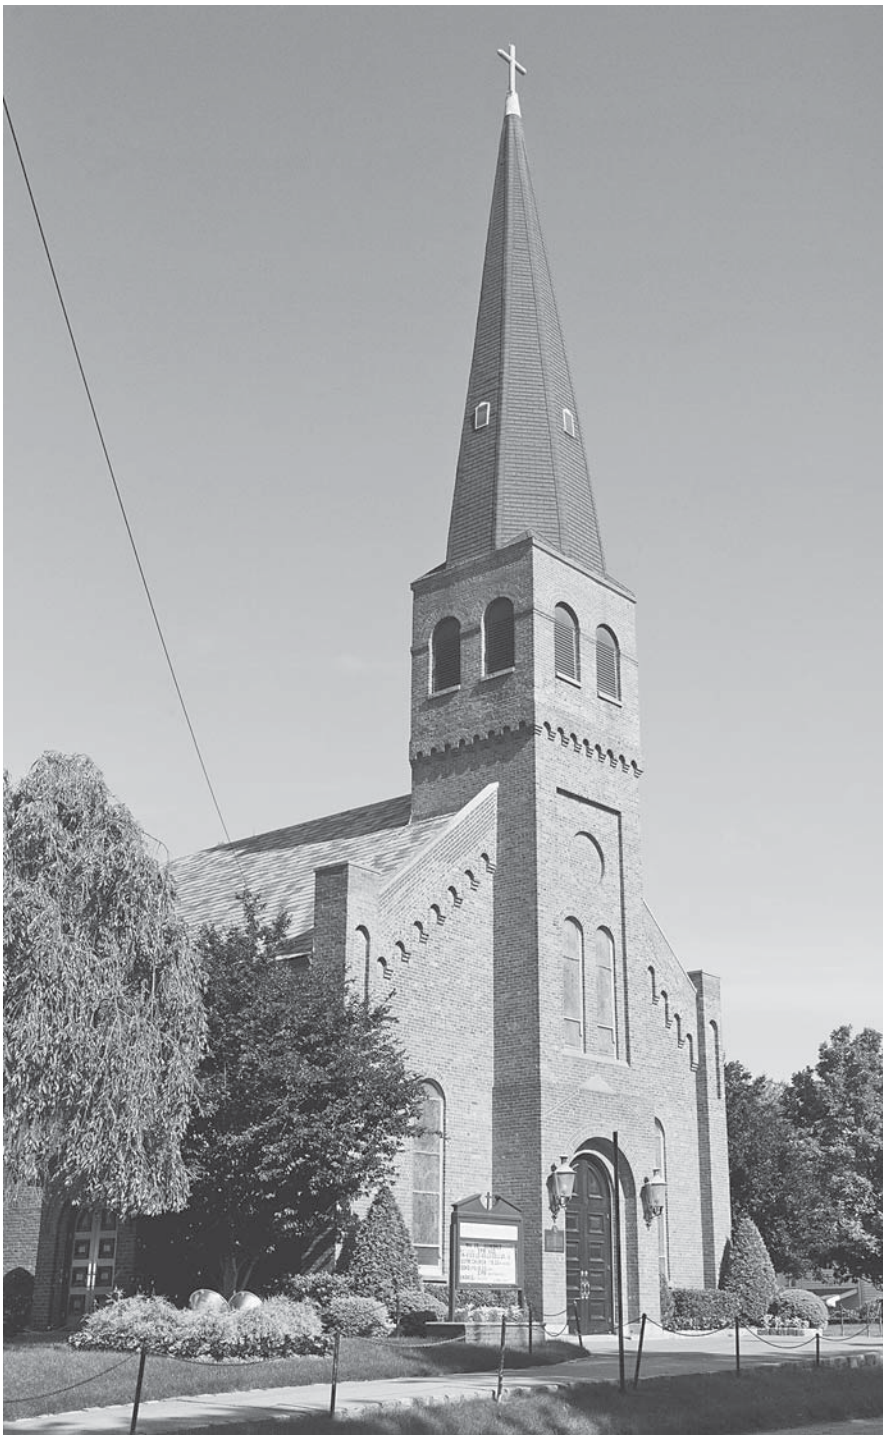
Chumley's has long been known as a favorite hangout of American literary figures who found their way to its unmarked doors, including James Agee, Heywood Broun, Willa Cather, E. E. Cummings, John Dos Passos, Theodore Dreiser, William Faulkner, Edna Ferber, Allen Ginsberg, Lillian Hellman, Norman Mailer, Edna St. Vincent Millay, and John Steinbeck. On 5 April 2007 a wall collapse forced Chumley's to shut down indefinitely.

Kenneth T. Jackson, Rowan Moore Gerety

Church, Frederic(k) E(dwin) (*b* Hartford, Conn., 4 May 1826; *d* New York City, 7 April 1900). Painter. He studied painting in Catskill, New York, from 1844 to 1846 with Thomas Cole, who taught him to consider landscape painting as a means of expressing noble ideas. In 1847 he moved to New York City, where he worked in studios in the American Art Union building (1847–58) and in the Tenth Street Studio (1858–89); he was elected to the National Academy of Design in 1849 and to the Century Association in 1850. His aesthetic was shaped in part by the writings of John Ruskin, which encouraged artists to depict nature as a reflection of divine creation, and by the works of J. M. W. Turner, whose spectacular lighting effects he emulated. Soon he was known internationally as the foremost painter of the Hudson River School. Inspired by the German scientist Alexander von Humboldt, who urged artists to evoke cosmic truths by synthesizing art and science in depictions of nature, he traveled to South America (1853, 1857), Labrador and Newfoundland (1859), Jamaica (1865), and Europe and the Middle East (1867–68). His greatest rival was Albert Bierstadt (1830–1902), known for his detailed panoramic paintings of Western scenes, especially the Rocky Mountains. Church's reputation declined after the Civil War. Between 1867 and 1872 he designed a farmhouse in a Persian style with Calvert Vaux for Olana, a farm overlooking the Hudson River near Hudson, New York, to which he retired in 1889. His studio at Olana has been preserved, along with 2000 books, several thousand manuscripts, and more than 700 artworks.

David C. Huntington, *The Landscapes of Frederic Edwin Church: Vision of an American Era* (New York: George Braziller, 1966); Franklin Kelly et al., *Frederick Edwin Church* (Washington, D.C.: National Gallery of Art, 1990)

Timothy Anglin Burgard



Church Club of New York. Club formed in 1887 in Manhattan by laymen of the Episcopal Diocese of New York. Among its aims were to promote interest in the history and theology of the church and to engage in good works for the benefit of the poor. Early members included such prominent figures as Nicholas Murray Butler, J. P. Morgan, and Cornelius Vanderbilt. Membership was at first limited to white males; racial restrictions were removed in 1954, and women were admitted after 1975. Over time the club became an important meeting place, independent of clerical influence, for active Episcopal laypeople from many of the churches in the city and the surrounding dioceses. It also made contributions to Episcopal theological seminaries. Although the Church Club has occasionally organized to pursue a particular aspect of church policy, more often its influence has been exerted by individual members acting in their local parishes and on diocesan committees.

James Elliott Lindsley, *The Church Club of New York: The First Hundred Years* (New York: Church Club of New York, 1994)

Chauncey G. Olinger, Jr.

churches. The first congregation in New York City was the Collegiate Dutch Reformed Church in Manhattan, formed in 1628. It eventually included Middle, Marble, West End, and Fort Washington Collegiate churches. The first house of worship, the Friends Meeting House in Flushing, was built in 1694. In 1697 Trinity Church built its first sanctuary at Broadway and Wall Street. In 1768 the John Street United Methodist Church in Manhattan was established as the first Methodist church in the United States. One of its sextons, Peter Williams, later left to form the African Methodist Episcopal Church. St. Peter's, the first Roman Catholic parish, was organized in Manhattan in 1785. By 1786 the city had 17 Protestant churches serving Presbyterians, members of the Dutch Reformed Church, Episcopalians, German Lutherans, Quakers, Baptists, Methodists, and Moravians. The Abyssinian Baptist Church (1808) was the first black church in the city and became one of the most influential, later providing a political base for Adam Clayton Powell, Sr., and Adam Clayton Powell, Jr. After the formation of the Roman Catholic Diocese of New York in 1808, St. Patrick's Old Cathedral was completed in 1815 and was the bishop's see until 1879 when a new St. Patrick's Cathedral came into use (1858–77, designed by James Renwick, Jr.). St. Philip's Episcopal Church (1818) bought scores of apartments in Harlem, playing a critical role in the development of the area and becoming the country's wealthiest black congregation.

During the mid-nineteenth century Gothic Revival styles dominated church architecture, owing largely to the influence of Richard Upjohn. He designed the Church of the Ascension in Manhattan (1841, Episcopal); Christ Church in Cobble Hill (1841–42, Episcopal); the Congregational Church of the Pilgrims (1844, now Our Lady of Lebanon Maronite Cathedral), which has a piece of Plymouth Rock jutting from one wall and was the first Romanesque-style church in the country; the Church of the Holy Communion in Manhattan (1844–46, Episcopal; now a nightclub); Trinity Church in Manhattan (1846, Episcopal); Grace Church in Brooklyn (1847, Episcopal); Trinity Chapel in Manhattan (1850–55, Episcopal; now the Serbian Orthodox Cathedral of St. Sava); St. George's Church in Flushing (1853, Episcopal); and Christ Church in the Bronx (1866, Episcopal). His most important rival was Renwick, who worked principally in the Gothic Revival style and designed Grace Church in Manhattan (1843–45, Episcopal); Calvary Church, also in Manhattan (1847, Episcopal); the Riverdale Presbyterian Church (1863); and St. Ann's Church (1869, Episcopal). Using Gothic Revival, Greek Revival, and Italianate styles, Minard Lafever designed St. James Church in Chinatown (1835–37, Roman Catholic), the Mariner's Temple on the Lower East Side (1842, Baptist), the Church of the Savior in Brooklyn Heights (1844, now First Unitarian Church), Holy Trinity Church, also in Brooklyn Heights (1847, Episcopal), the Church of the Holy Apostles in Manhattan (1848, Episcopal), and the Strong Place Baptist Church in Cobble Hill (early 1850s, now St. Francis Cabrini Chapel).

St. Patrick's, Richmond, 2009

Several churches were centers of movements for temperance, Sabbatarianism, and abolitionism. One of the best-known was the Plymouth Church of the Pilgrims in Brooklyn Heights, which under Henry Ward Beecher led campaigns against slavery from 1847. Several Eastern Orthodox congregations of

Greeks, Russians, and eastern Europeans built churches from the late nineteenth century. By 1890 the city directory listed 450 churches, including Congregationalists, Evangelicals, African Methodist Episcopalians, Reformed Presbyterians, United Presbyterians, Unitarians, Universalists, Disciples of Christ, Swedenborgians, and members of the Salvation Army. There were also churches formed by such ethnic groups as Germans, Swedes, French, French Canadians, Chinese, Italians, Latin Americans, Poles, and Irish. Storefront churches became common in some neighborhoods, often opened by charismatic preachers without a larger denomination. During the first decades of the twentieth century Bertram Grosvenor Goodhue introduced a new level of sophistication to the Gothic Revival style in his designs for St. Thomas Church in midtown Manhattan (1909–14, Episcopal), the Church of the Intercession in Harlem (1911–14, Episcopal), the Church of St. Vincent Ferrer in Manhattan (1916–18, Roman Catholic), and St. Bartholomew's Church in midtown Manhattan (1917–19, Episcopal), which incorporated Byzantine elements.

In the twenty-first century there were more than 2200 Protestant and Orthodox churches and 350 Roman Catholic churches in the city. With more than 40,000 members, the Church of the Incarnation in Inwood (Washington Heights) was the largest Roman Catholic parish in the city; St. Patrick's Cathedral had the largest Sunday attendance, with 6900 communicants. The Concord Baptist Church of Christ in Bedford–Stuyvesant, with 12,000 members, was the largest black congregation in the country. In some neighborhoods Anglican immigrants from the West Indies enlarged Episcopal congregations that had long declined; St. Mark's Church in Crown Heights had 3000 members and was the city's largest Episcopal congregation. From 1995 to 2008 the congregation of the Fifth Avenue Presbyterian Church grew by 50 percent to more than 3550 members. Among the few churches that remained devoted to a single ethnic or national group were congregations of Swedes, Norwegians, Finns, Czechs, and Hungarians. The number of Roman Catholic churches offering services in Spanish increased, and Chinese and Korean Protestant congregations were formed as well: one of the largest was the Korean Presbyterian Church of Queens in Flushing, which had 1800 members. The Cathedral of St. John the Divine, the seat of the Episcopal Bishop of New York, remained the largest church in the United States and one of the largest cathedrals in the world. Among the city's newest churches were Grace Methodist Church on West 86th Street in Manhattan and the Norwegian Seaman's Church on East 52nd Street. By the early twenty-first century New York City was central to Christianity's growth among non-Western populations. Reflecting contemporary immigration patterns, many fast-growing churches, such as the Seventh Day Adventists, had congregations around the city focusing on diverse ethnic groups, especially Latinos, West Africans, West Indians, Asians, and Eastern Europeans.

Susanna A. Jones

Church of Jesus Christ of the Latter Day Saints. See Ellis Island, Mormons.

Church of Our Lady of Mount Carmel (Manhattan). Roman Catholic church on East 115th Street in East Harlem. Migrants from Polla, Salerno, first celebrated the church's namesake feast day in East Harlem on 16 July 1881. The Archdiocese of New York secured Pallottine missionaries to organize the church and a school in 1884. Pope Leo XIII named the church a shrine on 12 May 1903. The Madonna's statue was installed over the altar on 23 June 1923. The school merged with nearby Holy Rosary, and the school building closed in 2004; in the early twenty-first century the building housed the National Catholic Museum of Art and History.

Robert Anthony Orsi, *The Madonna of 115th Street: Faith and Community in Italian Harlem, 1880–1930* (New Haven: Yale University Press, 1985)

Mary Elizabeth Brown

Church of Our Lady of Pompeii. Roman Catholic church at 25 Carmine Street in Manhattan. A chapel was opened for a new parish on 8 May 1892 by Pietro Bandini, chaplain of the Society of St. Raphael for the Protection of Italian Immigrants. From 1897 to 1926 the congregation met at the Church of St. Benedict the Moor, which was demolished during the widening of Sixth Avenue. The current building, modeled after southern Italian churches, contains a church (dedicated 27 October 1928), a school (opened 1930), and a convent. The plaza in front honors Antonio Demo, pastor from 1899 to 1933.

Mary Elizabeth Brown

Church of St. Ann and the Holy Trinity. Episcopal church in Brooklyn, incorporated in 1787. In the nineteenth century it became a national center of the Low Church movement in American Episcopalianism, and it supported missionary work, Sunday schools, Bible classes, an orphanage, and societies to help educate poor children. In 1869 it moved to a Gothic Revival church (Clinton and Livingston streets) designed by the firm of Renwick and Sands, which was sold by the congregation in 1969 to the Packer Collegiate Institute after St. Ann's merged with the Church of the Holy Trinity. From that time the congregation met in the neo-Gothic Church of the Holy Trinity (1847) at Montague and Clinton streets. They established a school and a performing arts center that became known nationally. In the twenty-first century they continued to support both institutions and had organized the restoration of the Church of the Holy Trinity.

Peter J. Wosh

Church of St. Benedict the Moor. Roman Catholic church formed by African American parishioners in 1883 at the former Third Universalist Church, a building in a Greek Revival style on Bleecker and Downing streets that closed on 1 May 1898. The building was demolished in 1927 to widen Sixth Avenue. The parish reconvened on 20 November 1898 at the former Second Evangelical Church, a Corinthian building at 320 West 53rd Street. On 28 February 1954 members of the clergy from the Franciscan Third Order Regular opened a ministry for Latin Americans at St. Benedict's. A number of African American nuns from the community of the Handmaids of the Most Pure Heart of Mary formed a convent and day nursery of St. Benedict uptown, which eventually moved to 34 West 134th Street. As of 2010 the parish was located at 457 West 51st Street in Manhattan.

Mary Elizabeth Brown

Church of St. Brigid. Roman Catholic Church at 119 Avenue B and East Eighth Street. Built in 1848 and 1849 to the design of Irish-born architect Patrick Keely, it served the East Village's growing Irish community in the wake of the Irish Potato Famine. As the neighborhood changed, the church welcomed the area's other immigrant communities, including Germans, eastern Europeans, and Puerto Ricans. In 2001 the church was closed because of structural problems. Years of fighting ensued between the Archdiocese of New York, which wanted to permanently close it, and parishioners, who wanted to reopen it. On the eve of demolition in 2008 an anonymous gift of $20 million saved the

Church of St. Brigid (designed by Patrick Keely), 2009

church and provided for its restoration as well as establishing an endowment and support for the religious school.

Melissa Baldock

Church of St. Luke-in-the-Fields. Episcopal parish church on Hudson Street in the West Village, between Christopher and Barrow streets. It occupies the third-oldest church building still in use in Manhattan. The congregation was formed in 1820 by a group including Clement Clarke Moore, who served as the first warden and helped design the building, a simple, rectangular, late Federal brick version of an English village church with a tower at the eastern end. The building opened in 1822; extensions in the Gothic style were added on the south side in 1859 and the north side in 1875. Throughout its history the church has emphasized service to a changing community and the liturgical piety of the Anglican High Church tradition. During the 1840s its rector John Murray Forbes helped to introduce the principles of the Oxford Movement in New York City, and in 1847 it was the site of one of the first professions of monastic vows in the Episcopal Church. A fire in 1981 gutted the building; rebuilt after a fund-raising campaign, the church reopened in 1985. The interior design by Hardy, Holtzman, Pfeiffer Associates restored much of the lost simplicity of the original Federal style while evoking other features of the old church with graceful restraint.

Donald F. M. Gerardi

Church of St. Mary the Virgin. Episcopal parish church at 145 West 46th Street, near Times Square. The congregation was formed in 1868 by Thomas McKee Brown under a state law allowing religious organizations to incorporate and remain self-governing. Affiliated from the outset with the Episcopal Diocese of New York, it emphasized the Catholic tradition of ritual and music in Anglicanism. Its church building became known as the Mother Church of Anglo-Catholicism and informally as Smoky Mary's because incense was (and is) often used during services. The congregation moved into its present building in 1895, the architect being Napoleon LeBrun and the style French Gothic. It is said to be the first church in North America constructed on a steel frame. During the 1970s the church took part in the liturgical renewal that inspired a revision of the Book of Common Prayer in 1979. St. Mary's also became known for its neighborhood ministries during the 1980s and early 1990s. Extensive restoration and redecoration of the nave interior was undertaken in 1997.

Newbury Frost Read, *The Story of St. Mary's* (New York: Privately printed, 1931)

J. Robert Wright

Church of St. Peter. Roman Catholic church organized in 1785. Its first parishioners included Elizabeth Ann Bayley Seton, Pierre Toussaint, and representatives of the Spanish Crown. The current church, dedicated in February 1838, stands at 18 Barclay Street. From 1800 to 1940 it operated the nation's first free parochial school. The congregation was largely Irish in the 1880s and Polish and Ruthenian in the 1920s; eventually many parishioners worked in the area but did not live there. The congregation was almost nonexistent in the 1960s, but grew as it attracted new members among residents of Battery Park City.

Mary Elizabeth Brown

Church of St. Vincent Ferrer. Roman Catholic church. Located at 869 Lexington Avenue, the French Gothic Revival church was originally conceived by Dominican priests during the 1860s. The present building, designed by Bertram Grosvenor Goodhue, was completed in 1918. It was dedicated on 5 May, with more than 50,000 people in attendance. In 1967 it was declared a landmark by the New York City Landmarks Preservation Commission. The St. Vincent Ferrer High School is affiliated with the place of worship. As of 2008 the Dominican order continued to run the church.

Church of the Annunciation. Catholic house of worship. Located at 88 Convent Avenue, the it was established to serve the Irish Catholic population of upper Manhattan, specifically residents of Manhattanville. When established in 1854, it was the first Catholic church to be built on the West Side above Second Street.

Sharon Wilkins

Church of the Good Shepherd. Episcopal house of worship located at 240 East 31st Street. Famous for its protracted history of ministry and service and originally known as the Church of the Incarnation, it was at various times designated a mission, a chapel, and an independent church. In the mid-1800s the Church of the Incarnation separated from Grace Church, forming the Association for the Home Mission of the Church of the Incarnation. The first services were held on East 28th Street, but a new building was soon erected on East 31st Street. Renamed the Church of the Reconciliation, it was admitted into the Episcopal Diocese of New York in 1863. Within a few years, owing to financial difficulties, the church again became a mission of Incarnation.

Shortly after the turn of the twentieth century Edward Severin Clark offered to build a new church. The cornerstone was laid in 1902, and additional buildings were added to the complex over the next few years. For several decades the chapel was a model for how to blend spiritual and social services. By the 1960s Incarnation was no longer able to

support the chapel and became a mission. In 1963 the name was changed to the Church of the Good Shepherd, which became independent through an endowment created by the sale of former Incarnation property.

Sharon Wilkins

Church of the Heavenly Rest. Episcopal house of worship founded in 1865 by a group of Civil War veterans. The original location was on the corner of Fifth Avenue and 45th Street. In 1925 the church moved to its current location, a building at Fifth Avenue and 90th Street designed by Bertram Goodhue.

Max Seppo

Church of the Holy Apostles. Episcopal parish church formed in 1844 at Ninth Avenue and 28th Street in Manhattan. In 1848 it moved into its current building, designed in an Italian Tuscanate style by William Maynard LeFevre and soon known for its stained-glass windows by William Jay Bolton and John Bolton, brothers widely considered the first stained-glass makers in the United States. Extensions designed by Richard Upjohn in the 1850s were added to the transepts and sanctuary. It opened a soup kitchen in 1982 that by the end of 1990 had served more than 1.5 million meals and was the largest facility of its kind in the city. The day after a devastating fire destroyed much of the church on 9 April 1990, the kitchen served 943 cold meals by candlelight. In 2008 Holy Apostles boasted the largest soup kitchen in the city on a single site, having served more than six million meals to the hungry and homeless from its opening in 1982 through its 25th anniversary in 2007.

Lucius A. Edelblute, *The History of the Church of the Holy Apostles (Protestant Episcopal), 1844–1944* (New York: Privately printed, 1944)

J. Robert Wright

Church of the Holy Communion. Episcopal church at Sixth Avenue and 20th Street in Manhattan, formed by W. A. Muhlenberg in 1844 as a "free" church, or one in which pew rents were abolished. It was noted both for its service to the community and for practices in worship that were unusual for the Episcopal church in the nineteenth century: daily prayer, weekly Eucharist, lighted candles, antiphonal chanting, and altar flowers. In the mid-1970s it formed a united parish with Calvary Church and St. George's Episcopal Church; in the twenty-first century the building is used for nonreligious purposes.

Robert Bruce Mullin

Church of the Holy Trinity. Episcopal house of worship located at 316 East 88th Street in Manhattan. The first Church of the Holy Trinity, at 42nd Street and Madison Avenue, was consecrated in 1865; a second was erected in 1873. Jacob Wrey Mould crafted the original design. Leopold Eidlitz used his vision in art and architecture to build a church in High Victorian Gothic style, featuring a steeple and tower. At the end of the nineteenth century, with the growth of Grand Central Terminal, the area changed and Holy Trinity merged with St. James Church at Madison Avenue and 71st Street in 1895. An endowment was created through the sale and demolition of Holy Trinity's 42nd Street property. The congregation became the Church of the Holy Trinity in the Parish of St. James. Meanwhile Serena Rhinelander donated construction funds and property on East 88th Street to erect a church complex to be supervised by St. James. The new Church of the Holy Trinity was consecrated in 1899. Its mission was to serve the spiritual, intellectual, and social needs of Yorkville and East Harlem residents. The Church of the Holy Trinity once again became an independent parish in 1950.

Sharon Wilkins

Church of the Most Holy Redeemer. Roman Catholic church at 173 East Third Street in Manhattan. It was founded in 1844 on Third Avenue as a German national parish by the Redemptorists. A school staffed by the School Sisters of Notre Dame opened in the same year, and Gabriel Rumpler was appointed the first pastor by Archbishop John Hughes. A new church was dedicated in 1851. As a result of the changing ethnic composition of the area, by the early twenty-first century the church ministered principally to Latin American Catholics.

Margaret M. McGuinness

Church of the Most Holy Trinity. German Catholic church founded in 1841 on Montrose Avenue in Williamsburgh, which is now in Brooklyn. The parish was formed by John Stephen Raffeiner to serve the area's growing German population, and the first church building was erected in 1841. In 1853 a larger church was built on an adjacent lot to house the growing congregation and to provide a parish for the sisters of St. Dominic (from Regensburg, Germany). Parishioners and clergymen formed the Orphan Home Society (1861) and St. Catherine's Hospital (1868) on Bushwick Avenue. A third church, a large Gothic cathedral, was built in 1885. Membership declined along with the German population of the neighborhood after the turn of the twentieth century. Many Latin Americans joined the church in the 1960s, and in 1981 Franciscan friars took over the administration of the parish.

Bernadette McCauley

Church of the Transfiguration (i). Roman Catholic church at 29 Mott Street in Manhattan, known as the English Lutheran First Church of Zion when it was built in 1801. It was purchased in 1853 for $30,000 by John McClellan and his congregation, who at the time occupied a church at 45 Chambers Street formerly known as the Dutch Reformed Presbyterian Church. Profits from the sale of their old church helped to retire the debts incurred by the parish, which consisted mainly of poor Irish immigrants from the Five Points. More than 1000 students attended a girls' school run by St. Elizabeth Seton's Sisters of Charity that opened at the church in 1856 (where one of the teachers was Mother Cabrini), and a boys' school run by the Christian Brothers that opened in 1857 (where one of the students was Patrick Hayes, later a cardinal). In the 1890s the Irish leaders in the parish relegated the more than 8000 Italian immigrants to a basement congregation. Tensions between the Irish and the Italians in the parish remained strong until 1902, when Ernest Coppo arrived from Italy with a group of Salesian priests, took over as pastor, and moved the Italians upstairs.

Coppo also established a Chinese mission at the church to minister to the more than 2000 Chinese who lived nearby. From the 1920s to the 1950s, the parish thrived as a central institution in Little Italy and Chinatown; Jimmy Durante belonged to the church as a youth, and the opera singer Enrico Caruso was known to attend services. In the 1940s Francis Cardinal Spellman assigned the church to the Maryknoll Fathers, an order that had served in China, and in the 1950s the parish added masses with sermons in Cantonese. The archdiocese took over the administration of the church in 1975, and in 1976 it named Mark Cheung as its first Chinese pastor. In the early twenty-first century the Church of the Transfiguration remained an important institution in Chinatown.

Edward T. O'Donnell

Church of the Transfiguration (ii). Located on 29th Street near Fifth Avenue, and one of the first Anglo-Catholic parishes of the Episcopal Church, it formed in 1848 and became known as the Little Church around the Corner. The church was a station of the Underground Railroad and a refuge for blacks during the Civil War. Well-known members who took part in the abolitionist movement were the mother of Theodore Roosevelt and G. H. Houghton, a rector who in 1863 repelled white lynch mobs by brandishing a cross. The outline of the present neo-Gothic building was completed by 1864; notable features include the Lich Gate (1896) and the Mortuary Chapel (1908). In 1988 the interior

Lich Gate (designed by Frederick Clarke Withers), Church of the Transfiguration (ii)

was refurbished and a new organ was built by the firm of C. B. Fisk. The Church of the Transfiguration is the headquarters of the Episcopal Actors' Guild and has the oldest boys' choir in the city, formed in 1881. In 2005 a new 55-story residential building was begun on the site of the old parish house, the first four floors designated for parish use; it was completed in 2008.

J. Robert Wright

Cigar Makers' International Union. Labor union organized in 1864 by Czech, German, and Hungarian immigrants in New York City who sought to protect their cigar shops from sweeping industrial changes. The United Cigarmakers joined the union as Local 144 in 1875, at a time when innovations such as molds, bunching machines, and suction tables threatened the hand-rolled cigar industry. Weakened by a series of costly strikes in 1869, 1873, and 1877, the union was reorganized by Samuel Gompers and Adolph Strasser (both from Local 144), who introduced financial and administrative reforms associated with the "new model" unions of Great Britain. Its longtime rivalry with the Progressive Cigarmakers culminated in the formation of the American Federation of Labor; it absorbed the Progressive Cigarmakers in 1886, the year its membership in New York City reached 8000 (almost one-third of the union's total). Continued technological innovation caused fears of job displacement and triggered many strikes. In 1915 lowered initiation fees were used to encourage women in the industry to join the union. Cigar makers during the interwar years began to move from union enclaves such as New York City to other parts of the United States, and national membership in the union fell from 40,000 in 1919 to 7000 in 1940. The union left New York City after World War II.

CIO. See Congress of Industrial Organizations.

Circle in the Square. Theater company formed by the producer and director Theodore Mann and the director José Quintero in 1951. It was the first nonprofit theater on Broadway. Early on it became known for its acclaimed productions of such commercially unsuccessful plays as Tennessee Williams's *Summer and Smoke* (1952) and Eugene O'Neill's *The Iceman Cometh* (1956). Among the many prominent actors who launched their careers at the theater are Geraldine Page, Jason Robards, George C. Scott, and Colleen Dewhurst. In 1972 Circle in the Square moved from Bleecker Street to a theater in the Paramount Plaza on 235 West 50th Street; the Circle in the Square Theatre School is housed in the same location. The theater was designed by Alan Sayles and seats 682. Since it opened in 1951, it has produced more than 150 shows, including *Death of a Salesman* (1975), *Tartuffe* (1977), *A Streetcar Named Desire* (1988) and *Sweeney Todd* (1989). Circle in the Square stopped staging its own productions in 1998, but the theater is still in use by other companies.

D. S. Moynihan

Circle Line. Two sightseeing boat lines. The original Circle Line company was formed in 1945 by Francis J. Barry (1906–86) through the merger of several earlier lines. From a pier at West 43rd Street its boats initially circled Manhattan Island clockwise; the direction was later changed to counterclockwise. Tour guides pointed out historic and architectural landmarks and the residences of well-known figures. In 1962 Circle Line acquired the Hudson River Day Line. In 1982 Circle Line split into two separate companies: Circle Line Downtown and Circle Line at 42nd Street. Both offered speed-boat rides, private reservations, and various tours around the city, including a three-hour tour around Manhattan. During the terrorist attacks of 11 September 2001 the companies ceased normal activities and transported people from Manhattan to New Jersey. Circle Line was the exclusive provider of transportation to Liberty and Ellis islands, transporting about 70 million people there from 1953 to 2007, when the service was taken over by Hornblower Cruises and Events. Circle Line remained a popular tourist attraction during the first decade of the twenty-first century.

Max Seppo, George A. Thompson, Jr.

Circumnavigators Club. International organization founded in 1902 by three travelers en route to New York City. The club's mission is to encourage and inspire global fellowship and to provide a forum for intellectual exchange among those who have traveled around the world. In the early twenty-first century the club maintained 14 chapters worldwide and international headquarters at the Williams Club, at 24 East 39th Street in Manhattan.

Holly Cronin

circuses. New York City became a favored destination of circus acts during colonial times because of its large population. A live lion was exhibited there as early as May 1728. In the decades after the American Revolution New York City was one of few in the United States where leisure pursuits were not prohibited for moral reasons. The first circus was probably that of the Englishman John Bill Ricketts, which ran between 1793 and 1799. An elephant, the first in the country, was shown in 1796. Exhibitions were mounted several times by the team of Victor Pépin and John Breschard between 1808 and 1813 and by the Englishman James West between 1817 and

1822. Seeking to eliminate competition, two theater producers bought out West and engaged the first bareback rider, James Hunter, who made his debut in New York City in 1823. These circuses and a few others, most of them managed by Europeans, performed for weeks or months in temporary buildings and at such pleasure gardens as Vauxhall, Niblo's Garden, and one at Richmond Hill (as early as 1823). By the late 1820s there were a dozen or more circuses and many traveling shows, most operated by Americans. The introduction of tents made circuses less dependent on long engagements in cities. Several menageries toured the country, and in the 1830s they became able to move wagonloads of caged animals and tenting equipment daily. In 1834 nine such menageries merged to form the Zoological Institute, headquartered at 37 Bowery, where an exhibition hall was also built. In 1835 the institute controlled all 13 American touring menageries and merged several with circuses, leaving only five touring circuses still independent. In a rigged stock sale the institute raised $329,325 from 123 investors but was forced to declare bankruptcy during the panic of 1837.

Various theaters, exhibition halls, and vacant lots in the city were sites of one-ring circuses that competed with one another annually until after the Civil War. From the winter of 1838–39 the hall at 37 Bowery was known as the Bowery Amphitheatre, a major venue for circuses until it was refitted as the Stadt Theatre in 1854. Franconi's Hippodrome, an impressive canvas-covered building, occupied two acres (one hectare) at Broadway and 23rd Street. On 8 February 1864 an iron structure known as the Hippotheatron opened on 14th Street between Third and Fourth avenues. In 1865 the facility was taken over and renovated by Lewis B. Lent. From 1866 to 1876 he ran Lent's New York Circus, one of the first to travel cross country by rail. The building was bought in 1872 by P. T. Barnum, who moved his circus there in November, and was destroyed by fire the same year.

The following years saw the mergers of several large circuses. In the autumn of 1873 Barnum leased land formerly used by the New York and Harlem Railroad between Madison and Fourth avenues at 26th and 27th streets. There he erected the New York Hippodrome and presented his circus from 1874 to 1875. Known as Gilmore's Garden during the late 1870s, the building was also used by other circuses, including that of James Cooper and James A. Bailey; it was renamed Madison Square Garden in May 1879 by the new owner, Cornelius Vanderbilt. In 1881 Barnum's circus merged with Bailey's to form a three-ring circus that was introduced at Madison Square Garden and dominated the city's circus business in the years that followed. The building was replaced in 1890 with another of the same name that was the venue of the Adam Forepaugh–Sells Brothers Circus (owned by Bailey) while Barnum and Bailey toured Europe from 1898 to 1902; the new building was demolished in 1925. In 1905 another structure called the New York Hippodrome was erected at Sixth Avenue between 43rd and 44th streets. After Bailey's death from an insect bite at Madison Square Garden in 1906, Barnum and Bailey was sold to the Ringling brothers in 1907; in 1909 it opened in Chicago and the Ringling circus was moved to Madison Square Garden. The shows combined in 1919 to form the Ringling Bros. and Barnum & Bailey Circus, whose performances in New York City became associated with the arrival of spring.

Ringling Bros. enjoyed a virtual monopoly in the city. Cole Brothers, which featured the animal trainer Clyde Beatty, opened for only one season in New York City, appearing for three weeks at the New York Hippodrome in 1937. As the Clyde Beatty–Cole Brothers Circus it opened unsuccessfully at the New York Coliseum. After that time it usually held its spring opening at the Commack Arena on Long Island. After abandoning the canvas big top in 1956 in favor of arenas, Ringling Brothers no longer opened its season at Madison Square Garden, but its springtime engagement in the city still remained the longest of the season, averaging six weeks or more. As part of a Soviet-American exchange program the Moscow Circus performed at the Felt Forum in September 1963 and in later years. An important innovation in the style of American circuses was the Big Apple Circus. Conceived by Paul Binder as the nonprofit New York School for Circus Arts, it was modeled on European one-ring circuses and supported mostly by local philanthropists. It opened under canvas at Battery Park on 20 July 1977 and in the following years toured the city and other sites in the Northeast; it appeared under canvas on 4 December 1981 at Damrosch Park near Lincoln Center, which became the site of an annual engagement that gradually lengthened to more than two months during the holiday season. By 2008 both the Ringling Bros. and Big Apple circuses had lessened their focus on New York City, instead touring major cities across the United States.

George Speaight, *The History of the Circus* (San Diego, Calif.: A. S. Barnes, 1980)

Richard W. Flint

Citibank. Commercial bank. It was formed by a group of merchants in New York City on 14 September 1812 as a state-chartered institution called the City Bank of New York. Its name was changed successively to National City Bank of New York (1865, after the bank joined the national banking system), First National City Bank of New York (1955, after a merger with the First National Bank of the City of New York), First National City Bank (1962), and Citibank (1976). A holding company, First National City Corporation, was formed in 1968 with the bank as its principal subsidiary; it became known as Citicorp in 1974. The headquarters of the bank remained for almost a century at 52 Wall Street, before moving in 1908 to 55 Wall Street (previously the Merchants' Exchange and the U.S. Custom House), then in 1961 to 399 Park Avenue. Citicorp Center, containing additional offices, opened in 1977 at Lexington Avenue and 53rd Street.

The first president of the bank, Colonel Samuel Osgood (1812–13), had been the first postmaster general of the United States, a naval officer of the Port of New York, and a director of the Bank of the Manhattan Company. Isaac Wright, the fifth president (1827–32), was the founder of the Black Ball Shipping Line, which provided the first regularly scheduled sailing routes between New York City and Liverpool. After the panic of 1837, control of the bank passed to Moses Taylor, who as a director and then as the president of the bank (1856–82) took a comprehensive approach to finance, offering a full range of commercial and investment banking services, and stressed liquidity, or "ready money," for commodity merchants. Under the leadership of James Stillman (1891–1918) the bank grew from a small commercial institution into the largest bank in the United States. During the panic of 1893 its reputation for safety attracted the deposits of leading corporations, and the bank also became a major underwriter of securities for American business. Frank A. Vanderlip (1909–19), whom Stillman had chosen as his successor, formed the National City Company, which sold foreign and domestic bonds to retail customers. As president of the bank Charles E. Mitchell (1921–33) expanded on Vanderlip's strategy of diversification. He increased the number of local branches, offered compound interest, and extended personal loans to small depositors. From 1927 the National City Company sold common stocks to its customers, using the world's largest private telegraph line, and in 1929 the Farmers Loan and Trust Company became part of the bank, which now offered trust services nationwide.

The Depression led to a drastic reversal of the bank's fortunes. A planned merger with the Corn Exchange Bank collapsed. The bank also had political problems: the chief counsel of the Senate Banking Committee, Ferdinand Pecora, blamed the bank and Mitchell in particular for the stock market crash, and Mitchell resigned on 26 February 1933. The Glass–Steagall Act separated commercial and investment banking and forced the liquidation of the National City Company. A need for funds in the late 1950s led to the development in 1961 by Walter B. Wriston of the negotiable certificate of deposit, a financial instrument that allowed the bank to enter a highly competitive market for funds and

expand its assets. As its president (1967–70) and then chairman (1970–84), Wriston transformed the bank into a global financial services institution. The bank expanded its businesses across state lines and emphasized consumer products as regulatory barriers fell. It was the first bank to introduce automatic teller machines on a large scale (1978) and became a national leader in credit cards, student loans, and home mortgages. In response to the oil shocks of the 1970s, it led other banks to "recycle" petrodollars (using excess funds deposited by Arab oil-producing nations by extending loans to the third world, primarily Latin America), and after the government of Mexico defaulted on its loans in August 1982 it organized an effort to restructure these loans. Wriston was succeeded as the chairman of Citibank by John S. Reed (1984–2000), who streamlined the back offices of the bank and led its consumer bank to profitability. After Reed's retirement in 2000 he was replaced by Victor Menezes, who was replaced three years later by William Rhodes. Citibank announced in 2006 that it would be the corporate sponsor of the new New York Mets stadium, which would be called Citi Field. In 2008 the bank became a subsidiary of Citigroup Incorporated and suffered during the global financial crisis, requiring a government bailout to survive that same year. In 2009 the company split into two companies: Citicorp and Citi Holdings, Inc.

Harold van B. Cleveland and Thomas F. Huertas, *Citibank, 1812–1970* (Cambridge, Mass.: Harvard University Press, 1985)

Joan L. Silverman

Citicorp Building. A 48-story skyscraper, 663 feet (202 meters) tall, at 44th Drive and 45th Avenue in Hunter's Point, Queens. Designed by the firm of Skidmore, Owings and Merrill and built in 1989, it provides backup office space for the Citicorp Center across the East River in Manhattan, which is one subway stop away. The Citicorp Building is taller than any other building in Queens, Brooklyn, or Long Island.

Citicorp Center. Skyscraper between 53rd and 54th streets on the east side of Lexington Avenue; at the northern end the base of the building extends as far east as Third Avenue. Designed by Hugh Stubbins with Emery Roth and Sons and completed in 1977, it has a height of 915 feet (279 meters) and is one of the tallest buildings in midtown Manhattan. The building is a sleekly modern aluminum and glass tower in the shape of a square column, entirely supported at its base by four 127-feet- (38.7-meters-) tall stilt-like pillars that are centered on each side. The asymmetrical roof is stepped and steeply sloped on its southern face and is a recognizable feature in the New York City skyline. A sunken plaza functions as an entrance to the lower level and to the subway. Originally the building was intended to have apartments on the upper stories, each with a southern terrace, but the plan was abandoned when a request for a zoning variance was denied. The Citicorp Center is arguably the most dramatic skyscraper built in the United States in the half-century after World War II.

John Tauranac

Citi Field. Baseball stadium in Flushing Meadows–Corona Park in Queens, home of the New York Mets. In July 2006 construction for the stadium began in a lot adjacent to Shea Stadium, the Mets' home field at the time. The cost of construction, which was completed in time for the 2009 season, was $900 million. New York City leases the stadium to the Mets; the current lease expires in 2049. In 2006 the New York City–based financial services company Citigroup agreed to purchase naming rights for $20 million per year, for a duration of 20 years.

Citi Field seats 41,800 fans. The design by the architecture firm Populous includes several features from Ebbets Field, the original home of the Brooklyn Dodgers, among them a rotunda dedicated to Jackie Robinson and a red brick and granite facade. The field has a natural grass surface and open-air design, as well as one of the deepest center fields in the major leagues and varied wall height. The iconic apple that was raised every time the Mets got a home run in Shea Stadium was made larger in Citi Field; the original apple from Shea Stadium is located inside Citi Field's bullpen entrance gate. Amenities at Citi Field include the Pepsi Porch, a section of right field that extends 8 feet (2.4 meters) into fair territory. The Taste of the City food court includes several of the city's trendiest eateries, and there are luxury restaurants and clubs on each level. Located behind the center field scoreboard is the 2KSports area, which caters to younger fans and features a variety of games.

See also Shea Stadium and New York Mets.

Meghan Lalonde

Citizens Budget Commission. Civic association formed during the fiscal crisis of 1932 to advocate low taxes, efficiency, and tight controls over the finances of New York City. It was sponsored by real estate owners, banks, and large retail and wholesale businesses but sought to appeal to all citizens. The commission's staff publishes information about the city's revenues, borrowing, expenditures, and operations; testifies at city hearings; and advises municipal officials. Among the best-known leaders of the Citizens Budget Commission have been the real estate attorney Peter Grimm, the Republican leader Harold Riegelman, the budget analyst Herbert J. Ranschberg, and Columbia Professor Raymond Horton, who led key studies during the response to the fiscal crisis of the mid-1970s. Consistent with its long history, in 2008 the commission listed as its functions those of a "watchdog," researcher, monitor of municipal performance, and information provider.

David C. Hammack

Citizens' Housing and Planning Council. An organization formed as the Citizens' Housing Council in 1937 by Harold S. Buttenheim, editor of the *American City,* to unite the many constituencies for housing reform and development in New York City, formulate and analyze housing policy, and support housing legislation. Its members included bankers; representatives of construction, real estate, and other businesses;

Citi Field, 2009

architects; engineers; labor and tenant leaders; and social workers. The council's early studies of how tax policy and rent control affected housing filled gaps in existing research and were published as a report called *Housing the Metropolis* in 1938. From 1941 it published *Legislative Information Bulletin,* which tracked and evaluated bills related to housing and community development. *A Housing Program for New York City* (1945) forecast the supply of housing that the city would need after the war and proposed financing and administrative means to achieve it. The council assumed its current name in 1948. In the following decades it analyzed public housing management (1958), offered an approach to neighborhood conservation (1962), gave an overview of the property market in the city (1975), and predicted financial difficulties in Mitchell–Lama housing (1977). In the report *On Its Own: New York City Approaches Affordable Housing* (1985), the council evaluated the effects of the federal government's virtual withdrawal from the production of subsidized housing and outlined actions that the city might undertake to address its still-urgent need for affordable dwellings. Its later reports included *The Challenge and the Change* (1989) and *Preserving New York's Low-Income Housing Stock* (1992). The council relies heavily on the technical and political expertise of its board of directors, which in the early twenty-first century consisted largely of development executives (from both profit-making and nonprofit ventures), lawyers, and bankers.

Rosalie Genevro

Citizens Union. Civic association. It began as a political party formed on 22 February 1897 by Elihu Root and 164 other prominent citizens to oppose Tammany Hall in the first municipal election after consolidation; R. Fulton Cutting was its first chairman (to 1908). The organization was committed to separating municipal elections from those at the state and national levels. Forming clubs in various districts in the city, it declined to join with local Republicans to nominate fusion candidates in the mayoral election of 1897, naming instead an independent ticket led by Seth Low, then the president of Columbia University. Low lost the election but won in 1901 after the union agreed to a slate of fusion candidates. By 1908 patronage seekers were infiltrating the party, and it became a nonpartisan civic organization. Located at 198 Broadway early in the twenty-first century, Citizens Union evaluates candidates for local office, publishes an annual voters' directory, and monitors city legislation, as well as state legislation affecting New York City. It advocates the selection of judges on the basis of merit, reforms in campaign finance and election law, and other legislative reforms to improve governmental efficiency and integrity. Among those who have served as its chairman are William Jay Schieffelin (1909–41), Richard S. Childs (1941–50), Milton M. Bergerman (1950–70), Robert B. McKay (1971–77), Terence H. Benbow (1977–83), Malcolm MacKay (1983–86), Robert F. Wagner (1986–93), and Richard J. Davis as of 2007.

Bernard Hirschhorn

City and Suburban Homes. Firm of real estate developers formed in 1896, specializing in limited-profit housing projects for low-income workers. It built model apartments on West 68th and 69th streets (now demolished), using a design by Ernest Flagg that had won a competition in 1896. In 1898 it engaged James E. Ware to adapt his own design, which had won second prize in the same competition, as the plan for a housing project in Manhattan, the First Avenue Estate, that eventually occupied sites at 1168–90 First Avenue, 1194–1200 First Avenue, 401–29 East 64th Street, and 402–30 East 65th Street. Refinements were later made by Phillip H. Ohm, who with Percy Griffin and the firm of Harde and Short was engaged to design the Avenue A Estate at 1470–92 Avenue A, 501–31 East 78th Street, and 502–28 East 79th Street; this was the largest housing project of its kind from its completion in 1913 until the 1930s. City and Suburban Homes continued to build model apartments in the city until shortly after World War II. Its most successful ventures became the basis for many other housing developments, including those built by the federal government from the 1930s. The First Avenue Estate and the Avenue A Estate were designated city landmarks in 1990. A portion of the estates was later stripped of its landmark designation by the Board of Estimate at the request of Peter Kalikow, who owned the site and wished to build luxury apartment buildings there. In 1993 the courts overturned the action of the Board of Estimate, restoring landmark designation to the entire complex.

Eric Wm. Allison

City Bank of New York. Bank formed in 1812 that eventually became known as Citibank.

City Center of Music and Drama. Concert hall at 131 West 55th Street in Manhattan, dedicated in 1924 as the Mecca Temple by the Ancient and Accepted Order of Nobles of the Mystic Shrine, or Shriners. After a foreclosure on the hall, Mayor Fiorello H. La Guardia and the producer Jean Dalrymple saved it from demolition in 1943 and purchased it for the city; it reopened on 11 December with a concert by the New York Philharmonic. City Center was the first performing arts center in the United States that could legitimately claim to be a people's arts center. It offered dramatic, musical, and dance performances at ticket prices of no more than $2. In its early years the hall was the home of the City Center Opera Company (later the New York City Opera) and the New York City Ballet, both of which encouraged American performers, composers, and choreographers. The City Center Orchestra was conducted by such figures as Leopold Stokowski and Leonard Bernstein during its relatively brief existence, and actors such as Gertrude Lawrence and Orson Welles appeared at the hall in theatrical productions. After the opening of the New York State Theater at Lincoln Center in 1966, the New York City Opera and the New York City Ballet left the City Center, which continued to stage various cultural events; starting in 2004 it hosted an annual Fall for Dance Festival.

Barbara L. Tischler

City Club. Organization formed in 1892 to promote social interaction among men interested in efficient city government and the election of "fit persons" to municipal office. The management of the affairs of the club and the political campaigns that it sponsored were traditionally in different hands. The club publishes an annual report as well as books and pamphlets on such diverse subjects as rapid transit, bridges, public charities, the water supply, the school calendar, the police department, and the city charter.

James E. Mooney

City College of New York. Original college of the City University of New York, formed in 1847 by citywide referendum as the Free Academy. First housed in a building at 17 Lexington Avenue, the school offered a pre-freshman year and four years of liberal arts instruction by five faculty members, and was administered by a president. It conferred its first baccalaureate degrees in 1853 and took its current name in 1866.The college also administered Townsend Harris High School. The student body consisted in the early years largely of German Jews and by the turn of the century of Russian Jews, and attendance at the college soon came to be regarded as a means of escaping the poverty of the Lower East Side. Jews accounted for three-fourths of the students by 1903 and for at least four-fifths during the 1920s and 1930s. In 1907 construction was completed on a new campus of 35 acres (14 hectares) at 138th Street and Convent Avenue, designed in a neo-Gothic style and built of Manhattan schist excavated during the digging of subway tunnels, with a trim of white terra-cotta. An amphitheater carved into the slopes of upper Manhattan was given to the college in 1915 by the mining

City College (designed by George B. Post), ca *1910; right assembly hall*

magnate Adolph Lewisohn and named Lewisohn Stadium (demolished 1973).

City College became known for academic excellence after World War I, and enrollment increased sharply, reaching the unprecedented level of 32,030 in October 1929. To ease the strain on facilities, campuses were set up in Brooklyn and Queens that later became Brooklyn College and Queens College. In the early 1930s the college emerged as a leader in collegiate basketball, and in 1950 it became the first school to win both the National Invitational Tournament and the championship of the National Collegiate Athletic Association; these achievements were tarnished in the following year when several players were found to have been guilty of "point shaving" (deliberately reducing the margin of victory in a game to accommodate bettors). Between the 1930s and the 1950s the student body also became known for its leftist sympathies, and many socialist, communist, and Trotskyist groups were formed on the campus. As the school improved its reputation, it increased the minimum high school average required for admission, from 60 in 1928 to 88 in 1941. In 1961 the school became a part of the City University of New York, which in 1970 instituted a controversial policy of open admissions that guaranteed a place in the university system to every graduate of a high school in New York City. In 1976 the city imposed tuition fees for the first time.

After decades of expansion the school added five professional schools in the last decades of the twentieth century: the School of Architecture, the School of Nursing, the School of Engineering, the School of Education, and the Sophie Davis School of Biomedical Education. It completed a performing arts center called Aaron Davis Hall in 1979 and the North Academic Center in 1984, and housing laboratories, classrooms, and the largest library in the university system. In part because of open admissions, the college's student body by the 1980s began to the reflect the city's ethnic diversity. City College continued to make a number of renovations to its campus in the early twenty-first century, including a large investment to replace the original terracotta on many of its buildings, which had begun to erode. The annual undergraduate population in the first decade of the new millennium was around 8500. Well-known alumni of City College include the financier Bernard Baruch (1889), the novelist Upton Sinclair (1897), Senator Robert F. Wagner (1898), Justice Felix Frankfurter (1902), the actor Edward G. Robinson (1914), the lyricist Ira Gershwin (1918), the historian Lewis Mumford (1918), the labor leader A. Philip Randolph (1919), the physician Jonas E. Salk (1934), the politicians Edward I. Koch (1945) and Herman Badillo (1951), Secretary of State and General Colin L. Powell (1958), and eight Nobel laureates, the most from any public college.

Marc Ferris

City Council. The legislative branch of municipal government. The first charter after consolidation provided for a bicameral legislature called the Municipal Assembly, but this was abandoned in 1901 in favor of a Board of Aldermen that initially had one member from each of 73 districts who served two-year terms. The number of districts was reduced to 67 in 1916 and 65 in 1921. Several charter reforms were undertaken to strengthen the council, which in 1936 was reshaped into a single house based on proportional representation. Between the elections of 1937 and 1945 the size of the membership varied from 26 in 1937 and 1941 to 17 in 1943. Proportional representation was abandoned in 1949 when the council became a body of 25 members, elected one to a district by majority vote. Charter revisions effective in 1963 called for 10 more members, two elected at large from each borough: to promote pluralism in a body that was overwhelmingly Democratic, it was stipulated that in each borough the at-large members must not be drawn from the same party. For many years City Council districts were coextensive with state assembly districts and later with state senate districts; when the boundaries of assembly districts were redrawn in the early 1960s in compliance with a decision by the U.S. Supreme Court to apply the doctrine of "one person, one vote" to state legislatures, the city increased the number of council districts to 27 in time for the municipal elections of 1965.

After a state law established the New York City Health and Hospitals Corporation, the council was required to appoint five of the 16 members of the board. Council seats were

reapportioned after the federal census of 1970, and in 1973 elections were held for 33 districts. The amended boundaries were successfully challenged in court, leading to federally mandated elections using a new set of boundaries in 1974. In the following year the council was required to approve several appointments that previously had been made at the mayor's discretion. The elections scheduled for 1981 required redistricting on the basis of figures from the census of 1980. The boundaries drawn by the council were found to violate the Voting Rights Act (1966) because they reduced the representation of racial minorities, and the elections were postponed until 1982 while new boundaries were drawn; the number of districts was increased to 35, benefiting racial minorities and incumbents. The 10 at-large seats were ruled unconstitutional because they violated the principle of "one person, one vote," and no new at-large members were elected in 1981 or 1982; the seats were abolished by referendum in 1983. Elections were held for all 35 district seats in 1985 and 1989. Charter reforms passed in 1989 increased the size of the council to 51 in 1992 and abolished the Board of Estimate, leaving the council with sole legislative authority over the operating and capital budgets; authority over zoning and land use also was transferred to the council from the Board of Estimate.

Elections for the 51 district seats were held in November 1991 on the basis of district boundaries drawn using data from the census of 1990. In 1993 council members were elected to four-year terms. The president of the City Council was elected citywide and stood next in the line of succession to the mayor's office until 1993–94 when, as a result of the charter revisions of 1989, the office was replaced by that of the public advocate. The public advocate also was given the responsibility of presiding over the council and serving as a member ex officio of all its committees, but with greatly reduced powers because of the newly enlarged role of the council's speaker. The speaker is a member of the council elected by the other members.

In 1993 voters approved an amendment to the City Charter limiting council members and other elected officials to two terms. The referendum was supported primarily by a wealthy businessman, Ronald Lauder, who financed the campaign in favor of the change. In 1996 the council speaker led an effort to amend the term limit provision to allow three terms. This was defeated at the polls with Lauder lending support to the effort to retain stricter limits. The effect of the term limit provision was evident in elections during the early twenty-first century, when several council members were prevented from seeking an additional term.

The 1989 charter reforms, the "new blood" attracted by the effects of term limits, transformed a previously weak legislature into a more active one. Council committees began playing an increased role in oversight and zoning, and the council leadership exercised initiative in bargaining with the mayor over the size and distribution of the municipal budget.

city directories. City and business directories were an important resource for consumers and commercial establishments before the advent of the telephone and remain valuable tools for research in the twenty-first century. In 1786 David C. Franks published the first directory of New York City, a slim volume containing 856 entries. Other directories were issued by the printing firm of Hodge, Allen, and Campbell (1789–92) and by William Duncan (1792–95). David Longworth and his son Thomas published 45 editions of the *American Almanac, New-York Register, and City Directory*. Although not a formal census, the almanac provided a listing of the names, occupations, and addresses of the city's "heads of households" (mostly men), "homemakers" (mostly widows and women who owned their own businesses), and business partnerships, as well as lists of judges, politicians, ministers, and fraternal organizations. Some residents refused to give their names accurately to avoid tax collectors, military service, or jury duty. To increase revenues in 1813 David Longworth inserted a small advertising section in the front of his directory. From 1841 until 1849 directories were published by John Doggett, Jr., the first printer to interleave pages of advertising and listings. In 1860 John F. Trow emerged as the dominant printer. When advertising revenues fell during the Civil War, Trow responded by selling advertisements on the borders of pages. He also published a street guide, a directory of partnerships, and *Wilson's Business Directory,* which was organized according to occupation or service and was an important outlet for advertising.

The *Brooklyn City Directory* was first issued by Alden Spooner (from 1822); between 1832 and 1860 seven firms published the directory, along with a separate street guide and business directory. Later directories of Brooklyn were published by J. Lain and Company (from 1861), the Lain and Healy Company (from 1892), and George Uppington (from 1900).

The spread of telephones around 1900 rendered city and business directories redundant. In 1898 the publishers of the nation's directories organized into the American Association of Directory Publishers in an effort to stem the decline. Ralph L. Polk, a directory magnate from Detroit, bought out Trow's publishing interests in 1915 and continued to issue directories under Trow's name after consolidating the city directory, the street guide, and the directories of businesses and partnerships into one volume. The city directory of Manhattan appeared sporadically during the 1920s. The last was published in 1932 by the Emergency Unemployment Relief Committee.

Marc Ferris

city halls. A tavern facing Coenties Slip on Pearl Street was the center of colonial administration for New Amsterdam and became the first city hall on 6 February 1653. Administrative offices were moved on 14 October 1703

Entrance to City Hall facing City Hall Park, ca *1905*

to a building on Wall Street, which saw the trial of John Peter Zenger for libel (1735) and meetings of the Stamp Act Congress (1765) and the Continental Congress (1785); it was remodeled in 1788 by Pierre L'Enfant. On 4 October 1802 the city announced plans for a new building near what is now the intersection of Broadway and Park Row designed by John McComb, Jr., and Joseph François Mangin. One of the most prominent structures of its time, it was set in a park and had a marble exterior, a dome, a rotunda, and a cupola affording spectacular views of the surrounding countryside. At its completion in 1812 offices and legislative and judicial chambers were moved there and the former city hall on Wall Street was demolished. During festivities in 1858 celebrating a demonstration of a transatlantic cable, the cupola, dome, and rotunda were set on fire by fireworks launched from the roof; reconstruction was supervised by Leopold Eidlitz. The body of President Abraham Lincoln lay in state there for a few days during the funeral procession from Washington, D.C., to Illinois. All judicial offices were moved elsewhere by the time of the consolidation of the five boroughs in 1898, and from that time the building has been used by the mayor and the city legislature solely for offices and legislative chambers. The interior was restored between 1907 and 1918 by Grosvenor Atterbury: the Governor's Room, among his most representative works, has furniture from the Federal period and a portrait collection that includes many works by John Trumbull. In the early twenty-first century it was still used as a museum that housed important American artwork and artifacts.

Mary Beth Betts

City Hospital (Center at Elmhurst). Hospital that later became Elmhurst Hospital Center.

City Housing Corporation. Limited-profit corporation formed in 1924 by members of the Regional Planning Association of America to put into practice their theories of planning and housing design. It sponsored the construction between 1924 and 1928 of Sunnyside Gardens in Queens, which spanned about 16 contiguous city blocks and provided affordable housing for 1202 families. The innovative features of Sunnyside Gardens included common ownership of shared courtyards and the mixing in the same development of different types of buildings and apartments and different forms of ownership. The corporation also sponsored the building of Radburn Garden City in New Jersey.

Clarence S. Stein, *Toward New Towns for America* (Cambridge, Mass.: MIT Press, 1951); Carl Sussman, ed., *Planning the Fourth Migration: The Neglected Vision of the Regional Planning Association of America* (Cambridge, Mass.: MIT Press, 1976)

Michael Kwartler

City Island. Island in the northeastern Bronx and the site of a neighborhood of the same name. Nearly 1¾ miles (3 kilometers) long at its longest point, it is connected at its northern end by a bridge to the mainland but is separated from the nearest residential area there by the expanse of Pelham Bay Park. Because of its isolation the neighborhood has retained the feel of a village in New England. At the northeastern tip is a causeway connecting the island to High Island, an uninhabited island of 3 acres (1.2 hectares). Initially called Minnewits by the local Indians and Minneford Island by the British, the island received its current name when it was purchased on behalf of a syndicate in 1761 by Benjamin Palmer, who envisioned it as a potential commercial rival to New York City. Although his plans were thwarted by the onset of the American Revolution, local residents earned an income from fishing and clamming, and from 1830 the Solar Salt Works retrieved salt from evaporated seawater. In the late nineteenth and the early twentieth centuries many marine pilots lived on the island, boarding steamships from New England to guide them through the treacherous waters of Hell Gate to Manhattan. The island also became a center for building yachts, and several financiers and industrialists anchored their boats there. In the twentieth century City Island became a center for boat building and sailmaking. Landing craft were manufactured there during World War II; after the war five yachts designed at the island won the America's Cup. The island also became a summer resort of rented cottages and summer homes. Minneford Shipyard, the last boatyard on the island, closed in 1982, but sailmakers and other maritime businesses continued to flourish. City Island Avenue, the main street, has seafood restaurants and marinas along with antique shops, boutiques, and the North Wind Undersea Institute, a marine museum. Most residents live in one-family houses, although there are also some condominiums.

John McNamara, *McNamara's Old Bronx* (New York: Bronx County Historical Society, 1989)

Lloyd Ultan

City Line. Neighborhood in east central Brooklyn, bounded to the north by Atlantic Avenue, to the east by the border with Queens County, and to the south and west by North Conduit Boulevard. It was named before Brooklyn was incorporated into New York City. In 1943 residents erected a war memorial by private subscription at Liberty Avenue and Eldert Lane. Once Italian and Irish, the population became predominantly Latin American during the latter half of the twentieth century and into the twenty-first century, with some residents from the Caribbean and Guyana. Just north of the area at Grant and McKinley avenues stands St. Sylvester's Roman Catholic Church, where services are given in both Spanish and English; it is an important community center. Liberty Avenue is the main commercial district (the City Line Cinema once stood there). One- and two-family houses predominate, but there are also several small apartment buildings.

Ellen Marie Snyder-Grenier

Citymeals-on-Wheels. Charitable program launched in 1981 in New York City by the writers Gael Greene, James Beard, and Barbara Kafka to supplement Meals-on-Wheels, a federal program offering five hot meals a week to the homebound elderly. It provides hot meals on Saturdays, Sundays, and holidays for thousands of homebound elderly residents. The program is funded privately and overseen by the city's Department for the Aging.

Alana Erickson Coble

City of New York v. State of New York. Court case decided in 1990 (76 N.Y. 2d 479) by the New York State Court of Appeals. It sustained a state law authorizing a referendum of voters in Staten Island to determine whether they wished to create a commission to draft a charter that would make Staten Island an independent city. Noting that the referendum would not actually authorize secession or commit the state to support secession, the court held that the referendum would not violate the city's home rule. In the referendum, conducted in November 1990, the charter commission proposal was supported by 82 percent of the borough's voters.

Richard Briffault

city planning. City planning in colonial New York City consisted of little more than providing for defense, regulating port activities, and isolating noxious industry. A more comprehensive approach was taken during the nineteenth century to accommodate rapid growth (from 60,000 to half a million during the first half of the century). The government devised a visionary plan based on efficient transport and on uniform, easily marketable parcels of property: it laid out a comprehensive street grid, installed a citywide water system, built Central Park, and passed legislation regulating tenements and allowing the city to build a rapid transit system. Calls to increase the role of government followed during the late nineteenth century, and on consolidation in 1898 responsibility for city planning was divided among the borough presidents, the municipal legislature (consisting of the Board of Aldermen and the Board

of Estimate and Apportionment), and the mayor. Among the most important jurisdictions was street mapping and park planning (only about 40 percent of the city was mapped at the time); this was overseen by the borough presidents and subject to approval by the Board of Estimate. The legislature had authority over infrastructure, purchases of land for public use, and building and housing codes; the mayor supervised the agencies responsible for delivering services and enforcing codes.

By the turn of the century progressives led by George McAneny identified planning as a vital element of municipal reform.and pressed for a nonpartisan, expert municipal commission responsible for developing a master plan and a capital budget. A citizens' advisory group was appointed to draft a plan to beautify streets and parks, and secure the passage of state legislation that gave the city jurisdiction over local planning and zoning.

At the same time, the Board of Estimate formed two committees to deal with the question of regulating land use more strictly. Each was directed by McAneny and composed of the borough presidents, and each had a paid staff and established citizens' advisory commissions. The first report recommended expanding the police power for zoning, an idea inspired by legislation limiting the height of buildings in other American cities and by the German practice of restricting land use. The second report called for a permanent planning commission patterned on those in 20 other cities. A Commission on Building Districts and Restrictions drafted a zoning code for the city. Based on a broad legal framework conceived by Edward M. Bassett, the code divided the city into residential, commercial, and unrestricted districts and regulated building density to provide more light and air; the code was adopted as law by the Board of Estimate in 1916. The requirement that skyscrapers be built with setbacks soon altered the skyline of Manhattan, as needle-like towers such as the Chrysler and Empire State buildings defined the prevailing style in commercial architecture. The Committee on the City Plan reviewed almost 50 subjects for the Board of Estimate, functioning essentially as a planning commission.

At the same time the Russell Sage Foundation sponsored a model housing community in Queens known as Forest Hills Gardens in 1911; this was followed by Sunnyside Gardens, a similar but smaller community built by the City Housing Corporation, a limited-dividend company. In 1921 the Port of New York Authority was formed to plan and operate regional transportation. During the 1920s the Russell Sage Foundation funded an ambitious initiative for the city and the 22 counties around it. Published as *The Regional Plan for New York and Its Environs,* the plan focused on transportation, open space, and the relations between the city and its suburbs. Many of its recommendations, especially for highways and regional parks, were implemented in the following decades.

In the wake of the *Regional Plan* the campaign to establish a permanent planning commission resumed, and at the insistence of such advocates as McAneny and Bassett, Mayor James J. Walker formed the City Committee on Plan and Survey. The committee made recommendations that led in 1930 to the appointment of a planning commissioner supported by a planning department and a nine-member citizens' advisory board. One of the commissioner's first tasks was to draw up a master plan for reviewing capital programs (his own power in this regard was weak). In 1932 both the commissioner's position and the department were eliminated as the city descended into fiscal crisis.

At the urging of planning advocates, Mayor Fiorello H. La Guardia in 1934 formed the Mayor's Committee on City Planning. With funds from the Works Progress Administration the group conducted real estate surveys, amended the zoning ordinance, drafted a new street plan, and mounted a large exhibition on city planning at the Russell Sage Foundation. More important, it made certain that city planning was a central issue in the charter revision of 1935. Under the new charter, approved in 1936, a permanent planning commission was formed to draw up a master plan and the capital budget, maintain the official map, and oversee the zoning ordinance. The commission had seven members (six appointed by the mayor in addition to the chief engineer of the Board of Estimate, who served ex officio) and several mandates, and its chairman oversaw a city planning department of 27 members. Each borough president was given the power to appoint a citizens' advisory board on land use. Mayor La Guardia appointed as the first chairman Rexford Tugwell, an advisor to President Franklin D. Roosevelt. Among the other commissioners were Vernon Moon, chief engineer of the Board of Estimate; Cleveland Rogers, editor of the *Brooklyn Daily Eagle;* the architect Edwin A. Salmon; Arthur V. Sheridan, chief engineer of the Bronx; and Lawrence Orton, secretary of the Regional Plan Association, who served for four terms until 1969. Initially the commission focused on the zoning ordinance of 1916, which it brought up to date by strengthening protection for districts with one-family housing and reclassifying unrestricted areas for retail, business, or manufacturing. In response to pressure for development and affordable housing, the commission revamped sections of the street system. One result was that the grid was eliminated in the area in the Bronx that became Parkchester, a housing development built by the Metropolitan Life Insurance Company.

During these years the commission began to draw up a master plan, and by 1941 it announced plans for slum clearance, low-cost housing, parks, transportation, and education. The most controversial element was the land-use scheme, which addressed the flight of the middle class to the suburbs. It assumed that the population would stay virtually unchanged at 7.3 million and focused on placing residents near their places of work and recommended reclaiming blighted areas for residential use, building high-density housing developments near parks and riverfronts and low-density ones beyond transit lines, and establishing business districts at transport hubs; it also sought to increase the amount of open space from 29,000 acres (11,745 hectares) to 76,000 acres (30,780 hectares), allowing for "greenbelts" separating incompatible districts and for a reserve surrounding Jamaica Bay. But the commission never adopted the plan. Parks Commissioner Robert Moses promptly arranged for his own appointment to the commission, where he remained a dominant figure for 18 years. During his tenure he blocked the notion of comprehensive planning and led the commission to focus instead on specific projects and the zoning ordinance. As the city's construction coordinator and the head of the Mayor's Committee on Slum Clearance he also directed the city's efforts in public building, slum clearance, and urban renewal, thus performing a highly personal and unorthodox brand of planning that was totally unimaginable to its original promoters.

The years after World War II saw the scope of city planning expand rapidly. By the late 1940s the zoning ordinance had become unworkable: it had three maps for each district, allowing hundreds of combinations, carried 1400 amendments, and made provision for a population of 70 million. The *Plan for Rezoning the City of New York* recommended a zoning ordinance based on a single map, 18 categories of land use, and 38 districts. It also sought to regulate building density according to the floor–area ratio (a measure expressing the "total permitted floor area as a multiple of the area of the lot, for all lots regardless of use"), defined an acceptable angle of light obstruction known as the sky exposure plane, and introduced requirements for open space, yards, and parking.

Little effort was made to implement these measures until the real estate magnate James Felt was appointed chairman in 1956 by Robert F. Wagner, who had become mayor in 1954. Felt soon engaged the firm of Voorhees, Walker, Smith and Smith to prepare the text and maps for a new ordinance. These were completed in less than two years and published as *Zoning New York City: A Proposal for a Zoning Resolution for the City of New York.* By 1961 the new ordinance was in place: providing for a population of 11 million (while

assuming a population of eight million for 1975), it designated half the city's area for infrastructure (streets, open space, and airports), reserved almost one-third for residential development, and divided one-fifth evenly between commercial development and manufacturing.

Another central element of planning after the war was a massive rebuilding program stimulated by such federal legislation as the Housing Act of 1937, the Housing and Slum Clearance Act of 1949, and successive amendments encouraging urban renewal. Seeking to preserve the city's stature in commerce, culture, education, and health care, the commission planned to replace factories and tenements with modern apartment buildings and middle-income housing; it approved such projects as Lincoln Center, the Brooklyn Civic Center, the expansion of Pratt Institute and New York University, and the development of enormous residential districts like the West Side Urban Renewal Area, Washington Market, and Kips Bay. With federal money the city eventually built more than 100,000 units of public housing, mostly in large developments on slum-cleared land.

These efforts met with anger from community activists, who protested the destruction of their neighborhoods and the massive displacement of population. Some of the best-known leaders of the movement were Charles Abrams and Jane Jacobs, residents of Greenwich Village who fought a plan to greatly enlarge a roadway going through Washington Square Park, and who became increasingly outspoken in their criticism. *The Death and Life of Great American Cities* (1961), Jacobs's first of three major works on cities, was an attack on both the methods and goals of orthodox city planning, and Abrams later led the planning program at Columbia University, which along with Hunter College and Pratt Institute developed advocacy planning, an approach that strengthened the role of local communities. Such measures helped to increase popular activism, and after a charter revision in 1963 mandated the establishment of community districts, 59 planning areas with community boards were formed. In 1961 Elinor Guggenheimer became the first woman appointed to the city planning commission.

Both public and private concerns undertook ambitious projects. Under David Rockefeller's leadership during the 1950s, the Downtown Lower Manhattan Association sponsored a plan for the redevelopment of 564 acres (228 hectares) in lower Manhattan. This called for improved transportation and redevelopment of Washington Market and South Street Seaport as well as rezoning, all of which was accomplished in succeeding years, triggered by the decision of Chase Manhattan Bank to build new headquarters in the area. In the 1960s the planning commission oversaw new initiatives, and the staff of the planning department expanded to more than 400. After his appointment by Mayor John V. Lindsay, Donald H. Elliott formed the Urban Design Group to sponsor innovative approaches to urban problems, opened borough branches, and oversaw the creation of 59 community planning districts, an idea promoted by a predecessor, Robert F. Wagner. Concern about the waterfront became a persistent issue, although a general waterfront plan was achieved only in the early 1990s under Richard Schaffer. New York State also took a larger role in city planning at this time.

In 1969 the planning commission published its long-awaited master plan as the six-volume *Plan for New York City,* which was controversial and never adopted. At various times the commission amended the zoning ordinance of 1961 to promote specific types of development and preservation: it protected unique features by providing for special districts, offered incentives to achieve such aims as adding open public spaces to densely built-up areas, and introduced contextual zoning to make new construction visually compatible with its surroundings. Several of the most important changes resulted from charter revisions made in 1975 and 1989. The first of these revisions guaranteed the public a larger voice in project reviews. Both revisions perfected the uniform land use review process to assess zoning and planning matters; under this process community boards and borough presidents hold public hearings and review planning issues before their consideration by the planning commission and City Council. The charter of 1989 enlarged the planning commission to 13 members appointed by the mayor, the borough presidents, and the public advocate, and assigned it a new set of functions.

Although the planning commission continued to oversee the zoning ordinance and the uniform land use review process, the charter no longer mandated that it develop a single master plan. Instead the charter called for the commission to adopt local plans (known as 197a plans) submitted by community boards or other parties, the waterfront revitalization plan in compliance with the Federal Coastal Zone Management Act, and its own or other agency-generated plans. In the early twenty-first century the department of city planning continued to perform staff functions for the commission. It also worked with other municipal agencies to maintain a citywide geographic information system and prepare a series of planning reports mandated by the charter.

In 2007 Mayor Michael Bloomberg issued PlaNYC, a strategic plan prepared by the Office of Long Term Planning and Sustainability, a part of the Mayor's Office of Operations. This plan aimed to reduce the city's greenhouse gas emissions by 30 percent by 2030 while accommodating a million new residents. Its 127 initiatives dealt with improving the city's infrastructure (especially water and transportation) and environment. Among its goals was the planting of a million trees by 2017.

were limited by quotas at several private colleges in the city, Jewish students predominated at these colleges from the 1890s to the mid-1950s, when Italians and Irish became numerous. After World War II a rising birthrate and the ensuing demand for higher education led to a period of modest expansion, culminating in the formation in 1961 of the tuition-free City University of New York. CUNY consisted of four senior colleges (City College, Hunter College, Brooklyn College, and Queens College) and four community colleges (Bronx Community College, Queensborough Community College, Staten Island Community College, and New York City Community College, renamed New York City College of Technology in 2002). In subsequent decades CUNY gained a reputation as a top-notch public university and opened graduate and professional schools as well as additional community and senior colleges.

The system grew rapidly after chancellor Albert Bowker instituted a policy of open admissions in 1970 that guaranteed a place in the university to every high school graduate in the city. The policy was widely criticized for lowering educational standards at a university that had produced scores of well-known graduates, including Bernard Baruch, Bella Abzug, Ira Gershwin, and Colin Powell. The number of first-year students initially increased from 24,000 to more than 35,000, and the cost of the expansion contributed to a fiscal crisis at CUNY during 1975–76. Beset by its own financial problems, the city for the first time imposed tuition on CUNY students. In 1979 the state assumed financial responsibility for the senior colleges and agreed to share in the costs of the community colleges. The university's reputation had dropped dramatically by the 1990s, when more than half the students enrolled in senior colleges required remedial courses to keep up.

In 1999 the university ended open admissions at the senior colleges; that same year CUNY alumnus Matthew Goldstein became chancellor, and under his leadership the university made significant improvements. Goldstein led efforts to hire more faculty and increase private fund raising to offset decreased public funding (tuition and fees, however, continued to account for an increased percentage of the university's $2 billion operating budget). Macaulay Honors College, an elite tuition-free program, opened in 2001. By 2007 every student at the top five senior colleges passed reading, writing, and math proficiency tests, up from 58 percent in 1978. In 2008 Goldstein raised admission standards at the senior colleges; university-wide enrollment had increased after 1999 although some voiced concerns about maintaining diversity when the percentage of black students fell. CUNY remains the largest urban public college system in the country, with 23 institutions educating more than 231,000 degree-credit students and 230,000 adult, continuing, and professional education students with 6100 full-time faculty. Black, white, and Latino students each compose about one-quarter of the student body, with Asian students accounting for 15 percent; 68 percent of CUNY students attend public high schools in the city.

Selma Berrol, Kate Lauber

civic associations. Organizations that work outside the political party system to further their views of the public interest and nonpartisan government. The Chamber of Commerce of the State of New York, arguably the city's first civic association, formed in 1768 to protest the Townshend Acts. Other early civic associations such as the Free School Society (1805), the Society for Prevention of Pauperism (1818), and the Association for Improving the Condition of the Poor (1843) advocated services. Most early associations won municipal subsidies from city officials who shared their social and family connections. Universal suffrage for white men increased the diversity of the City Council after 1850; wealthy merchants responded by creating the Citizens' Association (1863), a self-styled nonpolitical advocate of good government that sought to reform sanitary and housing conditions and evaluated the city government. Like the Chamber of Commerce of the State of New York, the Citizens' Association provided a sort of unofficial or private government until it ventured directly into politics at the behest of Peter Cooper and others. It remained active in municipal affairs well into the 1870s when some of its most prominent members formed the New York County Democracy, an overtly partisan group opposed to Tammany Hall.

Chamber of Commerce of the State of New York, ca *1905*

Civic associations allied with the Republican Party of the period included the Union League Club (1863), the New York Civil Service Reform Association (1877), and the City Reform Club (1882), in which Theodore Roosevelt was briefly prominent. Efforts by the People's Municipal League (1890), the City Club (1892) and its Committee of Seventy (1894), and Citizens Union (1897) to encourage the participation of "independent" Democrats and Republicans in mayoral campaigns brought civic associations to their high point. The vast, diverse electorate created by consolidation in 1898 made it more difficult for civic associations to compete against Democratic and Republican organizations with sophisticated leaders (such as Democrat Charles F. Murphy) and statewide networks.

With the expansion of municipal government at the end of the nineteenth century, most civic associations narrowed their focus. Women led many of the new groups, including the Charity Organization Society, the New York State Charities Aid Association, the Women's Health Protective Association, the Kindergarten Association, and the Public Education Association. Organizations concerned specifically with women's issues included the Women's City Club, the New York City Federation of Women's Clubs, several woman suffrage organizations, and the League of Women Voters (1920). Citizens Union alone continued to enjoy considerable electoral success with fusion mayoral candidates such as Seth Low and John Purroy Mitchel and ultimately Fiorello H. La Guardia. After World War II the Regional Plan Association of New York and the Citizens Budget Commission sought to play a broad role in policy planning comparable to that of the "private governments" of the nineteenth century. Notable associations with sharply defined purposes include the United Parents Association, the Citizens Committee on Children, the Citizens' Housing and Planning Council, the Friends of Central Park, and the Gay Men's Health Crisis. Citywide and neighborhood chambers of commerce and block associations are also civic associations, as are ethnic associations such as B'nai B'rith, the National Association for the Advancement of Colored People (NAACP), and the Italian-American Defense Fund. So many groups are now well organized in New York City that this is in truth a vast and complex field.

David C. Hammack

civil defense. There was little fear of foreign military attack in New York City during World War I, despite rumors of sabotage, but World War II brought a different perception and a different reality. Early in the war German U-boats sank thousands of tons of shipping near the entrance of New York Harbor. New Yorkers were reminded that "loose lips sink ships." After the Allies bombed Berlin in 1942, German radio vowed retribution against New York City, and blackout drills took on an understandable urgency. Mayor Fiorello H. La Guardia warned that the city was the "world's number-one target."

Rejected for a commission in the military, Mayor La Guardia in May 1941 was named the unpaid head of the U.S. Office of Civilian Defense, a position that he vigorously discharged but held only until early 1942. In the following year he appointed Grover A. Whalen, the guiding spirit behind the World's Fair of 1939–40, to lead the city's Civilian Defense Volunteers Office. During the war more than 400,000 New Yorkers enrolled. Organized at the local level by block leaders, about half the volunteers were assigned to "civilian protective groups," which included aircraft spotters, air raid wardens, and auxiliary firemen and policemen. Blackout drills were held at three-month intervals, and sirens were tested each Saturday at noon. The other volunteer programs, designated "community war services," involved activities such as child care, nutrition education, housing information, carpooling, and rationing. The rationing of gasoline, rubber, sugar, coffee, meat, and processed food by the U.S. Office of Price Administration (OPA) was supervised in New York City by 15 local offices. Regulations were so specific that they differentiated between hard and soft salami. Barrels to collect rubber, rags, and metal were placed in the lobbies of apartment buildings and public buildings. Schoolchildren collected tinfoil. Colleges provided training for military units, Columbia University offered courses to improve the efficiency of defense plants, and students at Brooklyn College went upstate to help bring in the crops. The city's branch of the American Association of University Women sponsored lectures on the psychological effects of war.

Near the war's end plans were made to sell the air raid sirens and close the city's civil defense offices. But the cold war strategy of nuclear deterrence assumed an atomic survival plan, and the U.S. Civil Defense Act of 1950 "assigned the main responsibility for action to state and local authorities with appointed local volunteer staffs." The New York City Office of Civil Defense, at 135 East 55th Street in Manhattan, coordinated all matters affecting civil defense and natural disasters, and had the power to mobilize civil defense forces and direct other municipal agencies. Schools held "duck and cover" drills; newspapers printed air raid instructions; shelter sites were designated in basements and subways; sirens were placed in firehouses; dehydrated foods, medicines, and supplies, including postcards to be mailed to relatives, were stockpiled throughout the city; buses were designed for conversion into ambulances; and documentary films as well as a 34-page pamphlet entitled "You and the Atomic Bomb" were widely distributed. There was, however, little support from the legislature, implementation was haphazard, with few dollars and fewer volunteers, and the public was essentially apathetic. The military editor of the *New York Times,* Hansen Baldwin, described the city's civil defense effort as "non-existent."

In 1955 Mayor Robert F. Wagner and Governor W. Averell Harriman argued that civil defense was a federal responsibility. Although the city was seen as a prime target of Soviet missiles, many New Yorkers questioned the value of shelters to protect against the immense destruction of a hydrogen bomb. Ulster and Sullivan counties were examined as evacuation sites, despite widespread doubt that evacuation from a missile attack was possible. One county executive in Westchester said that in the event of an attack he would close the boundaries with New York City. In the early 1960s Governor Nelson A. Rockefeller promoted shelters, notwithstanding continued debate about their worth, and sought to stock them with federal agricultural surpluses. During the 1960s and 1970s public concern with civil defense declined in New York even as the ability of the Soviet Union to destroy the city increased. With the collapse of the Union of Soviet Socialist Republics in the early 1990s, the military threat against North America virtually disappeared.

By the early twenty-first century, terrorism by fanatics became more of an issue than hostile actions by a powerful nation-state.

Arnold Markoe

Civilian Review Board. A panel dating back to 1953 to hear complaints of misconduct by the police. Mayor John V. Lindsay's proposal in 1966 that the panel consist entirely of private citizens provoked bitter opposition from the Patrolmen's Benevolent Association, which failed to defeat the plan in court but then succeeded in doing so by an overwhelming margin in a referendum. The board was then put in place with a membership consisting solely of employees of the police department (under the name Civilian Complaint Review Board). There was little public discussion or controversy in 1986 when Mayor Edward I. Koch signed a bill changing the composition of the board so that half its members would be private citizens. During the late 1980s the board heard allegations of police brutality in connection with several incidents, including a riot involving the police and advocates for the homeless in Tompkins Square Park in 1988. At the urging of Mayor David N. Dinkins, the City Council in 1993 passed a bill requiring all members of the board to be civilians (five selected by the mayor, five by the City Council, three by the police commissioner). The new board was also granted subpoena power. In 2001 Mayor Rudolph Giu-

liani adopted a practice that allowed the board to prosecute cases, although all substantiated disciplinary cases must still be given administrative hearings within the department regardless of whether a criminal prosecution takes place.

Joseph P. Viteritti

civil service. Nonelected government workers. Political loyalties were openly considered when public offices were filled in New York City during colonial times and after independence. In the late eighteenth century there were three appointed offices in the city for every eight persons in the electorate. Not all appointments were desirable; the charter of Governor John Montgomerie stipulated a penalty for appointees who refused to serve.

Among the positions filled by the state council of appointment was the mayoralty, which commanded such patronage that to accept it DeWitt Clinton resigned in 1803 from the U.S. Senate. During the 1830s the electorate expanded, the mayoralty and other municipal offices became elected positions, and municipal appointments were used to build and sustain broadly based "political machines." In some cases appointees engaged only in political work collected city salaries. During the mid-nineteenth century, Democrats in the city and Republicans in state government battled for control of municipal appointments. Tammany Hall played an important role in dispensing patronage, especially by its leaders, William M. "Boss" Tweed and John Kelly.

In reaction, the first civil service reform association in the United States, the Civil Service Reform Association, was formed in the city in 1877, and in 1883 New York City and Brooklyn became the first cities in the nation to adopt civil service regulations. (These inspired a national civil service movement.) Also in 1883 the first state civil service commission in the nation was established in New York. The application of civil service regulations in cities with populations of 50,000 or more, at first optional, was mandated by state law for certain groups of employees in 1884. In 1894 the new state constitution stipulated that state and local employees should be appointed and promoted according to "merit and fitness" determined in competitive examinations.

In the decades after consolidation, civil service reformers and party leaders struggled for control of municipal appointments. Initially the conflict was marked by issues of ethnicity and class: most reformers were Protestant and middle or upper middle class, while most members of party organizations were immigrants and Irish Catholics. Realizing its popularity, the parties embraced the notion of merit and fitness but simultaneously worked to constrain its reach by excluding certain positions from civil service requirements, establishing temporary appointments, and manipulating civil service rules and procedures.

Ironically, civil service rules sometimes proved to be an obstacle to reform—for example, by preventing employment of outside experts in city government. Mayors John Purroy Mitchel, Fiorello H. La Guardia, and John V. Lindsay were accused by their partisan adversaries of bypassing the civil service system to build political bases in the city's neighborhoods. The efforts of Mayor Robert F. Wagner (ii) led to a state law establishing a personnel department for city government (1954), collective bargaining with municipal employees' labor unions (1958), and a reduced role for the municipal civil service commission in policy making.

After it was disclosed in 1989 that Mayor Edward I. Koch maintained a "talent bank" of supporters seeking municipal appointments, the State Commission on Government Integrity (led by John Feerick) argued that to make municipal employment more widely accessible the number of posts requiring special qualifications should be limited. Allegations of bypassing civil service requirements continued to arise periodically, for example with regard to personnel administration in the Parks Department during the mayoralty of Rudolph W. Guiliani. A 1996 charter change under Mayor Guiliani created a Division of Citywide Personnel Services within a newly established Department of Citywide Administrative Services. At the end of 2005 there were 223,824 city employees under civil service administration. The Civil Service Commission remained as a quasi-judicial oversight and appeals body, seeking to ensure the continued application of the "merit and fitness" principle in city government.

Gerald Benjamin

civil service unions. Some of the first municipal workers who organized in New York City were street cleaners; they joined the Knights of Labor and the International Brotherhood of Teamsters but ceased their efforts after an unsuccessful strike in 1911. The New York Teachers' Union (1916) was succeeded by the United Federation of Teachers, which did not sign its first contract until mid-century. A number of organizations were formed that provided mutual aid and fought for better working conditions, but they did not engage in collective bargaining. Among these were the Patrolmen's Benevolent Association (PBA), the Firemen's Mutual Benefit Association, and the Civil Service Forum. Interest in unions among city employees increased during the 1930s as the Civil Service Forum declined, the national labor movement revived, and the political left grew in importance (many municipal unions were led by socialists and communists). By the time of World War II, unions had a foothold in the public welfare, hospital, and sanitation departments and the boards of transportation and education. Mayor Fiorello H. La Guardia (1934–45) allowed employees to join unions but barred them from striking and the city from engaging in collective bargaining. His stand was tested in 1940 during the city takeover of private transit lines that employed unionized workers. After a series of clashes with the Transport Workers Union, La Guardia entered into negotiations about wages and other issues but refused to allow formal bargaining. In 1947 the state's Condon–Wadlin Act outlawed strikes by public employees and made the dismissal of strikers automatic.

Municipal unions made some of their most important gains under Mayor Robert F. Wagner (1954–65). Seeking the support of labor during the 1953 mayoral election, Wagner pledged to institute collective bargaining for city workers. In 1954 he established employee grievance procedures and guaranteed the right of city workers to organize without reprisal. In 1956 the city allowed unions to collect dues from employees by means of voluntary withholding from paychecks and held its first union recognition election. Executive Order 49, issued by Wagner in 1958, granted many workers the right to bargain with the city through exclusively recognized unions of their choice. Blue-collar employees were among the first to take advantage of these gains. Some were represented by unions within single agencies, such as the Uniformed Sanitationmen's Association. Employees scattered throughout city government were sought out by Teamsters Local 237 and District Council 37 of the American Federation of State, County, and Municipal Employees, which soon became the largest municipal union. During the mid-1960s professional and clerical workers, many of whom were women, joined unions in large numbers, and several police officers' and firefighters' benevolent associations became collective bargaining agents. There were few strikes during Wagner's term, and those that occurred had little effect on the public, except for one by welfare workers in 1965 that lasted for 28 days. Under Mayor John V. Lindsay (1966–73) strikes were frequent and disruptive. In January 1966 transit workers held a 12-day strike that virtually paralyzed the city. During the next three years physicians, nurses, teachers, social workers, and sanitation workers went on strike, and the PBA held a five-day "sick-out."

The unions' militancy brought about dramatic improvements in wages, benefits, and pensions and led to the replacement of the Condon–Wadlin Act in 1967 by the Taylor Law, which continued the ban on strikes but placed greater emphasis on resolving disputes.

The growth of municipal unions, at a time when unionized employment in private industry was declining, bolstered the labor movement in the city. By 1970 civil service unions had more than 250,000 members and represented more than 90 percent of the city workforce in collective bargaining. Most civil service unions supported the civil rights movement and the liberal wing of the Democratic Party, but police unions generally followed a more conservative path. During the fiscal crisis of the mid-1970s civil service unions helped the city to avoid bankruptcy by agreeing to wage deferrals, benefit reductions, large-scale dismissals, and the use of pension funds to buy $2.5 billion in municipal bonds. Union backing was crucial in the election of Governor Mario M. Cuomo in 1982 and Mayor David N. Dinkins in 1989.

By the end of the twentieth century civil service unions had well over 300,000 members and remained influential in the routine operations and long-term development of municipal government. However, the city practice of signing contracts with one or two of its unions and then forcing the rest to accept the established pattern, along with reluctance of civil service unions after the fiscal crisis to engage in illegal strikes, restrained wage gains even during periods of prosperity.

Civil War. New York City's role in the Civil War has often been underappreciated. In part, this derives from two prominent events in the city that hardly advanced the Union cause. The first of course was the secession, or "free city" movement, associated with Mayor Fernando Wood, who called in early 1861 for New York City to remain neutral in a future North–South conflict. Manhattan was already the commercial entrepot of the entire United States, and its merchants and factories had already "lent" tens of millions of dollars, all of it at risk in case of war, to enterprises in the southern states. In the event of armed insurrection, such trade would be disrupted, and the worst-case scenario, feared by the New York City elite, was that the new Confederate government would unilaterally declare all debts to persons and businesses in the North null and void. New York City businessmen would lose $100 million or more in an instant. Not surprisingly, they proposed that Manhattan simply secede from Washington, remain neutral, and continue to do business with all comers in any forthcoming conflict. There would be no disruption of commerce, no deaths, and no inconvenience. This scenario never played out, the secession movement disintegrated, and New York City businessmen became enthusiastic supporters of the Union cause.

The second disruptive event in New York City during the Civil War was a riot in July 1863 that continues to rank as the worst civil disturbance in all of American history. The week-long violence resulted in at least 100 deaths, dozens of burned out buildings, and thousands of injuries. There was ample justification for anger among the rioters, in the form of a draft policy that allowed affluent men, such as Theodore Roosevelt's father, to buy their way out of uniformed service, but the riots gave the city a bad reputation on both sides of the Mason–Dixon line.

Yet New York City was the backbone of the Union cause. For example, in April 1861, after Confederate batteries in Charleston harbor had fired upon the American flag at Fort Sumter and after Abraham Lincoln had called for 75,000 volunteers to defend the union, more than 150,000 New Yorkers, the largest assemblage of people ever seen in the western hemisphere, gathered in and around Union Square in a public expression of support for the president. By the end of 1861, 66 regiments from New York State were already in uniform. By the end of the war, 448,000 residents of New York State had been drawn to the colors, comprising 248 infantry regiments, 27 cavalry regiments, and 23 regiments of engineers or artillery. New York City alone put about 100,000 men into the field, or more than any other city and almost as many as any state. Some New Yorkers served with particular distinction. The 69th infantry, better known as the Irish Brigade, for example, was blessed by Archbishop John Hughes at St. Patrick's Cathedral just before departing for war on 23 April 1861. It soon developed a reputation as one of the toughest units in the Union Army, and its soldiers made a decisive contribution to the federal victory at Antietam. Similarly, at Gettysburg in early July 1863, five of the six Union generals in action on the first day were from New York. On the second day, when Little Round Top was in extreme peril, five Union regiments, two of them from New York, saved the left flank of the army of the Potomac and thus the entire Union position. And the two officers whose quick thinking and decisive action made possible that epic defense were both from New York—Brigadier General Gouverneur Kimble Warren and Colonel Strong Vincent.

The New York 20th, 26th, and 31st regiments were major formations in what was known then as the United States Colored Troops (USCT). African Americans in those units trained on Hart Island and Rikers Islands in 1864, and the 31st was one of the Union regiments that cornered Robert E. Lee at Appomattox on 9 April 9 1865 and effectively ended the war.

But it was New York's industries and financiers as much as its soldiers who eliminated all hope for the Confederacy. New York State alone produced more manufactured goods than all 11 southern states combined, and it had more railroad track mileage than the entire Confederacy. At the great Continental Iron Works in the Greenpoint section of Brooklyn, skilled craftspeople produced gun carriages and mortar beds for the Navy, and they did most of the work on the Union's first ironclad warship, the *Monitor,* which engaged the Confederate ironclad *Merrimac* in 1862 in Virginia, thus ending the 2000-year history of wooden navies.

New York City, already the nation's largest city in 1860 and about twice the size of Philadelphia, outproduced every other city, let alone then-backward Richmond, where a few enterprises like the Tredegar Iron Works tried unsuccessfully to keep up with northern workshops. The city's carriagemakers made hundreds of supply wagons and ambulances for the Union Army, while Phelps Dodge made iron forgings and casings. The city's fledgling garment industry standardized men's suit sizes and made enough uniforms to literally outfit an army. Pharmaceuticals poured out from the shops of Pfizer and Squibb, while the Hendricks Brothers Copper Rolling Mills operated at full capacity around the clock to meet war needs. By the end of the Civil War in 1865, New York City was thriving as never before and poised to join London and Paris as one of the three greatest urban agglomerations in the world. The result would probably have been the same even if President Lincoln had somehow avoided war, but there can be little doubt that the foundation for New York City's industrial, financial, cultural, and commercial supremacy had been strengthened by the conflict between 1861 and 1865. And over those four years New York City and New York State made it possible for the United States to remain one nation.

Kenneth T. Jackson

Claiborne, Liz [Ortenberg, Elisabeth Claiborne] (*b* Brussels, 31 March 1929; *d* 26 June 2007). Fashion designer. She emigrated to the United States in 1939, at the age of 20 won the Jacques Heim National Design Contest (sponsored by *Harper's Bazaar*), and in

1949 moved to New York City to work as a sketch artist at the sportswear house Tina Leser. She worked as a designer for Dan Keller and Youth Group Inc. before forming a business under her own name in 1976. She broadened her line by 1984 to include accessories, men's and children's clothes, and fragrances. In 1989 she retired to pursue environmental and philanthropic interests, establishing the Liz Claiborne and Art Ortenberg Foundation that year. As of 2008 her company was valued at $5 billion.

Anne E. Kornblut

Clare, Ada (McElhenney) (*b* Charleston, S.C., July 1834; *d* New York City, 4 March 1874). Actress, feminist, and writer. Born to an aristocratic southern family, she moved to New York City in 1854 and took up acting. During the height of her acting career she frequented Pfaff's Cellar, where she became known as the "queen of Bohemia"; she also wrote a column for the *Saturday Press,* an iconoclastic weekly magazine of the arts. Her sole novel, *Only a Woman's Heart* (1866), was so poorly received by reviewers that she abandoned writing and spent the rest of her career acting in a provincial stock company. She died of rabies, which she contracted from a dog bite suffered in her theatrical agent's office.

Jan Seidler Ramirez

Claremont. Neighborhood in the southwestern Bronx (2000 pop. 15,064), lying in the northernmost section of Morrisania and bounded to the north by the Cross Bronx Expressway, to the east by Crotona Park, to the south by East 169th Street, and to the west by Claremont Park. The name Claremont was first applied to the estate of the Zborowski family, which occupied 38 acres (15.4 hectares) west of Webster Avenue; it was separated from the neighboring estate of the Bathgate family (later Crotona Park) by a carriage road that became Claremont Parkway. The Zborowski and Bathgate estates were bought for parkland by New York City in 1888 and later became Claremont Park and Crotona Park. The neighborhood developed in between the parks on lower ground. It became populous in the 1920s and 1930s and was predominantly Jewish until the 1950s, when the community became increasingly black and Spanish-speaking. By the 1990s, crime, drugs, abandoned housing, demolished blocks, and a large concentration of high-rise low-income public housing left Claremont one of the poorest sections of the southern Bronx. Since then, a decrease in crime and new construction of affordable housing have improved the neighborhood.

Evelyn Gonzalez

Claremont Riding Academy. A riding school housed in an equestrian stable at 175 West 89th Street in Manhattan. It was the oldest continuously operated equestrian stable in New York City and perhaps the oldest in the United States. The building (now a landmark), designed by Frank A. Rooke in Romanesque Revival style and completed in 1892, was a common structure for its time and housed a succession of livery businesses. The academy was formed in 1927, at a time when many stables in the city had been razed or converted into parking garages. In the 1960s the city condemned the academy to make way for public housing, but the housing was never built, and Paul Novograd, son of the academy's previous owner, bought it back in 1998. In April 2007 Novograd closed the academy because of rising costs and a decline in business.

Clarissa L. Bushman

Clarenceville. An obsolete name for a small section of Richmond Hill in central Queens. It began as a development in January 1853, when a group led by the prominent lawyer W. T. B. Milliken bought a farm on the south side of Jamaica Avenue, extending from 100 feet (30 meters) west of 110th Street to 100 feet east of 112th Street. A post office and a railroad station opened in July 1869. By August 1872 the community had essentially become absorbed by the surrounding development of Richmond Hill and abandoned its original name. The Long Island Rail Road nevertheless continued to use the name Clarenceville for a station at 111th Street until service there ceased in 1940.

Vincent Seyfried

Clark, Aaron (*b* Northampton, Mass., 16 Oct 1787; *d* New York City, 2 Aug 1861). Mayor. A lawyer and wealthy landowner, he became a Whig alderman and won a three-way election during the panic of 1837 to become the second popularly elected mayor of New York City. In 1838 he was reelected by a margin of 500 votes; he narrowly lost the election in the following year.

James E. Mooney

Clark, Kenneth (Bancroft) (*b* Panama Canal Zone, 24 July 1914; *d* Hastings-on-Hudson, N.Y., 1 May 2005). Psychologist. When he was five years old he moved to Harlem with his mother, a seamstress and union organizer for the International Ladies' Garment Workers' Union. His father remained in the Canal Zone, working with the United Fruit Company as an agent. Clark attended local public schools and George Washington High School in upper Manhattan. He earned a bachelor's degree in 1935 and a master's in 1937 from Howard University. He completed his doctorate at Columbia University in 1940, the first African American to earn a doctorate from its Psychology Department. While at Columbia he studied with Otto Klineberg, the eminent social psychologist. Clark became the first black faculty member at City College of New York. During World War II he worked on Gunnar Myrdal's *An American Dilemma,* the massive study of American racism. Clark's work with his wife, Mamie Phipps Clark, on racial awareness in children played a critical role in the U.S. Supreme Court's decision in *Brown v. Board of Education* (1954) that ruled racial segregation in public schools unconstitutional. Clark formed the organization Harlem Youth Opportunity Unlimited and began several experimental programs in education. His published writings include *Dark Ghetto* (1965), his classic discussion of the effect of racism and social and political powerlessness among urban blacks during the 1960s; *The Pathos of Power* (1974); and *A Relevant War on Poverty* (1969), with Jeannette Hopkins, his longtime editor. Clark became president of the American Psychological Association in 1970. He retired from teaching in 1975 but continued to be active at City College for the remainder of his life. He was dedicated to the Northside Center for Child Development, the social service and psychological service for children that he established with Mamie Clark in 1946. Initially, Clark hoped to establish an integrated center that would exemplify the principles of integration, but resistance from referral agencies and the school system combined with the reality of de facto segregation led to a largely minority client population. Clark's later life was marked by a certain cynicism about the future of American society's willingness to change, but he remained true to his belief that a truly integrated society remained the last, best hope.

Kenneth B. Clark, *Dark Ghetto, Dilemmas of Social Power* (New York: Harper and Row, 1965); Gerald Markowitz and David Rosner, *Children, Race, and Power: Kenneth and Mamie Clark's Northside Center* (New York: Routledge, 2000)

David Rosner

Clark [née Phipps], **Mamie (Katherine)** (*b* Hot Springs, Ark., 1917; *d* Hastings-on-Hudson, N.Y., 11 Aug 1983). Psychologist. She spent her youth in Hot Springs, attended Howard University, and earned a doctorate in psychology from Columbia University. Her research on racial awareness in young children was furthered by her husband, Kenneth Clark, and played a critical role in the decision *Brown v. Board of Education* (1954), in which the U.S. Supreme Court ruled racial segregation in public schools to be unconstitutional. Clark was the director of the Northside Center for Child Development from 1946 to 1979.

David Rosner

Clason Point. Neighborhood in the south central Bronx, bounded to the north by White Plains Road and the Bruckner Expressway, to the east by Pugsley's Creek, to the south by the East River, and to the west by the Bronx River. The neighborhood is mainly residential and contains a few small shops and a strip mall on Soundview Avenue. The first inhabitants were Siwanoys, whose village, Snakapin, was one of the largest Indian settlements along the shoreline of the Bronx. Known as Cornell's Neck by European settlers (for Thomas Cornell, a farmer who settled there in 1654), it was later named for Isaac Clason, a wealthy merchant of the nineteenth century, and became the site of the Clason Military Academy. The view and proximity to the East River and the mouth of the Bronx River led to the development of resorts that included dance halls, bathing piers, and restaurants. During World War II the last pedestrian ferry from Clason Point to College Point in Queens ended service; after the war Kane's Casino became the Shorehaven Beach Club, which was later the site of a housing development. The singer Jennifer Lopez began her career performing at the local Boys and Girls Club. Since the 1980s more than a quarter of new immigrants settling in Clason Point and its environs have been Dominican. The neighborhood is also populated by large numbers of immigrants from Ecuador, Honduras, Colombia, Jamaica, Guyana, and China.

classical music. New York City has been the national musical capital since the mid-nineteenth century. Its continued dominance into the twentieth and twenty-first centuries was ensured by its orchestras, opera companies, concert halls, and conservatories and by its role in music publishing and recording.

1. Beginnings to 1890

The Dutch sang psalms in their own language long after the English captured the colony (1664) and formed Trinity Church (1697). Musical life in eighteenth-century New York City was undistinguished. The earliest documented public performance, advertised in the *New–York Gazette* as a "consort of musick, vocal and instrumental," was held in 1736 at the home of the vintner Robert Todd. The first concert hall in the city was the Nassau Street Theatre at 64–66 Nassau Street where operas were staged from about 1750. A singing school opened in 1753 by William Tuckey, a clerk at Trinity Church, offered biweekly classes and helped the church to develop an accomplished choir. Music dealers and instrument makers often supplemented their incomes by giving music lessons; two of the best known were W. C. Hulett (a violin teacher and dancing master from 1759 to 1799) and Alexander Reinagle (who gave keyboard lessons to George Washington's adopted daughter, Nellie Custis). About 1760 Francis Hopkinson, later a signer of the Declaration of Independence, provided translations in English for the Psalter. The New Theatre opened in 1798 on Park Row facing City Hall Park and later became known as the Park Theatre. During these years musical life remained dominated by England: the theater in New York City was in effect a provincial branch of the theater in London, and many English immigrants were musicians and singing actors, some of whom also worked as teachers, publishers, composers, and entrepreneurs. Among the most important were James Hewitt (1770–1827), who moved to the city in 1792 and wrote the music for the play *Tammany; or, the Indian Chief* (1794); Benjamin Carr (1769–1831), composer of the opera *The Archers; or, The Mountaineers of Switzerland* (1796); and Victor Pelissier (*b ca* 1740; *d ca* 1820), composer of the opera *Edwin and Angelina* (1796). John Jacob Astor, who later made a fortune in the fur trade and in real estate in Manhattan, opened a music shop in the city in 1786 and within a decade found himself competing with Hewitt and Carr in importing and distributing music and instruments, principally from England.

Music in New York City developed rapidly during the nineteenth century as the number of inhabitants and especially of immigrants steadily increased. Traveling theatrical companies presented a variety of English, French, and Italian works in newly constructed theaters, and after the War of 1812 several notable European musicians arrived in the city. At the Park Theatre in 1825 Manuel García's troupe mounted a production of Rossini's *Il barbiere di Siviglia* (the first Italian opera performed in the city in its entirety) and another of Mozart's *Don Giovanni* that was attended by the author of the libretto, Lorenzo Da Ponte, a resident of New York City since 1805. Da Ponte was a leading backer of the Italian Opera House at Church and Leonard streets (opened in 1833, closed in 1835, reopened in 1836 as the National Theatre), a successful opera and entertainment hall that was destroyed by fire in 1841. Washington Irving, the city's leading literary figure, an amateur flutist, and the author of another English version of *Der Freischütz,* took part in the negotiations surrounding the production of *Il barbiere* (an effort also supported by Astor). He also joined with other literary figures to help bring about the first complete American production in 1839 of Beethoven's *Fidelio,* which attracted full houses to the Park Theatre for 14 consecutive nights.

One of the most important concert venues in the nineteenth century was Niblo's Garden at Broadway and Prince Street (built by William Niblo in 1829, destroyed by fire in 1846, rebuilt in 1849, again destroyed by fire in 1895). There, Gaetano Donizetti's *Lucia di Lammermoor* received its first staging in New York City in 1843. Italian opera also established a strong following at the Richmond Hill Theatre at Charlton and Varick streets, where Vincenzo Bellini's *Il Pirata* was given its American premiere; the theater was also known as Tivoli Garden and changed its name successively to the New Greenwich Theatre and the New York Opera House before closing in 1849. The American premiere of Bellini's *I Puritani* in 1844 was the opening production of Palmo's New York Opera House, the most distinguished opera house in early nineteenth-century New York City, which also staged the first opera by Giuseppe Verdi in the United States (*I Lombardi* in 1847); after a change in ownership in 1848 the repertory changed from music to theater. In 1847 a group of wealthy patrons opened the Astor Place Opera House. The riot that took place nearby in 1849 tarnished its reputation irretrievably, and in 1854 the owners sold the opera house to the Mercantile Library Association, which converted the building to Clinton Hall. The same year marked the opening of the Academy of Music, the first permanent opera house in New York City. Concerts were given from 1859 at the Great Hall at Cooper Union (still in operation in the 1990s) and from 1861 at the Brooklyn Academy of Music on Montague Street (destroyed by fire in 1903).

Although New York City in the middle of the nineteenth century did not have a school of composers equal to the Knickerbocker poets or the painters of the Hudson River School, a number of resident composers wrote music of lasting merit. One was Anthony Philip Heinrich (1781–1861), composer of fanciful orchestral pieces such as *The Ornithological Combat of Kings; or, The Condor of the Andes and the Eagle of the Cordilleras* (1836), who lived in New York City from 1837 until his death. Another important composer who flourished in the city was William Henry Fry (1813–64), an ebullient lecturer and a writer for Horace Greeley's *New York Tribune* whose works include *Leonora* (1845), the first American bel canto opera in English, and the symphony *Santa Claus* (1853). The popular composer Stephen Foster spent some of the most important years of his songwriting career in the city and died at Bellevue Hospital. The first internationally recognized American keyboard virtuoso, Louis Moreau Gottschalk (1829–69), made New York City his home

during much of his peripatetic later career. His piano compositions, based on Caribbean music, influenced later developments in popular music that led to ragtime and jazz, and his two-movement symphony *A Night in the Tropics* (1858) foreshadows by almost a century the style of much twentieth-century American music. George F. Bristow (1825–98), a native of Brooklyn, became the best-known American composer in England when the Andante from his Symphony no. 2 was performed there in 1854 by the Jullien Orchestra, and his *Rip Van Winkle* (1855), the first American opera on an American subject, ran for four weeks at Niblo's Garden. Lesser-known composers included Caryl Florio (the pseudonym of William Robjohn, 1843–1920) and Horace Nicholl (1848–1922). Musical life in New York City at mid–nineteenth century was so active that the prominent diarist George Templeton Strong could attend a concert almost every night of the week. The city was also the most important center for organ builders, piano makers, and music publishers, especially on lower Broadway. Leading music publishers included the firms of William Hall; Firth, Pond and Company; and Charles H. Ditson. The first foreign music publisher to establish a branch in the city was the German firm of André and Company, which offered among other items a complete inventory of music by Mozart; it was followed shortly by the British firm of Novello, which sold sacred music from its shop at 389 Broadway. Many of the hymnbooks distributed throughout the United States were published in Manhattan, and the *Jubilee Songs,* the first published sheet music of blacks that eschewed caricature, were issued from East Ninth Street. The piano-making firm Steinway and Sons was formed in 1853 and opened a large factory at 53rd Street and Fourth Avenue in 1860.

Music education at mid–nineteenth century was increasingly the domain of such small academies as the New York Conservatorio at 417 Houston Street (opened in 1836 by Elam Ives, Jr.) where classes were held during the day for women and in the evening for men; John Watson's Musical Academy at 385 Broadway (from 1839), which offered lessons in singing, organ, piano, harmony, and composition; and the American Musical Institute at 466 Broadway (1846–48), which during its final year had on its faculty the acclaimed pianist Henri Herz (he taught at the neighboring offices of André and Company, 477 Broadway). Amateur singing societies proliferated as German-speaking immigrants increased in number and formed social organizations; the more notable included the Deutsche Liederkranz (which performed its first concert in 1847 with Thomas L. Damas conducting) and its offshoot the Männergesangverein Arion (1854).

Religious music also flourished. A widespread interest in congregational singing spurred mass education in vocal music. Lowell Mason (1792–1872), originally from Boston, formed the New York Musical Normal Institute for training music teachers in 1853 along with other such influential musicians as Thomas Hastings (1784–1872), George James Webb (1803–87), William S. Bradbury (1816–68), and George F. Root (1820–95). The institute's novel teaching methods and instructional hymnbooks influenced generations of amateur American singers, as did its large repertory of new tunes, many of which became classics; the school moved to Massachusetts in 1856. From 1846 to 1859 the organist at Trinity Church was Edward Hodges (1798–1867), born and trained in England, who helped to revitalize church music through his performances of organ masterworks, founding of a male choir, and composition of services and anthems. His efforts culminated in the founding of such secular and nondenominational organizations as the Church Choral Society (1869) and the Oratorio Society (1873). A breach widened about this time between the populist tradition of vocal hymnody and a movement for higher aesthetic standards that saw music as a morally efficacious force. The extent of the division was made clear when the award by New York University of honorary doctorates in music to Mason (1853) and Hastings (1855), the first granted by a major institution of higher learning in the United States, was criticized by such leading professional composers as Fry and Bristow. By 1880 there were about 370 houses of worship in the city, most of which required the services of organists, choir directors, and professional singers.

Such advocates of the Episcopal liturgical revival as Hodges and W. A. King, aided by enlightened vestry members such as P. A. Schermerhorn and H. C. De Rham of Grace Church, were active in 1842 in forming the Philharmonic Society of New York (later known as the New York Philharmonic), the first permanent symphonic ensemble in the United States. The orchestra gave its first concert on 7 December at the Apollo Rooms, which stood on the site formerly occupied by the Broadway Theatre at Canal and Walker streets; it later was based at Niblo's Garden (1854–56, 1858–59); the Academy of Music, built in 1854 at 14th Street and Irving Place (at intervals, 1856–86); Irving Hall, an annex of the academy at Irving Place and 15th Street (1861–63); and Steinway Hall at 73–77 East 14th Street (1866), an important concert hall until it closed in 1890. Strong was president of the society from 1870 to 1874. Opera and especially Italian opera continued to flourish in the city during the second half of the nineteenth century. Built in 1868 as (Samuel) Pike's Opera House, the Grand Opera House at Eighth Avenue and 23rd Street presented the American premiere of Ruggiero Leoncavallo's *Pagliacci.* The New York Stadt Theatre at 45 Broadway opened in 1868 and presented the first American performance of Richard Wagner's *Lohengrin* in 1871.

By the mid–nineteenth century New York City had become the focal point of international concert tours, and many artists made extended stays. Among the operatic singers to appear in the city were García's daughter Maria Malibran (1808–36), who married a French merchant while living in the city; Jenny Lind (1820–87), whose concert appearances at Castle Garden in 1850 (promoted by P. T. Barnum) were enthusiastically received; and Adelina Patti (1843–1919), who at the age of seven made her operatic debut in the city at a charity concert in 1850 at Tripler's Hall, 667–77 Broadway, an important venue that was damaged by a series of fires during the following years, reopened in 1854, and took several other names before closing in 1867. Other popular visitors included Jullien (at the Crystal Palace, 1853), the eccentric Norwegian violinist Ole Bull (1810–80), the pianist Hans von Bülow (1830–94), and the composer Arthur Sullivan (1842–1900).

Professional schools of music began in earnest after the Civil War. Among the best known were the Grand Conservatory (1874), the New York College of Music (1878, absorbed in 1920 by New York University), and the National Conservatory of Music (opened in 1885 at 128 East 17th Street, closed in the 1920s). Under the directorship of Jeannette Thurber the National Conservatory had on its faculty the pianist Rafael Joseffy and the composer and cellist Victor Herbert; its director from 1892 to 1895 was Antonín Dvořák, who during his tenure wrote his symphony *From the New World* (also known as the *New World Symphony*). The Metropolitan Conservatory opened in 1886. During these years the city's primacy in music was reinforced by its growing number of music publishers, including G. Schirmer (1861) and Carl Fischer (1872), and by the formation in 1883 of the Metropolitan Opera, which staged its first performances on Broadway between 39th and 40th streets.

Music in New York City in the late nineteenth century was heavily central European. Germans both Jewish and Christian dominated the city's musical life, and German music was ubiquitous. Wagner was performed not only at the Metropolitan Opera but by brass bands. At the centenary in 1889 of Washington's inauguration as president, massed German singing societies supplied most of the music. Some émigré musicians distinguished themselves as impresarios, notably Max Maretzek (1821–97), Bernard Ullman (1817–85), and the brothers Maurice Strakosch (1825–87) and Max Strakosch (1834–92).

Prominent German-born conductors included Leopold Damrosch, who formed the New York Symphony Society in 1878 and excelled as a conductor of German opera, and Theodore Thomas, leader of the Thomas Orchestra (1867–91), the Philharmonic Society (1871–91), and later the Chicago Symphony, who set a high standard of orchestral performance, encouraged a generation of American composers by programming their works, and conducted young people's concerts as early as 1883. Among the leading musicians who were not of German origin the most famous was the composer Edward MacDowell, an accomplished pianist and inventive harmonist who early achieved wide recognition for his two concertos for piano and orchestra, four epic keyboard sonatas, and many elegant character pieces. In his last works he adapted the tuneful manner of Anglo-Celtic melody to his sophisticated harmonic style and made a point of exclusively using English rather than Italian terms as tempo indications and marks of expression. Among MacDowell's friends was George Templeton Strong, Jr. (1856–1948), who on deciding to pursue a career in music was nearly disowned by his father. Schooled abroad and an expatriate for most of his life, he composed several large-scale symphonic works, of which the most accomplished was the symphony *Sintram* (1888).

2. From the Opening of the Music Hall to World War II

The opening concerts on 5 May 1891 of the Music Hall (now Carnegie Hall) at 57th Street and Seventh Avenue were conducted by Peter Ilich Tchaikovsky and reinforced the emergence of New York City as one of the world's major musical centers. The city was soon visited by the pianists Jan Ignace Paderewski (1860–1941) and Teresa Carreño (1853–1917). The Church Choral Society and the Oratorio Society gave the first performances of such important American works as *Phoenix Expirans* (1892) by George W. Chadwick (1854–1931), *Hora Novissima* (1893) by Horatio Parker (1861–1919), and *Vexilla Regis* (1894) by Harry Rowe Shelley (1858–1947). Toward the end of the nineteenth century the first settlement schools provided music instruction to poor children, among them the Henry Street Settlement (1892), which later opened a music wing (1927). Emilie Wagner and David Mannes in 1894 opened the Music School Settlement, which later moved successively to Third Street (where it took the name Third Street Musical School Settlement) and East 11th Street and eventually became the nation's oldest community arts school. Columbia University formed a department of music in 1896 under MacDowell. New York City was one of the last major American cities to include music in the standard public school curriculum. In 1898 the Symphony Society began a regular series of children's concerts under Leopold Damrosch's son Frank Damrosch, later succeeded by his brother Walter Damrosch.

After the turn of the twentieth century the city was changed markedly by the immigration of thousands of Italians, Germans, Russian Jews, and Irish. Anton Seidl's 13 years in the city with the Metropolitan Opera Orchestra and the New York Philharmonic bolstered the performance of the German repertory, as did Gustav Mahler's years as the conductor of the Metropolitan Opera and the Philharmonic (1908–11). Walter Damrosch conducted the Metropolitan Opera, the New York Symphony, and the Philharmonic; composed operas (*The Scarlet Letter,* 1896; *The Man without a Country,* 1937); and at the end of his career was a popular radio personality. Frank Damrosch became a leading choral director with the Metropolitan Opera and the Oratorio Society (founded by his father) and in 1905 formed the Institute for Musical Art (later renamed the Juilliard School). In 1903 the Metropolitan Opera gave the first staged performance outside Bayreuth of Wagner's last opera, *Parsifal.* Italian music was also well represented. In his almost 20 years in New York City, Enrico Caruso became the most famous operatic singer who had ever lived, and through the city's fledgling recording industry the first international recording artist.

Efforts to strengthen a largely ineffectual system of copyright protection led to the formation in the city in 1914 of the American Society of Composers, Authors, and Publishers (ASCAP), which included among its founding members Herbert, Irving Berlin, and John Philip Sousa (whose works were the focus of several early lawsuits won by the association). At first, licensing fees were payable to ASCAP only for live performances of music by its members; eventually the association also monitored broadcasts and recordings.

In time, the operatic and symphonic repertory broadened, as the Philharmonic and the New York Symphony performed less music by German, Austrian, and Hungarian composers and French, Russian, and American works began to enter the repertory. At the same time classical music continued to reach a wider audience. The mining magnate Adolph Lewisohn endowed Lewisohn Stadium (1915) at City College, between 136th and 138th streets and Amsterdam and Convent avenues, with the stipulation that inexpensive concerts be given there during the summer (an annual feature that lasted until 1966). Two important music schools opened about the same time: the David Mannes School (1916, later the Mannes College of Music) and the Neighborhood Music School (1917, later the Manhattan School of Music). In 1923 New York University introduced a baccalaureate music degree, and the School of Sacred Music opened at Union Theological Seminary (this lasted until 1973 when it moved to Yale University). Major concert halls opened during these years included Town Hall at 123 West 43rd Street, built by suffragists in 1921 as a site for public meetings; and the Mecca Temple (now known as City Center of Music and Drama), constructed at 131 West 55th Street in 1923 by the Ancient and Accepted Order of Nobles of the Mystic Shrine, or Shriners. The Philharmonic Symphony Society of New York and the New York Symphony merged in 1928, by which time the city was regularly visited by orchestras from throughout the country and the world. Smaller orchestras were also based in New York City, such as the American National Orchestra (to 1923), the State Symphony Orchestra (to 1926), and the City Symphony (1940–47). In 1924 the Philharmonic began a series of children's concerts under the direction of Ernest Schelling.

As concert life became more active, American composers broke with European models and forged distinctive styles. Charles Ives, a prosperous partner in a life insurance business whose independent means freed him from the constraints imposed by a conservative public, wrote works that were often dissonant and modern for their time. He moved to New York City soon after his graduation from Yale University in 1898 and remained there until 1911, during which time he wrote his piano trio, first piano sonata, first two violin sonatas, second and third symphonies, and various smaller pieces. Prominent modernist composers based in New York City during the early twentieth century included Edgar Varèse, who moved to the city in 1915; Carl Ruggles, who moved there in 1917; and Henry Cowell. Among composers in a more conservative vein were Daniel Gregory Mason (professor at Columbia) and the opera composer Deems Taylor. A number of organizations promoted the performance of modern music, such as the International Composers' Guild, formed in 1921 partly through the efforts of Varèse; the League of Composers and the American section of the International Society for Contemporary Music (both formed in 1923, merged in 1954); the Pan-American Association of Composers, in which Cowell played a leading role; and later the Composers' Forum (active 1935–40, revived 1947).

During the years surrounding World War I the concert tradition and the vernacular influenced each other considerably. Ragtime composers often worked in classical forms, and many classical composers looked to ragtime for inspiration. The bandmaster James Reese Europe led a concert by the Clef Club at Carnegie Hall in 1912 that displayed a number of hybrid ragtime and classical pieces; George Gershwin wrote his *Rhapsody in Blue,* given its premiere in 1924 by Paul Whiteman and his orchestra, and his *Concerto in F* (1925) for piano and orchestra; the Harlem stride pianist James P. Johnson com-

posed several works of "symphonic jazz," notably *Yamekraw* (1928, orchestrated by William Grant Still); Scott Joplin during the last years of his life made a desperate and largely unsuccessful attempt to interest backers in producing his opera *Treemonisha* (which was widely acclaimed when it was finally staged long after his death, in 1976); and the early output of Aaron Copland included several works strongly informed by jazz, among them *Music for the Theater* (1925) and *Four Piano Blues* (1926). Copland was also an influential member of the League of Composers and a contributor to its journal *Modern Music.* Another composer well known for his critical writings was Virgil Thomson, who with Gertrude Stein wrote the operas *Four Saints in Three Acts* (1928) and *The Mother of Us All* (1947, about Susan B. Anthony) and from 1940 to 1954 was the principal music critic at the *New York Herald Tribune.* A number of modernist composers were active in leftist politics, particularly those associated with the Composers Collective, and contributed to two workers' songbooks published by the Workers Music League. Workers' rounds were written by Elie Siegmeister (1909–91), who used the pseudonym L. E. Swift, and Charles Seeger (1886–1979), who wrote as Carl Sands. Copland in 1934 won a song competition sponsored by the *New Masses* with his composition "Into the Streets of May," and Marc Blitzstein's opera *The Cradle Will Rock* (1937) was imbued with the ideology of the Popular Front. At the same time the phonograph achieved greater commercial viability. In New York City the recording firms Victor and Columbia Talking Machine were among early leaders of the field, which they continued to dominate after electric recording was introduced in 1925. During the 1920s both firms evolved into conglomerates active in such areas as broadcasting and theater management. They also expanded beyond New York City, especially after the 1930s when the advent of radio and the Depression prompted the industry to move most of its popular-music divisions to the West Coast. Long an important center for music management, the city about 1920 became the base of operations for the impresario Sol Hurok, who remained in the forefront of the business for five decades.

The rise of Nazism brought a number of distinguished émigré musicians to the city, including the conductors Bruno Walter and Erich Leinsdorf; the pianists Rudolf Serkin and Claudio Arrau; the singers Lauritz Melchior (1890–1973), Lotte Lehmann, Elisabeth Schumann, Friedrich Schorr, and Alexander Kipnis; and the composers Stefan Wolpe, Béla Bartók (who worked at Columbia), and Paul Hindemith (who taught at Yale). New symphony orchestras were formed, notably the NBC Symphony Orchestra, conducted by Arturo Toscanini from 1937 to 1954, principally on the radio. The New York Philharmonic broadcast over the Columbia Broadcasting System (CBS) from 1930, and from 1931 Texaco sponsored nationwide radio broadcasts by the Metropolitan Opera, which staged French, German, Italian, American, English, and Russian works performed by such singers as Rosa Ponselle (1897–1981), often in spectacular productions. Walter Damrosch gave radio broadcasts for schoolchildren during the 1930s, and the pianist Olga Samaroff-Stokowski offered "audience development" courses from the mid-1930s to 1948, first at the David Mannes School and later at Town Hall. The New Friends of Music presented concerts of chamber music between 1936 and 1953. The dominance of ASCAP in licensing was challenged when it failed to reach a contract agreement with radio broadcasters in 1939, and a consortium of 600 broadcasters then formed a competing organization, Broadcast Music Inc. (BMI), which specialized in popular genres such as folk music and blues. The radio station WQXR began broadcasting in 1936 as the first full-time classical music station in the United States; the municipal station WNYC also broadcast a large amount of classical music, especially during the administration of Mayor Fiorello H. La Guardia. From 1935 to 1943 the Music Project of the Works Progress Administration provided free concerts, educational programs, and music instruction to New Yorkers, and in 1935 the Composers' Forum began a series of lecture-performances at which a featured composer took questions from the audience.

From the 1920s to the 1940s many composers wrote works celebrating American history, the city, and the American West. These works were usually programmatic and often patriotic: well-known examples include Copland's *A Lincoln Portrait* (1942); Earl Robinson's *Ballad for Americans* (1938); Blitzstein's *Airborne Symphony* (1943–46), composed during World War II for the Eighth Air Force; John Alden Carpenter's *Skyscrapers* (1926); Adolph Weiss's *American Life: Scherzo Jazzoso* (1928); and Duke Ellington's symphonic jazz piece *Harlem Air Shaft* (1940). For the centenary of the New York Philharmonic in 1942–43 nine conductors programmed 22 compositions by Americans, and between October 1943 and January 1945 the Philharmonic played nine pieces commissioned by the League of Composers and CBS, some of which had been inspired by the war; these reached a large audience when broadcast by CBS over the radio. After a foreclosure on the Mecca Temple Mayor La Guardia saved it from demolition in 1943 and bought it for the city. Renamed City Center of Music and Drama, the building became the home in the following year of the City Center Opera Company (later the New York City Opera), which featured young American singers in high-quality productions at low prices. During its early years the company presented a short season devoted to the music of Gilbert and Sullivan, and later its offerings were often more adventurous than those of the Metropolitan Opera.

3. After World War II

New chamber ensembles were formed in New York City after the war, among them the Juilliard String Quartet (1946), and in 1948 the Metropolitan Opera began broadcasting performances on television. Composers living in the city worked in diverse styles. The art songs of Ned Rorem (*b* 1923), on texts by American poets as disparate as Walt Whitman and Sylvia Plath, were indebted to Maurice Ravel and Claude Debussy. Copland exerted an influence on a large group of composers, including David Diamond (1915–2005); William Schuman, composer of the opera *The Mighty Casey* (1951–53); Peter Mennin (1923–1983); and Siegmeister, who based his cantata *I Have a Dream* (1967) on the life of Martin Luther King, Jr., and also wrote such works as *A Sunday in Brooklyn* (1946). In addition to composing, Siegmeister was a tireless advocate of modern music, and both Schuman and Mennin were presidents of the Juilliard School. Ellington continued to write quasi-symphonic works, notably *Harlem (A Tone Parallel to Harlem)* (1950). The most influential and most difficult to categorize among composers in the city was Leonard Bernstein, who wrote compositions ranging from successful Broadway musicals to operas, ballets, and symphonic pieces composed in an eclectic, accessible style, and who was also the music director of the New York Philharmonic from 1958 to 1969. Composers of electronic music worked at the Columbia–Princeton Electronic Music Center, formed in the city in 1959 by Milton Babbitt (*b* 1916), Otto Luening (1900–1996), Vladimir Ussachevsky (1911–90), and Roger Sessions (1896–1985). John Cage, a resident of the city from 1943, wrote several compositions based on chance methods, a notorious, completely silent work called *4'33'* (1952), and music for "prepared piano" (the sound of which was altered by having nuts, bolts, and other objects inserted between its strings). He collaborated frequently with Merce Cunningham's dance company. The dense, rhythmically intricate, and often daunting music of Elliott Carter, perhaps more successful among critics than with audiences, constituted one of the most impressive bodies of work written by an American. Not all composers were tolerant of the stylistic diversity that characterized classical music in the city. Some of them, especially those affiliated with universities and with such organizations and ensembles as the League of Composers/International Society for Contemporary Music (ISCM), the Group for Contemporary Music, Speculum Musicae, and the New York New Music Ensemble,

espoused an orthodox view of composition that accepted as legitimate only the 12-tone techniques of Arnold Schoenberg and Anton Webern and their disciples.

Concert life in the city continued to be centered at Carnegie Hall, the home of the New York Philharmonic until the opening of Philharmonic Hall (eventually renamed Avery Fisher Hall) at the Lincoln Center for the Performing Arts on 24 September 1962. Carnegie Hall later survived efforts by real estate developers to have it razed. Lincoln Center was also the site of the New York State Theater, which became the home of the New York City Opera in 1966. In the same year the New York Philharmonic and the Metropolitan Opera began presenting regular seasons of outdoor concerts on the Great Lawn in Central Park and at other parks throughout the five boroughs. The Chamber Music Society of Lincoln Center, formed in 1969, presented concerts in Alice Tully Hall at Lincoln Center by a resident ensemble supplemented by guest soloists.

Far from the mainstream of classical music there developed schools of composition that flourished in the lofts, art galleries, and nightclubs of lower Manhattan. Inspired by the work of Cage, "minimalists" such as La Monte Young (*b* 1935), Meredith Monk (*b* 1943), Steve Reich (*b* 1936), and Philip Glass (*b* 1937) repudiated the complexity of modern composition and built extended works by frequently repeating simple rhythmic and melodic fragments. Groups such as Experiments in Art and Technology (EAT), which was associated with Bell Laboratories in New Jersey, explored novel combinations of technology and art. Composers such as Laurie Anderson and John Zorn attempted a fusion of classical music and avant-garde rock. The festival New Music/New York of 1979 led to the formation of the New Music Alliance, a group dedicated to promoting performances of new music throughout the United States.

By the early twenty-first century a large number of performing ensembles were based in New York City, ranging from symphony orchestras (which numbered more than 40 in the metropolitan area), to groups specializing in early music (for instance the Waverly Consort and the New York Cornet and Sackbut Ensemble) founded by graduate students and inspired by the study of pre-Baroque music at universities, to groups specializing in modern music (the Contemporary Chamber Ensemble, the Group for Contemporary Music, and Speculum Musicae). Operas were staged by the Metropolitan Opera and the New York City Opera, as well as by such smaller companies as the New York Grand Opera (which in 1994 launched a seven-year festival of all of Verdi's operas, the first such project ever), the Amato Opera Company, the Opera Orchestra of New York, the Brooklyn Academy of Music, and the opera companies of the Juilliard School, the Manhattan School of Music, and the Mannes College of Music. Although music programs in the public schools had suffered from budgetary reductions (fewer than 1000 licensed music teachers were in the system in the mid-1990s, compared with 3000 in the 1960s), in 2006 Carnegie Hall Academy and the Juilliard School partnered with the public schools in a program to train music teachers. High-quality musical training was also offered at the Fiorello H. La Guardia High School of Music and Art and Performing Arts (opened in 1936). In addition to its well-known conservatories the city had several notable community music schools, including the Greenwich House Music School, the Turtle Bay Music School, the Bloomingdale House of Music, and the Harlem School of the Arts.

The city's many concert venues cover a wide range. Carnegie Hall remains the favored auditorium for visiting orchestras, chamber ensembles, and recitalists; others perform at Avery Fisher Hall, Alice Tully Hall, and the Walter Reade Theater (all at Lincoln Center). Kaufman Concert Hall at the 92nd Street Y(M-YWHA) (1930, seating 916) supports resident orchestras and presents renowned guest orchestras and soloists. In 1978 the Hebrew Arts School added a concert hall seating 457 to its building at 129 West 67th Street, renamed Merkin Concert Hall in 1981. Classical music is also performed at several schools and universities, including Columbia (at the Kathryn Bache Miller Theatre), Hunter College (at the Sylvia and Danny Kaye Playhouse), City College (Aaron Davis Hall), Lehman College (the Lehman Center for the Performing Arts), and Queens College (the Colden Center), and at such museums as the Metropolitan Museum of Art, the Guggenheim Museum, the Asia Society, the Museum of Modern Art, and the Whitney Museum of American Art. Many churches offer performances of classical music at Christmas and Easter. Performance spaces specializing in the avant-garde include Public School 122 (First Avenue and Ninth Street), the Clocktower Gallery (108 Leonard Street), Franklin Furnace (112 Franklin Street), and the Kitchen (512 West 19th Street), which became a leading venue for performance art and experimental music soon after its opening in SoHo in 1971. Bargemusic, a floating concert hall moored in Brooklyn beneath the Brooklyn Bridge, began presenting a notable chamber music series in 1978. Symphony Space, at 95th Street and Broadway, is a disused movie theater that was converted into a concert hall in 1978.

Although some music businesses left New York City for California after the 1930s, the large record companies Polygram, Bertelsmann Music Group (BMG) (bought by Sony in 2008), and Sony kept their headquarters in the city, as did such specialized labels as Composers Recordings, Inc. (CRI), New World, and Nonesuch (now part of Elektra/Warner). The Recording Industries Association of America (RIAA), a trade organization formed in 1952, is also based in the city. Along 57th Street, near Carnegie Hall, are most of the country's large music management agencies, many of which were established by former associates of Hurok: Columbia Artists Management, ICM Artists, and Thea Dispeker. ASCAP has offices on Broadway across from Lincoln Center, and BMI is on 57th Street.

The study of music history in general and American music in particular owes much to the work of scholars based in New York City, such as Frédéric Louis Ritter in the late nineteenth century and especially John Tasker Howard (author of *Our American Music,* 1931). The American Musicological Society was organized in 1939 in a townhouse on Washington Square. Otto Kinkeldey, Gustave Reese, Curt Sachs, Paul Henry Lang, Eric Werner, and Oscar Sonneck established the city as a center for musicology through their activities as university professors, writers on music history, and librarians. Two institutions of great importance are the *Musical Quarterly* (1915–) and the music division of the New York Public Library for the Performing Arts, which has a unique collection of Americana and remains unsurpassed in the metropolitan region for the breadth of its holdings.

Clearing House Association. See New York Clearing House Association.

Clearwater. Sloop used for teaching about the ecology of the Hudson River. Designed like the sloops used for trade on the Hudson River during the nineteenth century, the ship was built during a campaign led by the folk singer Pete Seeger to clean up the Hudson. It first sailed in New York Harbor in the summer of 1970, serving as a mobile classroom

and laboratory. In 2004 the *Clearwater* was listed on the National Register of Historic Places for its role in environmental advocacy and education about the Hudson River.

Clemens, Samuel (Langhorne). See Twain, Mark.

Cleopatra's Needle [Obelisk]. Red granite shaft 69 feet (21 meters) tall and weighing 200 tons (181 metric tons) that stands in Central Park near the Metropolitan Museum of Art. It was erected in Heliopolis about 1475 B.C. by Pharaoh Thutmose III. Roman soldiers moved it in 12 B.C. to Alexandria, where it remained until it was shipped to New York City in 1880 as a gift to the United States from the khedive of Egypt. Unloaded at Staten Island, it was sent on pontoons up the Hudson River, then rolled on cannonballs to its present site. Another obelisk known as Cleopatra's Needle, also a gift of the khedive, stands in London. Despite their name neither is known to have any connection with Cleopatra.

Clermont [North River Steamboat]. The first commercially successful steamboat in America. Designed by Robert Fulton and built by Charles Brown(e) in New York City, it measured about 140 feet (42.6 meters) by 16 feet (4.9 meters), although the size was modified several times; the side paddle wheels were powered by an engine made by the English firm Boulton and Watt. Commercial service between New York and Albany quickly followed the first demonstration trip of the steamboat in 1807. The *Clermont* was retired in 1814, replaced by larger and more technically advanced steamboats. During Fulton's life it was known as the *North River Steamboat* and came to be called the *Clermont* only after his death in 1815.

Arthur G. Adams

Cleveland, (Stephen) Grover (*b* Caldwell, N.J., 18 March 1837; *d* Princeton, N.J., 24 June 1908). Twenty-second and 24th president of the United States. He was a mayor of Buffalo and a governor of New York before being elected president as a Democrat in 1884. After failing to win reelection in 1888 he moved with his wife, Frances, to New York City, where they lived in an elegant, four-story town house of red brick and brownstone at 816 Madison Avenue (near 68th Street). He was of counsel to the law firm of Bangs, Stetson, Tracy and MacVeagh (15 Broad Street), where he formed close alliances with many financiers on Wall Street, including J. P. Morgan. After he regained the presidency in 1892 the family sold the house on Madison Avenue and lived briefly at 12 West 51st Street before returning to the White House. Cleveland returned to the city in 1893 for an operation for throat cancer: this was performed aboard a yacht at Pier A in the East River and kept secret for fear that news of it would exacerbate a severe financial crisis, which ended in 1895 when Cleveland enlisted Morgan's help.

Clews, Henry (*b* Staffordshire, England, 14 Aug 1834; *d* New York City, 31 Jan 1923). Financier. After immigrating to the United States in 1850 he opened the securities firm of Stout, Clews and Mason in 1859, which became the second-largest underwriter of American government bonds during the Civil War. He was active in Republican politics and helped to form the Committee of Seventy, a reform group that forced William M. "Boss" Tweed from office. Renamed Henry Clews and Company in 1877, the firm by the 1890s was the largest negotiator of railroad loans in America or Europe. Clews wrote *Wall Street Point of View* (1900) and *Fifty Years in Wall Street* (1908).

George Winslow

Clifton. Neighborhood in northeastern Staten Island bounded to the north by Stapleton, to the east by Upper New York Bay, to the south by Rosebank, and to the west by Van Duzer Street. A neighborhood of the same name laid out in 1837 occupied a somewhat larger area; its early history was closely tied to that of the Vanderbilt family. As a young man Cornelius Vanderbilt carried passengers and cargo by boat to Manhattan from the foot of the avenue that now bears his name. In the neighborhood was the former U.S. Public Health Service Hospital, a sprawling complex that housed the original headquarters and laboratories of the National Institutes of Health (now in Bethesda, Maryland). In 2009 a large portion of the former hospital property was acquired by the Salvation Army for development as a recreation and community center. By the early twenty-first century, Liberians and other West Africans were living in the area. Most residents of Clifton live in one-family homes, with a few in apartment complexes. The principal thoroughfares are Tompkins Avenue and Bay Street. Clifton has a Staten Island Rapid Transit station.

Clinton. Name given in 1959 to a neighborhood on the West Side of Manhattan bounded to the north by 59th Street, to the east by Eighth Avenue, to the south by 42nd Street, and to the west by the Hudson River. It occupies most of the area formerly known as Hell's Kitchen. The name comes from DeWitt Clinton Park, located between 52nd and 54th streets west of 11th Avenue.

Clinton, DeWitt (*b* Little Britain, N.Y., 2 March 1769; *d* Albany, N.Y., 11 Feb 1828). Mayor and governor. The son of the Revolutionary general James Clinton, he entered elite circles of government and society in New York State after being employed as a private secretary by Governor George Clinton, his uncle, about 1790. Within a decade he became

DeWitt Clinton

one of the most powerful politicians in the state and was appointed to the U.S. Senate in 1802. He returned to the city in 1803 after being appointed mayor, a position to which he was reappointed every year until 1815 (with the exceptions of 1807 and 1810, when political opponents controlled the state's Council of Appointment). While in office he helped found the Free School Society, the New-York Historical Society, the Literary and Philosophical Society, and the Orphan Asylum; as mayor he also improved sanitation, administered public markets, guided plans to expand the city northward, and strengthened the defenses of New York Harbor to prepare for war with Britain. In the presidential election of 1812 he ran against James Madison, seeking the support of both Federalists, who opposed the war, and Republicans, who wished to wage it more successfully; he won 89 electoral votes to Madison's 128.

After his defeat Clinton was overshadowed in popularity by Governor Daniel D. Tompkins (whose election he had engineered in 1807) and by 1815 no longer held public office. He soon returned to politics to promote the plan for the Erie Canal, for which he managed to secure the legislature's approval despite opposition from the Bucktails of Tammany Hall. When Tompkins resigned in 1817 to become vice president of the United States, Clinton was elected to replace him as governor, winning 43,310 votes to his opponent's 1479. As mayor and governor Clinton had a vision of the city's future as a great commercial center, and by means of commercial success he hoped to raise the city to cultural eminence as well. To this end he sponsored many measures to aid education and cultural institutions, although a good number were weakened or blocked by political opponents. His plans for the city, like the plan for the Erie Canal, called for the active participation of government. He won reelection in 1820 against Tompkins but did not seek another term in 1822 because of strong opposition from the Bucktails, led by Martin Van Buren. In 1824 he was again elected governor, with the support of voters outraged that the Bucktails had dismissed him from his position as an unsalaried canal commissioner. Clinton presided over the opening ceremonies of the canal in 1825 and remained in office until his death. Two neighborhoods, a high school, and several parks in the city are named for him.

Van Benthuysen, 1842); Evan Cornog, *The Birth of Empire: DeWitt Clinton and the American Experience, 1769–1828* (New York: Oxford University Press, 1998)

Evan Cornog

Clinton, William Jefferson (Bill). (*b* Hope, Ark., 19 Aug 1946) Forty-second president of the United States. After serving two terms as president from 1992 to 2000, he started the William J. Clinton Foundation in 1997, a nongovernmental organization that works for international community building. In 2001 a New York branch of the Clinton Foundation opened in Harlem at 55 West 125th Street. In addition the former president set up his office in Harlem and with his wife, Senator Hillary Rodham Clinton, purchased a home in suburban Chappaqua.

Jessica Montesano

Clinton Cove Park. Two-acre park in Manhattan between 54th and 57th streets and the northernmost part of Hudson River Park. Funded by the city, the Hudson River Park Trust, and private donations, Clinton Cove Park opened in spring 2005 and features a boathouse for nonmotorized vessels, a sculpture of a 30-foot-long wine bottle, a lawn, a public walkway extending to the western end of Pier 94, and a "get-down," which allows visitors to sit at the level of the river.

Ben Silk

Clinton Hill. Neighborhood in northwestern Brooklyn. Overlooking Wallabout Bay and centered at Pratt Institute, it is bounded to the north by the Brooklyn–Queens Expressway, to the east by Classon Avenue, to the south by Atlantic Avenue, and to the west by Vanderbilt Avenue. The neighborhood is named for DeWitt Clinton and occupies the highest ground in the area. In 1832 Clinton Avenue was laid out as a tree-lined boulevard along the crest of the hill, and some grand villas had been built by the 1840s. The area was considered a rural retreat until the speculative development in the 1860s of row houses, which by 1880 lined most of the streets and attracted affluent professionals. Between 1880 and 1915 the wealthiest industrialists of Brooklyn built mansions on Clinton and Washington avenues. Development was spurred by the decision of the oil executive Charles Pratt to build a house at 232 Clinton Avenue in 1874; this magnificent residence, now part of St. Joseph's College, was surrounded by three of the four other houses that Pratt gave to his sons as wedding gifts. In 1887 Pratt founded Pratt Institute at 200 Willoughby Street, an art and industrial school that became the focus of the neighborhood and remained so for more than a century. Apartment buildings were constructed from about 1900, and during the 1920s and 1940s they largely replaced the mansions along Clinton and Washington avenues. During the 1950s and 1960s one-family houses became rooming houses. Robert Moses in 1954 cleared a five-block area south of Pratt Institute for renewal, and in the 1970s many of the fine brownstones of the neighborhood were restored.

Clinton Hill is a neighborhood of shingled, clapboard, brick, limestone, and brownstone houses, interspersed with frame houses and mansions predating the Civil War as well as apartment buildings. It is inhabited by a large number of artists, architects, photographers, and craftspeople and is racially diverse (45 percent black, 55 percent white and Asian), with many Italians and a number of black immigrants from the Caribbean. There is a wide range in the quality and price of housing, from elegant brownstones and mansions to inexpensive apartments for students.

Designated a Historic District in 1981, the neighborhood includes such city landmarks as the Emmanuel Baptist Church (1887) and the Steele-Skinner House (1812), both on Lafayette Avenue, and the Church of St. Luke and St. Matthew (1889) and the Royal Castle Apartments (1910), both on Clinton Avenue. The main buildings of the Pratt campus on Hall Street are all landmarks, as are the Mechanics Temple (1889, formerly the Lincoln Club) at 67 Putnam Avenue and St. Mary's Episcopal Church (1859) at 230 Classon Avenue. DeKalb Avenue is the main thoroughfare. As of the early twenty-first century, the neighborhood was experiencing an upswing in popularity, spurring gentrification and the growth of a burgeoning upper-middle-class population.

Cloisters. Museum. Located in Manhattan at Fort Tryon Park, it houses a collection of European medieval art and architecture chiefly assembled by the sculptor George Grey Barnard. It was known as the Barnard Cloisters until its purchase in 1925 by the Metropolitan Museum of Art, with a donation from John D. Rockefeller, Jr. The Metropolitan Museum then expanded and remodeled the building and opened it as a branch in 1938. Rockefeller also purchased 700 acres (290 hectares) across the Hudson River in New Jersey to maintain the natural views from the museum. The museum incorporates architectural monuments from the cloisters of five French monasteries: Saint-Michel-de-Cuxa, Saint-Guilhem-le-Désert, Bonnefont-en-Comminges, Trie-en-Bigorre, and Froville. Its chapels and exhibition halls contain approximately 5000 works of Romanesque and Gothic art, the most notable of which are the Unicorn Tapestries, and its meticulous gardens feature plantings representative of the medieval period.

Elliot S. Meadows

Cloisters, ca *1938*

Clove Lakes Park. Public park in Staten Island, occupying 200 acres (80 hectares) in West New Brighton. It contains several freshwater lakes, adjoined by a brook that extends through the park from Victory Boulevard to the Kill van Kull. From the seventeenth to the nineteenth centuries, several dams were built to create water pressure for local mills. Many ponds were used for ice harvesting. Brooks Pond provided the island's water supply in the late nineteenth century and the early twentieth. In 1926 the area was acquired by the Parks Department and given its current name. In the early twenty-first century Clove Lakes Park offered facilities for boating, fishing, hiking, and horseback riding.

James Bradley

clubs. See Political clubs, Social clubs, University clubs, and Women's clubs.

Clurman, Harold (*b* New York City, 18 Sept 1901; *d* New York City, 9 Sept 1980). Drama critic, director, teacher, and actor. He became interested in the theater after seeing the Yiddish actor Jacob Adler in *Uriel Acosta* at the Grand Street Theatre in 1907. After studying at Columbia University and the Sorbonne, where he lived with Aaron Copland, he settled in New York City. There he made his acting debut as a walk-on in Stark Young's play *The Saint* at the Greenwich Village Theatre in 1924. With Cheryl Crawford and Lee Strasberg he formed the Group Theatre (1931–41) to produce plays with aesthetic and social relevance. He directed premieres for Carson McCullers's *A Member of the Wedding* (1950, Empire Theatre) and William Inge's *Bus Stop* (1955, Music Box Theatre), wrote reviews for the *New Republic* (1949–52), the *Nation* (1953–80), and the *Observer* (1955–63), and taught directing at Hunter College (1964–80). Clurman's published writings include *The Fervent Years* (1945), a history of the Group Theatre; three volumes of criticism, *Lies like Truths* (1958), *The Naked Image* (1966), and *The Divine Pastime* (1974); and *On Directing* (1972), a widely read text among theater students.

Cobble Hill. A 40-block neighborhood in northwestern Brooklyn, sandwiched between Brooklyn Heights, Boerum Hill, and Carroll Gardens, bounded to the north by Atlantic Avenue, to the east by Court Street, to the south by Degraw Street, and to the west by the Brooklyn–Queens Expressway. It is one of several small neighborhoods that once made up South Brooklyn. The area was settled in the mid-seventeenth century by Dutch farmers, who called it Punkiesberg. A hill at what is now the corner of Atlantic Avenue and Court Street was known as Cobbleshill at the time of the American Revolution, but the name became disused during the nineteenth century. The area remained rural until 1836, when ferry service to Atlantic Avenue spurred suburban development. Between 1840 and 1880 many brownstones and brick row houses were built in the Greek Revival and Romanesque styles; the population was upper middle class. In the 1870s the philanthropist Alfred T. White built two experimental housing projects in the area: the Towers (439–45 Hicks Street), a Romanesque Revival apartment building intended for working-class tenants, and Warren Place, a mews of tiny one-family experimental housing developments built around a private courtyard for middle-class tenants; both remained standing into the 1990s. In the early twentieth century there was an influx of immigrants from Ireland, Italy, and the Middle East. The neighborhood contains many churches predating the Civil War and one of the city's finest collections of nineteenth-century houses, including the birthplace of Winston Churchill's mother, Jennie Jerome, at 154 Amity Street. Long Island College Hospital (1848) occupies several buildings on Henry Street and Amity Place. The Israel Ashei Emes Synagogue, in an early Romanesque former church building on Kane Street, is the home of the oldest Jewish congregation in Brooklyn. Brownstone enthusiasts moved in during the late 1950s and revived the name Cobble Hill; they organized a successful effort to resist public housing and were instrumental in having the neighborhood designated a historic district in 1969. Housing prices rose steadily from the 1970s through the 1990s, and by the beginning of the twenty-first century Cobble Hill was arguably Brooklyn's most sought-after neighborhood. By that time, almost all of its east-west streets had become a continuous line of elegant and renovated brownstones.

Cobble Hill Cinemas, 2009

Cocclestown. Original name of RICHMONDTOWN.

cockroaches. In New York City the cockroach has a notorious reputation and ubiquitous presence. The city's roach population was inadvertently introduced by trade and includes the American (also known as the "water bug"), German (common during the 1970s), Oriental, Australian, and brown-banded species, measuring 0.1 to 0.2 inches (0.3 to 0.5 centimeters) in length, although some reach 1.75 inches (4.4 centimeters). Scavengers that feed on garbage, dead insects, and human food, they are common household pests and are found everywhere, from subways to fine restaurants. Cockroaches are especially visible in poorly maintained buildings because wall voids and debris provide good shelter, although they enter new apartments as well, often by riding in on the clothing or shopping bags (they prefer paper over plastic) of residents. They seek the water around pipes and sinks, and are known to be attracted to toothpaste. Evidence that cockroaches spread disease is conclusive; this has encouraged the development of insecticides, although chemical control often forces roaches into neighboring apartments or buildings, and some roaches have become resistant to widely used substances. Research into effective roach control focuses on growth regulators, pheromones, and molting hormones to disrupt life processes and cause populations to fall.

Louis N. Sorkin

coffee. Coffee was available in New York City when it was a Dutch trading post. The Dutch dominated the coffee trade during the seventeenth century just as the British came to dominate the tea trade, and Dutch residents of New Amsterdam consumed coffee as a luxury item, sucking the drink through cubes of sugar held between their teeth at home or in coffeehouses, or having it prepared at the apothecary as a headache remedy. Over the course of the eighteenth century, the city's proliferating COFFEEHOUSES became hubs of business and politics and gathering places for high society. They served as offices for meetings that led to the founding of both the Bank of New York and the New York Stock and Exchange Board; the Sons of Liberty and the earliest manumission society in the United States both held meetings in coffeehouses as well. After Alexander Hamilton's duel with Aaron Burr, bulletins on the state of Hamilton's health were posted outside the Tontine Coffee House. When President George Washington arrived in New York City in 1789, the city's mayor chose to greet him at the Merchants Coffee House in Manhattan.

In 1790 the coffee-roasting industry was born in New York City when a factory opened on Great Dock Street (now Pearl Street). At the time coffee was still prepared largely in commercial establishments. Roasting coffee beans at home was time-consuming and impractical, and wholesale roasting made coffee more suitable for home consumption. Roasted coffee beans began to show up in New York City dry-goods stores in the first half of the nineteenth century.

Two Civil War–era New York City inventions helped usher in the modern coffee industry. In his factory on Warren Street, Jabez Burns invented and manufactured an industrial coffee roaster that could be emptied without removing the roasting drum from the fire. In Brooklyn the invention of the paper bag meant that packaging no longer needed to be made by hand in the style of "sugar loafs" (a cone of paper filled with sugar with the ends twisted shut) and that roasted coffee beans could be packed for retail in advance. John Arbuckle, who moved his business from Philadelphia to be closer to coffee's port of entry, was the first to successfully capitalize on these inventions in building a national brand. Some of the warehouses for his factory in Brooklyn's DUMBO neighborhood still stand. The majority of coffee businesses—from importers and brokers to roasters and "jobbers" (wholesale distributors)—were concentrated on Washington Street in Manhattan along the Hudson River. In 1882 local coffee merchants founded the Coffee Exchange in the City of New York. After more than a century of mergers and consolidations, the Coffee Exchange became the New York Board of Trade, where more coffee was traded than anywhere else in the world (more than $1 billion daily) early in the twenty-first century and where the global price standards for Arabica coffee were set each day.

At the end of the nineteenth century, the coffee port and corresponding businesses consolidated on Manhattan's East Side, on Water and Front streets. By the early twentieth century coffee warehouses moved across the East River to the Brooklyn waterfront, the point of entry for nearly 60 percent of coffee consumed in the United States in 1920. Coffee roasters remained in Manhattan. Eminent domain in the mid-1960s reduced the area in which they did business, and many closed; of those who could afford to move, only Gillies Coffee Company, founded in 1840, continued to do business in New York City in 2007. Several newer companies contributed to the approximately 100 million pounds of coffee roasted in New York City in 2007, but that number decreased each year. New Yorkers, however, continue to enjoy the brew in large quantities, from the 50-cent cups available from carts or bodegas on most corners in Manhattan to the $4 concoctions at any one of the city's 158 Starbucks Coffee locations (as of 2007—the first opened only 10 years before). On the retail side, New York City's coffee industry has grown considerably since cappuccino made its 1956 U.S. debut at MacDougal Street's Caffe Reggio, to more than half a billion dollars annually.

Rowan Moore Gerety

Coffee, Sugar and Cocoa Exchange. A commodities market incorporated as the Coffee Exchange of the City of New York in 1885. It was relatively small, sustained by connections to producers in Latin America and banks, as well as by daily reports from local business newspapers and other commodity exchanges and by monthly estimates of crop conditions and other harvest news from government agencies in provinces and shipping centers. The name was changed to the New

York Coffee and Sugar Exchange in 1916 when the sugar markets in Europe were closed by World War I and trade shifted to New York City. Coffee futures trading was plagued with difficulties caused by grading standards that could allow substitution of one variety for another, so that the need for arbitration of disputes between buyers and sellers increased. Importers complained during the 1950s to the Federal Trade Commission that the narrow definitions of grades excluded them from hedging opportunities. After an investigation the exchange entered into a consent decree that broadened its standard contract to cover about 70 percent of the world's coffee. The exchange in the 1960s had 350 members and controlled much of the world spot and futures business in sugar. In 1979 it absorbed the New York Cocoa Exchange (opened 1925), which was an important center of trading in Latin American cocoa, an increasingly important commodity as supplies from Africa diminished. Trading volume during the 1980s quintupled for cocoa (largely because lower output worldwide led to a sextupling of prices) and more than doubled for coffee. The Federal Trade Commission responded with more rigorous scrutiny of traders and efforts to bring about better self-governance. In 1998 the Coffee, Sugar and Cocoa Exchange partnered with the New York Cotton Exchange to form the New York Board of Trade. Its headquarters moved to the World Financial Center after its previous trading site was destroyed during the terrorist attacks on the World Trade Center of 11 September 2001.

Morton Rothstein

coffeehouses. During the colonial period coffeehouses were important meeting places for politicians, merchants, and military officers in New York City. Like their English counterparts these coffeehouses sold alcohol and were centrally situated. In 1696 John Hutchins opened the King's Arms, also known as the Coffee House, on the west side of Broadway just north of the cemetery of Trinity Church. A focal point for opponents of Jacob Leisler, it was frequented by a genteel clientele. By 1747 new owners referred to the King's Arms as the Exchange Coffee House to reflect its function as a marketplace for many commodities, including slaves, ships, horses, and real estate. Another important center of commerce and conviviality was the Merchants' Coffee House, opened about 1737 at the southeast corner of Wall and Water streets. Along with George Burns' Coffee House, which supplanted the old King's Arms, the Merchants' was an important meeting place for the Sons of Liberty; there, Isaac Low, Alexander MacDougall, James Duane, and John Jay on 23 May 1774 drafted the famous letter of the New York Committee of Correspondence protesting the Intolerable Acts and supporting the formation of the Continental Congress. In later years the Merchants' Coffee House was the site of meetings that led to the formation of the Chamber of Commerce (1768), the Bank of New York (1784), the New York Hospital Society (1785), the Society of the Cincinnati (1786), and the Manhattan Company (1799). The Merchants' also oversaw the first public auction of stock in 1790 and remained in operation until the building was destroyed by fire on 18 December 1804. The Tontine Coffee House, opened in 1794 on the northwest corner of Wall and Water streets, was perhaps the best known establishment of its kind in New York City and an important institution until 1826. Coffeehouses diminished in number by the 1830s as the city's boundaries expanded and various populist movements created a hostile climate that persuaded the rich and powerful to take their business to exclusive private clubs and other institutions.

Marc Ferris

Coffin, Henry Sloane (*b* New York City, 5 Jan 1877; *d* Lakeville, Conn., 25 Nov 1954). Minister. He was brought up in Manhattan at 13 West 57th Street and attended Yale University and the Union Theological Seminary. While serving at the Bedford Park Presbyterian Church in the Bronx and the Madison Avenue Presbyterian Church (1905–26), he became known for his impassioned preaching style and his writings on the Social Gospel movement. He rallied immigrants in support of educational programs, Bible classes, and missionary work in China, and increased the size of the congregation at Madison Avenue Presbyterian Church from 600 to 2500. During his tenure as the president of Union Theological Seminary (1926–45), the seminary occupied new buildings, appointed the first women to its faculty (1927), added a School of Sacred Music (1928), and absorbed Auburn Seminary from upstate New York (1939). Among the notable faculty that he drew to the school were the eminent theologians Reinhold Niebuhr and Paul Tillich and the biblical translator James Moffatt. In addition he expanded seminary opportunities for African Americans and helped students to reconcile religious pacifism with American involvement in World War II. As a leader of the local presbytery's Board of Church Extension, he helped to support new congregations. He was also a member of the Board of Home Missions (1903) of the American Presbyterian church and a charter member of the Board of National Missions (1923). Elected moderator of the General Assembly (1943), the highest post in the Presbyterian church, he advocated ecumenism after World War II and committed himself to unifying the northern and southern branches of the Presbyterian church, an objective that was achieved 40 years later. Coffin's published writings include *Social Aspects of the Cross* (1908), *A More Christian Industrial Order* (1920), and *A Half-Century of Union Theological Seminary, 1896–1945: An Informal History* (1954).

Morgan Phelps Noyes, *Henry Sloane Coffin: The Man and His Ministry* (New York: Charles Scribner's Sons, 1964); Robert T. Handy, *A History of Union Theological Seminary in New York* (New York: Columbia University Press, 1987)

David Meerse

Cohan, George M(ichael) (*b* Providence, R.I., ?4 July 1878; *d* New York City, 5 Nov 1942). Singer, actor, playwright, composer, and producer. As a child he toured with his family in vaudeville. During the first decades of the twentieth century he wrote and often performed in fast-paced musical melodramas and revues notable for their unabashed flag-waving, settings in New York City, slang, and widely popular songs. For some years he lived in the Hotel Knickerbocker at 142 West 42nd Street. Cohan wrote and produced Broadway plays and musicals throughout the 1920s, often appearing in them. From the 1930s he lived in an apartment at 993 Fifth Avenue. Toward the end of his career he received critical acclaim for his performances in *Ah, Wilderness!* (1933), by Eugene O'Neill, and *I'd Rather Be Right* (1937), by Richard Rodgers and Lorenz Hart. Cohan wrote "Give My Regards to Broadway" and "I'm a Yankee Doodle Dandy." A statue of him stands in Duffy Square in midtown Manhattan.

Patrick McGilligan, *Yankee Doodle Dandy* (Madison: University of Wisconsin Press, 1981)

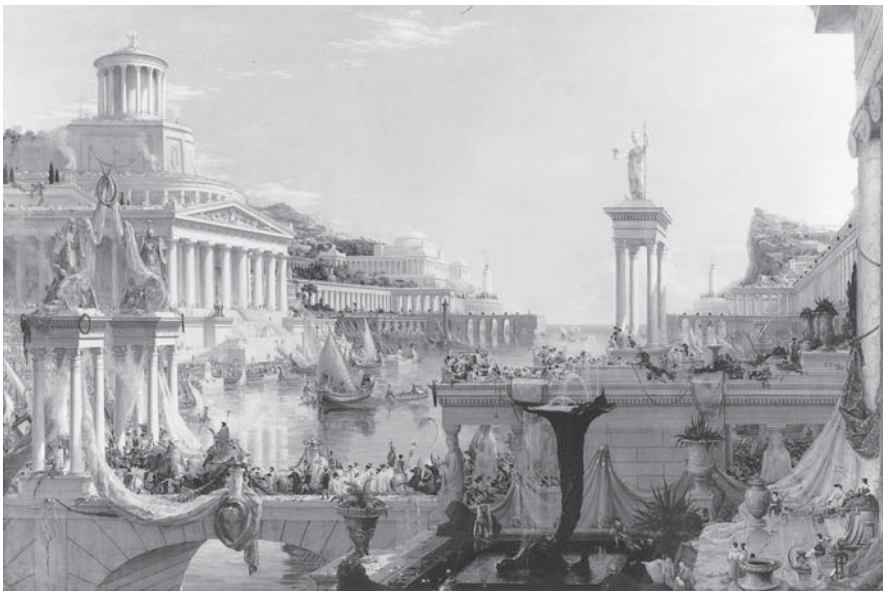
Cohen, Morris Raphael (*b* Minsk, Ukraine, 25 July 1880; *d* Washington, D.C., 28 Jan 1947). Philosopher. He moved with his parents to New York City in 1892, where he attended public schools and City College of New York (BS 1900). While an undergraduate he became active in the Educational Alliance, and with Thomas Davidson he opened a night school for workers where he taught philosophy and history; he later taught at Townsend Harris Hall (1902–4, 1906–12) and City College (1912–38). After beginning graduate work at Columbia he transferred to Harvard University (PhD 1906). A philosophic naturalist, he favored the use of rational methods in pursuing knowledge. He made critical reflections on social morals and laws in much of his work and adhered to a social philosophy calling for government intervention to eliminate social inequities. Cohen was president of the American Philosophical Association (1928).

Among his published writings are *Reason and Nature: An Essay on the Meaning of Scientific Method* (1931), *Law and the Social Order* (1933), *Preface to Logic* (1944), *The Faith of a Liberal* (1945), *The Meaning of Human History* (1947), *A Dreamer's Journey: The Autobiography* (1949), and *American Thought: A Critical Sketch* (1954). The Cohen Library at City College is named for him.

Leonora Cohen Rosenfield, *Portrait of a Philosopher* (New York: Harcourt, Brace and World, 1962)

Walter Friedman

Cohn, Roy (Marcus) (*b* New York City, 20 Feb 1927; *d* Bethesda, Md., 2 Aug 1986). Lawyer. He graduated from Columbia Law School at age 20; worked in Manhattan for the U.S. attorney, whom he assisted in the celebrated espionage trial of Julius and Ethel Rosenberg; and became known for his combative style in the courtroom. In Washington, D.C., during 1953–54 he was the chief counsel to the committee led by Senator Joseph R. McCarthy that held hearings on purported communist influence in the army; he then returned to New York City and joined the law firm that became Saxe, Bacon and Bolan. During the following decades he acquired a reputation as one of the most powerful, flamboyant, and controversial lawyers in the city. He defended a number of organized-crime figures and was associated with conservative causes. Acquitted on federal charges of conspiracy, bribery, and fraud, Cohn was disbarred in New York State for misuse of his clients' funds only weeks before his death of AIDS. He is buried at Union Field Cemetery in Ridgewood, Queens.



Nicholas Von Hoffman, *Citizen Cohn* (New York: Doubleday, 1988)

Lisa Gitelman

Cohnheim, Max (*fl* 1848–61). Humorist, playwright, and political activist. In Germany he was associated with the humor magazine *Kladderadatsch* in Berlin. After the revolution of 1848 he immigrated to the United States and settled in New York City. He wrote comic songs for the Arion Gesangverein, edited the *New Yorker Humorist* in 1858–60, and became one of the leading German playwrights in the city. One of his plays, about a triumphant German revolution, was partly set in the Shakespeare Hotel in New York City. He worked briefly for the Republican Party in 1856 before joining other German American radicals in 1857 to form the Kommunisten Klub. He later served as a captain of artillery in the Civil War.

Stanley Nadel

Cole, Thomas (*b* Bolton-le-Moors, England, 1 Feb 1801; *d* Catskill, N.Y., 11 Feb 1848). Painter. He moved to the United States in 1818 and worked as an engraver and portrait painter in Philadelphia, Pittsburgh, and Steubenville, Ohio. In 1825 he moved to New York City and made his first sketching tour up the Hudson River to the Catskill Mountains. That same year he became well known after three of his landscapes were bought by John Trumbull, William Dunlap, and Asher B. Durand, an event considered to have marked the beginning of the Hudson River School. Cole traveled to Europe (1829–32, 1841–42) and throughout New York State and New England, often using the sites he visited as inspiration when he returned to his New York studio to paint. The first artist to treat landscape as a metaphor for the new nation, he argued in his "Essay on American Scenery" (1835) that the United States was a new Eden in which the landscape revealed the presence of God and a future of promise. The allegorical series "The Course of Empire" (1833–36, painted for Luman Reed) and "The Voyage of Life" (1839–40, painted for Samuel Ward) were based on his conception that landscape painters should combine morality and imagination with observations of nature. Among his pupils was Frederic E. Church; he also encouraged Durand to become a landscape painter. In 1836 he left the city and settled in Catskill. Considered the most influential member of the Hudson River School, Cole helped form the National Academy of Design (1826) and the Sketch Club (1827).

Timothy Anglin Burgard

Coleman, Ornette (*b* Fort Worth, Tex., 9 March 1930). Saxophonist and composer. He made his debut in New York City in November 1959 at the Five Spot Café, where his group was so well received by those ranging from the Modern Jazz Quartet to Leonard Bernstein that the engagement was extended for six months. In the following year he recorded the album *Free Jazz,* the title of which came to refer to a genre that he played a large role in developing. Coleman returned to Greenwich Village in 1965 at the Village Vanguard. His performances and recordings during the 1960s and early 1970s were characterized by jagged rhythms, harmonies that were at least outwardly atonal, and the sequential repetition of short melodic motifs and helped to earn him a reputation as one of the most radical innovators in the history of jazz. He often performed with the trumpeter Don Cherry, the double bass player Charlie Haden, and the drummer Ed Blackwell. In 1971 he opened a performance space called Artist's House at 131 Prince Street in SoHo, and in 1976 he formed the band Prime Time, which blends free jazz, funk, and soul. His 2006 album *Sound Grammar* won the Pulitzer Prize for music in 2007. That same year, he was awarded a Grammy Award for lifetime achievement.

Barry McRae, *Ornette Coleman* (London: Apollo, 1991)

Ira Berger

Coler, Bird S(im) (*b* Champaign, Ill., 9 Oct 1867; *d* Brooklyn, 12 June 1941). Public official. He worked in his father's private bank and as a young man amassed a fortune trading

securities. He then turned to politics and with the backing of Tammany Hall was elected in 1898 as the first comptroller of the consolidated city. Defeated in the gubernatorial election of 1902, he won public office in 1906 as the borough president of Brooklyn. He was the commissioner of charities under Mayors John F. Hylan and James J. Walker. In 1929 he broke with the Democrats to seek the presidency of the Board of Aldermen on Fiorello H. La Guardia's unsuccessful mayoral ticket. Coler wrote widely on municipal government and finance. A hospital on Roosevelt Island is named in his honor.

See also Water, §2.

Frank Vos

Coler–Goldwater Specialty Hospital and Nursing Facility. Municipal hospital specializing in rehabilitation and chronic care, administered by the New York Health and Hospitals Corporation. It was built on Welfare Island on the site of a city prison that had been demolished during the 1930s and opened in July 1939 as the Welfare Hospital for Chronic Disease; it was renamed in 1942 for S. S. Goldwater. An initial focus on the research and treatment of chronic illness was broadened during the 1950s to include comprehensive rehabilitation for the disabled. A skilled nursing facility was established in the 1970s. In 1996 Goldwater Memorial Hospital merged with Coler Memorial Hospital to become Coler–Goldwater Specialty Hospital and Nursing Facility, creating one of the largest subacute care facilities in the world.

Sandra Opdycke

Coles, Honi [Charles] (*b* Philadelphia, 1911; *d* Queens, 12 Nov 1992). Dancer. He began tap dancing in Philadelphia and later became famous for sustained involvement in the dance world of Harlem and New York City. During the 1930s he performed at the Harlem Opera House and the Apollo Theater, and by 1940 he was a soloist with Cab Calloway. With Charles "Cholly" Atkins he formed the team of Coles and Atkins: their specialty was synchronized, identical-step dance routines, and in 1949 they began a two-year engagement on Broadway in the show *Gentlemen Prefer Blondes*. Although public interest in tap dancing subsided during the 1950s, their team was one of the longest-lived. Coles became the production manager of the Apollo in 1960, continued to perform occasionally, and worked with younger dancers. In 1988 he received the Capezio Award for providing an "inspiration to a new generation of tap dancers." He lived in East Elmhurst in Queens.

Robert Seder

Colgate, William (*b* Hollingbourne, England, 25 Jan 1783; *d* New York City, 25 March 1857). Soap maker and toothpaste pioneer. In 1795 Colgate moved to the United States with his family to escape public hostility toward his father, who had supported the French Revolution. After settling in New York City in 1804 he became a manager of Slidell and Company, the city's largest tallow chandler. In 1806 he opened his own firm, Colgate and Company, which introduced and began marketing the first commercial brand of toothpaste in 1873 and later evolved into Colgate–Palmolive, a global consumer products company. A leading philanthropist, Colgate was active in the American Bible Society and helped to found what later became Colgate University, in Hamilton, New York.

James Bradley

Colgate–Palmolive. Firm of soap and toiletry manufacturers formed in 1806 at 6 Dutch Street in Manhattan by William Colgate as a starch, soap, and candle enterprise called Colgate and Company. Its first advertisement for "Soap Mold and Dipt Candles" appeared in 1817. During the early years its main products were toilet essence, soap, and pearl starch. In 1847 the company moved its factory to New Jersey but kept its business office in New York City. In 1873, it began marketing the first commercial brand of toothpaste, which was sold in jars until 1896, when Colgate introduced the collapsible tube system to the industry. The firm merged with Palmolive–Peet Company of Chicago in 1922, adopted the Colgate–Palmolive name in 1953, and established domestic and international headquarters at 300 Park Avenue in Manhattan in 1956. Colgate–Palmolive manufactures a wide range of consumer products relating to oral care, personal care, home care, and pet nutrition. Prominent brands include Mennen, Ajax, Irish Spring, Hill's Pet Nutrition, Protex, Softsoap, and Murphy Oil Soap.

Richard Kobliner

Coliseum. See New York Coliseum.

Collect. A large pond 60 feet (18 meters) deep, formerly in lower Manhattan just north of the present City Hall Park; it was also called Fresh Water Pond. It was fed by an underground spring, and its overflow ran through the marshes of Lispenard Meadows to the Hudson River. The name is a corruption of the Dutch word *kolch* (a small body of water), erroneously written as *kalch* (lime) by some nineteenth-century writers, probably in reference to the lime from the heaps of oyster shells left around the pond by American Indians. During the eighteenth century the pond was a favored spot for picnics in the summer and ice skating in the winter. It also provided drinking water at the Tea Water Pump in Chatham Street and water for the tanneries, breweries, ropewalks, and slaughterhouses that were built on its southern and eastern banks; by the late eighteenth century the pond was already considered "a very sink and common sewer." Several proposals for new uses of the pond were submitted to the Common Council, including one for a park designed by Pierre L'Enfant and another for a canal between the Hudson and the East rivers, but the pond was instead filled in between 1803 and 1811 by earth from the surrounding hill. By 1813 the pond was virtually covered as Centre Street was extended northward.

Carol Groneman

College Board. Nonprofit membership educational association formed to develop standardized college admission tests for secondary-school students. Its first meeting was held on 17 November 1900 in the library of Columbia University. The board was conceived by Charles William Eliot, president of Harvard University, as a means of simplifying the college admission process by eliminating the separate entrance examinations administered by each college. The idea was energetically taken up by Nicholas Murray Butler, soon the president of Columbia, who was the first secretary of the board and later its president. Initially the board offered essay examinations in history, mathematics, physics, chemistry, and ancient and modern languages. In 1926 it introduced the Scholastic Aptitude Test (SAT), a multiple-choice examination divided into verbal and mathematical sections that displaced the essay examinations by 1940. In 1947 the board joined with the Carnegie Foundation and the American Council on Education to form the Educational Testing Service, which took over many of the board's testing and other services. The board reintroduced examinations in 1955 not unlike the early essay examinations as part of the Advanced Placement (AP) Program, which allowed high school students to enroll in college-level courses. The College Scholarship Service also was introduced in the 1950s; it provided a common application form for financial aid and promoted scholarships based on financial need. The board was chartered in 1957 by the University of the State of New York as a nonprofit educational association governed by a board of trustees. For many years the College Board was housed in offices provided by Columbia University. It moved into the Interchurch Center on Riverside Drive in 1960 and then to 888 Seventh Avenue before purchasing the nine lowest floors of the Sofia Building at 45 Columbus Avenue in 1985; in the early twenty-first century it maintained its headquarters there. The association is composed of more than 5400 schools, colleges, universities, and other educational organizations. Well-known tests it administers include the SAT, AP subject tests, and the

Preliminary SAT/National Merit Scholarship Qualifying Test (PSAT/NMSQT).

College of Mount St. Vincent. Independent liberal arts college formed in 1847 by the Sisters of Charity of Mount St. Vincent as a secondary school for women. Originally called the Academy of Mount St. Vincent, the school was first located at Mount St. Vincent at McGowan's Pass in what is now Central Park; it moved to its current site in Riverdale in the Bronx in 1857, when the Sisters of Charity purchased Fonthill, the estate of the actor Edwin Forrest. The curriculum was expanded to include postsecondary education in 1910, and the following year the school took its current name and opened with 28 first- and second-year students; degrees were awarded from 1913. The first president was the archbishop of New York, John Cardinal Farley, and the first dean was Mary Ambrose Dunphy of the Sisters of Charity. In 1964 the college initiated a cooperative program with Manhattan College. Male students were first admitted in 1974. The college received authorization from the New York State Board of Regents in 1988 to confer a master of science in nursing. It also added a master's program in business. By the early twenty-first century Mount St. Vincent had an enrollment of more than 1600 undergraduate and graduate students.

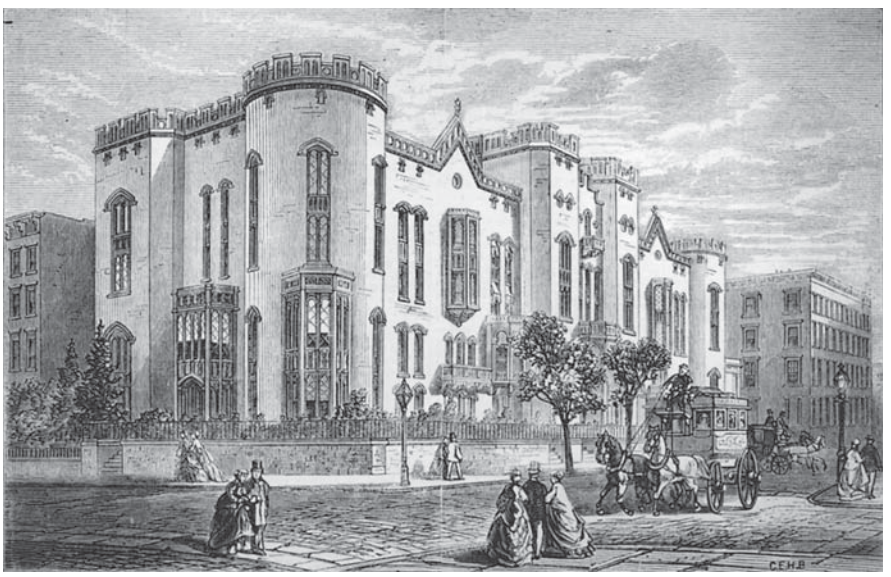
Bernadette McCauley

College of Physicians and Surgeons (P&S). Medical school of Columbia University located at the Columbia–Presbyterian Medical Center. See also Medical schools.

College of Staten Island. Part of the City University of New York, it was formed in 1976 by the merger of Staten Island Community College (1955) in Sunnyside and Richmond College (1965) in St. George. Senator John Marchi played a key role in creating the institution, and he and Governor Mario Cuomo worked to move the college to a new 204-acre (83-hectare) campus at Willowbrook in 1993. This campus, the largest of any college in New York City, incorporates 19 neo-Georgian buildings from the former Willowbrook State School with new library, performing arts science, and athletic and student activities facilities. The college offers two- and four-year undergraduate degrees, as well as graduate degrees and doctorates in nursing and physical therapy. In 2007 it had more than 12,000 students and 335 full-time faculty members.



The College of Staten Island at Willowbrook (New York: City University of New York, 1985)

Howard R. Weiner

College Point. Neighborhood in north central Queens, northwest of Flushing along the East River and Flushing Bay. It was built in 1854 by Conrad Poppenhusen to accommodate the workers at his hard-rubber factory, and Poppenhusen personally guided the development of its streets, houses, businesses, and schools. In 1870 it became a village incorporating the neighborhoods of Flammersburg and Strattonport. In the 1880s and 1890s, breweries, silk mills, and paint works proliferated, and the area grew rapidly and attracted mostly a German population. Its beer halls and amusement parks, especially Point View Island, made it popular for outings, steamboat excursions, and political clubs. During Prohibition the resorts declined in popularity and were eventually replaced by aircraft and aviation-parts factories built by Sikorsky Aircraft, the LWF Company, and the Edo Corporation. In the early twenty-first century, College Point remained predominantly residential, with a minor industrial presence throughout the neighborhood. Commercial and residential development increased, resulting in the demolition of many older buildings.

Vincent Seyfried

colleges and universities. The first institution of higher learning in New York City was King's College, opened at Trinity Church on Wall Street in 1754 by Anglicans allied with members of the Dutch Reformed Church and offering a traditional curriculum of Greek, Latin, and mathematics. Closed during the American Revolution, it reopened in 1784 as Columbia College. General Theological Seminary was formed in 1822, followed by Union Theological Seminary (Presbyterian) in 1836. The University of the City of New York (1831), later renamed New York University (NYU), was established in response to the conservative curriculum and dominance of Episcopalians at Columbia but nonetheless offered a curriculum of Greek, Latin, and mathematics for much of the nineteenth century; a law school was added in 1835. The first college for women was Rutgers Female Institute (1838); renamed Rutgers Female College in 1867, it ceased operations in 1895. St. John's College (1841), in what is now the Bronx, was the first Catholic college in the metropolitan area. It was turned over to the Jesuits in 1846 by Bishop John Hughes and later became Fordham University. Institutions for women included Packer Collegiate Institute (1845) and the Academy of the Sacred Heart (1846), which was renamed Manhattanville College in 1917 and eventually moved to suburban Purchase, New York. The Academy of Holy Infancy, established by Brothers of the Christian Schools in 1853, later became known as Manhattan College and moved from Manhattanville to the Bronx in 1923. Public higher education was first offered at the Free Academy (1848), which in 1866 changed its name to City College of New York and introduced college-level courses. The Polytechnic Institute of Brooklyn, founded

Rutgers Female College, 489 Fifth Avenue

in 1854 as an academy called the Brooklyn Collegiate and Polytechnic Institute, was chartered as a college in 1890 and later became Polytechnic University.

During the second half of the nineteenth century NYU Law School and the Columbia School of Law (1858) dominated legal education in the city. Cooper Union for the Advancement of Science and Art (1859), endowed by Peter Cooper, distinguished itself by offering training in architecture, engineering, and the fine arts without cost to students. St. Francis Academy (1859), organized by the Franciscan Brothers in Brooklyn, was taken over by Jesuits in 1884. The Homeopathic Medical College of New York opened in 1860, as did the Long Island College Hospital Medical School in Brooklyn (renamed the State University of New York [SUNY] Downstate Medical Center in 1950). At the invitation of John D. Loughlin, archbishop of Brooklyn, St. John's College, founded by the Vincentian Fathers in Brooklyn in 1870, later moved its main campus to Jamaica. In 1971 it assumed control of Notre Dame College in Staten Island.

Most nineteenth-century colleges continued to exclude women; among the exceptions was the Normal College for Women (1870, later renamed Hunter College for its founder, Thomas Hunter), which trained many of the teachers in the city's public schools. The Jewish Theological Seminary of America opened in 1886 to train Conservative rabbis and eventually had five divisions at its Morningside Heights campus. The same year saw the opening of the Isaac Elchanan Seminary, an Orthodox institution that eventually became Yeshiva University (first based on the Lower East Side and then moved to Washington Heights in 1929). Pratt Institute (1887) expanded from a technical secondary school in Brooklyn into a university with six divisions. Barnard College (1889), an undergraduate college for women, developed a close affiliation with Columbia but retained its own faculty and administration. The Webb Institute of Naval Architecture moved from Fordham Heights to suburban Glen Cove, Long Island, in 1949.

At the end of the nineteenth century the metropolitan region became a center for professional education. Three of the best-known institutions were medical schools: New York University School of Medicine (founded 1841 as University Medical College), the College of Physicians and Surgeons (founded in 1807; part of Columbia from 1860; coeducational since 1917), and Cornell University Medical College (1898, now Weill Cornell Medical College). Others were schools of law, including New York Law School (1891), formed by Theodore Dwight, who had resigned his position as dean of Columbia Law School after a dispute with President Seth Low; Brooklyn Law School (1901); and law schools at St. John's and Fordham. Other schools that opened during these years include Teachers College (1886, a part of Columbia from 1898); a school of pedagogy at New York University (1890); Adelphi College (1896, now Adelphi University), which moved from Brooklyn to Garden City, on Long Island; the Juilliard School (founded 1905 as the Institute of Musical Art), a conservatory that later became known as well for dance and drama; Pace University (1906), which began as a school of accounting on a site near City Hall; and the New York College for Podiatric Medicine (1911), now the site of the largest foot clinic in the United States. Cathedral College of the Immaculate Conception opened in Brooklyn in 1914 to train Catholic priests, moved to Douglaston in 1967, and closed in 1988. St. Joseph's College, formed in 1916 as a college for Catholic women in Brooklyn, admitted men in 1969, and added a branch campus in Patchogue in 1979. The Bureau of Educational Experiments (1916) became known for such innovative projects as the country's first nursery school (1918): as the Bank Street College of Education (1950) it was responsible in the 1960s for the Bank Street readers, among the first primers to depict characters of different races. The Mannes College of Music (1916) provided instruction at the undergraduate and graduate levels and also introduced high school and extension programs. The college merged with the New School in 1989. The New York School of Interior Design (1916) first granted degrees in 1976. The Manhattan School of Music (1917–18), awarded bachelor's degrees from 1943 and doctorates from 1973; it moved to Morningside Heights in 1969. Wagner College (1883, affiliated with the Evangelical Lutheran Church in America), originally Rochester (New York) Lutheran Proseminary, moved to Staten Island in 1918, where it became coeducational (1933) and introduced a comprehensive undergraduate program.

The number of institutions in the city increased after World War I. Charles A. Beard, John Dewey, Alvin Johnson, James Harvey Robinson, and Thorstein Veblen organized the New School for Social Research (1919). The country's first university for adults, its University in Exile and its École Libre des Hautes Études became a haven for European intellectuals in exile during World War II. Other colleges introduced adult divisions and weekend programs that attracted workers and parents. City College opened a school of business and civic administration (1919), a school of technology (1919), and a school of education (1921). The Jewish Institute of Religion, a rabbinical college founded by Stephen S. Wise in 1922, merged in 1950 with Hebrew Union College of Cincinnati. The resulting Hebrew Union College–Jewish Institute of Religion moved from the West Side to Greenwich Village in 1979. Long Island University, opened in Brooklyn in 1926, expanded to Southampton (1963, purchased 2005 by SUNY) and Brookville, Long Island (1954), and added a college of pharmacy and health sciences. Berkeley College, now with seven locations in New York and New Jersey, opened in 1931 as a business college. To meet an increasing demand for public higher education the state legislature in 1926 replaced the City College Board of Trustees with the Board of Higher Education, which soon opened a branch of City College in downtown Brooklyn (1926) that was absorbed by Brooklyn College (1930); Queens College (1937); and a division of Hunter College in the Bronx (1931) that became Herbert H. Lehman College (1968).

The first two-year independent colleges offered programs that permitted students to transfer to four-year colleges as well as vocational programs. From 1928 to 1936 Seth Low Junior College operated as an affiliate of Columbia, accepting Jewish and Catholic students who transferred to professional schools requiring fewer than four years of college for admission. Hofstra University opened on Long Island in 1935 as a branch of New York University. A two-year women's college formed in 1936 by the Religious of the Sacred Heart of Mary was renamed Marymount Manhattan College and became a four-year college after being chartered as a branch of Marymount College in Tarrytown, New York (1946, merged with Fordham University, 2002). Marymount Manhattan College became independent in 1961. The Kings College (1938), originally an interdenominational Protestant seminary in Belmar, New Jersey, moved from suburban Briarcliff Manor to the Empire State Building in 1999 and is now a Christian liberal arts college. Bramson ORT, a technical college under Jewish auspices, opened in 1942 to serve refugees and immigrants; it gained college status and moved from Manhattan to Forest Hills, in Queens, in 1977.

The demand for higher education rose sharply after World War II. The New York Institute of Technology (1955) moved from Brooklyn to Manhattan in 1958. Jurisdiction over New York City Community College (founded in 1946 as the New York State Institute of Applied Arts; now New York City College of Technology) was transferred from the State Education Department to the Board of Higher Education in 1964. The School for Cartoonists and Illustrators (1947, renamed the School of Visual Arts in 1956) offered degrees in fine arts, film, media arts, and photography. To make college education more generally accessible, the state legislature established the State University of New York (1948), which eventually took over the Fashion Institute of Technology (1944); Long Island College Medical Center (1950, now SUNY Health Science Center at Brooklyn); the Maritime

College at Fort Schuyler (1874), a regional center of Empire State College (1971); and the State College of Optometry (1971). In 1954 the Rockefeller Institute for Medical Research became a degree-granting institution called Rockefeller University. Yeshiva University opened Stern College for Women in 1954 in midtown Manhattan and the Albert Einstein College of Medicine in 1955 in the Bronx. Polytechnic University in Brooklyn (1854) opened a graduate center in Farmingdale, Long Island, in 1954, absorbed the NYU School of Engineering and Science in 1973, and announced a merger with NYU in 2008.

The first public community college of the City University of New York (CUNY) was Staten Island Community College (1955); other community colleges opened by the Board of Higher Education specialized in programs for adults and immigrants, including Bronx Community College (1957), which moved to the former campus of New York University in University Heights in 1973; Queensborough Community College (1958); Borough of Manhattan Community College (BMCC, 1964); and Kingsborough Community College (Brooklyn, 1963). The board also oversaw the founding of the Graduate Center (1961) and the John Jay College of Criminal Justice (1967) and took over Baruch College (1919). The New York City government ratified creation of the City University of New York as a coordinating administrative entity in 1957.

Rising enrollments in the 1960s led to a rapid expansion of higher education, both public and private. Marymount Manhattan College (1946), a branch of Marymount College in Tarrytown that became independent in 1961, established the Malcolm–King Harlem College Extension Center in 1968; the center closed in 1989. The College for Human Services (1964, renamed Audrey Cohen College in 1992 and Metropolitan College in 2002) offers "purpose-centered" liberal arts and professional curricula. Touro College (1970), a private, multicampus liberal arts college, emphasized Jewish history and culture in its curriculum. The Mount Sinai School of Medicine (1963, the first medical school opened by a hospital since the 1910 Flexner Report) moved affiliations from CUNY (1967) to NYU (1999). Several additional units of CUNY opened to accommodate the baby boomers and the city's racial and ethnic minorities, including York College in Jamaica (1966, four-year program); Eugenio Maria de Hostos College in the Bronx (1968, two-year); Medgar Evers College in Brooklyn (1969, four-year); and Fiorello H. La Guardia College in Long Island City (1971, two-year). Efforts by CUNY to build new facilities accelerated after 1970, when it adopted a policy of open admissions (guaranteeing a place at the uni-

For lists of public colleges and universities in New York City, see the tables in City University of New York and State University of New York

versity to every graduate of the city's public high schools). CUNY opened a School of Law in 1983 and a Graduate School of Journalism in 2006.

The city's fiscal crisis of the mid-1970s caused a severe retrenchment. CUNY discontinued its policy of open admissions and began charging tuition for the first time. Richmond College (1965) and Staten Island Community College were forced to merge in 1976, to form the College of Staten Island. St. Vladimir's Orthodox Theological Seminary moved from Manhattan to suburban Crestwood, New York, in 1962, and New York Medical College moved to suburban Valhalla, New York, in 1978, after becoming affiliated with Pace University in 1973.

The attacks of 11 September 2001 on the World Trade Center affected several colleges and universities in lower Manhattan. Damage to Fiterman Hall, part of BMCC located near the destroyed 7 World Trade Center, forced a move to temporary classrooms. But several existing colleges expanded into the area later in the decade by leasing relatively inexpensive space. Meanwhile, Columbia embarked on a major expansion into Manhattanville.

Harold S. Wechsler

College Settlement. First college settlement in the United States, opened in 1889 at 95 Rivington Street as an educational exchange for educated and underprivileged women. Initially there were seven full-time residents who were recent graduates of Smith, Vassar, and Wellesley colleges; they organized clubs for the neighborhood's children and adults, most of whom were German (eventually there were also Russian and Polish Jews). The organization soon expanded: by 1895 it had a kindergarten, a circulating library, a Penny Provident Fund, and a vacation home and provided instruction in sewing, cooking, woodcarving, basketwork, singing, literature, politics, history, and debating. The first head residents included Jean Fine Spahr (1889–92), Jane E. Robbins (1893–97), Mary Kingsbury Simkhovitch (1898), and Elizabeth Sprague Williams (1899–1915). Encouraged by the success of the organization, a group of alumnae from several eastern women's colleges formed the College Settlements Association in 1890, which, through membership subscriptions and the recruitment of resident staff, opened additional college settlements in Philadelphia, Boston, and Baltimore. As the neighborhood changed, the settlement decided to focus on teaching arts and dramatics and organizing leisure activities. In 1903 a 19-year-old Eleanor Roosevelt returned from a trip to Europe and became actively involved with the organization. For her contribution she taught immigrant children on the Lower East Side how to dance and stretch. Her experiences with poverty were later passed on to Franklin D. Roosevelt, whom she was dating at the time and who accompanied her on several visits. The organization closed in 1930.

Jane Allen

Collegiate School. Independent day school for boys from kindergarten through 12th grade and the oldest institution in New York City. Efforts to provide education in the Dutch Reformed Church were first made in 1628 by Jonas Michaëlius, the first Dutch Reformed minister in New Netherland. The school opened in 1687 at the first of its 17 successive sites, on Beaver Street between Broadway and Broad Street; it closed from 1776 to 1783 during the British occupation of New York City. Eventually the school settled on West End Avenue in 1892 between 77th and 78th streets. Collegiate became an independent corporation in 1940 but maintained close ties with the Reformed Protestant Dutch Church. In 2010 the school had 640 students.

William Lee Frost

Colles, Christopher (*b* Dublin, 9 May 1739; *d* New York City, 4 Oct 1816). Civil engineer and inventor. After moving to New York City he built the city's first public waterworks (1774–76), which employed a steam engine of his own design. Destroyed before its completion during the British occupation, the system was later adapted by the Manhattan Company. His plan to link the Hudson River with the Great Lakes by way of the Mohawk River (1785) is regarded as having inspired the Erie Canal. He drew the routes leading north and south from New York City in *A Survey of the Roads of the United States of America* (1789), the first comprehensive mapping of the nation's highways. He was also the first superintendent of the New York Institution (1816), also known as the Old Almhouse. Although Colles died impoverished, his friend John Pintard arranged for him to be buried at St. Paul's Chapel.

Gerard Koeppel

Collier's. Weekly magazine. Launched in 1888 by Peter Collier in New York City, it soon became a leading popular magazine, specializing in muckraking and the work of such writers as Henry James and Richard Harding Davis and of such artists as Frederic Remington and Charles Dana Gibson. The magazine was commended for its reportage of World War II, notably that of Ernest Hemingway and Quentin Reynolds. Members of the editorial staff included Theodore H. White and George J. W. Goodman (who later wrote

under the pseudonym Adam Smith). After the war the magazine declined under ineffective management. In the early 1950s it lost 40 percent of its advertising, and although circulation reached a peak of four million, *Collier's* ceased publication in December 1956. It was perhaps the first major casualty of the growing influence of advertising on magazines.

Ashbel Green

Collins, Ellen (*b* ?31 Dec 1828; *d* New York City, 8 July 1912). Housing reformer. She came from a Protestant background and was a member of the New York Mission Society and the Association for Improving the Condition of the Poor. During the 1880s she bought and repaired four dilapidated dwellings, known as rookeries, on Water Street on the Lower East Side and organized model tenements; these were rented to working-class tenants who were held to a strict code of moral behavior. She limited her profit to 6 percent in this venture and along with Olivia Dow and Edith Miles introduced tenement reforms that were adopted by the more systematic limited-dividend housing programs of corporate philanthropists in the 1890s.

Joel Schwartz

Collins Line. Passenger ship line. It was formed in 1850 by Edward Knight Collins (1802–78), an operator of sailing ships, and had five luxury liners. One of these, the *Baltic*, won a prize in 1852 for its speed in crossing the Atlantic. Two other ships were lost: the *Arctic* sank in a collision off Newfoundland that cost many lives, including those of Collins's wife and two children, and the *Pacific* vanished en route from Liverpool to New York City. The Collins Line ceased operations soon after the federal subsidy for transporting mail was withdrawn in 1857, owing to Southern opposition.

Frank O. Braynard

Collyer brothers. Collectors and recluses. Langley Collyer (1886–1947), a concert pianist, and his brother Homer (1883–1947), a former admiralty lawyer who had been blinded and paralyzed by a stroke in the early 1930s, spent their retirement barricaded in a dilapidated brownstone at Fifth Avenue and 128th Street in Harlem. They had no gas, water, electricity, or sewer connection; admitted no one to the house; had only an old crystal set radio for contact with the outside world; and never disposed of anything. Langley explained to an acquaintance that he kept thousands of old newspapers in the house because Homer would want to read them when he regained his sight, and that he had 14 grand pianos because Homer liked to hear him play. On 21 March 1947 the police received a mysterious telephone call reporting that Homer had died in the house. Officers were dispatched to the scene only to find that all the doors and windows were blocked. After many attempts they were able to break through an upper-story window; they found the house filled with rats and honeycombed with passages between piles of junk. Homer's body was found in an upstairs room, but there was no sign of Langley, and rumors circulated that he was still inside the house hiding. The investigation received extensive coverage in the local press, and crowds gathered to catch a glimpse of Langley Collyer or at least his fantastic collections. After clearing out the house for several weeks the police discovered the body of Langley, who had apparently triggered one of many booby traps he had set for thieves who he believed were plotting to break in; he had died of heart failure after a suitcase, three breadboxes, and several bundles of newspapers fell on him, and Homer had died of starvation several days later. In addition to the 14 pianos the police found tons of newspapers, several old chandeliers, many cats, and the chassis of an old automobile in the basement.

Jonathan Aspell

Colón, Jesús (*b* Cayey, Puerto Rico, 1901; *d* New York City, 1974). Community activist and writer. Colón spent his early years in Cayey, the birthplace of the Socialist Party in Puerto Rico. In 1917 he moved to New York City, where he became a columnist for several newspapers, including *The Daily Worker, La Vida Obrera,* and *Gráficio.* He was active in much of the grass roots political activity of the 1920s and 1930s that involved the Puerto Rican community in the city. He was a founding member of Ateneo Obrero and La Liga Puertorriqueña e Hispana in 1928. During the 1930s, as violence against Puerto Ricans increased, Colón regarded himself as a guardian of the community and reported acts of violence in his columns. He spearheaded a series of exposés, including one reporting police harassment and brutality against community leaders. In the 1940s Colón worked along with the American Labor Party and the Communist Party to organize workers. In 1953 he made an unsuccessful run for public office in New York City under the banner of the Socialist Party. The House Un-American Activities Committee investigated him later in the decade.

Linda Delgado

Colonnade Row. A row of nine attached Greek Revival mansions constructed in 1833 by Seth Geer in Manhattan on the west side of Lafayette Place (now Lafayette Street), just below Astor Place. Originally named La Grange Terrace after the Marquis de Lafayette's country home in France, the row was distinguished by its marble facade, which consisted of 27 Corinthian columns rising from a rustic base. All the stonework was done by inmates of the state penitentiary at Sing Sing. The houses were occupied by several prominent figures, including John Jacob Astor, before it became fashionable to move uptown. In 1902 the five southernmost houses were demolished to make way for an annex to Wanamaker's department store. Four houses remained in the twenty-first century.

Elliott B. Nixon

Colonnade Row, ca *1910*

Colony Club. Social club for women, the first of its kind in New York City. It was formed in 1903 by Florence "Daisy" Jaffray (Mrs. J. Borden) Harriman (1870–1967), who modeled it on clubs for prominent men. With other wealthy women, including Anne Tracy Morgan (1873–1952), a daughter of J. P. Morgan, she raised half a million dollars and commissioned Stanford White to build a luxurious facility at 120 Madison Avenue near 30th Street. Decorated by the well-known designer Elsie de Wolfe, the club had a swimming pool, rooftop garden, gymnasium, squash court, library, card room, cocktail bar, smoking room, dining facilities, reception areas with a musician's gallery, and 10 bedrooms. The 1000 or so members attended lectures, entertained, secured support for charitable causes, and held their daughters' debutante balls at the club. By 1913 more space was needed, and the firm of Delano and Aldrich was engaged to build a new facility at 564 Park Avenue at 62nd Street. This one was more elaborate: its 12 levels contained more bedrooms than the first, as well as a floor of servants' quarters and a room for pets.

Colored American. Weekly newspaper launched in New York City in March 1837 by Samuel Cornish and Philip Bell, a prominent black journalist. It was financially supported by abolitionists and dedicated to the advancement of black Americans. Cornish resigned as the editor in 1839 and was replaced by Charles Bennett Ray, pastor of the Bethesda Congregational Church and an active supporter of the Underground Railroad in New York City. Bell continued his association with the newspaper until it ceased publication in 1842.

THE

CARRIER'S ADDRESS

OF THE

COLORED AMERICAN.

Alike some sadly pleasing dream
Another year has gone,
Or like an ever-onward stream,
Time rolls his billows on.

May joy serene stretch forth her hand,
And wipe away the tear,
From ev'ry face throughout the land,
And hail the new-born year.

Peace crowns each smiling, happy plain,
And sits on ev'ry hill;
She beautifies each mountain chain—
She sings in ev'ry rill.

Now joy, we hope within your doors,
Her happy anthems sings,
While blessings, teaming Plenty pours,
That smiling fortune brings.

Not though the skies should darken o'er,
And pour a flood of wrong
And crime run conq'ring o'er our shore,
As waves our coast along.

Not though the midnight fires glow,
And tell the horrid tale
Of dwellings wrapt in gloom, and wo,
Of Freedom's martyrs slain;

And through the land we hear the wail
Of widows reft and lone,
And on the heavy burden'd gale,
Shall come the orphan's groan.

Those dark'ning clouds shall never hide
Or dim the sun-like blaze
That Freedom in her glory's pride,
Flings on the despot's gaze.

The twink'ling stars old time may see,
Down from their orbits fall;
And moon, and sun, run wild and free,
And crush this earthly ball.

But when the earth no more shall roll
And all the spheres retire,
Still holy Truth fair Freedom's soul
Shall glow with living fire.

New-York, January 1, 1838.

"The Carrier's Address of the Colored American," poem for the New Year, 1838

Colored Home and Hospital for the Sick, Aged and Indigent. A charitable institution for blacks founded in 1839 by the Society for the Relief of Worthy Aged Colored Persons (a Quaker women's organization). Initially called the Colored Home, it housed, according to its own literature, "respectable, worn out colored servants." In the mid-1840s the commissioner of almshouses authorized it to shelter all sick and destitute blacks in the city, and a facility was constructed on First Avenue between 64th and 65th streets with a grant of $10,000 from the state legislature. This included not only a home for the aged and infirm but a men's hospital, women's hospital, lying-in hospital, nursery, "house of industry," chapel, and school. Children, the sick, and the destitute of all ages were received, excluding only the insane and those afflicted with smallpox. Among the first occupants were a number of retired black sailors who had been denied admission to the city almshouse and Sailors' Snug Harbor despite having contributed to the mariners' fund. During the 1850s there were 200 beds, enough to house virtually all the city's sick black population. By paying the weekly fee of 60 cents charged to each resident, the city contributed 80 percent of all revenues. In 1872 the name was changed to the Colored Home and Hospital for the Sick, Aged and Indigent. The institution expanded its capacity in the 1890s to 300 beds and began charging its patients fees and accepting voluntary contributions; eventually public funds accounted for only about 30 percent of annual income. In 1898 the home and hospital moved to 141st Street and Southern Boulevard in the Bronx; outpatient dispensary services were added, and the Training School for Colored Nurses opened as the first formal nursing school for black women in the country. Because the Bronx was then predominantly white (most residents were recent immigrants), the move meant that the institution became distanced from the blacks whom it was originally intended to serve. In 1902 it began to admit white patients and was

renamed the Lincoln Hospital and Home. The old-age home continued to operate as an institution for blacks (until 1927), as did the nursing school (until the early 1970s).

Colored Orphan Asylum. School and shelter for black children opened in 1836 by Mary Murray and Anna Shotwell. It was managed solely by women for more than a century and attained celebrity before the Civil War as a model institution. Fewer than one-third of the asylum's inmates were orphans, and by about the age of 12 most were returned to their parents or placed in positions as farm laborers or domestic servants. After its building at Fifth Avenue between 43rd Street and 45th Street was destroyed by a mob during the draft riots (1863), the asylum was rebuilt in 1867 at 143rd Street and Amsterdam Avenue. In 1907 facilities were constructed in Riverdale according to the "cottage plan," a reform of the Progressive era that reorganized large, dehumanizing philanthropic institutions into campuses of smaller, homelike "cottages." The first black member of the board of directors was appointed in 1939. In 1944 the asylum was renamed the Riverdale Children's Association. After a controversy over conditions in the orphanage was aired in the press, it was decided in 1946 to discontinue institutional care and concentrate on foster care and dispersed small-group settings. The campus in Riverdale was sold to the Jewish Home for the Aged. It moved to Riverside Drive and 168th Street, changing its name to the Westside Center for Family Services. In March 1988 the Westside Center merged with Harlem–Dowling Children's Services.

Coltrane, John (William) (*b* Hamlet, N.C., 23 Sept 1926; *d* New York City, 17 July 1967). Saxophonist and composer. He grew up in Philadelphia and played in various groups before moving to New York City in 1955. During the next four years he became prominent as the tenor saxophonist in the small groups of Miles Davis and Thelonious Monk. He lived from 1957 to 1959 in an apartment on the second floor of 203 West 103rd Street in Manhattan and from 1959 to 1963 at 116–60 Mexico Street in Queens. He recorded the album *Giant Steps* (1959), his first major album as a musician at the forefront of jazz, and then formed a quartet with the pianist McCoy Tyner, the double bass player Jimmy Garrison, and the drummer Elvin Jones. In the following years his music grew increasingly dissonant. Coltrane became the leading figure of the jazz avant-garde, a circle of musicians based principally in the city who were seeking to overcome what they considered the limitations of bop and its offshoots. He was also the key figure in the resurgence of the soprano saxophone, which had been an obscure instrument in jazz for several years until he took it up in 1960. In his later career he obliterated the boundaries of jazz harmony and often performed solos of unprecedented length. Coltrane's important recordings include *My Favorite Things* (1960), *A Love Supreme* (1964), *Ascension* (1965), and three albums recorded at clubs in New York City—*Live at the Village Vanguard* (1961), *Live at Birdland* (1963), and *Live at the Village Vanguard Again* (1966). More than any other jazz musician of his time he enjoyed a reputation well beyond the usual audience of aficionados.

Peter Keepnews

Columbia Broadcasting System

[CBS]. Television and radio network. It was formed in January 1927 as United Independent Broadcasters, comprising 16 radio stations and operating from the Paramount Building. It was financially unsuccessful until it was bought in September 1927 for $503,000 by William S. Paley, the heir to a cigar fortune, who renamed the network the Columbia Broadcasting System (CBS). He engaged Lowell Thomas in 1930 as the newscaster of the first daily network news broadcast on radio, and Frank Stanton in 1935 to develop methods of surveying audiences. In 1938 he acquired the American Record Company and renamed it CBS Records. Stanton took charge of corporate matters and became president of the network in 1946, a position he held until 1972; Paley continued to make the decisions about programming. Initially CBS had fewer affiliates than the National Broadcasting Company (NBC) because it lacked radio personalities. Paley persuaded Jack Benny, Edgar Bergen, and others to leave NBC and join his network. He also had success with Ed Sullivan, Jackie Gleason, and Lucille Ball. Having less capital than his competitors, he

decided to focus on news programs that were relatively cheap to produce. The network is considered to have originated broadcast journalism. Its leading newscaster was Edward R. Murrow, who during World War II broadcast *This Is London* with a team of reporters that included Charles Collingwood, Eric Sevareid, Howard K. Smith, and Richard C. Hottelet. In New York City Murrow and his producer, Fred W. Friendly, broadcast the first news documentary series on television, *See It Now* (1951–58). The best-known episode of this program, which discussed the activities of Senator Joseph R. McCarthy, aired in 1954. During the 1950s, which were regarded as the "Golden Age" of television, CBS produced *Studio One* and *Playhouse 90* (live broadcasts of dramas and comedies in which well-known actors from the Broadway theater appeared) out of New York City, and it soon had the highest ratings of the three networks. In the 1950s CBS developed its famous "eye" logo. The anchor of the network's evening news program, Douglas Edwards, was replaced in 1962 by Walter Cronkite, who held the position for almost 20 years. In 1965 the company moved its corporate headquarters from 485 Madison Avenue to a new building designed by Eero Saarinen at 51 West 52nd Street; its news division worked out of a renovated dairy at 524 West 57th Street. In 1968 the network first broadcast the news-magazine program *60 Minutes,* which became the longest-running program of its kind.

Between 1962 and 1979 the net annual income of CBS rose from $41.8 million to $200 million, and by 1977 the network was a conglomerate with holdings of $2.5 billion. Its diverse holdings included the baseball team the New York Yankees, the piano maker Steinway and Sons, the toymaker Creative Playthings, and the book publisher Holt, Rinehart and Winston. In 1981 CBS launched a cable television service focused on the performing arts. These businesses proved hugely unprofitable, and the company divested itself of most of them. With the rise of the American Broadcasting Company (ABC) and the Cable News Network (CNN) in the 1980s, profits fell and CBS was no longer the most successful network in television. It was taken over in 1985 by Laurence Tisch, president of Loews Corporation, who closed or sold most of its remaining subsidiary businesses.

In December 2005 Westinghouse Electric Corporation acquired CBS for $5.4 billion. Viacom bought out this company in 2000 at a cost estimated at $37 billion. In 2005 Viacom split off CBS, which once again became a publicly traded company. Beginning in 2008 both Viacom and CBS were controlled by Sumner Redstone.

Columbia Grammar and Preparatory School. Coeducational high school opened in 1764 in Manhattan as the preparatory school for King's College (now Columbia University). Samuel Johnson, the first president of the college, advocated for the school because of his conviction that before entering college a student should be well trained in grammar. The school was affiliated with the university until 1864. It moved several times throughout the city and now occupies four buildings on West 93rd and 94th streets, including a new high school building completed in 2001. As of 2007 enrollment in both schools was 1100.

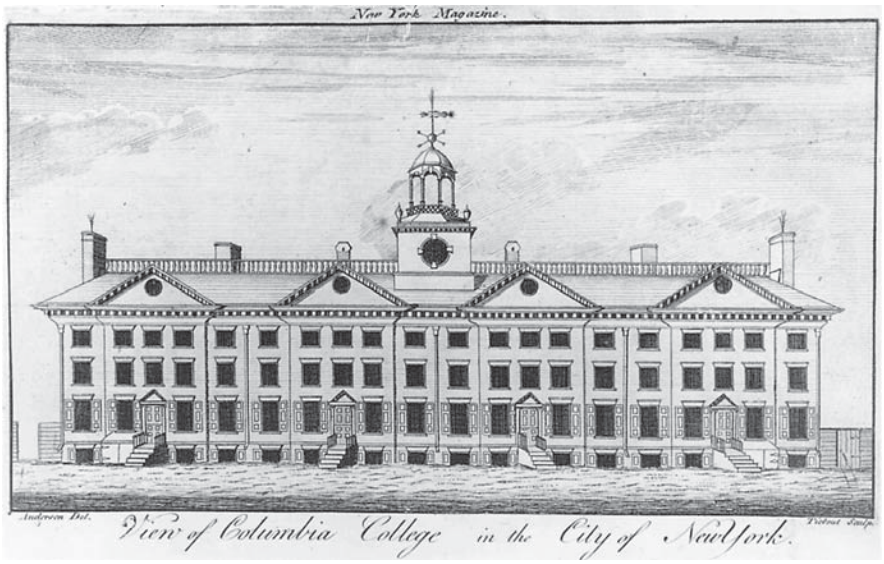
Richard Schwartz

Columbia Journalism Review. Bimonthly magazine published under the auspices of the Graduate School of Journalism at Columbia University. It was launched in 1961 by Edward W. Barrett as a quarterly publication that monitored print and broadcast news in the United States; beginning in 1971 it was published bimonthly. The largest, oldest, and most widely respected magazine of its kind, it is written for professional journalists and is known for the popular features "The Lower Case" and "Darts and Laurels."

Laura Gwinn

Columbia–Presbyterian Medical Center. See New York Presbyterian Hospital.



Columbia University. The oldest, richest, and most famous educational institution in New York City, situated principally on a 36-acre (14.5-hectare) campus in Morningside Heights in Manhattan. Chartered by George II on 31 October 1754 as King's College, it opened with eight students in the vestry room of Trinity Church and moved to its own building in 1760. The first president was Samuel Johnson (to 1763), a convert from the Congregational to the Anglican Church and the first in a line of Anglican and Episcopalian presidents lasting for nearly 200 years. His successor was Myles Cooper (to 1775), a Loyalist under whom the college nevertheless attracted as students such revolutionaries as Alexander Hamilton (1773–75), John Jay (AB 1764), Robert Livingston (AB 1764), and Gouverneur Morris (AB 1768). The college added a medical department in 1767. The college building was a military hospital during the American Revolution, when classes were suspended.

The state legislature, which envisioned the college as part of a projected state university, rechartered the school in 1784 as Columbia College. It returned control of the college to locally based trustees in 1787. Columbia divested itself of its medical department in 1813 by allowing it to merge with the New York College of Physicians and Surgeons. This college itself became a division of Columbia in 1860 during the presidency of Charles King (1849–64). King also supervised a move in 1857 to a campus at Madison Avenue and 49th Street and oversaw the opening of the School of Law (1858) and the School of Mines (1864, now the Henry Krumb School of Mines, part of the Fu Foundation School of Engineering and Applied Science). Other professional schools were added during the administration of Frederick A. P. Barnard (1864–89): the School of Architecture (1881, now the Graduate School of Architecture, Planning, and Preservation) and the School of Library Service (1887), led by Melvil Dewey. The university opened the School of Nursing (1892) during Seth Low's presidency (1890–1901) and affiliated in 1898 with Teachers College

Original building of Columbia College, 1790

(opened in 1889). Columbia favored a broad and "scientific" rather than a narrow and practical brand of professional education. This emphasis caused some controversy: Theodore Dwight, who dominated the law school for 30 years, resigned as its dean in 1891 after a dispute with Low and founded New York Law School. Graduate faculties were established in political science (1880), philosophy (1890), and pure science (1892), and the name of the institution was changed to Columbia University in 1896 (changed again to Columbia University in the City of New York in 1912).

In 1897 the university moved to its current location, a rectangular campus with buildings designed in an Italian Renaissance style by the firm of McKim, Mead and White. Low Memorial Library, a classical Roman building with Grecian detail, became the centerpiece of the new campus. The harmonious design of its undergraduate, graduate, and professional buildings marked the rest of the campus, a symbol of the continuity of liberal and professional education.

Nicholas Murray Butler, president of the university from 1902 to 1945, and professors such as political scientist John W. Burgess spearheaded the move to emphasize graduate and professional schools in the early twentieth century. A prominent figure in local and national politics, Butler oversaw the absorption in 1904 of the New York College of Pharmacy (1831–1976) and in 1905 of the School of Philanthropy (founded 1898, renamed the School of Social Work in 1963), as well as the opening of the Graduate School of Journalism (1912), the Business School (1916, renamed the Graduate School of Business in 1949), the School of Dental and Oral Surgery (1917, merged in 1923 with the New York College of Dental and Oral Surgery, renamed the College of Dental Medicine in 2006), the School of Optometry (1910–56), University Extension (1920, renamed the School of General Studies in 1947), and the School of Public Health (1921, renamed the Mailman School of Public Health in 1999). Butler also liberalized admission and graduation requirements for undergraduates (increasing the number of permissible electives) and made it easier for them to pursue liberal arts and professional degrees simultaneously (an option exercised by more than 60 percent of all students at Columbia College in 1939).

During these same years Columbia became known for a distinctive approach to the social sciences. A belief that events were determined by social forces rather than by a priori laws and that conclusions about human behavior emerged from induction rather than deduction informed the work of John Dewey in education, psychology, and philosophy; James McKeen Cattell in psychology; James Harvey Robinson in history; E. R. A. Seligman in economics; Franz Boas in anthropology; and Charles A. Beard in political science and history. Tensions beset the university during World War I: the Student Army Training Corps was active on campus, and many faculty members worked on military research and propaganda; at the same time Dewey helped to form the American Association of University Professors to protect the academic freedom of faculty members, and Cattell defended the rights of conscientious objectors, for which he was dismissed in 1917 by Butler (prompting the resignation of Beard, who then joined with Dewey and Robinson to form the New School for Social Research in 1919). One indirect result of the war and its propaganda efforts was the introduction in 1919 of a compulsory survey course for undergraduates called Contemporary Civilization, which traced the development of Western thought from Plato to the present. Columbia introduced a complementary course in the humanities in 1937. In 1921 the College of Physicians and Surgeons moved from midtown to Washington Heights and formed an affiliation with Presbyterian Hospital.

During the interwar years Columbia College remained in the university's shadow, although its course in contemporary civilization became widely known and imitated. Several faculty members were active in local, national, and international affairs: philologist John D. Prince served in the New Jersey state legislature and was an ambassador to Denmark (1921–26) and Yugoslavia (1926–33); law professor A. A. Berle was a member of President Franklin D. Roosevelt's "brain trust," as was the economist Rexford Guy Tugwell (who later led the New York City Planning Commission from 1938 to 1940). Economists Seligman and Robert Haig worked for the League of Nations, and the historian Carlton Hayes was ambassador to Spain (1942–45). Nobel Prize–winning physicist Michael Pupin advocated electrification with direct current rather than alternating current, which led to clashes with local utility companies.

Butler worked toward adoption of the Kellogg–Briand treaty and for international reconciliation and was awarded the Nobel Peace Prize in 1931. Many World War II refugees found their way to the university during the 1930s, including sociologist Paul Lazarsfeld. Lazarsfeld founded the Bureau of Applied Social Research at Columbia and undertook important work with Robert K. Merton and members of the Institute of Social Research, which moved from Frankfurt am Main in Germany to a brownstone owned by the university. A number of physicists connected with the Manhattan Project studied nuclear fission at Columbia until the project moved to the University of Chicago in 1942, among them I. I. Rabi, Enrico Fermi, John R. Dunning, Harold Urey, and George B. Pegram (later head of the university's Division of War Research). Literary and cultural critics who became prominent during these years included art historian Meyer Schapiro; literary scholars Lionel Trilling, Gilbert Highet, Mark Van Doren, and Rufus Mathewson; sociologists Daniel Bell and C. Wright Mills; and historians Jacques Barzun, Allan Nevins, and Richard Hofstadter. An upset by the Columbia football team of Stanford University in the 1934 Rose Bowl and frequent demonstrations by left-wing students highlighted a multifaceted campus student life during the 1930s.

After World War II the university introduced area studies programs and in 1946 opened the School of International Affairs

Low Library (center) at Columbia University, 1898

(renamed the School of International and Public Affairs in 1981). By the early 1950s the university was the center of a group of cultural iconoclasts and bohemians known as the beats, whose most important members were Allen Ginsberg and Jack Kerouac. Completion of five buildings with designs strikingly at odds with those of McKim, Mead and White signaled the continued dominance of the professional schools. Dwight D. Eisenhower, president of the university from 1948 until he left for the White House in 1953, was the first head of the university who was not an Anglican or Episcopalian. Columbia opened the School of the Arts (1965) during the administration of his successor, Grayson Kirk (1953–68).

The growing national and international reputation of Columbia stood in contrast to the university's strained relations with its neighbors. Increasingly selective admissions policies worked against applicants from New York City, and the university, the largest owner of real estate in Morningside Heights, was accused of excluding working-class and minority tenants from its residential housing. Many students leveled the same criticisms; they also objected to the role of some professors in secret defense research during the Vietnam War and to a mode of governance at the university that they considered autocratic. These tensions culminated in April 1968 in demonstrations by students against the construction of a new gymnasium in Morningside Park. Demonstrators occupied five buildings, the university called in the police, and many students were arrested. One consequence of the demonstrations was the formation of the University Senate, a deliberative body in which the administration, students, faculty, staff, and alumni are represented.

Columbia College in 1983 became the last division of the university—and the last Ivy League school—to admit women. Affiliated Barnard College (1889), for women only, has its own administration, governing board, and faculty. Columbia faculty members who played prominent roles in the federal government since the 1960s include law professor William Cary (head of the Securities and Exchange Commission, 1961–64), economist Arthur Burns (head of the Federal Reserve, 1970–78, and ambassador to Germany, 1981–85), and political scientist Zbigniew Brzezinski (national security adviser to President Jimmy Carter, 1977–81). Politically prominent university alumni include Barack Obama (president of the United States, 2009–); senators Judd Gregg (R-N.H., 1993–) and Frank Lautenberg (D-N.J., 1982–2001, 2003–); U.S. attorneys general Michael B. Mukasey (2007–9) and Eric Holder (2009–); and New York State governor David A. Paterson (2008–).

Recent university presidents include Andrew W. Cordier (1969–70), William J. McGill (1970–80), Michael I. Sovern (1980–93), George E. Rupp (1993–2002), and Lee C. Bollinger (2002–). In 2003 Bollinger proposed a campus expansion onto a 17-acre (6.9-hectare) parcel in Manhattanville; the university offered housing, open space, and commitments to sustainable development in exchange for community support. Bollinger presided over the university's 250th anniversary in 2004 and announced a $4 billion capital drive in 2006, focused on endowment, physical plant, and scholarships.

In the twenty-first century the university reported the deaths of 107 alumni, family members, and friends of Columbia University during the terrorist attacks of 11 September 2001. Controversies related to Middle Eastern politics preoccupied the campus during middecade, culminating with a September 2007 speech delivered by Iranian prime minister Mahmoud Ahmadinejad, preceded by Bollinger's frosty remarks.

In addition to 65 buildings on its Morningside campus, Columbia sites include the Columbia University Medical Center and the Audubon Biomedical Science and Technology Park in Washington Heights; the Lamont–Doherty Earth Observatory in Palisades, New York; Nevis Laboratories in Irvington, New York; and Reid Hall in Paris, France. The university is also the site of more than 100 centers and institutes for specialized research. Its endowment was $7.2 billion on 30 June 2007—the seventh-largest endowment among U.S. universities. In autumn 2006 Columbia enrolled 24,644 students and had 263,137 living alumni. Columbia College had 4212 students in 2006 (51.7 percent women). The university's 25 libraries held 9.3 million volumes, 6.2 microform units, 28 million manuscript items, and 600,000 rare books, making the system the seventh largest in the United States. As of 2010, 79 Nobel laureates studied or taught at Columbia. Recent faculty recipients include Barack Obama (Peace, 2009), Martin Chalfie (Chemistry, 2008), William Vickery (Economics, 1996), Horst Stormer (Physics, 1998), Robert Mundell (Economics, 1999), Eric Kandel (Medicine, 2000), Joseph Stiglitz (Economics, 2001), Richard Axel (Medicine, 2004), Edmund Phelps (Economics, 2006), and Orhan Pamuk (Literature, 2006).

Columbia University Press. University press formed in 1893 by 10 trustees of Columbia University. It was the first university press in New York City and one of the first in the United States. The press publishes both scholarly works in a wide range of fields and books of general interest. Its best-known publications are *Granger's Index to Poetry* (1904–, first published by Columbia in 1945) and the *Columbia Encyclopedia* (first published 1935; 6th edn 2000). Columbia University Press is located at 562 West 113th Street in Manhattan.

Eileen K. Cheng

Columbus Circle. Site in Manhattan from which distances to and from New York City are measured, lying at the intersection of Broadway, Central Park West, Eighth Avenue, and 59th Street. On 12 October 1892 the area was named to honor Christopher Columbus after local Italian Americans donated a rostral column of Carrara marble 70 feet (21 meters) high; Gaetano Russo's statue of the explorer was placed atop the column

Columbus Circle, ca *1910*

in 1894. Early in the twentieth century subway service was installed below the monument, but incessant traffic prevented development of the new theater district predicted by leaders such as William Randolph Hearst. In 1913 a monument to those lost on the battleship USS *Maine* (Harold Van Buren Magonigle, sculptures by Attilio Piccirilli) was constructed at the Merchants' Gate into Central Park. Both the column and the monument were refurbished before centennial celebrations in 1992. Area attractions included Reisenweber's Café, where the original Dixieland Jazz Band debuted in 1917, the Colonnade Building, and the Park Theatre, but visitors rarely entered the area west of the circle known as San Juan Hill. Urban redevelopment razed much of that ghetto in the 1960s, and the circle was for a time dominated by the New York Coliseum (Leon Levy and Lionel Levy, 1956), the unique Huntington Hartford Gallery of Modern Art (Edward Durell Stone, 1965; renovation Brad Cloepfil, 2008), and the Gulf and Western Building (Thomas Stanley, 1970; renovation Costas Kondylis and Philip Johnson, 1997). Another cycle of redevelopment began in the 1990s, when the Gulf and Western Building became the Trump International Hotel and Tower, and in the early twenty-first century the Time Warner Center (David Childs, 2003) was built on the former site of the New York Coliseum. Cultural institutions include the Rose Theater and Jazz at Lincoln Center (both inside the Time Warner Center), while the former Huntington Hartford Gallery in 2007 became the Museum of Arts and Design. A 2005 redesign of the circle created a fountain and quiet pedestrian sanctuary around the statue of Columbus.

George J. Lankevich

Columbus Hospital. Original name of Cabrini Medical Center.

Columbusville. Name formerly applied to a section of Maspeth in northwestern Queens. It was developed by Edward Dunn during 1854–55 on 69th Place (old Fifth Avenue) between Grand and Caldwell avenues and was soon absorbed by Maspeth, which lay a few blocks away. The name fell into disuse in the 1890s.

Vincent Seyfried

Comden and Green. Team of lyricists. Its members, Betty Comden (*b* Brooklyn, 3 May 1918; *d* Manhattan, 23 Nov 2006) and Adolph Green (*b* New York City, 2 Dec 1915; *d* New York City, 24 Oct 2002), met in the 1930s and formed a nightclub act called the Revuers that also included Judy Tuvim (later known as Judy Holliday) and Alvin Hammer and that wrote its own material because it could not afford to pay copyright fees. The two wrote the lyrics for Leonard Bernstein's musicals *On the Town* (1944) and *Wonderful Town* (1952), which won a Tony Award. They also won the award for *Hallelujah, Baby* (1969), *Applause* (1970), and *On the Twentieth Century* (1978). Their work was noted for its elegance, enthusiasm, and wit.

Robert Seder

Commandment Keepers Ethiopian Hebrew Congregation. Synagogue located at 31 Mount Morris Park West at 123rd Street in Manhattan. It was established in 1930 under the leadership of a Nigerian-born rabbi Wentworth Arthur Matthew, who immigrated to the United States from the British West Indies. The followers of this sect, many of West Indian heritage, believe that people of Ethiopian descent compose one of the lost tribes of Israel. The congregation has been housed at the Marcus Garvey Park location since 1962.

Sharon Wilkins

Commentary. Monthly journal launched by the American Jewish Committee in November 1945. Elliot E. Cohen served as editor from 1945 to 1959, and the art critic Clement Greenberg as associate editor from 1945 to 1957. Early contributors included such prominent intellectuals as Harold Rosenberg, George Orwell, Reinhold Niebuhr, Hannah Arendt, Arthur M. Schlesinger, Jr., Martin Buber, John Dewey, Daniel J. Boorstin, Philip Roth, Lionel Trilling, and Albert Camus. Initially considered liberal, the journal gradually became more conservative under Norman Podhoretz, who served as editor-in-chief from 1960 until his retirement in 1995, when he became editor-at-large. By the early twenty-first century, it was considered one of the key bastions of neoconservatism. The magazine is no longer associated with the American Jewish Committee. *Commentary* has editorial offices at 165 East 56th Street.

Melissa M. Merritt

commercial banks. Commercial banking in New York City had its beginnings less than seven months after the British evacuation. Favored by location, leadership, and legislation, the city developed into the world's largest commercial banking center by the mid-twentieth century.

1. To 1900

The Bank of New York, the first in the state and today the oldest surviving bank in the nation, opened on 9 July 1784. It has occupied the corner of Wall and William streets since 1798. It received a charter on 21 March 1791. By then its deposits aggregated 50 percent more than its bank-note liabilities. In 1792 the First Bank of the United States (1791–1811) located a branch on Wall Street. Nathaniel Ward organized what may have been the first private (unincorporated) bank in 1796. The Manhattan Company bank was sponsored by Republicans as a counterweight to the Federalist-dominated existing banks. Merchants Bank opened on 2 July 1803 but had to wait until March 1805 for a charter because of a strong opposition from other city banks. A benevolent society for poor members of more than 30 trades, the General Society of Mechanics and Tradesmen, received a charter for the Mechanics' Bank in 1810. Directors of Jersey Bank in Jersey City formed the Union Bank in 1811. Congress refused to renew the charter of the First Bank of the United States. Its closing in 1811 led to the formation of the Bank of America, City Bank (today Citibank), and the bank of the New York Manufacturing Company. The city had eight chartered banks by 1812, all located on Wall Street. Franklin Bank, located on Franklin Square, opened in 1818. These banks could receive deposits, deal in coin and bullion,

Interior of the National Park Bank at 214 Broadway, ca *1910*

make loans by discounting merchants' notes and accepting bills of exchange, facilitate payments, and issue banknotes, which served as currency. Private banks were forbidden to issue banknotes but otherwise performed the same functions as incorporated banks. They dominated foreign-exchange transactions in the early nineteenth century.

As the local economy expanded, new banks formed. Almost one-third of the loans to the U.S. Treasury during the War of 1812 came from New York City banks. These banks resented the branch of the Second Bank of the United States at 65 Broadway (1817), which they regarded as an egregious incursion against their business by the federal government. The branch eventually relocated to Wall Street, where it functioned until 1836, when the Philadelphia bank's federal charter expired. Thereafter, the largest bank in the United States was New York City–based until the mid-twentieth century. In the 1820s eight banks were formed, beginning with the North River Bank (1821). In 1824 Fulton Bank and the Chemical Bank on Broadway opposite City Hall Park were authorized. The latter started out as an affiliate of the Chemical Manufacturing Company, a producer of medicines and dyes. The Delaware and Hudson Canal Company began operations in 1824; the Bank of the New York Dry Dock Company received a perpetual charter in 1825. The firm of James G. Brown opened a private bank in October 1825; in 1931 the name was changed to Brown Brothers Harriman, the sole remaining private bank in the city. By the 1830s New York had become the nation's largest banking center. Banks in upstate New York as well as the Midwest kept balances on Wall Street, which they used to clear banknotes and checks. During the spring and summer deposits flowed to the city; in the autumn money was withdrawn to move crops to market. Call loans, introduced in the 1830s, became a fixture of the New York money market by the 1850s. In 1837, 78 percent of all bankers' deposits were in nine of the city's 23 banks; by 1846 eight of the 24 held 82 percent. Until 1838 bank charters were issued on the basis of political bargaining in Albany. As a result only 40 of 3170 shares of the Seventh Ward Bank (1833) were sold to the general public; one-third went to friends of the commissioners distributing the shares, and the rest to state officials. The landmark General Banking Law of April 1838 opened the field, providing free banking. A bank charter no longer required a special act of the legislature. Many other states and even the federal government copied the act. North American Banking and Trust Company was the first to be organized under the new law (16 July 1838), followed by 15 other free banks in the next two years.

By the 1840s the major city banks were attracting deposits from about 600 of the 700 banks in the nation. In exchange, various services were rendered. Financial panics prevented bank customers from converting their claims into specie on several occasions. This lasted from May 1837 to April 1838 and for two months beginning on 13 October 1857. New York had 5.1 percent of the nation's banks and 11.2 percent of its total assets in 1850. To ensure the smooth functioning of check and note collection among the numerous local banks, the New York Clearing House Association opened on 11 October 1853. Fifty-one city banks and the recently organized National Bank of Brooklyn joined at the start. The clearinghouse's usefulness was demonstrated during the panic of 1857, when loan certificates were issued to the member banks to quell the crisis.

In August 1861 New York bankers joined with colleagues in Boston and Philadelphia to lend $150 million to the Union cause. Restrictions on cash payments went into effect in December 1861 and were not lifted until April 1862. Specie payments were suspended on 30 December 1862 and were not resumed until 1 January 1879. Gold was now traded as a commodity. In the autumn of 1864 the Bank of New York took charge of examining, bagging, and sealing gold coins on behalf of the Board of Gold Dealers. The private bank of J. P. Morgan opened in 1862 and developed into a major force in American business history.

The National Currency Act of February 1863 made it possible to obtain a bank charter from Washington. Eleven national banks soon organized in the city: the First, Second, Third, Fourth, Fifth, Sixth, Eighth, Ninth, and Tenth National Banks as well as the Central National Bank and the National Currency Bank. At the outset the Clearing House would not admit the First National

Bank and refused to exchange its banknotes. Only one state bank converted to a national institution: the New York Exchange Bank (1864). Seeking to attract all state-chartered banks to the national system, Congress amended the National Currency Act in 1864, making New York the sole central reserve city where national banks throughout the country could redeposit a fraction of their required reserves. New York retained its leading position even after Chicago and St. Louis also became reserve cities in 1887. The Bank of Commerce, the largest in the United States, became a national bank in January 1865, followed by Seventh Ward Bank in April (renamed the Seventh National Bank) and eventually 43 other Albany-chartered banks. Of the state banks opened before the war, only four never converted to national bank status: Peoples, Oriental, Bank of Manhattan, and Corn Exchange. By 1866 there were 11 state banks; except for the Bank of America, Bank of Manhattan Company, Nassau Bank, and Corn Exchange, they were small, with capital under $1 million.

In 1864 two newly organized banks ran counter to the national bank trend: New York Exchange Guaranty and Indemnity Company and the New York Gold Exchange Bank. In 1867 the state chartered Stuyvesant Bank and the Eleventh Ward Bank (which absorbed Dry Dock). A state law made it easy for national banks to convert to a New York charter, and three did so in 1869. That same year no fewer than five new state banks opened in the city.

The first trust company, Farmers' Fire Insurance and Loan Company, opened in 1822. Renamed Farmers' Loan and Trust Company in 1836, it was bought by National City Bank in 1929. New York Life Insurance and Trust Company appeared in 1830; it was acquired by Bank of New York in 1922. These institutions focused on executing and administrating trusts but over time encroached on the traditional activities of commercial banks. United States Trust (1853) became a leading firm. By the early 1870s, the dozen trust companies that had been established began to offer serious competition to the city's commercial banks. Trust companies were not then subject to legal reserve requirements and (unlike banks) offered interest on deposits.

By 1876 there were 70 banks, 15 of which lined Wall Street; one was as far north as 123rd Street and Third Avenue. It was natural that the nationwide organization of the industry, the American Bankers Association, would select Manhattan for its headquarters. Comptroller of the Currency John Jay Knox hailed New York as the "clearinghouse of the western world" in 1882. In 1883 there were 506 private banks in the city. In 1885 Bank of America's capital reached $8 million, the largest in New York. The first bank merger in the city produced Market and Fulton National Bank (1887), which merged with Southern National Bank (1896). The Twenty-third Ward Bank (1888) was the first commercial bank in what became the borough of the Bronx a decade later. Also in 1888 the Bank of Harlem and Hamilton Bank opened in northern Manhattan; they merged in 1892. By 1890 New York City had more state banks and trust companies than national banks. Some were associated with particular trades and industries. Central National Bank (1863) catered to dry-goods firms. Market National Bank (1852) was involved with shipping and the metal and stone trades. Shoe and Leather Bank (1852) focused on hardware and other "conservative trades." Hide and Leather National Bank opened in 1891 and changed its name to the National Bank of the United States in New York (1902), merging to become the Western National Bank of the City of New York in February 1903.

The Bank of New York opened the first foreign-exchange department in 1897; in 1902 National City Bank advertised that it could pay out any sum in any city worldwide within 24 hours. In 1887 the Jarvis–Conklin Mortgage Trust Company opened a London branch—the first foreign office of a New York institution. In 1914 only four city banks had branches overseas. Meanwhile a few Canadian banks opened branches in New York toward the end of the nineteenth century.

Financial crises interrupted growth. After Marine National Bank closed in 1884 a stock market panic nearly resulted in a suspension of cash payment. In 1893 most of the city's banks suspended such payments, which brought the premium for currency to 4 percent. By 1900, as more prosperous times returned, the city's banks held 25.4 percent of the country's banking resources, though accounting for only 1.2 percent of the nation's banks.

2. After 1900

Trust companies offered increasingly stiff competition to commercial banks: trust deposits increased 150 percent between 1897 and 1902, while bank deposits grew only 40 percent. National banks, barred by law from offering trust services until 1914, organized Bankers Trust Company (1903). Banks began to establish affiliates that enabled them to underwrite securities. First National Bank formed First Security Corporation (1907). National City Bank's National City Company (1911) became the leading investment bank by the end of the 1920s. By 1910 the city's national banks had 15 percent of the loans made by all U.S. national banks.

As early as 1891 the Knickerbocker Trust Company (234 Fifth Avenue) opened a branch on 18 Wall Street, possibly the first bank branch in the city. Under a law enacted in 1898 chartered banks could establish branches throughout the five boroughs, which by then composed Greater New York. By 1905 there were 15 banks and nine trust companies in the four outer boroughs; the oldest included Brooklyn Bank of Long Island (1824), Brooklyn Bank (1832), Mechanics Bank (1852), Staten Island Bank (1838–42), Flushing and Queens County Bank (1873), the Bank of Staten Island (1886), First National Bank of Staten Island (1888), the Bank of Jamaica (1889), and Citizens Trust Company of Brooklyn (1905). Citizens acquired Manufacturers National Bank of Brooklyn (opened 1853) in 1914 and renamed it Manufacturers Trust Company in 1915. The latter relocated its headquarters to the Wall Street area. The spread of branch banking was accompanied by 148 mergers within the city between 1899 and 1925.

The Federal Reserve Act of 1913 aimed to diminish the power and influence of New York's great banks nationally. The country was divided into 12 Federal Reserve districts. The Federal Reserve Bank of New York opened 16 November 1914 with only 33 national banks as members. The first state-chartered bank to join, Broadway Trust Company, waited until the summer of 1915, followed by Corn Exchange Bank (1916) and Guaranty Trust (1917). Wartime patriotism led others to become member banks. The district bank in New York dominated monetary policy making nationwide under Benjamin Strong, governor of the institution from 1914 until his death in 1928.

Restrictions on foreign exchange and gold exports by World War I combatants helped turn New York into the main source of financing for American foreign trade and most European trade with Latin America and Asia. Deposits from foreign governments and investors accumulated in New York, and by 1917 the city surpassed London as a financial center. National City Bank had 35 branches overseas, which grew to 83 by 1930. Many foreign banks opened subsidiaries in New York: the French–American Banking Corporation (1919), Anglo–South American Trust Company (1923), and J. Henry Schroder Banking Corporation (1923).

In 1923, 33 of the 100 largest American banks were in New York. Of the 93 banks headquartered in Manhattan in 1916, 40 were south of Fulton Street. Ninety-seven banks merged between 1926 and 1930, including 29 in 1929 alone. Most were small neighborhood banks; among the larger were Guaranty Trust Company's acquisition of National Bank of Commerce (1929) and Chase National Bank's merger with Equitable Trust to form what was for a time the largest bank in the world. At 927 feet (282 meters), the Bank of Manhattan skyscraper (40 Wall Street) was briefly the tallest building in the world (1929). That year the city's banks held just under 23 percent of the nation's banking assets and had a combined total of 630 branches in the five boroughs. Corn Exchange Bank led with 67,

Ladies' department at the New Amsterdam National Bank, 1906. To encourage gentile women to do business in what was essentially a male institution, banks provided separate areas to make them feel more comfortable

followed by Bank of Manhattan, 64; Bank of United States, 58; Manufacturers Trust, 45; National City, 37; Bank of America, 34; and Public National, 33.

The Great Depression brought significant changes. By 1930, 79 of the 100 largest U.S. banks were outside New York. National City Bank took over Bank of America in November 1931; Manufacturers Trust's acquisition of Chatham and Phenix National Bank early in 1932 was the last significant merger for the next 20 years. To cut costs, branches were closed; by 1932 the number had declined to 552. Cash payments were suspended from 4 March to 13 March 1933, this time under an order from the White House.

During the stock market booms of the 1920s securities affiliates such as Chase Securities (1917), the Guaranty Company (1920), and the Bankers Company of New York (1928) enjoyed tremendous success. Congressional hearings after the stock market crash of 1929 uncovered questionable actions by security affiliates, especially by National City and Chase. Some banks dissolved their affiliates even before all member banks were required to do so by the Banking Act of 1933 (the Glass–Steagall Act).

During World War II, the city's banks were major purchasers and promoters of Treasury securities. In 1940 they had more than 30 percent of U.S. deposits. The financial district remained south of Chambers Street, where 37 of 51 Manhattan banks had their headquarters. Interbank balances declined relative to other cities. Chase National Bank was the largest in the city until 1948, when it was surpassed by National City. The amount of American bank assets held in the city dropped below 19 percent in 1949. In 1954–55 major Wall Street banks combined with other commercial banks known for their large neighborhood networks. Manufacturers Trust led with 112 offices; Chemical merged with Corn Exchange to form Chemical Corn Exchange, which had 98; Chase and the Bank of Manhattan Company formed Chase Manhattan Bank, which had 96 offices and became the city's largest bank once again; First National City, combining First National Bank and National City (1955), had 73 offices; and after merging with Public National, Bankers Trust had 42. At this time half of the commercial loans made by the city's banks went to borrowers outside the metropolitan area. Chase Manhattan introduced a consumer charge plan in the city in 1958 but abandoned it after a few years. In 1928 National City had been the first major bank to offer consumer loans. Its success encouraged banks all over the United States to finance household spending on autos and major appliances after 1945.

At the end of 1958, 26 foreign banks had agencies, and 41 had representative offices in the city. National City, Chase Manhattan, Morgan Guaranty, Bankers Trust, and Hanover had, among them, 64 foreign branches in 1959. Meanwhile, in 1961 foreign banks were authorized to open branches that accepted deposits in the United States. About one-fourth of the city's bank employees worked in its 366 foreign banks. In 1960, at long last, city banks were permitted branches in adjacent Nassau and Westchester counties. Nevertheless, city banks had only 15 percent of the nation's bank deposits in mid-1965, a decline from about 17 percent in 1959.

In 1961 the city's financial center moved from lower Manhattan to midtown, as Citibank relocated its headquarters to 399 Park Avenue (at 53rd Street) and other important banks such as Chemical, Manufacturers Hanover, and Bankers Trust opened offices nearby. In February 1961 First National City became the first major bank to pay interest to large business depositors, offering negotiable certificates of deposit (CDs) at a rate competitive with those of Treasury bills. The innovation spread throughout the United States as banks sought to attract funds for lending purposes. Chase Manhattan formed the first small-business investment company in 1962. Major banks were now cultivating small businesses, as sizable firms turned increasingly to securities for financing.

Eurodollar deposits in overseas banks, with London as the center, denominated U.S. dollars. Eurodollar loans had begun to appear in the late 1950s; they increased greatly over the next decade as a result of a federal tax on long-term bank loans to foreigners and regulatory restrictions on foreign-credit extensions, which were introduced in 1965 as part of an attempt to correct American balance-of-payment difficulties.

During the late 1960s major institutions introduced bank credit cards: the Everything Card (First National City, 1967); Master Charge, later renamed Master Card (Manufacturers Hanover, Chemical, and Marine Midland, 1968; First National City, 1969); Unicard (Chase Manhattan, 1969); and Bank Americard, later renamed Visa (Chase Manhattan, 1972). Chemical Bank installed the first automated teller machine (ATM) in 1969. Citibank launched a program of covering its New York market with cash-dispensing machines in the fall of 1975. With the exception of Citibank, all the major banks in New York City formed an ATM consortium called the New York Cash Exchange into the 1970s. By the late 1980s almost every bank in the city offered ATM facilities.

Bank holding companies could operate nonbank financial subsidiaries devoted to such services as mortgages and consumer lending anywhere in the country. In October 1968 the owners of First National City Bank exchanged their stock for shares in a bank holding company, First National City Corporation (now Citicorp), with the aim of becoming the leader in global finance. By 2006 Citicorp had more than 2000 subsidiaries in more than 100 countries. Chase shareholders became owners of Chase Corporation in June 1969. A merger with Morgan Guaranty in

2000 created JPMorgan Chase and Company, which described itself as "a leading global finance services firm with operations in more than 50 countries." Within a few years all the nation's major banks had become subsidiaries of bank holding companies.

In 1975 New York banks held about 10 percent of the city's $12 billion municipal debt. Deficit spending in the 1950s and 1960s had brought indebtedness to such a level that lenders were no longer willing to finance the city. (See BUDGET.) At the height of the city's fiscal crisis during the summer of 1975, leading banks exchanged short-term notes for bonds issued by the Municipal Assistance Corporation. When the city again faced default that autumn, Ellmore Patterson of Morgan, Walter Wriston of Citibank, and David Rockefeller of Chase sought a federal loan or loan guarantee; Congress extended to the city an unprecedented $2.3 billion line of credit. The municipal debt was refinanced and timely payments made.

Manhattan's banks focused increasingly on foreign markets, where they were permitted to engage in all aspects of investment banking. In 1977 Chase extended more credit abroad than in the United States. To enable American financial institutions to compete in overseas Eurocurrency markets, the New York Clearing House proposed international banking facilities (IBFs); approved in December 1981, by 1989 they numbered 527. Half of these were in New York City and belonged to 150 American banks, 49 Edge Act corporations (subsidiaries of American banks engaged exclusively in international banking), and 37 foreign banks and agencies. Although IBFs had little direct effect on employment, they helped to stem the growth of offshore shell branches in the Caribbean.

As Europe and Japan prospered during the 1980s the city's banks ceased to lead in international lending. Meanwhile, between 1975 and 1989 the number of foreign banking facilities increased from 68 to 255; these held 74 percent of total assets in the United States. Commercial bank employment in the city increased from 5.2 percent in the private sector in 1983 to 5.7 percent in 1987 but declined soon after. By 1984 Chase Manhattan had 331 branches in every major market in New York State and by 1985 operated in 71 countries, which were the source of half its deposits and loans. Citicorp became the country's largest bank, and its holding company the ninth largest in the world; in 1987 Citicorp, Chase, Morgan, and Bankers Trust had more than half their assets overseas. Bank of New York merged with Irving Trust in 1989, the largest local merger to that time. In July 1991 Chemical Bank and Manufacturers formed the third largest banking organization in the United States, then merged into Chase in March 1996. A consortium of European banks acquired the failed Franklin National Bank in October 1974; Citibank bought European American Bank (EAB) in 2001, attracted by EAB's significant presence on Long Island. Deutsche Bank, one of the world's largest, bought Bankers Trust in 1999, as part of the German bank's plan to become a global investment bank. The most significant consolidation in recent years was the 1998 merger of Citicorp and the Travelers Group to form Citigroup. Citi led the move to modify the Gramm–Leach–Bliley Act of 1999, making it possible for Citi to keep its Travelers insurance and investment-bank holdings. The banking industry could now engage in universal banking on the European model. Repeal of the 1933 Glass–Steagall Act permitted commercial banks to be combined with investment banks, a long sought-after goal. By the early 2000s JPMorgan Chase and Citigroup were the leaders in investment-banking revenues, ahead of Morgan Stanley, Merrill Lynch, and especially Goldman Sachs, which had earlier dominated the industry.

In the early 2000s, leading banks moved credit and consumer-lending subsidiaries to states offering less restrictive regulations and lower taxes, especially Delaware and South Dakota. As part of the global financial crisis that began in 2007 and continued for several years, some financial institutions, such as Merrill Lynch and Lehman Brothers, either merged or went out of business entirely. Other giant institutions such as Citgroup and AIG needed massive assistance from the federal government in the form of loans; in some cases such as Citigroup, the government took part ownership.

commercial fishing. Cod, mackerel, bluefish, and striped bass were once plentiful in the waters surrounding New York City, as were shad, sturgeon, and eels in nearby bays and the Hudson River; there were also abundant lobsters and oysters. For decades a fish known as menhaden that was valued for its oil rather than its meat was also caught in the metropolitan area. Although most East Coast whaling was done off Nantucket and New Bedford, Massachusetts, whaling vessels sailed from the Port of New York as early as 1768, and between 1792 and 1877 at least 49 whaling ships were based there, making extended voyages to grounds in the Pacific and Indian oceans. During the colonial period shallow water off Communipaw (now in Jersey City, New Jersey) was the local center for oystering and Upper New York Bay was the center for fishing, but both areas ceased to be used in the early nineteenth century because of depleted stocks and increasing pollution. About this time the Fulton Fish Market on the East River in lower Manhattan became the regional distribution center for seafood. From March to June mackerel was

brought there by a large fleet of schooners from New England that operated between North Carolina and eastern Long Island. Farmers living near the shore supplemented their income by fishing and delivered their catch to the market themselves or loaded it onto steamboats that operated between local landings and Manhattan. A number of styles of net were used: seine nets hauled ashore by teams of men or horses; moored, cylindrical "fyke" nets; pound nets hundreds of feet long erected on poles offshore, which trapped fish in a pocket at one end; and gill nets, which were attached to poles or allowed to drift and entangle the gills of fish (these were outlawed in much of the area during the 1940s because they depleted the stock too rapidly).

Raritan Bay became a vital area for fishing, clamming, and oystering during the nineteenth century. Along with oysters harvested in Long Island Sound those harvested in Raritan Bay were sold late in the century in the oyster markets of Manhattan, which consisted of distinctive barges moored in groups along the waterfront; these barges were the headquarters of various wholesalers. On each barge stood a two-story structure with doors and windows facing the shore: the first story was used for packing and distribution, the second for offices.

For over a century the piers at the Fulton Fish Market were home to a large fleet of fishing vessels. These were mainly schooner- or sloop-rigged sailing vessels during the nineteenth century; in the twentieth century the development of gasoline and diesel engines led to their replacement with motored fishing boats. After World War II the expansion of the country's network of paved highways and expanded use of refrigerated trucks led most of the boats to leave lower Manhattan for smaller harbors closer to fishing grounds off the upper coast of New Jersey and off the south shore and east end of Long Island. By the early 1970s few fishing boats still delivered their catch directly to the Fulton Market. The last to do so was the scalloper *Felicia,* which called for the final time around 1978, shortly before the historic fishing slip between piers 17 and 18 was eliminated as part of the construction of a large dining and shopping pavilion.

During the 1980s the city attempted to attract fishing boats back to the harbor with the construction of a modern "Fishport" on the Brooklyn shore of the Upper Bay at the foot of Columbia Street. After seven years of planning and construction and the expenditure of over $25 million, the city had to abandon the project. Most fish wholesalers preferred to remain in Manhattan and continue one-on-one trading rather than switch to the auction system instituted at the new facility. Wholesalers also believed that fish would remain fresher if brought to the city in refrigerated trucks from points near where they were caught, as opposed to spending increased time in the holds of boats. By the first decade of the twenty-first century, the survival of commercial fishing in the region—including the last enclave within the city at Sheepshead Bay, Brooklyn, also home to a fleet of party fishing boats—was being threatened. This was due to depletion of the fish supply and the federal catch quotas intended to maintain fish stocks; steadily rising costs of fuel and crew wages; gentrification, the rising values of waterfront real estate, and the construction of upscale developments along the water; and the new residents' complaints about the noise and smells associated with commercial fishing.
